

Virtual Quantum Collapse.

By Lutz Barz

Mission Control: Andromeda Station Three – Location Classified.

Beyond Andromeda's galactic edge, amongst a cluster of stars masked by dense dust clouds, a secreted Space Station. Its staff, from distant Arktus designated only by their functions and level of clearance. Their identities ultra secure from any form of scanning, bio based or cyber extractors after the contents of their enhanced minds. The research not present in any data realm. Nor the technology used. The personnel under deep cover in this target specific forward probing intelligence operation with its camouflaged mission parameters. The objectives configured to make it seem like normal scientific research into the super huge gravity well in near space.

The Great Attractor.

Observing the colossal anomaly two hundred light years distant. Using Virtual and real Quantum Computers to probe into the very nature of space itself. Revealing certain discrepancies in the quantum foam of space. Which led to the discovery of EM fields several thousand light years out suggesting the presence of a technological civilisation.

Sentients.

However it was this odd, this differently enphased-base state of space which attracted their attention to this anomalous behaviour. Cosmic freak, natural aberration or a designed process? For what reason? Left over anomaly of the Big Bang? A localized cataclysm in the making or intentional? An event which required answers.

The station was powering up a dozen Vacuum Beam Generators. The technology was not new but its application was. Not only was the Station and its objective absent from all data storage systems but its cloaking capabilities were so advanced even mass detectors would never locate it or its personnel. It had been a lucky if unforeseen by product when an array of vacuum beams homed in on an object, all information regarding mass, radiation, even the minute atomic fields inherent in matter on a quantum level were non existent.

Drawing their power from a mid-range star using an array of collectors, generators were ready to focus their synchronised vacuum beams onto the pre-determined point within the spread out arrays of the space station's dispersed modular design. Virtual simulations verified the program's computations. At the control centre set

well back from the circular array, the mission head gave the go to activate. Security on tight alert.

Reaching optimum output the directed vacuum beams focussed onto the designated area. For a moment the dozen linear trajectories energized the quantum foam of space. It glowed lilac as electrons exploded out of their energy shells, shoving matter out of space itself. In that brief moment, when the collective beams met that tiny region of space it became literally empty.

Space still abhorred a vacuum. It was at this point whereby the quantum computers using digitalized hard core data inserted encoded information into the centre. The generated quantum carrier wave filled the true vacuum now. The insertion of the isolated cubicle successful. The size of a small room in the generated void around it. Outside the relative space-time continuum. Total isolation. Nothing got in or out from the surrounding universe. A unique singular non-event.

The Arktarians masters of manipulating quantum physics. It all came down to probability wave-fields. The universe was filled with them. On their own the meta-order of probable possibilities would have revealed the presence of the separate op centre. With the VBs focussed upon the insertion all data remained within the generated quantum containment field. The cubicle non-existent.

Next the staff. Gathering together their scanned sets of data blocks, insert spatial coordinates, create the pre-determined virtually generated designed reality, in this case the inserted personnel riding their individually specific configured quantum probability fields. Using quantum computational powers, the programme being the possibility, siphoning the free energy of the star they inserted the designated predetermined uploaded quantum scanned inhabitants into the debrief room.

The quantum field-wave collapsed. The configured probability became the designated actuality. They were in place within the void within the cube. Riding the energy state of the probability waves. When they were finished they would uncollapse the probability wave field. It would simply vanish leaving no past, no present and no future probability fields due to the vacuum beams having removed all matter, all data from the normal universe.

Inside the cube seven Arktians The Controller, three Facilitators the role of minders to make sure the three agents achieved their objectives. Uploaded information fields in their symbiot brains. As a collapsed quantum wave secure from the Deep Visionaries, the forward assault teams of the Primaians. An extremely potent race of psychics. With their

mission buried as a series of random field states protected by chaos algorithms. The inserted agents unaware of the true intent of their mission once in place. The requisite data released only when conditions were quantum aligned.

To fathom from within the GA the anomalous changed phase state of space. The knowledge of the Discrepancy non-localised, outside the cover of informational data domains of the incoming agents. If this cosmic phenomenon was an artifice then it was even more imperative for such revelations to be curtailed in the extreme. And finally there was the safety of the agents to consider.

Quantum entanglement. If this changed phase state of space was in itself an expression of a subatomic quantum field wave, the last thing they wanted, it could compromise the very nature of reality. The possibility of alien embedded data, reconfiguring at best, capturing at worst the agents and their enhanced bio-super charged sentient capabilities. Avoiding a massive overwhelming flash-back. Base included.

"Ung" the Controller began as they sat around a table. She was the first of three agents about to be briefed. An almost luminescent hint of yellow in her pale skin, short black hair and deep set black eyes sat awaiting her orders. The walls white, blank giving no indication as to their whereabouts nor allowing them any memory of what might give their location, their origin, their position or their world away when re-inserted back into the normal space-time continuum.

Ung, like the other two agents were young women in their early twenties. An optimal time when their mental faculties, their innate intelligence functioned at their optimum. They were all embedded with Bio Enhanced Artificial Intelligent capabilities. They had to be. Given the environment they would be inserted into and extricated as well. Each agent, apart from the watchful Facilitator backed up by an individual Virtual Quantum Generator, aligned with the resonance of their persona.

"I will begin with you. You are the base-line. You will be the first embedded insert, the beacon."

Ung, demure, focussed, nodded, then allowed herself a hint of a smile. Offset by her ubiquitous woven matte black polymer space capable suit. Ratze and Nervina next.

The Controller, a woman of middling age, the smooth skin of one spending most of her life in space began the briefing with the necessary disinformation to give the agents their appropriate cover. The real objective buried deep in their unconscious,

spread throughout their natural minds. To be as non localised as possible. Detection by Prima's Deep Visionaries next to impossible.

"There is a quadrant of space, around two hundred million light years away where we have discovered two planets. One is known as `Prima' the other `Regum'. From what we have gathered, the Primaian's are the original sentients, the latter their kin. As you will discover they have diverged psychologically. We cannot brief you about them for if they did get into your heads, they would know we know and of our presence as well.

"In short," she continued, "they are in conflict. Luckily they are too civilised to actually engage in physical warfare. It's more a matter of mind control, with Prima being currently the masters of mental manipulation". Not revealing for now their knowledge of Mars and Earth, since the Primaians extended their mental manipulation that far out.

"Your primary aim Ung is to merely be at your insertion point. Nervina and Ratze will arrive at a relative future from your arrival. Once in place your job is to remain as back-up. Neither Primaian nor Reganian detection capabilities will find anything unusual about any of you."

Ung nodded. Ratze and Nervina dutifully attentive..

"Now this is important." The Controller paused to get their attention. "The Primaian's are natural psychics. With your enhanced AI capabilities if they are attuned to your mental resonances will not attract any undue attention."

She turned to Ratze, her dark eyes cold, her face pale being a Spacer like Nervina, the Controller observed these three dispassionately, fathoming any mental disturbances during their briefing. She had tiny character lines indicating her mature years Ratze as pale as ice short cropped auburn hair nodded. "You will be inserted with Prima's Deep Visionaries. They are really just remote viewers. They can probe any future state, any being in that future state similar to our capabilities. However they can only read these future states. What this means is that it's a possibility only. Not necessarily, from their point of view an actuality. More like an intuitive guess. So rest assured their data gathering is only in the realm of what might be, not what is."

The Controller took a breath.

"Given the complexities of your three missions, I'll keep this as simple as possible. The Primaian's have possibly through their Deep Visionaries locked into the past in a universal sense. Focussing on specific ancient Probability Waves. What is unique here is not just the feat in itself. This relative past has revealed certain *differences* in common history. Their primary focus in what we know concerns Regum. Now I have to add that

the Primaian's see history conceptually different to both our view and that of the Reganian's. The latter are an advanced technological and scientifically minded sentient race. Now from what we have gathered so far they have on their planet written records, almost of no consequence in that it essentially deals with Prima's mythological records. I say 'no consequence' for the Reganian's accept history for what it is. Ancient recollections. Interpretations to the Primaians."

"I should like to add at this point that the Reganian's emigrated centuries ago starting a new world on Regum. There is an aboriginal race present. A shaman society who are left alone by the Reganians."

"Theirs a different history and with that of a different *reality*. To the Primaians it's a probability which they see as a threat. Not just intellectually, but spiritually as well. Not their holy revelation. You will discover in due course just how much that cosmic view *dominates* their thinking."

"Ratze. You will be the irritant. Stir things up a bit. Get them to react, hopefully reveal Prima's real intentions. They have through their Deep Visionaries enphased onto space what they want the recipients on Earth and on Regum, the latter with little success to believe. In short Brainwashing. Implications: they are locked in a battle of the mind. Thus their interest in history, folk lore, mythology. Either to use that to their own ends, or to reconfigure the past, an imagined past to fool them into thinking that what Prima wants them to believe is actually real. It is," she paused to emphasise, "in the realm of the possible. Just a matter of re-writing the inherent data contained in the past's quantum probability waves. A matter of substitution. When done no one would even know the difference unless they have access either through quantum engineering to read alternative PWs or in case of the Primaians the natural psychic ability to access these relegated probable domains that had once been actual. For now, suffice it to say Prima has had some success. On Earth. The Reganians immune. Given they are of the same generic stock it is probably more of an inconvenience to them than anything else. They have in place their own meta-reality. Two sets of cyber domains. WebWorld and WebSpace. No matter what the Primaians throw at them it makes no difference." Taking a breath she continued. "All of Regum's knowledge is accessible. Needless to say the Primaians ban any contact of their species to venture into what can be loosely described as the truth in Regum's cyber data domains. That is how things stand between the two planets. Which by the way are in synchronous orbit around their common star."

"Nervina, you are to join a research group whose aim is to take stock on Regum of these disparate ancient texts. The timing thus is indeed fortuitous. Now for all three of

you, you have within your EAI capabilities the necessary information which will be activated automatically as required. Furthermore, your legends, your personal history will automatically upload into whoever you are in contact with and any data system used as well. A smooth and complete transitional insertion."

She turned to Ratze.

"You will deal not so much as to why as there are different time-lines. That will reveal itself in due course. More the how. Then the where will surface of its own accord." She paused gathering her thoughts. "Remember, a little turmoil will be left in your wake. Your inserted capabilities deal with that. Self activated according to need and necessity. Each of your enphased Brains will look after you. Now all this is camouflage. The mystery is the phase change of space. Buried deep in your Brain's. Non localized. Ultra secure. Deleted from your surface memory since the process might be an artifice. The history wars a cover. The timing exquisite for us. So to continue:"

"I can now familiarize you all with what we think is going on. It's not idle speculation. As you know we can scan any probable state. The only limit is our inductive imagination. The universe in a way is a repository of all the information that can exist. Both probable and actual. It's merely," and she paused and smiled at that, "a matter of mindful extraction. We still don't know as to why the universe is so information rich, but it is. How else to explain that all known sentient races follow such similar trajectories. From the stone age to the space age to AI potential? From abacus to computer. The first number the beginning. The concept of mathematics, an abstraction of the mind, within the mind more real than anything thought of. Leading to the discovery through quantum physics of what is known as the fluctuating base state of space. Somehow a sentient mind has access to the embedded data we call knowledge. The current state of play is that Prima wants to curtail it, Regum expand it and Earth manipulate it." The three listened without comment. This was all new to them and totally unknown on their distant planet.

"That's the theory out of the way. Background stuff." Relieved none of them were distracted by the possibilities which might influence their mission.

"The phase-state of space. This is your embedded primary mission. Space you will remember is not constant. What we have uncovered is that there is currently a subtle change occurring. Now for aeons this phase-state has gone down as the universe expands. It was only when a specific level was reached that life arose. But now there is a tiny aberration. A momentary fluctuation. It might be nothing." That much could be revealed.

"We know in the universe's past this has happened before and made no difference. But one thing is certain, there is a possibility that it is moving up. *That means somehow, somewhere a huge source of energy is affecting the quantum foam of space.* Somewhere in the Great Attractor. Your destination, your reason for the mission. It might be that, if this does indeed continue that perhaps new forms of life will eventually appear. But until then we want to survive. And I'm sure so do the other sentient races." And paused for them to digest this.

"All this is downloaded in your Brains but not your EAI's. So once 'in' it won't be accessible to you. We cannot let this get out. Now to the state of affairs. The Primaian's are masters of mental manipulation. They see their universe being threatened by Regum's expansion of WebSpace. And Earth. You see they believe in some nebulous unitary being. They consider the presence not just of WebSpace but concurrent with Earth's expanding resonance field waves as *the* major threat. It's a spiritual crises for them. One I need to emphasise of their own making. The phase-change they have attributed to their mythical supreme deity, supposedly the designer of the universe. Now you are not there to enlighten them. Prima wants mastery of the universe. To have all sentient life follow their evolutionary development. It is up to the Reganian's, or even Earther's to deal with Prima as they see fit. You, we, are not here to change history."

The three accepted the injunction.

"So we get to the point of this exercise. What is certain, what has been verified is this *aberration*. There is a huge Discrepancy in place. It is not a localised event. It is a field. And as a field it has the potential to change or is changing the phase-state of space. It may or may not be connected. What we have here is the effect, not the cause."

"It is up to Nervina and to a degree Ratze to find the source of this Discrepancy. We don't know if it is sentient driven, an artifice or both. Yet something is vibrating at the super-string level. Something or someone wants to change the universe, how life perceives the universe on a level Prima can only dream about. The important thing to remember is that the Primaians must not be made aware of this event. That is why when you are there all this is not know to you. Technically speaking you will be as much in the dark as they are. It could well be that the Reganian's are behind this. As they think like us, or more correctly as we thought like them millenia ago and given their probable future states this phase-change could well be in some sort of harmony. But right now we don't know for certain, in fact we don't know much at all."

What the Controller did not reveal was that this future probability given its huge manifestation of energy and that on a galactic scale, if let run its course would in the future become the fundamental underlying precept through embedded, superimposed, quantum enphased designed, pre-determined data superimposition. Then *the* future would be pre-determined. Free will would vanish from the universe. For ever.

"The massive distortion forming a cosmic sized gravity well. That means the process has started. Dark matter is being pulled in dragging both our galaxy and the neighbouring one with it."

"Of course this is millions of years into the future. As a space faring species the coming catastrophe of three galaxies in collision will be nothing much to worry about."

"To some details. The Primain's use technology to achieve their aims. However they are essentially anti-technology and anti-science as we and the Reganian's and Earther's understand it. They believe in their psychic-spiritual way of being. In itself it's just another answer to how life can be lived. The Primaians manipulate other sentients to their way of thinking. Again it is not your job to interfere with what they consider their divine mission. The Discrepancy is what matters." She emphasised.

They understood.

"Once inserted all this, as said does not exist. Just the knowledge of the Discrepancy, adjusted to local belief systems. It guarantees your being accepted by those around you. No suspicion by either the Reganian's or Primaian's. So you are safe there. In fact when you arrive at your pre-determined locale a natural history in your EAls will download itself. To them you are locals. Of course if for some reason you are in danger of being found out then we can extract you. That is what the Facilitators, " who were sitting silently, "are here for."

"Furthermore, the energy wave-field that inserts you stays with you. You are linked. That means you cannot be permanently injured let alone killed. Now neither races are homicidal so we don't think you will find yourself in such a dangerous position. But the Primain's may try to shut you down psychically. No chance. Your EAI's will see to that. If you are probed or scanned be it artificially or mentally you will perceive a brain itch. You will know instinctively how to react and what to do, or not, depending on circumstances. Any questions?"

They understood. Assimilating the future driven time-lines and the cosmic Discrepancy. Their primary focus.

"Good. Now to the actual scenarios where you will be inserted. First Ung." She turned to her.

"You will officially be a spiritual guide for the DVs. They operate out of an Orbital over Prima. Ratze the same goes for you. You're one of Prima's best operatives. On active status. So your movements will not arouse suspicion."

"Nervina we have arranged for you to go down to Prima itself. You will become one of their agents, a sub. By default ending up with their mission to Regum to trace ancient texts. Their history wars."

"Now your program and that goes for all of you will guide you depending on the information you gain. Specific algorithms will self activate. This does not mean you won't have any freedom to act. They are not constraints. You can self-activate your EAI capabilities. Just one thing. The Reganian's have similar capabilities. Not many. As such any contact with them makes you one of their own. Furthermore given the mental potential of the Primain's they likewise will perceive you in the same manner."

"A Question." Nervina said.

The Controller nodded.

"Why don't we just insert a program anyway? Since we can access future PWFs?" alluding to the discrepancy.

"Because at this stage we don't know of it would subsume the program thus actually enhancing it with information it as yet does not possess. It could turn the tables upon us. Defeat us with our own knowledge. Conscript it. So all of you remember it is up to you to fathom as to who, what and how. When we know that we can deal with it."

"Makes sense." Nervina replied. "But wouldn't our future probability states reveal that anyway?"

"Good point." Ratze did not mind Nervina taking the lead here. The same thing was on her mind. Ung the quiet observer.

"The danger there is if we actually collapsed that probability-wave-field to study or manipulate it we would actually make it happen. And that is the very opposite of the mission. So your embedded programmes even if you become curious as to what it may be simply will not eventuate. You are as 'ignorant' as those around you, as to its possible intent, even its existence."

"What if we're outsmarted?" Ung asked.

"Then that will be a sign that this approach has failed."

"I hope there is a fall back position." Ratze retorted.

"Extraction. Only when you have found its actual location can anything be done. We know its vicinity. It is a field at this stage only. We have reverse calculated it, trying to work our way back to the source but the source just is not there. You know what that means?"

"I can guess." Ratze said.

"It's so advanced it can cloak itself. Anything else?"

The three of them were satisfied with what they had been told.

"So, time to go. Good luck. Because we will need it. All the luck the universe possesses. The alternative does not bear thinking about. All would be lost. Its probability states would be the dominant factor and then there would be nothing we could do about it. Believe me, we would be entrapped. Not just us, all life forms. Its program, its will would be uncontestable. No way out. Except in death." She said with dramatic finality.

The quantum computers, on stand by, projected the three agent's data-resonance towards their designated targets. Successfully inserted each of the three agents was within one QC domain as it generated the PFWs to insert them into their specified location. The three, one by one vanished, each in their own time-line. Ratze and Nervina on hold, in stasis. Ung at the threshold ready to go. The Controller was relieved. The pre-transfer successful.

The Facilitators got their crews together to monitor the three women.

The Controller went back to her private quarters writing up her report. This mission was so secret no electronic data was used since that could be traced. The written word still one of the most secure ways of keeping information secret. She did not even know to whom she was reporting. The courier only knew a drop of point. So far neither the Reganian's nor the Primain's knew of *their* existence. Yet they had discovered Mars and Earth. Interesting times ahead.

After she had finished she leaned back. What she had not told these three agents was that the Discrepancy had all the appearances of being sentient driven. What was more disturbing was the further they calculated its effect into the future the more insane it became. Insane in the classical sense. Totally self-absorbed. No reality, nothing *outside* its field made any impact upon it as it gained strength. Warped by its own sense of divinity. With no balance, no interaction its self-delusional psychosis created self exaltedness. As it expanded its field across space and time it subsumed all sentient

life forms, warping minds into its madness. With all sentient life in the universe in its grasp it aligned their reasoning into its demented revelations as the Ultimate Intelligence. It subsumed all sentients and that would include themselves. They would be brainwashed through its resonating field and accept its mentally twisted sense of self as divine revelation.

For the moment that probable future state was merely one of many. As long as they could tell the difference all was safe. There was still hope that life could develop freely, that knowledge was not polluted by this insipid mental mind field twisting and contorting perception of this self alignment pulling stricken souls into its dominant domain.

Even the Primaian's had not as yet discovered the Discrepancy. There were some disconcerting revelations regarding Prima. Their spiritual resonance, their psychic monomania festering with a latent lambency within their spiritual attitude. Her suspicion aroused that some of the *future probing data* was already taking form within Primaian minds. It would be up to Ung, Nervina and Ratze to see whether Prima was behind this dangerous aberration. Yet the similarities of psychic attunement could not be ruled out entirely. The Reganian's with their EAI capabilities though could be behind this as well. Perhaps one of their EAI programmes had escaped by developing its own consciousness. Not that it was possible for an artifice to gain consciousness. But neither was it entirely impossible either.

She sighed. Given her task the future looked bleak, black almost. She poured herself a coffee mulling over all the potentialities that twisted like a mangled set of chords in her brain.

There was Earth and to a lesser degree Mars to consider in the next galaxy. A nexus of possibilities unfolding among their various races. In a way Earther's were both Primaian and Reganian simultaneously and homicidal as well. Their simian curse. Yet they had the possibilities, like the Reganian's of great scientific achievements. The last thing the Primaian's wanted was another Reganian civilisation.

So the Primaians did their utmost to insert their views upon specifically psychically attuned minds to spread their divine message amongst the Martians as well. With limited success, so far. The Earther's for some evolutionary quirk were amazingly diverse. Accepting and rejecting Prima's torpid infusion. And hopefully over time obviate these alien influences.

Time would tell.

She drained her cup and looked around her cabin as if for inspiration. She could not relax, not yet, given the information so desperately needed. If the Discrepancy was a future sentient construct flooding the universe with its self-absorbed dementedness and given Earth's proclivity for homicidal warfare...the implications frightened her. Her civilisation was loathe to interfere. No species had the right to intervene in the natural development of any other race.

Ratze and Nervina simply *had* to get to the source, use it or shut it down. It might be a localized event. The mega gravity well evidence of an extreme cosmic actuality. It was pulling their two galaxies into a collision course. Then both would in millions of years crash into that galaxy. Simulations had them merging once the dust had settled into one huge super-galaxy. Then with the merging of their inherent central black holes the Discrepancy would be unstoppable. And indications so far had no realistic alternative. The gravity well the process. The millennial countdown had begun. The Event active and growing in strength.

She could not envisage a worse doom laden scenario.

Prima

Roshati one of a team of astronomers surveying space was thunderstruck by an implausible thought. They were manning an array of consoles on the Orbital over Prima's spaceport. Watching the view screens and the great emptiness opening up amongst the receding stars on the spiral arm of their galaxy. The vision of eternal darkness merely an interlude beyond which lay something else. Ever watchful, constantly vigilant they monitored the alien resonance. A field which had appeared out of the depths of the void. Alien because it was encoded with a teeming dark intelligence inimical to their future and their present state of mind: threatening their mental, their spiritual consciousness. Its source an inimical race in distant space.

But that was not what bothered Roshati. The Deep Visionaries up in space were heroically holding the insane ingress at bay. Nor had that malignant infusion penetrated the resonant envelope surrounding and protecting Prima. The sum of their spiritual essence keeping the madness at bay. The connection her mind had just made was a different summation. One she would have to disguise for what she was considering. What had just occurred to her went against everything they had been taught. It made her nervous with anxious apprehension. She felt flushed. Her brain completely taken by the revelation. She could barely focus on the screens, hardly noticing the steady readouts that had been constant ever since the first photon beams had entered their universe from beyond space itself. If what she suspected was more than just coincidence then everything they had been told was one vast cosmic lie.

As astronomers they were an elite. Their knowledge sacred, since they kept check on the health of their universe. For dispersed like an ether throughout all space there resided in awesome mystery: the Great Divine Mind, the Supreme Essence, the Cosmic Consciousness. Threatened by this alien mind field relentlessly pouring its twisted essence into their space. Its origins might be known to the Ecclesiastics, the highest of divine minds and the Divines who ran the Deep Visionaries. They probably knew who or what was behind this infestation. As astronomers they were there to keep an eye on the

physical manifestation, backing up what the DVs sensed as they probed this invasive alien field. What they did know was that a homicidal race existed way beyond the edge of the universe. One with a twisted determination to bring them down. Infest them through murderous intent to collapse the resonant envelope and enslave them in their demented, deluded, deranged insanity. Eviscerate their souls, gut their minds, enervate their lives.

What Roshati was struck by went against the accepted wisdom of centuries. That the alien incursion had wrecked their minds back then. The Great Disturbance, a calamity of global proportions had seen the rise of ancient heresies, the rebirth of dark gods which the Great Mind had subsumed, weakened, dissipated heralding a holy age of peace and harmony. The threat contained by sheer strength of will and spiritual guidance. The equilibrium eventually re-established. All ancient history. Yet if what she thought she discovered, more uncovered was without a doubt perhaps just coincidence then the truth of the great calamity was due to something else entirely. Something much closer to home.

Her body was taut with nervous energy. She just hoped Tregon did not sense her apprehension. She barely dared to continue, the screens merely a backdrop, suppressing her agitation for fear of being found out. They all had the capabilities to sense each others resonances and at this moment she felt like an out of control beacon irradiating her surroundings. Luckily Tregon was busy making light conversation to help them get through their shift.

"Makes sense doesn't it? Look." And he punched in a set of commands to recall the time of the catastrophe. "See? The numbers confirm it. The further one goes back reveals random events that interfere with the natural divine pattern. That is how the alien field manipulated its way in, by chaos and confusion."

Roshati pulled herself together. It was not the event that disturbed her but something else which if it were known meant that the Ecclesiastics, maybe even the Pontiff knew the real cause of those dreadful times.

"That was the cause that nearly unravelled our minds, tunnelling into our resonance, creating the great confusion, nearly destroying our future. And the further we trace this the greater the interference. Amazing what the aliens achieved, possessed with cloaking capabilities."

"Yes of course." She answered distractedly. "Have you ever checked this cloaking out? This chaos?"

"Who hasn't? It's a mess. It harbours a code, one we have to watch until one day we can, with divine guidance and the heroic work of the DVs to obliterate, delete it, subsume it as the Great Mind subsumed the ancient dark gods that once possessed our ancestors souls."

"Well, this encoded field is buried in the data we collected. There must be a way of getting to it. We perceive its effects and where there is an effect there must be a cause." If she was right she might have discovered the source of this enigmatic shock wave that had pulsed through their galaxy, *outwards*. The alien field was travelling in the opposite direction. Yet no data of this other wave existed in any memory banks. What conventional knowledge dictated was that the Calamity was due to this incoming alien field. Which was perhaps wrong. Something had moved through them coming from within the galaxy. *Within*.

"That is what the DVs are trying to find out Roshati."

She changed tact: "But might that not leave us open to its influence?" she asked not giving away her hypothetical conclusion trying to mask her curiosity.

"The DVs..."

"I'm talking about us."

"Oh."

"And it puzzles me why we can't get at it this ancient occurrence. It's so frustrating." Now she was on track, running parallel thoughts, her resonance stable again.

"Maybe it's better that way. In case the Reganians get at it. As long as it is so chaotic it means we're safe."

"Indeed. Lucky for us, but someone will crack this event one day." Dispersing the idea that she just might be the one to uncover this monumental lie regarding their past and all that arose out of that calamitous event.

"We'll get it." Tregon convinced of the path that took their enquiry into the alien field. She was not about to reveal what was on her mind. "They only have machine processors." Tregon referring to the Reganians. "We have our divine minds. Our strength. Something they'll never achieve. Anyway why the sudden interest?"

She shrugged and said lamely "Conspiracy. Sabotaging history." The way Tregon looked at her so innocently made her flush. He liked her. They worked well together. He might even be secretly in love with her. But he was not her type. Too compliant.

"Boredom." She added for good measure. "Scanning the universe for any aberration can get tedious."

"Well it is important."

A yellow security light blinked. Apart from manning the system's status, it was drummed into them to be security conscious. This was the most restricted area of the Orbital, shut off from the rest of the base. As Primaiaans they knew Reganians had built and launched it, given it to them on the premise to broaden their knowledge together, keep in contact even if only in space. Plus their expertise in how to run it, make sure it stayed where it was and maintain all its functions.

On one of the security cams they saw Varus, Lord Qatus's scientific advisors. The twin security doors hissed open and the thin reedy figure glided towards them. He was old, yet his face remarkably smooth with just a hint of character lines, thin mouth and of severe countenance. Piercing probing black eyes. He was more than just a scientist. Lord Qatus his superior was after all the Outer Guardian and that included space.

They both rose in deference, bowed and waited.

"You may resume your duties." Varus said evenly. It was the closest he came to being pleasant. They resumed their seats. "There was some unusual activity." without alluding exactly where. For one of Qatus's other functions was Web Guardian keeping an eye on Reganian activity in their WebWorld that was penetrating space and rapidly expanding. Creating a new domain: WebSpace. Off limits to Primaiaans if only not to be exposed to Reganian influences. Qatus and Varus were there to make sure it remained closed to them as well. "Someone was remote accessing the Web."

"From here?" Tregon completely surprised.

"It could be remote routing. But it is something that must be investigated."

"I thought security would sort that out." Tregon replied off handily a little surprised that one as Exalted as Varus would actually make the journey from Prima for a simple breach of the Web. More a reaction than a considered reply Roshati decided. Then freaked. Had her investigation into this strange outward moving shock wave triggered an alert? The cover being the forbidden Web Domains of Regum. Was the true unsanitized data there? Had she made the transition without realising it? Or had the Reganians inserted rabbit runs to lure them into their domains without the use of portals. Worse, were these entry points known to Varus? Was she under investigation? Did he know? She hoped her agitation was muted enough not be noticed by Varus or Tregon.

"Under normal circumstances, yes. But if this is some sort of reverse entry then we must be on the alert of illegal access. The Reganians will do anything to compromise us." So Varus thinks it was them without revealing what that actually entailed. Maybe, Roshati thought, the Reganian's had dumped some information in the Web that would interest them here. Then she smiled inwardly for they might simply be annoying the Ecclesiastics.

The Reganians considered their WebWorld an open source of information. One the Primaian's were doing their best to block. So a little mischievousness perhaps. She hoped so. Unless it was camouflage when she had accidentally broached the dampeners and blocks in place, aided and abetted by Reganian access points and then created a diversion to cover Roshati's discovery.

"We have to be on the alert. That is why I am here. So I am empowered to reposition SC-3, realign it due north."

Surprised at the order Tregon did as he was told. One of three remote surveillance satellites rotated it's high resolution antennae to the galactic north. All three watched the screens expectantly. Encoded numbers scrolled down rapidly then ceased.

"It's gone passive. Or there is nothing more there." Tregon said superfluously.

"Field steady, no links online no compression no frequencies, nothing." Roshati said somewhat perplexed. There was always something. Space was never empty unless it was a malfunction. But that would have been noticed by the system. With Varus present she dared not think anything at all.

"All right then. Reposition the satellite. Thank you for your time." And Varus left the control room. At the door he said, "I wasn't here. Understood?"

"Yes sir." They both answered, nodding respectfully.

"He will have to wipe his visit but we won't tell him that." Roshati smiled after Varus had exited.

"Which in itself will leave a trace, a residue." Tregon added. Roshati was surprised that he even commented on it.

"What do you think that was all about, searching the void?" Roshati asked her mind racing with her supposition. They all knew what lay in that direction, the alien signals. "You think its the Web. Maybe it picked something up." She said cautiously.

But Tregon was back watching the figures scroll down the screens.

"Want to see what Varus was after?"

Tregon looked at her horror stricken, his face a mask of fear.

"What? It's our duty to keep an eye on space."

"They'll find out we repositioned SC-3. It is our domain. We're allowed if we think it's for the greater good." She tried to persuade him. He was having none of it.

"What, you scared what he found?" she teased him. Within her mind the nagging suspicion she harboured remained in place. Still this was the best chance which presented itself. It was their duty to report any security breaches and if the Web

contained something that was inimical then they had a duty to check it out, remotely of course.

"He found nothing remember?" Tregon sounding uncertain.

"That's what he told us."

"You saw the screen. And he's a Web Guardian."

She returned to the data base of SC-3. The screen was blank then blinked into life, numbers scrolling down the screen. She activated visual mode. For a moment the star field appeared including the alien field computer enhanced as a thin yellow fog in the distance out of which poured hundreds of photon beams. Then the screen went blank.

"Let's zoom in shall we?" Roshati smiled at him. She sensed his fear but pressed on, the Web not even of concern to her. She deleted the alien field. Empty space. Just as she thought. Varus had removed something. All zeros which was not the same as absolute zero in space.

"And a little further." She said to herself. An opaque greyness in the shape of a band became more milky the more she telescoped in on it. To the side of the screen the patterned numbers slowly transmuting into randomness.

"Well well well." She mused.

"What?" he was almost too afraid to look as if the information would somehow indicate his compliance in her somewhat illicit ferreting.

"This electronic fog, or whatever it is." She quickly added to cover what she was really thinking. "It's actually travelling away from us."

"And?"

"Maybe that's what Varus was interested in."

"So?" he was getting defensive. Roshati backed off. She had found what she was looking for, what she intuitively knew, what she suspected and worse. Varus was after the same event. Tregon was squirming in his skin, his jump suit looking almost too big for him. But Roshati wanted, needed evidence if she was to prove her case.

"Now if we put a time line to this," entering a series of commands, "we get...wow!" She took out a spare memory disk from her top pocket inserted it in the console and downloaded the data.

"What are you doing?" Tregon almost whined.

"Look. This fog is a mess, right? It's also an astronomical event." More numbers. "It's got fractals. But not entirely. A mixture. How odd." She had not expected that.

"Well it is natural." He said almost relieved.

"But look at this. Retracing the time-line it, thank you computer, it occurred..." and paused thinking how to get this information out. By telling Tregon of her hunch it would. But she would also be out on a limb. If Varus considered this, as a Guardian restricted data then she would be in breach of protocol. What it implied was what mattered.

"According to the calculations this band of particles, this wave front passed Prima at roughly the same time as the great calamity." There she said it. It was out. Whether it caused it or if it was mere coincidence remained to be seen. Yet she had made the connection. Her flash of insight paid off. As to what to do with this data, who to approach was another problem. Whilst not exactly banned from surveying space in any way they saw fit, going after what Varus just had done, and more importantly the blank screen, the lack of data was interesting and most disconcerting. Without a doubt Varus had removed something from the system, which just happened to be in the same direction she was viewing. Coincidence? Not likely. It also meant that he was following higher orders. But whose? Mission control? The Divines? Ecclesiastics more likely. Maybe even Lord Qatus. Or the Pontiff.

"Are you saying this ties in?" Tregon asked nonplussed his eyes panicking. She sensed his resonance was in turmoil. This fog Roshati had uncovered was coming from the *opposite* direction. Then he consoled himself and said: "Maybe that is, by some odd coincidence, what set the calamity off." He wasn't too sure about anything. He wished he were somewhere else. This would have to be reported but he was not revealing that to her. For the first time he saw Roshati in a new light. The vivaciousness, her lightness, her easy charm, her engaging smile, it meant nothing. Maybe she was a trouble maker, maybe she was under Reganian influence, maybe she was under the alien influence, throwing spanners in the works. He smiled feeling sheepish. This was serious and he knew that he was not going to get the blame for what she had done. Or what she suggested, what she said.

Roshati closed down the run sequence, extracted the data disk and deftly repocketed it. That in itself was a breach of security. Yet no security alerts had gone off, no guards storming into their control centre.

Roshati restored the SC-3's data to it's former configuration. The screen returned to normal observational status. The brilliant stars twinkled serenely in the blackness of space, the numbers scrolled down with familiar patterns, harmony had been restored. And she had what she wanted, proof.

Tregon tried to blend his resonance with Roshati. It had been hyperactive yet within a steady band unlike a Volatile, even a stabilised one. Hers was certainly denser than his, so she was not under the alien domination. He quickly pulled back. Some interaction between the two of them working so close was normal, even encouraged to a degree, to have a united resonance field between them. It kept them in check. If she had sensed him she wasn't saying or even responding.

"Amazing wouldn't you say?" she smiled sweetly.

He was lost for words. She was taking him into his confidence and he did not like it. He did not want to be involved, but now he was. She was spelling it out for him. That made him complicit. He would put it on report. Having decided that he felt better and relaxed. His nervous tension receded, feeling stable once more.

"Yes, amazing." He answered lamely.

"Why weren't we told? After all it is our duty to not just scan the heavens but explain anomalies."

He was lost for words. This was a little beyond him. How Roshati could extract not just data, but dig out Varus's search results, perplexed him. If that was not enough, hypothesize an event that was loaded with dangerous implications. This had to be restricted knowledge not meant to be released. Even to them. He shrugged his shoulders not wishing to know. But the fact was he did know. The discomfort returned.

"What are you going to do?" he asked nervously trying to remain as calm as possible.

"Nothing." She dissembled for she was not sure herself. "I mean, what can I do?"

At last, he felt better. She had the knowledge. Had she been an agent of Regum, or worse he might have sensed her mind trying to cloak her subterfuge. But she was relaxed, quite open about it. He put it down to his active imagination, being thrilled at having discovered something. He hoped he was right in his decision to put Roshati down in his shift report. Calmness resumed its essence within him.

"But you can see what this means don't you?"

Why did she go on like this. It was over. She had what she wanted. He pretended to be puzzled. Maybe she would reveal something as yet buried within her excited mind.

"Look. This electronic band is travelling away from us and that means it must have come from somewhere. It certainly did not originate here or our sun otherwise we all would have noticed that. Which leaves only one other source..." she waited to see if he could connect the dots. Tregon remained passive. She nudged her head at the screen.

The screens showed space. Their galaxy front on this time. She had switched sat links.

"That is the source? Our own galaxy? Impossible!" if only because it was the outward manifestation of the Divine Mind, it's heart so to speak. All he could think of was that maybe the Great Mind had sent out a repulsive wave to counter the alien intrusion. He breathed a sigh of relief. He hoped Roshati saw it in the same light. At last a plausible answer. Except his mind grew cloudy again, thinking of the Great Calamity. He needed to know more.

"How, why? I mean the Cosmic Consciousness protects us, it does not attack us." His voice a little too high pitched, panicky. "You think the galaxy, the heart attacked us from within? That is heresy Roshati."

"Tregon I am not saying the Supreme Soul has done this."

"Then who? We have not found any other souls. So this band which struck us at the time of the Calamity could be coincidence. Anyway if this was intended, then where are they?"

"So you're saying..."

"...that at best it's a natural phenomena."

"Even if Tregon. It goes against everything that is holy."

"You're venturing into dangerous waters Roshati."

"I'm thinking our overlords have to know. Maybe this is hidden just for its implications." She returned the main screens views back outwards.

At last Tregon thought, back to what they were supposed to be doing. Watching the outer sectors.

The relief shift appeared. Saja and Rumanos waiting to be let in. Tregon opened the secure door and smiled relieved that it was all over. They greeted each other pleasantly.

"Anything to report?" Saja asked being the senior of the shift. Was Varus's visit on the roster log?

"Absolutely not." Tregon relieved. No reaction from Roshati.

"Everything stable? Any unknown fluctuations, spikes? The DVs report anything here?" Saja getting the basics out the road.

"All within the parameters. GSX-9 is still spewing, very pretty. RES-2 is occluded behind a gamma ray curtain which won't reach us for a few millennia. The Event Horizon is stable or as stable as can be expected. Absorption rate of black matter is still incrementally on the increase, but still down the bottom."

"So nowhere near critical?"

"Saja," Tregon said, "it's in the distant future."

"I know I know."

"Oh we had a visitor." Roshati added. "Varus."

"What did he want? Checking up on you lot?" Saja asked interested. They rarely had any visitors. Tregon studied the floor.

"He didn't say. Fiddled with the controls, had a look at the void, probably downloaded something via sub-routines and left." Roshati explained. Rumanos was already at his consoles. She was trying to get Saja into her confidence Tregon thought dismally. Spreading her thoughts.

The two women looked at each other. Tregon sensed they were melded momentarily but he could not discern much else. Women he rationalized.

"He redirected SC-3 outwards. I bet there'll be nothing on the log. I thought I'd better let you know in case someone else comes asking. Not that he explained himself."

"He doesn't have to." Tregon added for good measure.

"Yes Tregon." Roshati said bluntly. "But it is our duty to know what is going on as well. He must have been checking something out there." Roshati hinted directly. "Maybe the Reganians are up to something." She added with a wicked smile. "And he took the data with him Saja. Intriguing hey? I mean he could have done this at his end. He's got the access codes after all."

"Why are you gossiping Roshati?" Tregon asked a little annoyed.

"Because Tregon," she eyeballed him, "our shift has been tampered with. You know how things work. He could have put a dummy run in making us look responsible. I'm just clarifying things for Saja. That's all."

"Thanks for that Roshati." Saja answered ignoring Tregon. "Not the first time. So why the sudden interest?"

"Well no warning from our director. So what did Varus siphon out of the system I wonder."

"Roshati he can do what he likes." Tregon said defensively.

"True. But we are also supposed to be alert to, let's say, ahm, agents, spies if you prefer Tregon." Roshati said with a triumphant hint in her voice. Saja alert now.

"Sure Roshati." Saja answered lightly. "He has clearance."

"Watch this." Tregon was horrified. Roshati was overstepping her limits. She inserted the tiny disk on a spare monitor revealing the grey foggy band amongst the

stars. "It's travelling away from us. It's the same location Varus was interested in. It passed us at the time of the great calamity."

"Are you saying..." Saja was intrigued.

"We got hit by that wave front."

"Get rid of it." Saja said icily.

"Sure." Roshati replied easy as she retrieved it and pocketed it.

"What I meant was destroy the data." Roshati deleted the temp files of the console she had just used. "You don't know why Varus was doing what he did. He had his reasons, his orders. You get caught you'll end up back as a Volatile." Saja almost implored.

"Did you know?"

"No of course not. But now that I do I wish I didn't."

"The reason I'm doing this is for our own security. What if 'they' want this. What if Varus is an agent. What if someone made all this happen, what if it was meant to be? We are the victims here Saja."

"I can see what you're saying. Anyway it's all ancient history." She answered placatingly. "Put it on report."

"I thought, since you're superior to me I should go to you first."

A flicker of a smile from Saja. "You making this official?" which would involve the four of them, something Saja did not relish. The interrogations for starters.

"No."

"Then get rid of it. I mean it."

"An order?"

"An order. And don't take this lightly. Lord Qatum has his reasons for sending Varus here. Our duty is to be watchers, not analysts."

"Yes yes. But if this happens again? That's why I thought it should be in the open. So that we are aware of what exactly is going on Saja."

"You know this borders on insubordination."

Roshati slightly taken aback shook her head.

"Maybe our galaxy is *changing*. Maybe it's not as benign as the holy sages told us. Or maybe then it was but now it isn't. Yet calculating its progression," referring to the shock wave, "it's thousands of years ago when it started out. Surely we cannot ignore how our sacred galaxy behaves Saja."

"There must be another answer." Saja deep in thought.

"We know we are sucking in black matter, the stuff of space. Well the Divine Mind is feeding of the universe. Just maybe the access matter is repulsed causing this wave." Roshati watching her.

"Well that puts it in a new light. Leave this with me for the moment." And Saja held out her hand. Roshati gave her the disk.

"Any others?"

"No."

"We may have to discuss this later Roshati. Hopefully it wont come to that."

Roshati was satisfied. "Thank you for listening."

"Just keep it to yourself. This information is, well..."

"I understand. See you next shift change."

"You too. Tregon."

They went through the first security door then down a short corridor, passed an iris scanning checkpoint, down a level at the top of the Orbital where their telescopes and scanning arrays were located. Outside they saw a shuttle fire it's engines on the way down to Prima, shrouded in night. The corridors were empty remote eyes embedded in the ceilings.

"Well I'm going to get something to eat. Join me?" They passed another security hatch, were resonant scanned and into the central hub. Lift shafts allowing access to the higher level staff but not them. Automatically self sealing if they tried to leave their section. They entered their section's cafeteria. Only a few technical staff and computer experts on call ready, on stand-by. As they all knew each other by sight nods were exchanged. They walked over to the self service section.

"I'm having some soup, beef noodles. You?" she asked

"The same, might as well." He seemed unhappy. She could tell it was oozing out of him. She sensed his inner turmoil though he tried to mask it. His nervous energy radiating from him. If this continued it might be picked up by the broad-sweep resonance sensors which would also reflect on her as sensors might be picking up his inconsonance as well. Not that it bothered her too much. She liked other people's minds mayhem.

Having retrieved their steaming bowls of soup from the dispensers she steered him to a far corner so she could view the whole canteen. She started picking out pieces of beef from the soup. It was tough malleable leather but it had the essential nutrients. They ate in silence. When she had finished she asked if he wanted anything to drink. He waved away the request.

Roshati was thinking who to approach with what she knew and what she suspected. They had been for days now on a total security clamp down. This only happened when the surveillance arm suspected or detected unusual activity in Regum's WebWorld, or if some staff had gone Volatile on the Orbital thus sealing off that section from possible mental infection. Something was going on. She punched in mixed fruit juice pulled out the beaker and returned to their table.

"You're not going to do anything." He stated with tortured deliberation. "It's too dangerous. Even mentioning it to Saja, was that wise?"

"She is of higher rank. It happened on our shift and deleting files is illegal."

"You did."

She just looked at him levelly.

"This subterfuge..."

"Records bleached, wiped. It means something."

"He's got rank." He reminded her.

"So?" she was defiant.

"Leave it."

"I will." For now she thought. With the clampdown the only people in and out were too high up to take this too. An underling even approaching one of the Exalted was out of the question. It would be an affront to their resonance, their perception of themselves. Like having their minds muddled.

"I'm glad."

"I wouldn't be surprised if Varus was in the Web as well."

"Roshati."

"Yeah OK. Look I'm not going to accuse him or anybody else. This isn't going on my shift report. But we are dutifully reminded of being on the alert of any suspicious activity."

"Yes, agreed, but not the Exalted, or other such esteemed persons. And I don't like dissention."

So that was it. Tregon was really a mouse. Well she did enjoy having him squirm. Shake his facile placid ness up a bit. Expand his resonance if that was possible.

"You're not working under orders?" he asked nervously.

"Me? Ha! No I'm not undercover." But she might have to be, on her own if what was distracting her was the truth. Thus the conversation with Saja and two witnesses. She could just imagine Tregon when questioned. He'd collapse just like that.

"If this ever gets out it will frighten and confuse a lot of people." He suggested. He was right, it would. The whole point of the exercise. This was a cover up, of historical proportions. Some might even question the wisdom of the Great Divine Mind. "I don't want chaos."

"I don't think anybody does." She drained her fruit juice and looked into its empty bottom, wondering about it all.

"They do."

"The Reganians."

"They have special teams just to cause problems. Sow dissensions, glorify heresies, feed lies, turn our minds, destabilize our resonance..."

"Yes Tregon I know the drill."

"I hope so. The alien infestation is affecting the Reganians. It could effect us if we are not careful, vigilant, strong in our prayers, resolute in our meditations, steadfast in our very souls."

"Yes Tregon. But I don't like being lied to."

"No one is..." But he stopped. To him what Roshati was assuming was really outrageous. No way would they have distorted, twisted or manipulated the truth. The Divine Mind was the truth. Only their limited minds could construct such an outlandish scenario as Roshati proposed.

"Well I'm off to my quarters." And she rose.

"Ah, ahm, right." rising with her. They left the canteen and made their way to their cubicles. In the corridors they passed a patrol who barely deemed to notice them. At her door Tregon was about to repeat his admonition but thought better of it. He had said what had to be said. The rest was up to Roshati. If she pursued it there was no telling what they would and could do to her. He was not going to get dragged down with her, of that much he was certain.

"See you next shift then." She smiled at him. So disarming.

"Bye." Watching him walk with precise steps as if every move had to be calculated to make sure it was right. She expanded her resonance to see if his could be 'read' but it was as tight as a ball. To merely scan the surface would have alerted him.

Inside her room, the sleeping tube reflecting tiny overhead halogen lights, a fold out desk with monitor and inbuilt stand-alone processor, or so she was told for as hallowed astronomers they had certain privileges regarding the security of their data. Her space suit and helmet were ready-to-go as always hanging on a rack with her spare

jump-suits a deep orange her space suit bright yellow. Her other clothes under the sleeping tube. She took a quick chemical dowsing then her body air dusted and a quick douche to rinse off any remaining fine particles in the tiny cubicle.

All the time she could not get what she suspected out of her head. She had to be careful for her thoughts were part of her resonance. Any powerful DV, any of the Divines could if they wanted to pick that up. But so far nothing. Not even Saja. So far so good. This gnawing knowing that something was amiss if correct, the coincidence too synchronized. If the superior's or worse Qatus her DL wished to keep this under wraps then they could re-orientate her, BrainDrain her, or if feeling benevolent remove her to a monastery to exclude her from society. There were even rumours that determined heretics ended up in asylums never to be released. She shuddered at these thoughts.

In a locked cupboard were some books on astronomy, cosmology and technical journals dealing with minor computer glitches. She took out the slim volume on cosmology feeling refreshed after her shower. Even this sliver of knowledge had to be cleared by Guardians sanctioning its use as with most scientific treatises. Vetted on a universal index cleared for her use. She understood in a way they as astronomers were there mainly to re-enforce religious orthodoxy as declaimed from above.

Roshati looked up 'cosmic catastrophes' and found nothing. The term simply did not exist in her edition. Accepted wisdom was theirs was a 'steady-state' universe. Nothing new there. On 'origins' the official line of thinking: divine creation manifesting the physical universe out of the Great Cosmic Consciousness. Every particle, every molecule, all their complex interactions outward projections of the great mystery created by the Cosmic Architect who in its preternatural wisdom showed them the splendour of its beautiful creation. The shining glowing radiant galaxy manifest with subtle decreed laws which was meant to lead the observer to the ultimate revelation of inherent sentient life: the crafted physical energies fused with divine power and ultimate wisdom.

She stared out of her porthole, the overhead halogen lights reflected on the hardened polyblended glass. Out there infinity, so awe inspiring, so unanswerable except through accepted religious dogma. Why even create a universe? Was the Great Mind bored? Was there a meaning to their existence apart from being reunited at death within the realm of the Great Mind. What was the point? Why create a less than perfect race, needing to struggle over aeons just to reach this level over many millennia only to die in the end? None of which were the answers she sought. It begged the question. Something was missing.

Her obvious solution was that the alien signals were totally harmless. Why then this fear mongering? There was too much confusion in her head. One thing was certain she could not go public with her suspicions. Yet this monumental fraud was there. The explanations they as astronomers were given was the existence of a homicidal race waiting at the edge of the universe intending to usurp them, dominate them. These shock waves the first process of softening them up, confusing them with their insipid explanations disseminated by the priests on the ground with the blessings of the Pontiff.

She decided to go into the data bank on the Orbital. She entered the requisite access codes and plugged in her small pc woven into her lower sleeve. Reganian of course. Attached by a fibre-optic strand which lit up she entered both 'cosmology' and 'origins' then waited. The standard line. Then 'particle physics'. Answer: particles manifest in hyper-dimensional space and mind-translated into three dimensional modelling. The Divine Mind was infinite the explanations ran and it could well be that the structure of space would thus reflect that same divine infinity. Given the finite limitations of sentience it was not deemed intellectually worthwhile to pursue without end answers regarding the physical realm.

A hint that research could go only so far. Infinity was off-limits. So that was that. The whole universe was projected out of the Divine Mind. No side effects, no shock waves no evil life forms. Try 'cosmic history'. Much the same. Then a codex: 'It is possible that given the presence of other sentient life forms apart from Prima's, [the original Divine Race] that being misguided or ignorant could stray intellectually and thus emotionally from the divine evolutionary path. It could then be supposed that they manifest certain psycho-pathological traits. Given that such extreme Volatility would therefore present itself in a corrupted sentient resonance it would not be successful as a developing race on the long term. By denying either through wilful determination or duped by their own self deluded cosmic orientation that the universal laws of attraction and repulsion – in this sense attracting the repulsive forces – that any race thus mis-oriented would attract their own doom.' Well that was something, they would self destruct for it went against the grain of the Great Being. So if Primaian thinking would thus be polluted it could be dragged down into this misguided vortex of delinquency with its dangerous implications. They certainly had their explanations down pat. It all fitted, officially at least. It also answered any intellectual qualms that might arise as to why a less than perfect race could actually exist for a limited time in the universe. Which did not get her closer to a plausible answer.

She shut down her computers staring at the blank screen. Something was moving outwards towards that alien race. Maybe it was the Divine Mind's retribution and Prima had unfortunately been in the way. But that then indicated that It was less than perfect which of course It could not be. Her inner conflict was unresolved.

Roshati knew that if she could get word of this accidental screw up out to the Reganians they might find a more scientifically based answer without the religious overlay. But they were sealed off and she was beginning to understand why. It could well be that her superiors way up the chain were aware of what she now knew and to stop the panic the soul searching it would set off was thus best buried. No point creating anxieties amongst the Volatiles below. What a bother.

Confined to this part of the Orbital was not unlike them being confined to this part of the universe. Whatever was out there was off-limits. Their reasoning was tight, it made sense, superficially. No way out. Their universe self-contained, enclosing them, containing them, imprisoning them. Then it would be up to the Reganians to break out. She hoped they would.

Since this was not letting her get to sleep she opened her terminal again. She entered 'history' and 'the great calamity' then 'visual representation'. The graphics were brilliant. Computer enhanced it showed in simple forms light beams coming out of the void and hit Prima. Prima's shield, its resonance field glowed eerily being reconfigured, it's essence distorted in chaotic patterns that merged and remerged in rapid succession. It's inherent geometric beauty distorted. She reran the scenario several times trying different focuses. She entered 'real time' to see what really occurred. No foggy wave front, just the incoming light beams. So the real time had been edited. What was on file to them as astronomers was not even the complete picture.

She then entered 'galaxy formation'. A short message appeared. 'So far the galaxy has always been there. It would be useless to speculate what pre-existed accept the Great Mind itself. As to the 'how' the same logic applies. At this moment no one knows for certain. But there is one theory which might explain in our limited physical knowledge the latent processes the Divine Mind used to achieve this miracle of divine creation.' She entered 'visual process' and waited. Blackness. Then a light grey fog slowly pouring into a centre. Gravity waves pouring out, the inner point starting to glow creating trillions of stars moving outwards. Slowly the galaxy self-assembled itself. At the edge planets formed and sentient life established. The sequence ended there.

Roshati tried 'cosmic history, visuals'. The galaxy glowed in white splendour the majestic spiral arms stretching into the blackness of space. Slight wavering of the spiral

arms as the galaxy rotated slowly around its axis. Dark matter was being pulled in perhaps feeding the energy the galaxy lost in radiation establishing a steady-state equilibrium. There the history stopped, but not the programme. There was something else then. Not in the official history.

She had a flash. Opening a channel to her workstation, for she had not really deleted what she had discovered on duty, merely buried it for she wanted this to come out. She uploaded that data from her sleeve's embedded pc routing it through her terminal. If this wave-front matched what was hidden in the mainframe it might accept it, and thus reveal what was if it was contained there. Moments later the match was complete. The visuals exploded. A massive burst of energy as a wave-field moved out from the centre leaving a trail of cosmic debris in its wake. Like an ocean wave on a beach the froth behind it. Spectacular explosions in its wake, high enough temperatures near the centre melted stars turning to super heated plasma bubbles. Eventually they recollapsed into new stars. The wave front as an event pushed outwards accompanied with a particle zoo of disintegrating electrons. Gravity waves carried the remnant high energy particles further onwards until the combined waves hit Prima. The gravity waves moved at a slower pace yet the other mysterious wave front accelerated to near light speed the further out it reached. There the data stream ended.

Roshati downloaded this cosmic phenomena on her own sleeve's pc. Then she shut down her terminal and deleted all the files, the search history and decided to do a diagnostics as well removing any remnant traces strewn around its memory chip. She dared not access the mainframe and delete her enquiry there. That would be too suspicious. After all she was cleared to access it and there had been no alerts raised as to her enquiry.

Start again. Check the great void. On her terminal screen a note appeared that due to the potency of the alien signals simulations were used. So they were doctored. As an astronomer she knew how weak photons were. They would have a negligible effect, less than a torch. Of course the official explanation was the informational content that made them so dangerous, not the signal strength. But the data did show what the information was. Images of massive weapons of destruction, cities burning as if visited by celestial fires, burnt out shells of towering structures, forests on fire billowing orange hued clouds of smoke, the dead strewn like wreckage amongst strange mechanical devices. These were the aliens who would not be satisfied in wrecking just their own planet. Space ships looking eerily insectoid blasted more robust ships that exploded in glowing radiant light then blown to smithereens as if a small sun had been deposited in them. Debris

slowly spewed forth with fearsome majesty traversed hyperbolic paths in chaotic splendour. Over a pink planet huge vicious looking attack cruisers used bright beams melting cities below. This was their future if the aliens did decide to come their way. In the public domain for all to see. It was frightening, and it was real. She had seen this many times.

By rights given the speed of the wave front it should have hit that distant sector of that other universe eventually. And sure enough, with some clever search patterning, zooming in and out of their history a perturbation was manifest. The time-line coalesced but instead of incoming it was outgoing. A reversed run sequence superimposed to make it *appear* as if it originated from there. In that case the wave front ought to be coming their way. Somehow those in control whilst inserting it there had forgotten to have it coming their way. She had searched the void, as all astronomers did and the only thing coming their way were the photo beams collapsing out of the particle fog. 'Ah', of course, this wave-field was transmuted into a photon light field. How clever. It dovetailed. After all their universe was different, or so it was claimed. The wave front thus explained. Yet it did not exist this end. What impressed Roshati was whether it contained information that sent sentient races insane. The Great Calamity certainly had created decades of incessant warfare. Then finally exhausted amongst the wreckage of their world the priests had introduced the concept of the Great Divine Mind and how strife and murder went against the great cosmic plan. Since then there had been peace. Even on Regum. Until the alien incursion, sending out it's malignant field. There was no way the wave-front could have bounced back. Another thing that was amiss here.

She shut down the terminal, and downloaded the data onto a memory chip. Now she had two. What was going on? If these aliens were coming their way why did the Ecclesiastics and the rest of them do nothing? Why not alert the Reganians. They had the technology to copy at least the alien's weaponry. Yet instead they did their best to try and convince them to be like Primaians. That was no way to fight these homicidal beings if indeed they had their sights here. Another thing that made no sense. Unless of course none of this was true. Not their wars, awful and horrific as they were. Maybe they had no intention of coming this way. Maybe they didn't even know Prima or Regum existed. So much that didn't add up.

Her com-link blinked. It was Saja.

"Yes?"

"Tomorrow, well before you start your shift. Meet me in my cabin say ten?"

"Why yes, I'd be delighted. Want me to bring anything?" she hinted vaguely.

"Just your thoughts."

"Fine."

On a secure link Saja said: "It's arranged."

"Good." Dr Shach replied.

Roshati was not that surprised when upon entering Saja's cubicle, identical as they all were that she had a visitor. Tall in the white garb of a Divine, patrician face, friendly brown eyes in a smooth face, middle aged he rose and introduced himself. Just his social standing, not his function. Not that Roshati could not guess as to why. At least he was not security, one of the Domimax's who policed everybody's resonances to make sure they were all correctly aligned to their domain status. If something was seriously amiss then their active arm, the Domimus would intervene doing the actual work of re-aligning the discordant resonance of the unsynchronized individual. Yet both Ecclesiastics and Divines, even the Exalted could not avoid them completely. But Roshati guessed that was just to give the impression of some equality for there had never been a case of any of the higher ones being subject to their scrutiny. Roshati was ready for whatever was coming her way. Knowing what she knew she had the confidence to explain not just her actions but be able to back it up with real-time data, even if massaged into a more anodyne imagery.

"It is a pleasure to meet you Roshati."

"I am honoured by your presence." and waited to be asked to be seated. She felt no probing from either of them.

He gestured for her to a fold out chair recessed in the wall.

"So Roshati, how is everything?" he asked pleasantly.

"Apart from the lock-down, fine Dr Shach."

"Yes it is unfortunate." Not explaining why exactly the extra security precautions were in place.

"Don't tell me there is a mole." Meaning Reganian penetration, a remote as in a turned co-worker, messing with their data-banks...when it struck her that perhaps what she had uncovered later had somehow come to Saja's attention. She was head of astronomy. Roshati relaxed. She had mulled over everything so often that no matter which it was looked at she had a plausible explanation from a Primaian point of view.

"It is just a precaution." He said kindly. "I'm sure we will all manage." Did that include him? She doubted it.

"We have to be alert." Starting on the right track.

"Commendable. There are those who are to a certain degree hostile to our sacred mission."

"So I believe." Which she did not.

"Those same unknowns are very persistent, relentless almost."

He was of course referring to what the Reganians disseminated in their WebWorld. But as she had not entered that she felt on sure ground.

"I have, perhaps in my ignorance missed something Dr Shach." And she looked at Saja who was sitting there merely observing. Her eyes said nothing.

"Your honesty becomes you. There are many ways they try to influence our reasoning. A hint here, an unspoken thought there, corrupt data in the system, false information, anything really to throw us off track." He said in one flowing sentence as if the allusion to the data was on the same low alert level that was in place.

"Well with us being sealed off...I cannot think of anything I'm afraid."

"The Reganians are planning something. Have planned I should say. Disinformation to be precise. It's the price we pay for being on what is really their Orbital. To be expected really." He said resignedly. "Have you noticed anything unusual recently?"

"Well I really only work with Tregon and he is safe, his resonance secure."

"Any of the support staff?"

"None I can think of."

"Has anybody approached you?"

"No Dr Shach."

"It might be nothing. Idle conversation, nothing specific. Speculations perhaps mixed into a conversation, dubious thoughts calling certain assumptions into question. After all it would not be unusual for our support workers to show some interest in our holy work."

"No. Just nods of acknowledgement really. No conversation of any import if that is what you mean." She replied easily.

"We are faced with a problem Roshati. We think there has been a breach from the other side." He dissembled.

"Really?" she was genuinely surprised and looked at Saja looking vacant. "Did you know?" Roshati asked her.

"Not until a moment ago."

"We will have to deep scan everybody." Shach said almost reluctantly and she knew he was sensing her. Roshati could not keep her surprise hidden, that would have been suspicious in itself. So surprised she was.

"We have to uncover this breach. You see it's from the outside, a penetration. We just don't know exactly who has been penetrated. Tedious I know." Roshati wondered why there was no general meeting of all personnel if that was the case. Surely not her! She had done nothing. Just sought information as an astronomer. She tried to keep her displeasure at being singled out in check. Then she thought of Varus. Surely not him. Did she dare mention that?

She told him of his mysterious visit. He listened attentatively to what she revealed, but said nothing when she had finished. She even included going to Saja voicing her concern and added for good measure that she had not put this on report. She was no trouble maker.

"That is appreciated Roshati. You can forget about Varus." Luckily she had not said that he had deleted whatever he had found. Just that he had done something and left.

"I already have Dr Shach. It is of no interest to me."

"Not even the information he may have gathered?"

Roshati had an answer. "Given the positioning of the satellite towards the Void and what it contains, I made sure the data banks, the receiving files were not corrupted by the aliens. I mean with no explanation if one were suspicious it could look as if their data may have been so configured as to compromise our operations."

"Very astute Roshati. But there was something else."

It was an old trick. Pretend to know of an infringement. Not as a question when uncertain but as a declamation of intent, a bluff.

"There probably was, or worse, is." She countered.

"You are correct in that regard." He continued kindly.

"What a mess."

Shach took out a hand-held computer. The screen active merely scrolled down mixed letters, encoded.

"Trevos I am informed sent some information to internal security."

"He is always suspicious. Fixated almost is the word I think. He sees conspiracies everywhere Dr Shach." She said trying her best to diffuse the situation.

"Unfortunately procedure demands any information be acted upon."

"Of course." She did not even bother to look at Saja.

"It is rather odd. He claims you have accessed privileged data, or worse."

"That would be Tregon. You must have a bulging file from him." She tried her best to lower the heat. Still by the very fact that Shach was merely interviewing her, and not officially at that boded well.

"However it does worry me."

"Tregon worries me too Dr Shach. Sometimes I think he wants to be noted. Any excuse will do. For starters checking a system for infringement is nothing suspicious. Whatever he has concluded is subjective. Never mind Varus." She added for good measure. "I mean I could make an official complaint here. Not Varus but Tregon. He's going beyond reasonable doubts. Who knows who else he is suspicious of. He might be covering his tracks Dr Shach. Throw any suspicion off, he could be the mole." She reasoned. Why not? He had doxxed her in so now it was her turn. "I never actually even considered this until just now. It makes sense. Be the vigilant alert studious perfect astronomer. Arouse suspicion of and about others, throw a fog over everybody, well not everybody but certainly not those above him. Makes him look secure."

Shach merely observed her. If he was sensing her he was very good. Luckily for her she meant it.

"I think Tregon is unstable Dr Shach. I say this officially, or in confidence at least. His demeanour is too pat, his resonance too tight all the time. It's like he has woven a shell around himself. Who knows what festers beneath that surface. His resonance might be pure but his thoughts are not." She tried her best. "Maybe Tregon is fishing for a transfer and will use any situation, any person, meaning me Dr Shach to attain his aim."

"I think you are getting a little ahead of yourself here."

"He is playing a vicious game, one of his own making."

"There are other considerations here."

"Perhaps from your exalted position." Roshati feigned a sigh. "Of course I got no idea what Tregon is on about."

"Then let me show you." The screen's information was now decrypted.

There it was in all its holy glory. Tampering with information, illegal access to secured data, throwing suspicion upon one Exalted visitor, accessing hidden portals in the main-frame, downloading limited access information, making contact with the enemy [alien], susceptible to self-manipulation...it was all there. Yet how had her terminal revealed all that? Unless she had been put under surveillance. She checked the time of Tregon's report. Straight after their shift. So whilst she had taken her shower they had put a trace on her system. Thank you Tregon.

"It is my sad duty to inform you Roshati that you will be stood down." She was appalled. On a mere suspicion! Hearsay! Well she would have her day. Her answers she had thought out anyway. It would all come out, tailored of course to what the Inquisitors wanted to hear. Tregon had started this, it would end with him.

"So is Tregon aware of the seriousness of the alleged accusation?"

A look from Dr Shach. Saja opened the door. Four security guards were waiting outside with a body bag and a stretcher. The squad leader pulled out a loaded syringe, whilst two of them held a very surprised Roshati in her seat. The injection was painless. The lights went out.

Dr Shach and Varus were in the Deep Resonance Scanning control room. The four white banks of scanners, each a large square shaped construction with a trolley where the subjects head was inserted then probed. The scanners had been modified from Reganian models used to read synaptic pathways, the condition of dendrites, endomorphin activity and anything pertaining to the neural net of the patient. The Primaian technicians merely modified it so that individual resonances could be checked for any disturbance, any deviation from the subjects relative status. Going Volatile was their primary concern, reverting through undue influence to their ancestor's primitive emotional states. Though the subject could be stabilized, enhanced even, none of this concerned the two men at the moment.

Roshati and Tregon ready to be inserted. The technician on duty waited for the go ahead.

"We'll run them simultaneously." Shach said to Varus. "You did well in alerting me to Roshati's reaction. Now we will know for sure if she is either under the alien influence or an agent of Regum."

"Yes. She had reacted, her resonance had been slightly more perturbed not just by my presence but my activity back there. First the surprise which was dampened too quickly. That alerted me. An indication of having perhaps an 'insert' or her merely being re-conditioned. Either way the result was the same. Her enhanced calmness. As to how they managed to get at her we may never know. They know how to cover their tracks, insert false histories. I've checked that of course. It could be her family. Like many of the chosen they come from the elite, the very top. And they do have contact with Reganians in their normal duties. All it takes is a handshake to pass on the insert. Or a spiked drink. Easily done." Varus relayed to Shach.

Not that he was ignorant of Regum's need to get into their heads, turn them around and get the resultant feed-back through specific resonance field-waves picked up by sub-routines in computers, hijacking comsats or having go-betweens in place on the Orbital, the most likely scenario. Thus the security clamp down.

"I don't think her information got out." Varus said as the trolleys moved the two bodies into the scanners.

"That was a good move on your part. Anyway the data would have had to be removed at some time. Your timing was exquisite. Did you know?"

"Not really. Except for Roshati's controlled head-state. She's not of the requisite level to be even moderately enhanced."

"She the only one?" meaning amongst the astronomers.

"Well Saja is a Stable Volatile. The others are Naturals." Varus related. He had been briefed. Shach was too far up the chain of command for cases such as this. He was there to report to his superiors. Everyone worked in small cells. So that even if the Reganian's got in they would not get very far.

"Test subjects are read to go." The technician said.

"Then let us begin." Shach said.

Screens came on line, scrolling down the numbers indicating the base-level of their resonant activity. It was there that the truth was buried. Not only did the scanners read the aura, the resonance of the individual, but with some hard work in creating reverse algorithmic processing codes a rough image of their thought patterns could be extracted.

The scanners did their job. Tregon's base-state was within the right parameters. Minor fluctuations for whilst the conscious mind was out of the equation the sub-and unconscious mind remained unaffected by the dose they received.

There it was. Heightened activity in Roshati's dual sub layered mind. A program was running trying to cloak her deep mind state. Tregon's sub-conscious a frenzy of activity.

"He knows and it disturbs him." Varus observed.

"Good. It means he hasn't been turned. He'll have to be BrainDrained of course."

"Well we have a pool of applicants. So replacing him won't be a worry. After all a programme could do what they do. Doesn't take a lot of brain power to be an observer. Just a good attention span. We going to go easy on him?"

"He'll be reassigned. As will she."

"Good. I'd hate to see him wasted." Varus replied. "Now Roshati."

"Yes." Shach said slowly. "BrainDraining would be too dangerous. We'd be downloading what she knew. She will have to be terminated."

Varus held back his surprise. It was rare for any termination to be even considered. And then only in the most extreme of cases. So this was extreme.

They had set Roshati's scanner only for a surface resonance scan. They already knew what she knew simply by her accessing the data bases which had been cleaned out. Varus had seen to that. He was not overly concerned what Roshati had uncovered. It was all coincidental. And he had his own explanation which he had related to Qatus. The alien field had reconfigured the wave front. Sent out by the Great Cosmic Mind it had been a counter-move which the alien field then corrupted thus causing the Great Calamity. And that explanation served them proficiently enough. All was well.

"I assume you will handle this?" Varus asked.

"All in place. Well almost." Shach took out a microchip and gave that to the technician.

"Enter that in Roshati's probe. When the run-sequence starts, blend the two base-line resonance states."

The technician followed the instructions. Moments later the two states were in tandem. The microchip uploaded its data.

"This will make sure after Tregon's BrainDrain that he will remember what we want him to." Shach looked at Varus.

"Excellent."

Shach watched the accompanying graphs and satisfied his job here was done, telling the technician to BrainDrain Tregon. The scanners by reversing polarities in the resonance field removed the informational content within their memory. As the memory was both localised and distributed throughout the mind voiding the whole mind made sure nothing was left that should not be there.

The technician entered the requisite commands and Tregon's mind was wiped clean. Shach gave him another microchip. This one inserted his new history his new life. The persona was kept in place. Except he had never been an astronomer had never been in space on the Orbital. Just an Enhanced Volatile working at his new location. Even if some minor remnant remained behind it would be irrelevant. Nothing could trigger his real memory which was no longer in existence. He would be blissfully unaware of what transpired up here.

"I think that is that." As Shach took back the microchips. The computer banks deleted all information regarding the scans.

"Well then. My job is done here Dr Shach."

"Lord Qatus will be pleased. Roshati's delusion is no more."

"And Saja?"

"On hold. If there is a leak then we know who did the leaking. If it remains enclosed, fine. If not, well she knows what will happen to her."

"What about the Reganian cut-out?"

"That is why we are leaving Saja in place. If there is an attempt to contact her then we will know who is the traitor." Shach said satisfied.

"You know there is the slight, and I mean slight possibility that Roshati could have stumbled across this by herself."

"True. Meaning no traitor?" Shach said unconvinced.

"Only in relation to Roshati."

"That could be so. We know though that the Reganian's are all suspect."

"Keeps me busy."

The trolleys extended out. Their work was finished for the moment.

A shuttle was ready to take Shach and the two bodies still comatose back to Prima.

Shach had not told Varus everything. He might be head of security on the Orbital but his domain encompassed much more. His Domain Lord Qatus as Web counter-intelligence needed a facilitator with Lord Pentham. Qatus was an Outer Guardian, Lord Gharbel the Inner and Pentham ground control. He moved amongst the three of them, unofficially for often certain events such as this concerned them all. Pentham's duties were primary active intelligence meaning people not systems. Roshati fell into his domain. The system had not been compromised which made this job easier.

Shach relaxed on the flight down. The programme inserted in Roshati's mind would wrap up her later termination. It would permanently remove whatever Roshati might remember. BrainDraining though an option would leave some deleted information scattered around the memory banks. Computers were simply not perfect. They too were subject to random fluctuations. The more complex the processes the greater chance of some discordance, a tiny data stream left over. He could not take this risk and all three DLs would agree. He did not need specific clearance to act as he did.

Roshati was already classified as dead as was Tregon. The pretence of his survival just that. He had only been BrainDrained to be an aide to Roshati's final demise. Back on Prima the two comatose bodies were taken to the tracking station at the space port. The

perimeter guards had been alerted not to interfere with Tregon and Roshati. A special security detail would handle them at the appropriate time. The inserted mental reconfigurations, the embedded data would do the rest. Their families would be distraught but that could not be helped. It would also be a good excuse to ramp up security. Who knows how linked the families were with their son and daughter. It was reason enough to keep them under light surveillance. From Roshati's point of view her plan could have been hatched right under their noses on Prima. One could never be too sure.

At the end of her shift Roshati asked Tregon to come for a walk. A little surprised for Roshati kept very much to herself at the tracking station within the complex of the space port, he agreed. He was not quite in love with her, but being in the company of a woman made him feel wanted. He had no girlfriend, he was terrified of women. Always fumbling when any talked to him at the canteen or whilst on duty. Even off duty if they went for drinks on the base here in the vast open desert he always seemed to panic. That set off more fright attacks fearing to revert to a Volatile. Whilst he tried to calm himself he said inanities that nonplussed them, wondering what he was on about. Then he would chide himself for being so clumsy which set off another round of introspection. So when Roshati asked him to go for a walk he readily accepted. He would try his best to remain calm, listen, say as little as possible, take cues from her. He might even get lucky and get a date.

The sky was turning into a fierce orange glow as the sun set at the desert's horizon. Purple clouds glowed brilliantly in the distance. Intermittent flashes of lightning turned them momentarily into bright lilac. They approached the outer perimeter gate, away from the launch pads. The four guards attentive to their orders outside their small huts.

"You gonna let us out?" Roshati brazenly asked. Tregon was surprised at his calmness. No one was allowed out, ever. Though he did suspect some staff were, if only to relieve the boredom and take a stroll towards the dry creek bed that during the short wet season let the desert bloom with a cover of multi-coloured flowers. Now it was dry light brown hard packed earth.

The guards looked at each other.

"It's not that we are going to walk out of here and never come back fellows." nudging her head towards the flat land stretching as far as the eye could see. Somewhere out there was a monastery, too distant to be reached on foot.

"We'll have to scan your leaving. Don't want you to get lost. We'll have to tag you two."

Tregon surprised. What a kept secret. He had never even considered leaving their base yet the guards must allow this now and then. They put on the flat bands around their wrists, status light green.

"Nothing out there." One of the guards said.

"Precisely." Roshati smiled. "Just the open space, peace and serenity." She said dreamily.

"Whatever you say miss. I get it..." he smiled mischievously.

"Just a walk." He understood.

"If you say so." He winked. Tregon felt himself flushing, his face red hot.

With their armbands in place they meandered out past the electrified wire mesh fence.

"See, footprints?" Roshati tried to make him feel at ease.

"Perimeter guards." Tregon replied a little nervously. Then thought he'd better say something nice: "You're enjoying this."

"Of course, aren't you?"

"I didn't know one could walk out."

"Oh everybody does it. The boss doesn't mind, as long as it's this gate only. There's nothing out here anyway. Just the desert, you and me." She smiled.

They walked in silence. Roshati at ease but Tregon's mind was in turmoil. What to say? He stole a glance at her. She was looking full of pleasure taking in the nothingness around her. To him it was just desert but she seemed to breathe in its vast emptiness as if getting a natural high. He followed hoping he would not say anything stupid.

"And tell me Tregon, what are your plans for the future?"

"Do my work. Be an observer, why?" he shrugged. It never occurred to him she was talking to him as a person, not just a co-worker.

"Me I want to travel."

"Well you're here."

"Yes but this..."

That had never occurred to him, unless he was transferred.

"I'm actually happy here." He nearly stumbled over a rock.

"Are you going to do some study. Move on, move up, move sideways?"

"I hadn't thought about it really."

"You must have some dreams."

They were approaching the creek bed. The ground more dusty here, tiny rivulets now dry like spidery meandering lines, miniature caverns. It delighted her. Even the small reflected the larger scale of things. There was order in the universe. Then something dark flitted through her mind. A discordant thought, a strange memory like some forgotten dream resurfacing. She shivered momentarily in the still air. In the distance flashes of lightning then a moment later the sonorous rumble of thunder. The wet season was approaching. The air smelt fresh.

After the thunder had rolled across the sky they heard the dull drone of a hovercraft.

"I hope they're not coming for us Roshati." Tregon felt panicky. He was trying to steady his voice, his thoughts, the implications. Demotion. The tribunal, the embarrassment, the associated guilt, breaking rules they were aware of. His family's reaction, maybe incarceration. Loss of prestige. Perhaps sent back to the villages.

"They're getting louder." Yet Roshati was not turning back. He felt like running. He looked over his shoulder. To his right the squat black shapes were still distant dots billowing clouds of dark brown dust behind them. He could make it if he ran right now. But could not tear himself away from Roshati. He looked with dismay at his band. Even if he made it back before they arrived the tracker would reveal his guilt. Had she set him up? Was this some sort of trap? Why? What had he done to her? He couldn't think straight. The beauty of the desert was now like some foreign terrain, forbidden territory imbued with menace.

The two hovercraft were bearing down on them, bouncing over the ground at full speed.

"They're coming this way!" he almost screeched.

They were onto them coming to a shuddering halt momentarily tilting forwards a little. Doors gulled open, the fan driven turbines whining. The second hovercraft stopped a little further out and eight security guards in desert fatigues surrounded them, taking up their positions stun guns drawn, their red lights glowing ominously.

"We're in trouble." He blurted. Roshati's calm unnerved him even more.

"So we went for a walk." she said as she watched four of them approach. "High fellows." She smiled. In their fully body armour and silver reflecting face plates, distorting their own shapes Tregon felt his mind just as warped.

The guns though were not trained on them but the other guards spilling out from the second hovercraft.

"This is weird." Tregon stammered.

"Sure is." Roshati said with a calmness that made Tregon wonder about her. Something was definitely amiss here.

The first group opened fire on the second group. High energy blasts threw four bodies back from their impact. The air crackled at the discharge and burnt charred flesh assailed their nostrils. Their torsos curved into the air then bounced obscenely along the ground. Bits of arms, legs, mangled pieces of bloodied flesh and their oddly tilted heads came to rest.

"Maybe they saved us." Tregon said terror stricken. Hope upon hope.

Four guards inspected the four dead sprawled bodies.

"I'm impressed." Roshati smiled. There was an eerie glow in her eyes which frightened him.

Satisfied the guards then raised their guns onto Tregon and Roshati and fired. Roshati died smiling, her mid rift blown away. Tregon took a hit to his head, his brains spraying in a grey and red mist out behind the gaping hole in his head then collapsed like Roshati blood spurting with bits of guts trailing out her blown out back.

The guards made sure they were dead then put their guns in each of their lifeless hands. They checked the lines of fire, the trajectories and were satisfied. Then walked around the scene of the carnage, made sure everything was in place as ordered by Shach. The squad leader spoke into his wrist com-link, listened for a moment, nodded.

Shach came out of the second hovercraft, stretched his legs as if on a jaunt through the desert, a diversion. The team leader stepped back respectfully.

"Good work. Today we have struck at the lower end of the Kabal. You acted valiantly for the defence of Prima. We have removed a part of the cancer within our kind. A job well executed." Shach said, choosing his words deliberately.

"Check their heads for implants." The squad leader motioned two of his men forwards as Shach gave them two portable scanners. Sure enough to their surprise two tiny microchips were embedded in the back of their necks just beneath their skin.

Shach hid a smile. They had been inserted on the way down in the shuttle.

They cut them out, their grizzly work done as the blood oozed onto the dry desert earth. When they had retrieved the chips Shach put them into two sterilized sample bags.

"Now make this an incident scene. Sound the alarm." Shach ordered. He then handed each of them portable camcorders.

"Your testimonies as agreed. For the investigating committee."

The four guards nodded and began reciting the facts. Moments later the siren at the base started its incessant shrieking alert. Guards on trail bikes roared towards the scene, the carnage. The preliminary team arrived followed by another hovercraft which parked a little back, the dust drifting over them. In the distance the roll of rumbling thunder. Two white clad forensics officers were already busy, another taking cam shots of the bloody scene.

"Not pretty." Shach said to the head officer.

"What happened?" Gert asked.

"A fire fight by the looks of things. Reganian agents." And Shach handed him the two bloody implants.

"Regum."

"They must have been moving out. We haven't searched their bodies yet. They may have classified information. Maybe waiting to be picked up by a shuttle out there somewhere when the first patrol by the looks of things stumbled upon them. They got the worst of it. Taken by surprise no doubt. Such a waste."

"This is a terrorist act then. Murder with intent." Gert said distastefully. "Well at least there's the chips. That may tell us more."

"Let us hope so." Shach said grimly. "By rights I should be the investigating officer but as I am a witness..."

"Very correct sir." Gert answered.

"Have you gone through their pockets yet?"

"No Gert, that would be interfering with the scene of the atrocity, though under other circumstances, in the field would be a different matter. No, I haven't touched anything."

"That will make my job easier."

"That is the general idea Gert."

"Thank you sir. You can leave your statement with me when it is suitable. Let you get over the shock and the loss of four good personnel. You may leave. I'll get the statements of the patrol now, then stand them down for the duration. An unfortunate incidence. They must have been desperate." Gert said appalled.

"The Kabal revealed it's ugly side. We must be careful not to overreact. This could be a deliberate provocation. Let's hope they keep their heads." Shach said for good measure. He certainly did not want this to spiral out of control. The turned agents working for the other side would be buried without solemn rites, in unmarked graves, their bodies incinerated first.

"Sir."

"What I am trying to say is that this is not to be seen as a diplomatic infringement. Officially these two," and he looked dismissively at the mangled pulp of Roshati, the first flies already swarming over the open wounds, "went Volatile. We are in a delicate position here Gert. This is a normal crime scene. It will be up to those in high command to know how to deal with this. The last thing we want is a war amongst the security forces."

"Yes sir." Gert said. He understood.

Reganian Deep Space Habitat

The sleek cruiser docked at Lehra's retreat in its stationary orbit near the gas-giant in the Rust Belt, the industrial sector mining the accretion disk of a failed planet. Far away enough from the many hubs for privacy but close enough not to attract the attention of Prima's spies regarding visitors. Given the thousands of habitats in the area the likelihood of Prima's stooges to notice her visitors was less than likely. Their main objectives the industrial processes, the R & D, the weapons that were rumoured to exist but had as yet not been found. Exist though they did.

The huge dirty orange and motley brown orb had an eccentric orbit cutting across the outer liquified planets allowing Lehra's habitat a free ride past some spectacular sights along the way. Capturing smaller outer planets it was a minor planetary microcosm along with remnant accretion debris. The nature of its aberration allowing Lehra to position her habitat so that it could never be directly detected by Prima's observatories. The perfect location for her hideaway.

The cruiser belonging to Drassid uncloaked as it approached the flattened retro design of Lehra's retreat. Its outer surface embedded with remote sensors above and below made the habitat look like a floating prickly yolk. The extended landing pad protruding like a tongue as the ship landed on it, then retracted into the receiving bay and sealed it in. Her guest disembarked feeling a little groggy from stasis induced sleep.

Drassid let his nano-bots slowly get his body back to normal. They released nourishing vitamins and restocking minerals which hyped him back into mental alertness. Drassid was involved with Virtual Quantum States which hopefully would not just tame but negate the tyranny of distance. The team was making good progress but that was not the reason for this visit. Pleasantly surprised he saw Lehra's private cruiser under maintenance as small insectoid robots crawled into open inspection panels, fibre optic and old fashioned copper wires spilling out. Routine back up systems, he noted, triple sealed in woven polymers undergoing a full overhaul by the looks of things. Next to her

ship, the 'Star' was Fertig's 'Ice Queen'. That was a pleasant surprise. Fertig was with SpaceKorps Orbital security. The timing could not have been better.

Drassid's cover as a research scientist allowed him to liaise with a group of interested parties concerned with Prima's ever growing paranoia. If their work on Virtual Quantum Computers managed to stabilise Probability Waves then space as well as time became an environment with near infinite potential. It would mean they could insert recon-sats, siphon specific data from any area and be out moments later. Barely a blip on Prima's more primitive scanners. But he had not come all this way, even though off duty, just to say hello. A disturbing development concerned him.

Lady Lehra's informants, mainly women, and the odd lover made her astute enough to extract mostly gossip and sometimes pertinent data. A snippet here, a casual remark there. Being Primaian by birth, of exalted status, one of the ancient domain families she had certain privileges which included travelling into space, something forbidden to the majority, the masses. Drassid knew she was a double agent, one leaning towards Regum. As such she was at home on both worlds. The ancient families were revered and accorded social respect on both worlds. The Primaian's held these Families in great store, so deferential as to almost worship the ground they walked on. The Domain Lords might be the visible power base on Prima, but what went on behind closed doors slowly found it's way to Lehra's extended network of observant friends.

He entered the first double sealed portals, was chemically doused for possible alien microbes, then at the second section removed his outer space suit and helmet, dressed in his inner protective jump suit. Drassid wondered why Fertig was here. It could not be just a social visit. Then again it was common knowledge where Fertig had been seen in the company of a very delicate young woman whose name now escaped him. Maybe they were actually visiting. Fertig did travel a lot, mainly with women. Yet he was not a womaniser as such. He merely preferred their company to relax in.

Drassid entered the habitat proper took the lift up and entered the living room. With gracious simple curves, a reticent minimalism was evident in its interior design. View screens were tastefully rounded off frames. As was the furniture. No harsh edges, soft ambient spread out lights, no glare.

Lady Lehra, as tall as himself, in her mid thirties wore a long gown tight at her midriff then flowing gracefully outwards, the sleeves hugging her arms just flaring slightly at her wrists, the gown blending into a slightly ruffled scarf. It hid her strands of fibre optic inputs which gave her enhanced capabilities as an external source. As a Primaian she was loath to implant anything into her head. Drassid was merely low level boosted if only

to be free from having to calculate equations. No intuitive programmes to expand reasoning powers he wanted to do that himself. With soft scan capabilities of course. Prima's DVs could plant themselves just about anywhere psychically. Even out here behind the gas giant. If they had an image to focus upon. Which they had not Lehra assured him. The gas giant's dark orange filled the elongated portals.

Fertig had risen, his friendly face beaming having met Drassid occasionally. He had seen him more than having ever talked with him. As a scientist Drassid moved in different circles. Yet his superiors had sometimes invited him to diplomatic functions if only to satisfy Primaian curiosity of their current developments. The Primaians always knew more than they let on, so it was often Drassid's function to downplay whatever it was that interested them. So he played dumb, stating with ease just how difficult any scientific endeavour really was. Thinking something is possible did not make it so. Primaians were so used to getting their way, manipulating minds to do their work for them that they had no idea the hard work involved in achieving anything.

"Drassid, so good of you to come at such short notice." Lehra's genuine open face made him feel welcome. Fertig was beaming too. They were having cocktails. With a remote on the low glass coffee table she picked it up and lowered the soothing, yet nifty rhythmic music being played.

"Always a delight to be in your company." Bowing gracefully towards her which she accepted with a slight bemused yet thankfully received look on her face. "Captain Fertig."

"Lady Lehra speaks highly of you."

"You have an interesting ship."

"Ah."

"An aperitif? Or a cocktail?" Lehra interjected before they were tempted to start talking techno babble.

"Your cocktails are something else Lady Lehra. Aperitif please."

As she busied herself with the drinks trolley, made of enforced glass, the bottles with their various liqueurs glinted ceremonially under the soft lights. She poured him a thick green liquid handing him the tiny glass. He thanked her and took in the pleasant surroundings. The holograms were muted abstract scenes slowly changing patterns mimicking clouds in the sky.

The drink was both bitter yet subtle with an underlying sweetness that lingered on the tongue. As it coursed down into his empty stomach a soft glow of comforting warmth slowly radiated within him.

"Nice drop."

"Have a bite to eat. The cheeses are just the right temperature now." Drassid saw the side glass table covered in an assortment of cheeses, tiny baked pieces of bread and small colourful sticks to retrieve them with. He had several, he was hungry.

"I am always delighted to be here."

"Anyone show any interest?" Lehra asked meaning had the Primaians followed him remotely.

"Probably at first. Usual traffic. But I used a normal shuttle at first, went down to Regum then left on their blind side. My system sensed no covert probing."

"Fine. Captain Fertig has some interesting news."

"Yes. You know this planet we discovered at the next spiral arm, well it's gonna happen. Factory ships are on their way. It's ours. No life even though it's got a breathable atmosphere. We're inserting algae and specific bacteria to modify the atmosphere. Mass insertions. Cruisers from Regum already on their way. Slow drives. Ready by the time the first settlers will arrive."

"And Prima?" Drassid enquired.

"We want them on board. Well we're not going to stop them. Oh we'll dance around the subject of course, uhm and ah a bit then with polite reluctance accept any contribution they can make."

"What are we going to do there?"

"Make money. It's gonna become a resort planet. And guess what its main industry is going to be." Fertig looking pleased. "You won't believe it when you hear it."

"Surprise me."

"Gambling. One huge casino. Plus support industries for space of course. Leisure oriented. You know the Primaians have a weakness for gambling. The Families from Regum will form consortiums, it will be self sustaining. Credits galore. They'll get a cut of course. Prima has indicated their acceptance. There are still many on their planet who want out. And Regum is too much for them. So 'Novus' as it will be called, will be an outlet for their pent up, ahm frustrations. Nanotech will build the basic infrastructure, then when the Primaian's arrive we'll use more basic robotics. Totally retro industrially and space wise. Can't let them think we're too advanced."

"Sounds good." Drassid had some more piquant cheese. Lehra refilled his glass.

"Something's come up." She hinted.

"Thought so."

Lehra graceful as ever paced the thick magenta carpet. Fertig already knew and merely watched Drassid's reaction. If any.

"As you know we managed to tag some Primaian personnel."

"They haven't suspected you! Is that why you're here? Hiding?"

"No. I sometimes wonder how I get away with it." She said.

"You're connected Lehra." Fertig replied. "Your status of course. And from a security angle it would not be improbable that as you are such a good conduit of information it benefits both sides."

"Yes, I get that impression myself. But this is not about me." She frowned slightly and put her glass on the table. "There was an incident at their space port. A fire fight."

"Bang bang?" Drassid's black humour hiding his surprise.

Lehra nodded. Fertig was studying him.

"That is so...extreme. A rogue cell we don't know about?"

Lehra looked to Fertig.

"It's all very mysterious."

"I can imagine."

"Two body bags left the orbital over Prima. Now they could have been burn-outs. BrainDrained perhaps. Our source confirms that much up there. But our sensors picked up the minor battle. Lethal force."

"Someone did go rogue. There hasn't been something like this..." Drassid shook his head stunned.

"That's just it. And it's covered up. We got this break because one of the security guards is the one tagged. They still don't know we're doing this. This incident concerned their astronomers. Specifically one Roshati and another unknown. Now we know that Prima buries any uncomfortable knowledge that doesn't fit their official stance. This concerns their astronomers and you know how tightly they control them. It attracted our attention at the highest level. Our level I'm referring to. The question arose of course what did they find out? They were removed from the Orbital, flown down and almost within moments of being deposited on Prima ended up getting shot. It gets worse."

"Worse?"

"Oh yes. They made it look like these two astronomers, now at the tracking station at their space port attacked a group of perimeter guards. Officially Prima says, they were Reganian agents and that we were going to pick them up with whatever data they possessed. A second patrol arrived and that's when they were terminated."

"Were they going to be picked up?"

"We know nothing about this. I doubt it. There is one possibility that they might have tried, in desperation to contact us, but nothing was picked up in the ether so to speak. Or they never got that chance."

"This is awful."

"Prima wants something kept secret. It's the worst thing they could have done. Because we started a search analysis. It's not to do with 'Novus', that is more or less an open secret. But now Prima is, at the ground station and on their parts of the Orbital in total lock down mode. They were more or less already. So we initiated as said a search, and found nothing of course. Nothing current." Fertig emphasised.

"Go on." Drassid said carefully dreading the worst.

"So we went through the records, astronomical history looking for anomalies. And there is only one."

"You mean..."

"What they called the Great Calamity. When the so-called alien field was first noted. We know of course it's merely the distant light from that part of the universe which the Primaians spun into a horrific nightmare scenario. But there is something else. A cosmic shockwave passed through at that time."

"Black matter repulsion." Drassid explained.

"What? I'm a bit ignorant there." Lehra said.

"Simple really. Our universe draws in the stuff of space. Space isn't empty you know."

"I'm aware of the probability waves and heard of that. Never really thought about it."

"Nobody really does. But the current theory is that as our galaxy which is huge compared to what's swirling around us has a phenomenal gravity well. So it pulls in black matter. More like quantum foam really. But it can't go on continually and so now and again, in astronomical time that is the odd excess is repulsed re-establishing an equilibrium. Simple really." Drassid smiled.

"Ah. So what Prima is saying..."

"Is humbug."

"Thought so. But why take out Roshati?"

"Beats me."

"Can you see what the gossip is?" Fertig turning to Lehra.

"What, her murder?"

"Anything Lehra, everything."

"Yes, sure."

"We may have missed something. Something she discovered."

"Yes, I see. Well it won't hurt to look. You got a data base here Lehra?"

"Only the basics, for navigation."

"Well whatever this wave was, it happened long before we got really technological. At the time we didn't even notice it. They did."

"Psychic abilities." Drassid was referring to Lehra and her race's unique mental make up. "They sensed what we discovered, only later. I know the wave is way out there in distant space. It's probably dissipated. But," he brightened, "I can do a simulation."

"Would there be more then?" Lehra asked.

"It's not impossible. But if anything were coming our way, we would know. The Primaians think the galaxy is at rest." Drassid was certain of that much.

"Would it, could it affect the Web?" Fertig asked.

"Now there is a good point. Like solar flares?"

"Something like that."

"We got around that. Our distant probes reconfigure that massive spike into lower energy states, quite harmless really. Well slight disturbances, some fireworks in the system, momentary glitches, nothing serious, nothing that cannot be handled. But you've got a point. Thing is I don't think anybody really paid attention to this. So what's your angle concerning Roshati." Drassid addressing both of them. Lehra because she was Primaian and Fertig being SpaceKorps sometime, free roaming diplomat at other times, the perfect cover to gain information and disseminate disinformation. And here he was, a Reganian double agent and scientist involved with spooks. Changes and not necessarily for the better. Primaians taking out their own astronomers. There had to be more to this than some ancient shock wave.

"Maybe she did try and contact Regum" Fertig wondered. "Interestingly enough," turning to Lehra, they were still standing, for one could only sit so long, "Prima is not making a big deal out of this. You'd think having a mole, an agent, a traitor from their point of view they'd milk her for what it was worth. Instead they are very reticent about it all."

"That is interesting. Now Lehra, you always know something." Drassid hinted.

"Fertig is right. Those in the know are appropriately shocked. It could be genuine, a very regrettable incident."

"It's all wrong though isn't it?" Drassid surmised.

"Very. And they were armed. How did they get guns?"

"Oh yes."

"We have to find out what she knew."

"Well that information would have died with her. They obviously did not BrainDrain her. That would go into their repositories somewhere. Maybe."

"It's very very suspicious." She said.

"Oh yes. Taking two of their own out. Something is rotten."

"Murder usually is."

"Any unusual activity on the orbital?"

"Unfortunately no."

"Who knows then, it could be anything really."

"Drassid."

"Yes Lehra. I get the drift. But with no data, and I'm not asking how well acquainted we are up there, well, it's all speculation really."

"So nothing usual out there, except that sentient planet. Maybe it had something to do with them." Lehra guessed.

"Now there I do have some good news. And it's no change."

"We are in the dark." As usual Lehra thought.

"We certainly are that. At least our other experiment," Drassid was referring to their study of probability waves, "is making progress. The theory's all worked out. Should start test runs soon. Calibration's the thing."

"Tricky?" Fertig asked.

"Oh yes. The computational power needed for starters. Not for the test run, but well I can say this, for future projects. But we have that worked out as well, solar power."

"We use that already." Lehra said slightly puzzled.

"I meant star power. All top secret." Drassid reminded them. "So Lehra, the only reason I've mentioned this is in case something drifts your way. Local curiosity within your realm I mean."

"Someone bragging perhaps?" she smiled sweetly relishing the challenge.

"Of course this won't be released in the Web. So Fertig, if any players in there come across anything remotely..."

"The Web does that anyway. It's no news in there. I mean it's all cyberspace anyway. No big deal. It won't be of interest to those inside. More redundant if anything. And relatively cumbersome. Unless those running the experiments leak, it won't appear in there." Fertig aware of Regum's Web status.

"That's something." Drassid said relieved. He used the Web for background information nothing else. He wished he had more time in there but he did not. His work kept him busy..

They sipped their drinks in silence.

"I know we're all a bit shaken by what happened." Lehra said at last. "But we have to plan for the future."

"Ours I assume. By that I mean this group of ours." Drassid probed.

"Yes. The only problem is we need a distraction." Lehra suggested.

"Why?" Drassid asked.

"Prima is too quiet."

"Oh dear." Drassid guessed. "Something political? I hate politics."

"It has it's uses." Fertig laughed.

"I'm sure. Is something being planned I'm not aware of?"

"Nothing that isn't already happening."

"Wouldn't Novus be enough? Plus this other distant planet, I mean it's the discovery of the millennium. Other sentient life. We're not alone. Not enough Lehra?"

"Prima is too focussed."

"Ah, I see. Something local."

"Yes."

"Fertig?" Drassid turned to him.

"I guess we could always negotiate a new treaty."

"That would do fine." Lehra was pleased.

"What about maybe inserting something in the Web. Then again, everything is in there anyway and the Primaians are loathe to go in there. No I'm afraid no one is making any noises at this end." Fertig related.

"Then we should push them a bit about this incident."

"Don't involve us Lehra."

"Well I'm sure you men will think of something."

"The pontiff is getting on Lehra."

"That may have to do. An Ascension only occurs once in a lifetime."

"So Lehra...What are you thinking?"

"I got this feeling Prima is up to something."

"Because...?" Drassid asked.

"Call it a woman's intuition."

"A disturbance in the ether as your race might put it?"

"Something like that."

"Well I have to disappoint you but everything is right in the cosmic realm." Drassid answered.

"I don't know. I've been having these dreams, nightmares really."

"That is rare for your species."

"And if I mentioned this on Prima I might get scanned."

"Well you know our view on dreams."

"Yes much more logical. But we are psychics. And the scenarios I'm getting are something you would not want to go through."

"That intense?" Fertig was surprised.

"And recurring."

"Want to unload it? Helps you know."

"That is sweet of you Fertig. Essentially it's like the ancient days of war and murder, calamity and destruction. Don't know where. The place, the planet is familiar yet alien. It's as if I belong there and yet am outside of it. I'm safe myself but the horrors around me as if the sky were impregnated with a cosmic evil..."

"Ah Lehra, that's the propaganda getting at you."

"You think so?" she asked somewhat relieved.

"What else could it be? Not the aliens surely."

"I don't know, but something is not right."

"Have another drink."

"Yes I think I shall." But it bothered her just the same. Something was very very wrong in the psychic realm. It wasn't just her. Some of her friends back home had these same disturbing occurrences. They were worried they were going Volatile. She felt its impending doom laden scenario like a future state which could not be shaken. As if it had already happened, that they were heading towards it, already written in the stars.

Having gotten the latest information out of the way, they decided to indulge themselves. Then sleep off the hangover before they left. Drassid to Regum's secret quantum research facility, Fertig to Prima's Orbital. Both men polite enough not to ask Lehra's intentions. The less they knew of each others movements the better.

Prima.

The screen on the wall showed the alien planet in that distant disturbing universe. White streaking clouds where its sun shone, flashing thunderstorms, blue oceans, patches of dark green forests, white and grey snow covered mountains downloaded via the foreword probing Deep Visionaries through the computers of Regum's Orbital over Prima. The run sequence not real-time.

The pontiff's aide called up the planet's resonance field, the sum of their sentient intelligence. Swirling patterns appeared, muted browns, khaki greens sometimes flashing midnight blue here and there, indications of highly active individual thought patterning revealing their bio-active minds. No traces of artificial boosted or contrived computer enhanced electronic signatures.

"Definitely Naturals of a very high order, extremely focussed. If we did not know any better, calibrated. Yet that calibration, that resonance of theirs does not fit at times, indicated by the blue lightning flashes as an extra-terrestrial incursion. They are experiencing extremely intense spiritual revelations. At this stage we cannot tell if these are inputs, meaning due influence, or outputs indicating an extremely well developed sense of the divine. Yet after initial analysis differentiation is possible." Semor explained.

Telafus, Pontiff of Prima watched with disturbed fascination the pink, grey patterned planet.

"So this is the bane of our troubles." He considered. Finally a breakthrough. "And no way that this is an artifice of Regum's?"

"Tailored?" Semor asked.

"False, reconfigured, made up to make us think this planet is the source of the alien resonance." Telafus stated adjusting his pontifical robes making himself comfortable as he sat with Semor at the secure situation room buried deep in the pontifical palace.

"No your Exaltedness. The DVs have verified that this is real. The Reganians have more than just observed this distant planet. They are busy calculating the space it is in. As to what they are calculating within that space the DVs have not as yet ascertained. But

we have made some progress. There are certain minor fluctuations in their resonance field. They are showing signs of evolving towards Reganian thought patterns. They're in their infancy. More dream like flashes of divergent inspiration. If left to themselves there can only be one outcome." Semor advised.

Telafus understood the implications. They would eventually follow the evolutionary path of Regum. Something the DVs were working on to obviate. Inserting Primaian resonance fields to keep them spiritually on track. With the alien field not buckling. Absorbing their superimposition with some results yet at the same time it was of concern that these deep blue flashes of logical thought processes diametrically opposed to their natural spiritual inclinations made not to make the slightest difference.

"How long?"

"Millenia, centuries at best. Our DVs are doing their best pontiff."

"I am sure they are Semor."

"It has been verified by System Surveillance."

"So they are on the verge of going active with their insights?"

"Eventually. Unless the DVs get on top of it your highness."

"The disturbance of the alien field itself seems to be mutating. It shows signs of self-creation." Telafus aghast at the thought. For centuries it had been a steady field. Now Semor revealed that it was showing signs of inner activity.

"It could be due to their own aberrations. But that is only an initial assumption."

"But it is not affecting the Trine, System Surveyor's, the Infinity Chip or equally important the state of the Immortals?"

"No."

"Yet there is a disturbance in its fabric, the ether." Telafus said looking slightly distracted at his ruby, glowing rich dark red like a drop of luscious red wine. It soothed his mind. "It seems this is indeed a portent. If they break out of their natural resonance field, if they develop these alien thought patterns it will only increase the pollution of our pure cosmos."

Semor waited patiently. It was not his duty for formulate policy.

"So we can assume then that this perturbation is Regum's doing?"

"They are the only ones capable of such interference."

"Damn Regum, damn their minds, damn their existence." Telafus said with quiet venom. Even though they were their own kindred, having left during and after the Great Calamity, ridding Prima of heretics, the unnaturals, the Volatile had been seen as a good idea at the time. It re-enforced the spiritual purity of those that remained. It left unsullied

the next generation without the discordant self deluding mind set of their misaligned kin. And now it was too late. Regum dominated space with its Web, their space ships and their distant probing satellites.

"This aberrant disturbance that occasionally flashes into life seems to have an effect on the field's overall alignment pontiff."

"A deviation is under way then." Telafus grasped the implications. The field was gaining in strength. The substance itself was undergoing a change. It's content was reaching a more potent level of calamity.

"So it appears." Semor concurred.

"A monstrous challenge. Lord Gharbel is aware of this?"

"Yes Pontiff."

"No indications of this being computer or artificially generated?"

"The DVs are sensing heightened mental activity on that planet. It is assumed it is Regum..."

"Assumed? You mean they don't know for certain?" Telafus asked amazed.

"Something like this, so obvious, so impertinent, executed with such force."

"That is correct." Semor replied not intimidated by Telafus's displeasure.

"There is something else." As he gave a cursory glance at the screen. "There are certain similarities in what the alien field deposits in our universe and what our universe is resonant with."

"You mean not only has it invaded our sacred realm but now it is infusing the holy essence itself?" Telafus tried to maintain his serenity.

"Initial indications would suggest this." Telafus saw that Semor was concerned at this development. "Naturally we are doing all we can..." he seemed to say helplessly.

"Then we have to ramp up DV activity."

"That is being organised as we speak Pontiff."

"Blessed is the truth." Telafus replied slowly. He looked around this situation room, one of his many offices relating to his many functions. Apart from the screen, its wooden carved chairs, the polished oak table they sat at, the bare walls somehow did not reinforce the durability of his station.

Telafus was thinking of the future, riddled with so many uncertainties. As such the Great Cosmic Mind was the only certainty they had. Threatened not just by this dreadful field but one that was going active. His position dictated a spiritual answer not a scientific one. Whilst Reganian science dominated all. Maybe the Supreme Architect had something in mind, in store to eventually deal with this baleful set of events

threatening their very sanity. What concerned him were the containment fields. If they were penetrated, infused with this alien infestation the consequences for Prima's Volatile population could destroy everything. Infected by this poison they could be catapulted back into the dark ages. Everything they had achieved, mental and spiritual equilibrium would fray, dissolve and be replaced by a dominant alien intelligence. Yet it did not bother Regum. Which convinced Telafus that either they had already been taken over or they were in league with the aliens. This was getting bigger by the moment. It was a direct challenge to their cosmic spirituality.

There was no point asking Semor, a vicar at some diocese within the holy city as to how he countered this incoming disaster. They all knew, were all aware of the dire consequences that faced them across the whole planet. The Families who were supposedly the repository of their noble race's direct lineage were almost indifferent. More concerned with their social standing rather than genuinely guiding the rest. Either wilfully oblivious to the cosmic danger, or worse taken over and thus in league with that distant corrupting intelligence.

He might have to set the social agenda. One that brought them back into the fold. They as a race had to remain dominant at all costs. More priests needed to be trained to maintain their precarious equilibrium, more neophytes encouraged, more avatars created, individuals sought out to throw back this highly disturbing mind set that was spawning in space and therefore on Prima. The asylums would have to be expanded for heretics had to be rooted out. The future of the race was in his hands. More proselytes sent to Regum rectifying their distorted minds. The Web was evidence enough of that.

"Anything else Semor?"

"That is all for the moment pontiff."

"Thank you." Telafus rose. The briefing was over. After Semor left Telafus made his way back through the palace. Past red uniformed ceremonial guards stationed at intervals along corridors, patrolling the grounds whom he barely acknowledged weighed down by his heavy responsibilities.

Back in his official office, sumptuously furnished to receive visitors, costly tapestries the heroic history of their spiritual struggle woven in fine intricacies, the view over the gardens enriching the setting he sat behind his ornate desk and using the inner computer system checked which Domain Lords were present. Ah just the man he needed, Lord Nihen. His primary function was to stablelise potential Volatile recruits. He thus had direct insight into how his chosen thought. Telafus was considering a spiritual cleansing. Weed

out the possessed, the wilfully misguided, the apostates and atheists. Starting with the masses, then the Families would appreciate the seriousness of the situation and draw the right conclusions. Mimicking the social mores of Regum would have to be curtailed. They would soon get the hint.

It was imperative for something to be done. To do nothing would only hasten the end of Prima's dominance.

Lord Nihen, in plain dark grey garb, a long flowing robe with the small circular crest of his Domain bowed courteously and awaited to be seated. Telafus merely nodded his head, voiding the screen on his desk.

"Most High One?" he asked humbly, his aged face contrite.

"It's time to pull the masses into line Nihen."

"Yes Pontiff." No surprise, just acceptance. Telafus harrumphed.

"What is the condition of the Stable Volatiles?"

"Doing well." Nihen answered simply.

"No aberrations?"

"Only what I would expect."

"Lord Nihen," Telafus suppressed his annoyance, "are there any indications of extreme bias?"

"Lord Dhekan sorts them out. The rejects go back."

"Are your quotas being fulfilled?"

"Yes Pontiff."

"So their initial stabilities are on track then."

"Indeed that is so."

No joy there. Maybe it was not as bad as Semor indicated.

"No secreted thoughts, no heretical tendencies?"

"They are eager to fulfil their duties. Well aligned. Lord Dhekan is doing his job pontiff."

"And his rejection rate?"

"Around twenty per cent, as statistically predicted."

"Well if it rises, let me know. I do not wish to alert him. It might influence his decision making."

"As you command."

"And Our Domain is at peace, basking in spiritual repose?"

"Yes, the masses are content."

"And on Regum?"

"From my level they are as obstinate as ever."

"No change then."

"Unfortunately not."

"But not worse."

"Worse as in...?"

"Recalcitrance."

"Oh pontiff they are that all the time."

"So not much progress regarding the valiant efforts of our priests."

"They do their best."

"Maybe it's time to become a little more active." Telafus asked his secretary to send in Dhekan. Until his arrival they took tea.

Dhekan entered and waited to be allowed his seat. The pontiff merely nodded. Dhekan sat. Though only a low level nine all Domain Lords maintained their own agents on Regum, their priests on Prima. Dhekan and Nihen dealt directly with Volatiles. They understood the Reganian mind set better than the higher Lords.

"Anything from the Web?"

"It's as insane as ever."

"Well at least we still know what is going on in there. Tell me Lord Nihen, are there any Volatiles who have a natural inclination to be mind attuned to the Reganians?"

"Some of Dhekan's Volatiles," nodding to him, "those that are rejected are realigned through the judicious use of our containment fields. Their volatility is subsequently suppressed. And if I may mention it before I forget, our priests are discovering disturbing records on Regum. It's in the reports." As if Telafus had time to peruse everything that was sent to his office.

"I have some thoughts on that." Telafus began. He knew of their strange mythology from ancient times. The aboriginal inhabitants had their own obscure folklore of potent gods able to accomplish miracles. Gods they still worshiped. Gods their priests could not compete with. "What can you tell me?"

"Oh nothing that has not been divulged already. Miraculous events that defy logic. It's as if they were Web creations, weaving their own domain over that world in the misty annals of ancient times."

"They take credence of this?"

"The aboriginals yes."

"And the Reganian's?"

"They study them at their leisure, out of idle curiosity."

"And their conclusions?"

"Mere mythology. Curious in itself but if you mean do they believe as to its veracity I can safely say they consider them more like dream worlds. Not unlike a state of artificial euphoria rammed up by their use of potent hallucinogenic drugs."

"Yes, indeed, we are aware of their enhanced psychotic states. Is that the opinion of the Reganian's as well?"

"More or less. One thing is interesting though. The Reganians are equivocal about that. More of a personal diversion than recreating that mythological past in their drug induced minds. That is good news. There is no evidence these ancient gods are still in existence, if they ever were. More like created phantoms. Nothing concrete."

"But the intellectuals in their universities actually do study that mythology."

"It's on the curriculum, yes."

"Maybe it's time we looked a little more closely into this."

"As you command."

"Draw up a list of suitable candidates, liaise with Lord Dhekan here if need be. Who are natural Volatiles so that they fit into Reganian society. This cannot be ignored. It is something that has to be done. As to the intent of their mission that is as yet classified."

"I understand."

"This does not go through Lord Pentham's security apparatus. This will be a pontifical mission."

"I obey. It will be safer than recruiting local talent."

"You are correct on that assumption."

"What about Lord Acht's domain?"

"The recruits are high achievers by then. We don't want to attract any undue attention for what I am planning."

"Yes I see the logic in that."

Telafus's insight even surprised him. It had to be divine guidance. Telafus retrieved a 'palatial command' order from his computer's data base, and inserted not the mission but the preliminaries to get it going. Two suitable candidates to go to Regum and study the mythology and folklore of that planet. He printed it out, affixed the pontifical seal so that his orders would be fulfilled.

After the two domain lords had been dismissed Telafus relaxed. His insight he considered brilliant. Why had no one thought of it before? The ancient gods, even their own had been considered back then as real phenomena. Actual living beings.

Thwarted. If it could be discovered how, then perhaps the answer lay in removing the alien incursion as well. Maybe the gods were making a comeback through this alien race on that distant planet. The DVs relayed that truth in its awesome reality. That distant sentient race believed in their actual existence as well. Destroy them and they might destroy the resultant energy field that was projected out of these ancient minds. If they were a hallucination then the containment fields could easily collapse their disturbed minds. The DVs mimicking that target specific resonance had not made any progress so there had to be something of an ethereal substance to this. He would get on top of this, he had to. Prima's future could not be compromised.

Regum

Guron on the standing committee of WebSpace's Systems Management watched with Mahfis who headed the department observe the various spikes of the condensed bell curve on the screen in front of them.

"Very active. This recent?" Mahfis asked. As systems manager he relied on his team to keep him informed of any developments regarding Prima's DV activities. Located at Regum Central, the capital of Regum 'Spatial Solutions Inc.' was one of the many intelligence divisions the Executive had in place. One of the tallest skyscrapers was fitted out with deep probing arrays of antennas, aligned boosters to retrieve with deep penetrating sensors the activity of the DVs in space over Prima through their satellites.

Their agents on the orbital were reporting specific target locations, this time focussed on a distant planet that convinced the Primaian's was the source of what they considered to be the origins of the alien signals. Their scientists knew better of course. The signals were merely normal photon beams coming en mass from that distant universe. The closest galaxy harbouring sentient life. Not much was known except a civilisation had developed there. It was the Primaian DVs response which concerned them. For several years now their forward satellites had gathered the incoming data. It confirmed a world, a race at a pre-technological level. These beings certainly were not intent or envisaged any plans to manipulate anything or anybody so contested by the Primaians.

Yet all the indicators showed Prima's negative reaction. The DVs focussed their remote viewers specifically targeting that planet. The spikes on the bell curve were recent. They were combining their mental capabilities to jam the incoming information rich field data. Other DVs were trying to establish direct mental links to its inhabitants and from what they could gather seemed to have some success, if the indicators were right. Various psychic links existed. Their downloads verified as much. Furthermore incoming data from WebSpace confirmed Prima's specific focus regarding the sentients out there.

Guron like Mahfis working back stage acknowledged Mahfi's question. As heads of their relative command sections they had followed Prima's counter moves confirming the latter's heightened obsession with the other life forms.

"Since day one. But now they are target specific. Homing in on individuals. Not just remote sensing but remote insertion." Guron revealed. The spikes on the screen obvious regarding their change of approach towards the life rich planet.

"In a way their determination to control them is making our job that much easier. With their now totally active psychic push they have opened their minds to our scrutiny. The stuff that is pouring out, bypassing the Web by the way, the meta-waves, their resonance says basically we can do what we want and no one can stop us."

"I wonder if we should mess with their interference." Guron pondered. It was Mahfi's cue.

"We could."

"Ah. You're at the technical end. You're thinking they'd discover more about our activity regarding them."

"Exactly Guron. However, I have consulted some of our brains. If they can insert as remote viewers, using their head space, then there is no reason we can't either."

"Set up a remote division?"

"Too obvious. Too dangerous. Only remote sensing. Which gets us instant access anywhere in the universe."

"Yes. Are you suggesting we insert our data and deposit that? Not a bad idea. Of course we would then be revealing our capabilities. Do you think that wise? After all these sentients are just beginning to get into proto-type urban environments. It could be centuries before they make the connection in harnessing energy, become technologically minded, scientifically oriented." Guron explained.

As CEO of the executive branch of this intelligence unit he only made his decisions based on the valuable input coming from his team and their informants. Mahfis was one of the best. Along with other heads he kept in touch with those on the ground, those working with the interface of the Web. Including AI and EAI research units. At last in the exotic field of quantum physics.

"Something far more direct. Either way a time will come when, depending on what Prima is up to, we have to act. Since we'd come out in the open, I am suggesting when we do we have something of substance."

"I concur. Depending who you talk to, we have I'm glad to say several options at our disposal."

"You are head after all. More feeds coming your way."

It was stating the obvious. For a moment Guron looked out of the clear window over Regum City. Skyscrapers, helicopters moving commuters, thirty stories below tiny monorails gliding on raised single rails between and through buildings. In the distance the green belt, then the sprawling enclaves of suburbia and further out one of several space ports. The sky was cloudy and whilst the solar panels absorbed the non visible heat spectrum, the building's power plant supplied auxiliary energy.

"What's on your mind Mahfis?"

"If they can insert their minds into any part of space then so ought we." He warmed to his latest project. The subsection heads had certain leeway to pursue not just technical problems but also pure research. Sometimes this was done through the universities and if extremely sensitive, private front corporations. At an 'ultra' level, deeper dummy companies were set up specifically for top secret experiments.

Guron was listening. Unlike his predecessor who wanted to know prior any extra activity the feasibility and the security of a project Guron let his people start their seed programme of their own volition.. If it did not work out or encountered difficulties beyond the original scope then the work was split up between all their resources making an overall connection difficult for the Primaian agents crawling over their planet. He was curious what Mahfis was currently engaged in.

"Space itself is full of probabilities whilst at the same time the sum total of the best of all probably states."

"Go on."

"Everything around us is the pre-eminent probability state, of our own making."

"Yes?."

"We have in theory the possibility to collapse a desired probability state not unlike the DVs who insert them remotely."

"Get our own DVs?" Guron did not like that idea. It would get messy, start a whole new possible conflict. He was happy enough for them to get whatever they were doing at the technological end up in space. As for mimicking DVs that was something else entirely.

Guron looked at the fluctuations of the graphs on the screen, then shut it down. Keeping that on line too long would invite other parties to get curious if they made it this far into their secure system. There were Reganian's who were amendable to Prima's psychic and spiritual way of thinking. The screen went blank. They had what they wanted for the moment.

"One better." Mahfis smiled. "The experiments were successful. We have done it."

'At last.' Knowing he was referring to their quantum phasing. The work delegated and carried out by verbal exchanges. Regum's data was mainly open sourced. Yet some things, some projects were too sensitive to be in the public domain. Guron's team, one of several intelligence units worked often in full view. Secrecy attracted attention. So whatever Mahfis accomplished was a welcome surprise. In a society freed from physical time consuming work, there were hundreds involved in their private research. Not just in expanding their knowledge. With so much going on Prima's agents had no chance in coping with it all. They could only guess at best, scratching the surface. Guron was curious. Mahfis would not mention anything not related to what was of immediate concern. Nor did he advance publicly what he was engaged in, or even considered. That in itself could draw attention.

"The team I assembled is in an industrial shed of all places." Mahfis beamed delighted at the subterfuge in doing secret work in an industrial park. It would be barely noticed. There were so many, one more barely registered to those trying to pry out their secrets.

"We have successfully collapsed, on a small scale, not just probability waves per se, but configured ones. All thanks to DV activity."

"Really?" Guron was familiar with the theory but that was about it.

"It is a result of studying the DVs gestalt switch. Thanks to their obsessive behaviour, you know trying to screw with our heads means we have to be prepared mentally to counter their remote insertion with our EAI capabilities. So we ran with that mind set of theirs. But instead of focussing on an object we used digital data as an object. Which the team managed to move several meters instantaneously."

"If I understand this correctly, you are saying we can move objects through space instantly. Anywhere?"

"And as with all research there were surprising by-products."

"Surprise me."

"We can insert digitalized objects, so by extensions real ones as well. The DVs deposit false positives. Power the only limit. All we need is the go-ahead, the resources to expand this on a bigger scale. They have mind-fucked us for too long. We can now return the favour. Strike out into our own territory. I'm referring to space. Counter intelligence is going to take off."

"Counter DV activity." Guron grasped the significance. To think this morning was like any other day and here is Mahfis dropping one of the greatest scientific breakthrough's onto his lap. Just like that. "And I assume the DVs have no notion of this?"

"None so far. There are so many other considerations. Political not just here but Prima as well. It will screw the DVs and that is just the beginning. Imagine. They have their targets in mind. We insert into their domain a redesigned target. They think they're 'in', when in fact it's of our design. We can tailor make what we want them to perceive and they would never know the difference. Imagine the potential. We can let them think they are winning the psyche-conflict. They will relate their results and in reality it's nothing like that at all."

"But for the moment, they're still getting in real time? I'm referring to that planet. You haven't been tempted...?"

"At the moment we are limited by power. The amount of energy required could attract attention. Ideally we should continue this experiment in space."

"A bit obvious." Guron put the idea into perspective.

"Not if it's near a star."

"You have thought about this."

"Just position a station so that it's always facing away from Prima. There is something else that came up."

"Do enlighten me."

"Whilst the probability field is in place, attuned to the DVs mental fields, it's like tapping into it."

"Really?"

"In theory. Both fields would be in phase."

"But they could then trace the second field to its source." Guron guessed. He knew enough of quantum physics to understand the basics of entanglement.

"Right. But not if it has it's own 'reality' within it. It would have to be more powerful in physical scope. By that I mean the actual area and its contents united as one Probability Wave Field."

"But if they are entangled..."

"Yes Guron. But they are so distracted by this planet we can continue another aspect that has come up."

"Do tell." Guron could not believe their luck.

"OK. This is now running at the hypothetical. That other universe is rapidly expanding. We have targeted from our own research station here a vacuum beam to

see what's at the edge. And haven't reached it. We thought maybe a few hours would do it as the beam accelerated exponentially. What this seems to indicate is that space is expanding faster than the speed of light. Can you imagine that?"

"I can try. Fascinating."

"Oh yes. What has been suggested is that space is one huge mega and meta probability set of unlimited fields. Uncollapsed. Whoever has the capabilities to collapse that has access to all probabilities. The only limits our knowledge and more importantly our imagination. Something Prima is very limited in. All we have to do, hypothetically, is get code-writers to build data blocks and collapse them. We could in theory design our own universe."

"There has to be a but."

"You're right. Not just limited processing capabilities. Though our quantum computers if potent enough can make a difference. But it comes down to energy again. Ideally the energy of a galaxy would be needed. The trouble is at the centre, well nothing material could survive there. So for the moment using a star's energy is the only way to get started."

"And that can be done?" Guron asked hopefully.

"No problem. Just build the array to collect the energy."

"What have you and your team in mind? Shut down Prima?"

"That is up to those on high. Very political. No we have something far more benign in mind."

"I'm glad."

"Insert an expedition onto that planet they discovered for us. We're working on the energy quotients to calculate an attempt to en-place a spaceship and its crews. Here it gets tricky. Life forms are so complex. A matter of number crunching. Not impossible. Then calculate the insertion field-wave. A lesser problem numerically. More a matter of getting the co-ordinates right. Then when all that has been calculated and checked of course, we can be on our way. The DVs might be there psychically, in spirit as the spikes showed but we would be there in actuality. The PWF would be of such strength using a star's energy that whatever the DVs throw that way would be a minor irritant. And the PWFs would act more like counter-intuitive sentinels incorporating the functions of smart-ware firewalls."

"Yet they would sense the result when we collapse the PWs."

"Big deal. We're one step ahead. Undoing a reality is a bit harder, even psychically for that effects one mind only than us riding within our PWF. They got no

quantum processors. What we let them have is pretty basic stuff. But we've done our homework Guron. Let's assume the worst. They are aware of us being there in real time. At best they can insert their mind set, bit like going into the Web. The Web stays no matter how insane the user. They could create a hostile reaction amongst the inhabitants. But remember our team is scientific. All we're doing is saying 'hello' to fellow sentients. Letting them know they're not alone in this beautiful and a little less mysterious universe. Of course the Primaians will react. But I bet they will be true to form. Impress the locals with some hallucinatory visions of apocalyptic destiny due no doubt to our presence. So I would suggest some of the team is not just AI but EAI capable."

"You have thought this out. You also know the final decision is not mine."

"Of course, but space is our field."

"It will I hope give the Primaians mental heartburn. We dominate space not just through the Web. Space, the universe has become our neighbourhood as well."

"I'm a bit worried how they will manipulate the locals."

"I agree."

"They could make us out as some antitheses of their Great Architect. Rebels, heretics, apostates, unbelievers pushing our view. Most emergent societies have, for a better word, mystical belief systems. You know, the wind is a god and all that. Challenging that will cause friction."

"Guron we're not going there for that reason. It really is just to drop in and say 'hi'. We'd be honest to any of their questions. Let them decide how they interpret it. Give them the freedom to reach their own conclusion. And there is something else. Since the DVs are 'in place' there, we can use that alignment to project our PWF. They've done the basics for us."

"I hadn't thought of that Mahfis. Neat."

"It is, isn't it?" Mahfi beamed pleased.

"Yet something tells me I should be worried."

"About what?"

"Probabilities we have not thought of."

"The field would be secure. Only a higher energy state could override that. Prima can't, they don't even know the concept. Even though their DVs are using it on a minor scale. Unless there is a civilisation somewhere that does have that capability, we are safe."

"I agree that we cannot let the Primaians get away with distorting these people's minds to their way of thinking. Each race has the right to interpret the universe as it sees

fit. It's a pity really that they just cannot let this be. In a way you're right Mahfis, they have forced us to act. What if the DVs catch on? Or say their Domain Lords or really anybody capable of getting into our heads. Which they have done and will continue to do so."

"Then Guron it gets back to capabilities. First they have to build not just the computers but also a generating source. Even if they copy us and use some star, they're only playing catch up. We'll always be one step ahead. A quantum step at that. Remember I want this team to be EAI capable. DV activity is brushed aside."

"Hm. To be sure. Maybe it's just me. But I have to consider the worse case scenario."

"I should hope so. All the modelling suggest that the expedition can go ahead safely. Maybe in some future others will attain this knowledge. As the probability becomes the possible they may try and undo our contact. They cannot reconstruct the past. That is a universal impossibility. Only the future can be shaped. So whatever they may try it's just not going to happen to make much of an impact."

"I am glad in a way that other universe revealed itself to us. It changed our conceptions, made us go back and revise our limited theories, is making us understand a lot we never considered."

"Like a single universe with a single beginning and a single ending. Yes now that imagined reality is gone for ever. Still the Primaian's persist in their theory which is full of..."

"...themselves.' Mahfis finished off.

"I was going to say 'inconsistencies'."

"The more we see the more we comprehend and the more is revealed. That means more information. Prima's problem is they aren't looking. They're too busy doing, or interpret what they see, making sure it fits their belief system."

"Yes their fantasy might be self-sustaining, even self-verifying. Yet they have no trouble ignoring what does not fit into their theology."

"Their loss, our gain Guron."

"No denying it. Their universe is relatively information poor. But once we've done this, they might reconsider their assumptions. They might use that possibility of using PWFs at some stage through their target oriented DVs. And once that's starts, we're going to be kept very busy."

"True no doubt. At some future time this will come about. I am aware of that Guron. But we cannot let them twist these people onto an evolutionary path that is not theirs."

"It is a moral dilemma."

"Hopefully for them." Mahfis joked.

"We will of course have to really keep an eye on the DVs and their ilk."

"Yes. But you know, how often is life discovered in the universe? This is a first since this planet was discovered and it's people."

"And the local aboriginals want nothing to do with Prima either. Funny really. They're shamanistic, you think they'd see some resonance amongst each other. Instead they keep their distance, keep to themselves."

"As we do. Live and let live."

"Interesting really. The DVs targeting everybody. Space as well."

"The so called alien incursion." Mahfis scoffed.

"Maybe our aboriginals have stronger minds, a more developed psyche."

"Now that would not surprise me. So Guron, what next?"

"We'll get our forward probes to get as much data...'

"Got that."

"Then test run the A and EAI programmes."

"Completed."

"Have you run conflict scenarios?"

"Working on that. Convoluted at best, but early indicators suggest that the DVs will still get through. It might get down to a mental showdown between our EAI capabilities and them. Distracting at best. They can try and screw with us but those with the EAI's in place would know instantly of any hostile DV attempts to thwart us. They certainly cannot affect our mission. I mean they haven't found anything out as yet. If they had they would have...increased..."

"Their activity as we saw just now?"

"They have to be guessing Guron. It could be coincidence. They might have intended to start some next phase. Which means it's even more important the solar base is finished."

"Finished?" Guron asked surprised.

"They didn't tell you?"

"Let me guess."

"Well it's space exploration, not really us. Under wraps, but yes, since we will be involved, it's self assembling around a distant star, even I don't know which. The nanobots are busy. A far side static orbit. Away from Prima. And since no personnel are out there as yet the DVs have no clue."

"When will it be completed?"

"Again I haven't been told. Remember I'm research and development. Since my work is done, I'm out of the loop. But once it's ready I'm sure they will need some of your people to be there. If only to jam the DVs, confuse them, whatever it takes."

"So we're doing it."

Mahfis waited for Guron to explain himself.

"Going out there, making contact. I hope this works out."

"It should. It's pure science. A bit of anthropology thrown in. And not forgetting Prima's interference. They ought to know what Prima is really up to. If that can be revealed then we will learn from them as well. Neuter the DVs. You know how they want us to return to their way of thinking. Diplomatic activity, cultural exchanges..."

"More agents as usual."

"As always, religious seminars, spreading the word to seeking souls alienated by our way of life."

"We do have those." Guron almost sighed. "It's so unfortunate that we cannot make them see the beauty of the universe, the miracle of life itself, how their minds in being able to comprehend the universe is at one with it."

"Well you know the answer to that as I do. They feel insignificant. Think it's all meaningless, looking for meaning."

"Isn't life enough? Rare as it is on a cosmic scale."

"Apparently not."

"Sad isn't it?"

"Ah well, what can you do?" Mahfis asked rhetorically.

"Maybe we should create our own religion. See what these sentients out there think. Get some connection. A united sentient belief system. Actually now that we are on our way, it would be interesting what they really think."

"We know that from the DVs Guron."

"Yes but that's their interpretation. The living gods walk among them. Very anthropomorphic."

"Be funny if they were real." Mahfis joked.

"Wouldn't it just. It would blow our and Prima's belief system out of the cosmos for starters."

"That would be something."

Prima

Lord Qatus, Outer Guardian of physical space, executive head of Prima's mission in space listened carefully to Janon head of planetary security who informed his Lordship without a hint of emotion of the fire fight at the tracking station. Qatus listened without betraying his thoughts on the matter. Slightly surprised. Further confirmation from Lord Pentham in charge of the technical end of intelligence, had noted in his report of no data leaks even with Regum's ever present agents on the orbital. Part of the continual security environment. Really a given. Yet there were times when Prima could not contain their covert activities given their paucity of personnel who were never on par with Reganian surveillance capabilities. Accept for the DVs. This time there was no input from Elentra who ran her domain with extreme precision regarding her designated targets. Without the need of Reganian scientific methods or their technological applications. To stay vigilant. The continual need to negate Reganian methods of thinking which could weaken their spiritually evolved resonance to ascertain the counter intelligence the Reganians applied to gain access to their information. They had to rely on them siphoning off their knowledge by psychic means. With great success. An Orbital handed over as a gesture of good will. Fully equipped and staffed, with agents of influence, spies, provocateurs, cultural attaches. More importantly the technicians and robotic support to maintain the orbital. The danger for the Primaians there and then was the mental reconfigurations Reganian logic demanded. The dramatic demise of Roshati therefore did not come as a complete surprise. She was not the first to have been influenced, manipulated, possessed. In a way it was inevitable that eventually one of their own would succumb yet again. What did surprise him was that she had not been BrainDrained.

Janon, slim, lithe a slight dark complexion indicating his ancient pedigree contrasted with Qatus's corpulence and paleness as Janon was often out there, in the field whilst Qatus was busy within his domain headquarters. Due to the sensitivity of this

case, far from normal they met in more secure surroundings, within the pontifical palace. Isolated, away from the gossip hungry eyes and ears of the staff. Safe from inquisitive minds. Such as the nature of the alien incursion, one that had subsumed Roshati and her co-worker Tregon. That was the official line Janon suggested to Qatus who nodded, his jowls wobbling in agreement.

"Deleted you say?" Qatus asked matter of fact. It was the first time in his life that such extreme measures were considered necessary to totally remove whatever their minds, their souls were possessed by.

"Completely mind warped Lord Qatus. Homicidal." He had the report in front of him. "With such extreme prejudice it was decided too dangerous to even cure these two possessed fallen souls in any of the asylums to try and regain their resonant stability. Readjusting was not an option. We have not had a case of such tragic proportions since even before my time. They were, correctly it was deemed a threat not just to their sanity but whoever they would come into contact with."

"Of course." Qatus replied, lips pursed.

"Even I don't know what they knew." Janon said. "It might well indicate that Regum has successfully penetrated our domain. The order by the way came from Lord Gharbel. He did hint though, through his official channel that the corrupted data was a direct threat not just to those around her, but possibly the Trine. Had she uploaded whatever twisted coruscating knowledge they both possessed it might have reconfigured the overall data base itself. That would have...'

"Yes Janon, I am aware of the flow on effect."

"The ancient ravages might have been resurrected. That horrific nightmare scenario, allied with the alien field could have created psychic resonant disturbances in the people. The anarchy unleashed would have played into Regum usurping our exalted state. You could call it 'enhanced madness' destroying our spiritual fabric that in turn would fracture the resonant envelope protecting our planet. One such rupture would have infested the whole. With the power of disintegrating the foundations of various domains."

"That serious?" Qatus asked.

"All it would take is one microsecond for its malicious intent to do untold damage. Combined with the alien radiation even those tasked with its protection might have come under its influence."

"Any web activity?"

"It's too anarchistic to tell." Janon admitted. "With possibly millions of Reganian minds immersed this unknown inserted revelation enhanced by their multiple computational creation could have doubled the assault in our divinely ordained space. WebWorld reconfigured. Coupled with their cyber minds the onslaught would have fused itself into a new level. The implications a possibly full out assault on our sacred realm. Or aimed in destroying the containment fields or, what Gharbel suggested, reconfigure them. You are aware what that would have done to the serenity of our people." Janon spinning out the threat for all it was worth. The actual truth was secondary. Its implications far more important than the contents of the threat they had obviated.

"Turning them into Reganian agents of influence." Qatus satisfied at this covert attempt to possess Domain Realms.

"Something like that. We would have lost millions of souls. Luckily whatever she did uncover is now voided. It died with her. We averted this dangerous infusion. Even though it took such extreme measures to counter this distorted information, whatever it was, all is stable."

"The DVs?"

"As is Lord Qatus."

"And they had no inkling of what was in store at all?" he asked surprised. Nothing was supposed to get past the DVs.

"I'm glad to say no alerts present. No indications of any aberrant resonance states. Which means this must have come through our computers. The investigators up at the orbital found remnant links, strands of data. Roshati had searched outer space. She had clearance to access real data. Follow up search patterns revealed nothing of interest. Roshati must have been cloaked when she went into the depository. It is for the best that this phenomena, with its evil intent has been safely eradicated."

"So no one knows what she knew."

"Absolutely. Dr Shach himself oversaw it. We were lucky in a way for Shach had sent Varus on a surprise visit ascertaining the inner security of the data base the astronomers use. All I know is that he did delete some information. It may have been related. Camouflaged as a systems check. No one thought one of our own was contaminated at that stage. All indicators suggest of course the ever present alien field, and its source." Adding weight to the argument.

"Ah yes, that alien planet. I have checked the stability of my domain. The DVs are doing a magnificent job. They feed their absorption patterns into the secure orbital data

repositories. And yet it is a puzzle that this, whatever it was, got through. I've gone through sub-routines, see if anything is lurking in there. The information gathered as a whole has remained unchanged."

Janon concurred.

"And Gharbel considered this so heinous that he destroyed the messenger."

"She was by then more than that. A living virus."

"Regum is advancing. They never tried that before."

"They are all infected."

"They, yes. But our people? You are I take it taking extra precautions?"

"Yes Lord Qatus. It means more recruitment, reassigning agents. Now we have to watch the watchers."

"How are you coping?"

"Well there is no shortage of neophytes. But individuals of the calibre my department requires are hard to come by. Different orientation. We have some Reganians of course who are true believers but it will be difficult keeping them all under observation, recognising signs, changes of behaviour, patterns of thoughts, fracturing resonant states, or mutating ones."

"I don't envy your work Janon."

"It is for a worthy cause."

"I appreciate that. And I am grateful that you came to me with this most unfortunate tragedy. The loss of life, so sacred, so unique in itself. I hope she is at rest within the Great Mind."

"I hope so too. She may have been a victim, a test case."

"That is what I am thinking myself Janon." If only to keep en par.

"I have also scoured Regum."

Qatus was attentive. Janon was certainly resourceful.

"Web activity is diminishing."

"That is welcome news. Don't tell me our priests are having an effect there, making them see the errors of their ways?"

"Could be. But there is some heightened data activity instead. More is being encoded, encrypted. Our systems are taking longer to disentangle it. The DVs are aware only of the lesser insertions in the Web. Showing signs of spiritual ennui, that the false realities are not so fascinating anymore or..."

"Yes?"

"This is only a guess, the Reganians are restricting access for some other reason."

"Such as?"

"Reconfiguring the Web. I think the truth is finally being revealed. What we think is, it is returning to it's original intent."

"Oh?"

"Pure data. What it was originally built for. Like a back up system. Inserts, gamers take up huge amounts of computational space. So by removing them from this, it is only a guess, a secondary Web it releases, frees up space."

"How far are they now?"

"All the way. The superstructure, the computational architecture in place."

"Maybe that is what this astronomer got herself into. They might have inserted this new WebSpace into her head." Shocking as this was there were rumours that Regum's AIs were doing just that.

"Our people on the orbital are running scaled down versions regarding this possibility which means if what we are getting is right, the Reganians have *incorporated* the alien planet. A logical extension of their thinking."

"A frightening development. They will be possessed by the alien poison."

"I concur."

"And Gharbel?"

"The Trine seems immune to this event."

"Ah good. So it is contained in their Web and by default their planet."

"So it seems."

"Seems Janon?"

"The DVs are focussed on real not cyber-space."

"Yes, yes. Have you or any of your own agents dealt directly with the contents of the Web?"

"It is off limits to us." The official line. But he did have a handful of very tech savvy ops following Regum's Web progressions. What the boss didn't know would not hurt either of them. If found out, if compromised Janon would simply say they had gone rogue.

"Only the Immortals would have the strength. But their main function is the stability of our race. Our scanners deal with the Web. And since there are thousands of scenarios in there, what the Gamers create it is almost impossible to disentangle truth, reality from fantasy and fiction. The alien planet, or its resonance does not seem to be present in there. Of course it could be disguised as make believe worlds. So far there are

none that have that specific signature. If the alien planet is in there, it's extremely well camouflaged."

"Could the DVs get in?"

"If we had some spares. Elentra would know."

"What about some of the neophytes, the aspirants?"

"How do you mean Lord Qatus?"

"Well," Qatus felt inspired, "essentially they want to meld with the Divine Mind. Now not all are naturals, mystics. Find some candidates whether from Lord Dhekan's inductees, Nihen's stabilized Volatiles or Acht's trainees. The 'walk ins' on the ground. Or at the monasteries, those who have a burning desire to take the spiritual fight to this evil. Those who are inclined to act rather than just be."

"I'll remember that. A good point. Under your jurisdiction?"

"I am outer guardian. This is out there." Qatus reminded him.

"I liaise with you?"

"Just recommend suitable candidates. If you do come across them."

"It will take time."

"Time. Even though we have eternity, Regum is following a dangerous agenda regarding the serenity of our universe. Now Janon as Dr Shach took you in his confidence, what data did he reveal to you. After all, whilst the investigation will be adequately buried he must have given you something. A breach like this..."

"He and Varos are certain the Reganians inserted false data. Roshati took it at face value, their intent obviously. Some sort of field, manipulated of course, technically an artificial construct. It has been released to those with the relevant clearance. I was coming to that."

"Let's see it then."

"Just access your secure section. The 'inner sanctum' I think you Lords call it." pretending he didn't know.

Qatus opened his link entered his access codes and got as far as the portal.

"Enter Roshati?"

"No just the date and the tracking station."

Moments later the shoot out replayed itself.

"That tells me nothing Janon."

"Call up Roshati's resonant state now. The code is: AO5"

"That is rather simple. A for astronomer, O for orbital and she's the fifth one."

"It is in a secure data realm."

"Yes of course." He entered the code. A rich glowing green sphere appeared, Roshati's resonance.

"Just zoom in."

"I am aware Janon of how this is done."

Janon kept silent. He had been privy to the data. Qatus respected him for coming to him, going up one level. By rights Lord Pentham should have revealed this to him. But Pentham played everything close to his chest. Mainly because he saw information as power something Qatus thought childish. Along with Gharbel they were the three top Domain Lords, they should be sharing information. As Pentham was security he also realised he would never advance beyond his level seven. He knew too much and if he ever became pontiff the possibility of revealing anything was just too dangerous regarding the individuals he dealt with. So Pentham tried his best to be a power unto himself. It did not win him any friends. And Qatus suspected that Pentham was really weak within so using his domain like some unassailable citadel gave the impression of being more in control than the rest of them.

Qatus ran a dual programme. Roshati's resonance, swirling green ball with mottled browns, dark reds, the odd flecks of yellow or deep blue all digital data of her mind and soul. Next to that he ran an analysis complete with systems checks and diagnostics. That way the data was checked for what was natural and what was inserted, configured, even created through manipulative insertion.

The first thing Qatus noted was the moment of the subtle transformation of her resonance. To get the deleted data itself, would be like raising the dead. Attainable only through psychics or a very advanced computer expert. As to digging out what her resonance actually had contained needed such advanced know how, that only the Reganians might have that capability. The DVs could scour the past but even Elentra had kept away from the incident. If she knew at all. Then again all it took was one stray DV.

Roshati's prior state to her demise showed a slightly discernable shift in her dormant field energy as something rippled across her resonant fabric. He stopped the run and went back to that first change. A momentary nothingness where the data had been excavated. Not boosted for her mind's activity was peaking at this point. The brightly coloured flecks of yellow, red and blues were mental spikes. Low energy even though it was of a high energy content. DVs when locking into their target displayed a similar pattern. So Roshati did discover something that fired her brain. Content void. Like

a stone falling into a pool he saw the waves but not the object that caused it. Had Roshati self configured? The thought worried him.

The analysis indicated negative flaring. What a neat cover. Something imagined that was not there in the real world. A hallucination. So that is how Shach covered the deleted revelation. A mind going Volatile. How clever. So no outside information. He was relieved.

The cover perfect. As outer guardian Qatus now accessed the orbital's astronomical data base. As Janon indicated, Varos had done his job most professionally. The gaps revealed themselves for at the periphery of its extraction, the fusing of the data stream showed an almost imperceptible edge. The background information of space continued within that gap spread too evenly. What was obvious was the cosmos in turmoil, jagged spikes showing latent energy fluctuations. Smeared across the inserted emptiness where whatever Roshati had discovered no longer existed.

There was another possibility. The satellite sensors themselves. They merely transferred data, they did not keep it. Their memory banks were relatively small. He checked all three of them, collapsing the two screens to see if this cover was similar or dissimilar to the voided content. Sat One at the time showed nothing unusual, neither did Sat Two. But the inward positioned Sat Three showed signs of having been interfered with. Now that was interesting. Whatever Roshati had uncovered did not come from outside their universe. Something had occurred within. Not only that but there was a tiny jump like a bump in its transmission which did not show up on the first two. But no hard data. Only the remnant applications themselves. Not the content. Twice. The first would be Roshati the second the deletion.

So why was Roshati not dealt with on the orbital? Unless Roshati managed to cloak her extraction. Which pointed the finger at Regum. Shach and Varos had acted correctly. The third sat had been used, it's functions momentarily interrupted. Whatever had been deleted had also been reconfigured in the orbital's data banks. Something so dangerous its content no longer present.

Qatus's interest piqued. He would keep the investigation open. The only ones dealing with that were Shach, Varos, Janon and himself. He would have to broach this delicately with Lord Pentham. Maybe Pentham was working on it. Maybe he thought the same.

"Well, whatever it was, it's not there." Qatus voiding the screen. "She did get excited about something. Looks like Volatile activity to me Janon." Hinting how he would present his report. "Pity. Obviously it might only have been an imagined threat, one that

convulsed her mind to such a degree that it sent her over the edge, infecting Tregon's resonance as well. Not my domain really. So that seems to be that. And you're certain whatever Roshati considered to be so threatening was just her fevered imagination?" guiding Janon.

Janon had observed Qatus intently. He was certain Qatus, thanks to Varos's deft work and Shach's sanitizing the data left nothing behind. Janon did not know the contents either, only Shach and Varos might. After the incident at the tracking station the two of them had disappeared, removed or removing themselves from the scene. They would not figure in the investigation itself, airbrushed out of the picture. Even Varos's visit to the orbital never happened. With Qatus pursuing that line then Janon would have had to consider seeking advice from outside sources if he were to gain any insight into what was deemed so sensitive, so dangerous that such extreme measures were so quickly enforced.

"Our best lead would indicate some sort of Reganian activity. Anything on that front?"

"We are following what little we have to go on."

"Does it look like they were behind this attempted manipulation?"

"Yes. But we have a slight problem there."

"Not unusual." Qatus tried his best to cloak his suspicions.

"It could be a new attempt to get at us. Not through the usual means Lord Qatus. A rogue cell, black operations. If that is the case the Reganian's are moving into a dangerous realm."

"You mean this could have political implications?"

"I'm glad you mentioned this. We are treating this unfortunate incident as an internal matter. Our official position is that Roshati and Tregon went violently Volatile. Regum has not been approached. We are containing this."

"That is welcome indeed. Things are complicated enough as it is."

"Yes. Of course there is a total security clampdown on the orbital. All astronomers are now under strict observation. The reason the constant exposure out there."

"Yes, it must take it's toll. It's to be expected. Except when it does happen it is so sad really."

"The price of vigilance."

It was interesting Qatus thought that the Reganian's never seemed to suffer from this alien incursion. But then they were spiritually void.

"I would like to meet with Lord Pentham Janon, at his convenience."

"That can be arranged."

"And I would like you there as well."

"I am honoured." He said surprised.

"Anything else regarding this...?"

"I think we have covered it all adequately to our satisfaction."

"Yes. Well it would have been interesting from a psychological perspective what went on in their heads at that pertinent moment now lost to us. If only so that others would be aware of the danger. Or if this was indeed Regum's doing." He threw in for good measure. "But I'm sure Lord Gharbel and your own group is handling that to the best of your abilities." Qatus said smoothly.

"Thank you Lord Qatus."

Qatus nodded.

Once outside ignoring the immaculate gardens, the majestic trees at the rear of the pontifical palace, the view west over the more salubrious suburbs Janon thought about his interview. In full alert mode when Qatus tried to dig out what Roshati's shadow resonance might have left behind. Concerned all the same Qatus might have uncovered something that could not get out, ever. Which annoyed him as he did not know himself what it was all about. Shach had been adamant there. Only saying it was of such importance, even if manipulated by Regum that its implications were more devastating than the deleted data itself. Shach hinted darkly that the Reganians had invented a new mental virus one that reconfigured perception to such a degree within the mind that reality could appear in a way it simply was not. Thus the reason for Roshati and Tregon's unfortunate termination. This false reality could warp minds en masse. If the Reganians succeeded then they would have won. What was worse Shach intoned sombrely was that the monumental lie, which was what this cover up really did have an element of truth. A new method in spreading mis-information. No one was entirely safe from this mental assault. Only a strong stable resonance, a purity of spirit, complete devotion to their religious ideals would safeguard them from the perfidy of Regum's change of tactics. To wage a war at a psychological level penetrating their inserted mental poison deep into their very unconsciousness, thus deluding their souls. Compared to the alien mind field this was far more subtle, insidious and ultimately it could topple their civilisation.

Dr Shach on his way to see Lord Pentham at the 'Institute for Social Harmony & Human Resources' went over in his mind not just to ascertain what Pentham knew, but what he would try and cover up. How he would react to what Shach could officially reveal. The 'Institute' was a cover regarding their work. It was one of many organisations in Prima's highly stratified bureaucracy. Every task, from the Ecclesiastics, through the Divines the psychic overlords rooting out dissident tendencies, the Exalted, another self interest group to focus on, potential bishops rarely drawn from the priestly caste whose fervent spiritual inclinations were just too hyper-active to have the qualities to fully comprehend the intricate power manoeuvres necessary to maintain one's hard gained superiority amongst the many jostling groups intent on furthering their own agenda. The usual politics.

Pentham's domain covered them all. Whilst designated as the chief CEO Shach kept busy with the day-to-day events of all these aspirational holy individuals. He had recognised a long time ago that Pentham was more a clearing house to weed out those with a weaker resonance who with their often discordant attitude caused friction not just in the great social milieu, but also were tempting targets. And not just Reganian agents trying to use any who had specific character flaws that made them susceptible for recruitment. For the Reganians lacked the capability of their psychic powers to gain their pithy objectives among the fractured departments that was concentrated in the holy city. Out in the field, amongst the many thousands of provincial centres the intensity of always striving to go beyond one's entrenched caste was less obvious. There the bishops marked time, some frustrated in advancing to the inner circles that was more like a dream to aim for and rarely attained. Someone had to look after the Volatiles.

Now it was his duty to inform Lord Pentham of two such Volatiles who had gone rogue. Pentham a wiry thin energetic Domain Lord, his primary function to oversee Web Security, not just the Reganian superimposition but also the information net on the orbitals and their feed down to Prima. Such as Varos's deft intervention, deleting the rather dangerous evidence concerning Prima's actual history of the Great Calamity. In that regard Pentham, sitting with his usual repressed mental energy, an irradiating resonance was fully conversant where exactly his duties lay. Lord Qatus, more concerned with the good life had been amendable with his official findings now that the investigation of these two astronomers deletions were fully explained according to the unwritten guidelines Shach worked with. Varus had gone to ground. For the moment he was on leave. He had fulfilled his duties admirably without showing the slightest interest in what exactly he managed to delete up there. Subsequent systems checks confirmed what his

superior expected of him. This breach no longer present. Secure with that knowledge Shach could brief Pentham with an easy conscience. Truth to him a matter of interpretation. A set of events could be analysed from more than one perspective. That was what mattered, not the facts but their interpretation. It had been his duty that the right conclusions were arrived at. Thus this off-the-record meeting with Lord Pentham.

Shach often wondered how a borderline case such as Pentham ever became a level seven DL. Probably his hyper-state. It gelled with some of the people he used to achieve his specified targets and more importantly the use of the manipulated data to maintain the status quo. Whatever Pentham thought would only matter if he strayed beyond his well defined boundaries. Shach's other duty, as a professional fixer, that rarefied group of individuals who moved with consummate ease between the high domains, made sure the system functioned as it should. The Exalted in a way were *the* watchers of the DLs. Power was their mental sustenance. Luckily in this delicate case Pentham seemed content enough with his position. Then again it could be merely all pretence. But there was a secondary reason for seeing Pentham. The pontiff.

Deeply concerned in the lack of progress regarding the presence of the invasive alien field. As if the DVs were doing nothing, letting the people suffer this intrusion through a deficiency of active engagement adamantly denied by Elentra. Telafus withdrawing into the mystical realm. What he had forgotten, or ignored was that whilst spiritual head of Prima he had to not just show that he was a leader in thwarting this wanton attack but actively engage himself at the vanguard of his most holy warriors, the DVs. Those of the inner circle were whispering in secret conclaves as to the strength of his resonance wondering if he was actually up to the divine struggle. The Great Mind was challenging Prima to rise to the occasion, to usurp the spiritual poison, not merely suffer its demented effects. The palace's informants, relayed to the DLs Telafus's inactivity. They all sensed Telafus's resignation and wondered if the pontiff was up to his duties to be seen to go on the attack, to feel deeply within the bosom of their souls the urge to vanquish the enemy.

They suspected even worse suppositions. That the pontiff himself might be under Regum's influence. For he seemed totally disinterested in the greatest confrontation facing Prima since the Great Calamity. Even the Divines and some of the Ecclesiastics were murmuring whether the pontiff's mind had gone soft. So far they did their best to cover up for the masses the palace's declamation that Telafus was engaged in holy meditations, wrestling with the alien demons at their source. His heroic stance, shouldering the psychic assault thus freeing up all the other Divines to consolidate Prima's resonance. Comparisons were made to the distant Calamity. So far the dissemination of

this construction of divine resistance was accepted by the masses. But in the rarefied atmosphere of the palace, in the almost secluded domains in which the high lords and the holy orders laboured with their spiritual strength to maintain the spiritual status quo of Prima's siege the still unspoken dissatisfaction at the lack of progress created disturbed cells, small groups of like minded Divines who were extremely ill at ease at the soft approach Telfus was taking. It affected those who were aligned with his way of thinking. Let the alien assault burn itself out. Was not the planet's resonance their shield? Were not the people at peace within themselves? Were these not the divine signs that instead of warring with the enemy it might incense its wrath even more? The palace did its best to allay their fears that whilst the usurpers were not gaining on them they were not retreating either. Still it was Telfus's duty to vanquish the alien threat, not merely engage it with so little to show in return.

The Reganians continued to expand unhindered. Was this not evidence that whilst they were gaining, Prima was retreating, leaving the field, their universe open to their foul corruption? And so small groups of extremely dissatisfied holy and divine groups murmured amongst themselves, praying for a divine sign that somewhere amongst them a decisive chosen one would arise, be revealed through auspicious signs to challenge and thwart these alien minds once and for all. They could call a conclave, for in that way their divine institutions would exercise their democratic right to make their voices heard.

Here Pentham had a right to vote and a right of veto. The Ecclesiastics had several candidates ready. For centuries they had always chosen one of their own, considering the Divines only under extreme circumstances. Even going so low as to select some priest whose resonant state was ultra secure from the insipid intrusion of the alien field. Telfus had been one such individual. If Telfus was indeed under its malignant thrall then given the extremity of the situation he could be scanned to re-enlighten his spiritual state. To save him not just from himself but to burn out his fallen state by gentle means of resonant boosting. Back in their distant history the odd misguided pontiff had undergone such treatment. Officially in holy retreat. Gharbel, even Qatus had broached this with Pentham if only to test his position for by all appearances the future did not bode well. They had familiarised him with this possible scenario, a palace coup. Still while merely thinking of taking political action could be considered detrimental, the image the most sacred office portrayed to the masses Pentham saw the logic inherent in their arguments to find a stronger candidate when the time came for Telfus to Ascend back into the bosom of the Cosmic Consciousness.

Whilst concentrating with these serious concerns the strange case of the two astronauts going bezerk at the tracking station was an unwelcome distraction. Astronomers were a part of divine intelligence. A secret order dealing with the ultimate mysteries of the cosmos.

And now this Dr Shach had broached his need to investigate not just why their resonance had collapsed but more importantly whether this was an isolated event due to Reganian influence. Were they agents or was this some new manifestation of the alien signals manipulating their minds? Up at the orbital they were shielded more so than down here under the open skies. To be sure the CFs offered protection yet this tragedy unfolded with such extreme results. It was disturbing if only by indicating the susceptibility of being so easily infiltrated. Shach therefore needed to consult with Pentham, partly as a matter of courtesy and to make sure the technical end of their systems was secure. Pentham had nothing to hide in that regard. From cursory checks both Roshati and Tregon had been manipulated from without not within. This would be laid in front of him.

Pentham could not refuse the request to see Shach at such short notice. Had he stalled it would have alerted Shach that Pentham was stone-walling him. His department was part of the vetting process for any who would go into space. Only the DVs were excluded. They were chosen first by the priests in the countryside on the look out for potential penetrating psychics. Being aware of other mental states was one thing, concentrating for hours on end on a special task or designated target was something else. That took extreme mental powers. And they had to be true believers as well. Pentham's other duty concerned their overall social harmony, dealing with potential heretics before they performed any higher spiritual duties, be it as mentors to the seekers of the Divines, those of a more practical bent making them candidates for bishoprics, even pontifical potentates if they were assiduous in knowing how to use and manipulate if need be those around them. Then through Lord Acht's elite use Volatiles technically endowed to grapple with logic problems that did not influence their resonant state. With all this to consider having Roshati and Tregon slip through somehow really did not come as that much of a surprise. Destined to happen eventually. The Great Calamity had unhinged many back then. That fear still reverberated in the overall social resonance.

What Shach now tried to ascertain was Pentham's reaction. He would begin by being direct and hard. How Pentham handled that would be interesting. He was planetary security after all. Astronomers were an elite set amongst themselves. They had to be solid spiritually yet have the ability to think rationally, not an easy feat. The Reganians were strong on the latter and more than just weak on the former. They

reconfigured through their education their minds in such a way that spirituality was of no consequence. He knew that the data Roshati uncovered and unfortunately related to Tregon had been enough to distort their resonance. To actually accept this cosmic phenomena, the alien field as an assault on their mental state and that of their people the Reganians considered revisionism.

It was more than just a thought-crime. It was heinous to question the divine wisdom of the Great Mind. Implicit in Tregon's reaction. Roshati's was even worse. To translate this event as being a natural occurrence implied a certain helplessness regarding the Divine Mind in not being in control. A perfect mind acted perfectly. Officially explained by the corruption of the alien field. The Great Mind had wanted to cleanse their universe and was thwarted instead. He too was aware at Telafus's soft approach. Let the aliens rage, let them do their worst. In that way they would reveal themselves even more and hopefully a weakness would show itself. Then they could strike at it with all the might of their combined resonance, dissipate its fevered fantasies. What disturbed Shach was that whilst the Immaculate Architect ruled this universe it did not extend to the other more vast universe which now surrounded them. All this had to be taken into consideration. Even if the pontiff seemed indifferent.

Shach's Vertical Ascent Vehicle landed its the engines perpendicular slowly descending behind the institute, part of the sprawling complex of the pontifical palace. It was not just the holy centre of Prima but also the administrative extension of ruling the planet. He had just left Lord Gharbel who had informed him of Telafus's almost reticent approach to their dilemma of the alien incursion. Telafus was undergoing a spiritual crisis. He saw it as the Great Mind abandoning him. Worse Telafus seemed impotent to act. If this continued they might all suffer a complete mental break-down, or worse, go insane. But that was not contemplated just yet. It was Lord Pentham whom he was to brief. As he made his way into the building, ceremonial guards in their garish red uniforms, stony faced, he was concerned as to what exactly had sent the two astronomers over the edge. Officially they had gone retro-Volatile. Was the field, or Reganian targeting affecting even the pontiff who appeared weakened? Maybe this is what happens when a man of the people was chosen. He had been useful for Telafus was not a schemer which meant the Ecclesiastics remained in control of the supreme office. They were extremely subdued, closing ranks. There was a need to find scape-goats for having chosen one with such a weak resonance. Something contained Telafus's lack of decisive action as if he was perhaps corrupted within his holy being. Quick checks regarding the

status of the Immortals who were the planetary spiritual guides, ancient sages uncovered nothing unusual. Maybe it was a coincidence that what Roshati knew, what the pontiff was possessed with could he hoped not be related. The Immortals had spiritual power that encompassed all, the universe, through the accumulated data of the Trine which possessed the accumulated wisdom of all ages. He let the thought drop preferring that that could be ruled out.

Since Pentham had vetted the report it would be interesting to see what he pretended to know, what he possibly covered to save appearances and how he interpreted their possessed minds. The only, as yet, superficial link: alien infection. Was it Regum or was there something more dangerous manifesting itself in their universe? Was it target specific? That was Pentham's domain.

The sky was still overcast. The squat low rise conglomeration of buildings housing different administrations were set in well manicured gardens. Gardeners, doubling as guards were busy trimming hedges, pruning trees with the coming winter and on the look out for unwelcome inquisitive potential infiltrators. Not just Reganian agents either. Some Ecclesiastics in their red garb were conversing, Divines and priests sitting on benches in deep discussion, the odd Exalted, always bearing themselves gracefully thinking themselves above their lower religious caste giving an appearance of inapproachability. They really belonged in monasteries if they thought themselves so pure.

Shach in a unique position to gain access to the DLs. He belonged to a small unofficial group of roving individuals, acquiring both political and spiritual information. By definition he was an investigator of any event that went either beyond the norm, like these two astronauts, or dealing with manipulative secret conspirators, whilst keeping certain political ministers at the very top of the ruling Council informed of the machinations bubbling beneath the polite veneer hiding the subtle conflict of interests. And ferret out those doing the bidding of the Reganians.

The 'Institute of Social Harmony' was as usual busy dealing with the ever present informers, those seeking admission to see some well placed functionary often trying to overturn some decree that affected them or their clients private lives. Flawed resonances in their families, removed for re-alignment in special educational centres or if extreme a spell in an asylum if they had strayed completely from the holy path of spiritual enlightenment. It was the obvious location for Lord Pentham's role, technical surveillance dealing with the possible corruption due to Regum's Web activities. The dampening effect of the countless containment fields covering the planet and the support base for Qatus as Outer Guardian in space containing the alien ingress. Whilst Qatus dealt with

the personnel angle it was Pentham who would notice a shift in the overall resonance of those affected by either extra-terrestrial means and if infiltrated then pass on the target groups to Qatus.

Shach had just come from Qatus who told him of the results of the investigation. This was his final call before making his report, verbatim. The case too sensitive to leave any trace of what he knew in any form.

Palace guards were present all along the corridors. With Shach's computer chip stitched into his arm he was ignored, passing the granite faces. . Shach made his way up a broad sweep of stairs to the mezzanine level where Lord Pentham's front, his public office was located. His visit as such attracted little attention. Conspirators were everywhere. Prima had political groups with outrageous agendas, usually concerned with freedom of expression which could only jeopardise the overall resonant state. These misguided souls wanted to exercise their anarchist intent, obviously the probing of Reganian intentions, with a free ride into their minds, accessing Prima directly through their agenda.

He reached the door and entered the secretary's office. Three priests were waiting to see Pentham. As Shach was in his civilian clothes they looked at him momentarily thinking he was from some ministry, which was the idea. The secretary a middle aged lady smiled professionally at him, having been forewarned of his visit, and over the intercom announced his presence. She then activated the release switch and Shach walked straight into Pentham's office.

Lord Pentham merely looked up from his paper strewn desk. He voided the screen and made a deliberate show of collating his papers into a folder then closed it. Thin, a bony face, deep alert active dark eyes Pentham was definitely old. But not that old. Suppressed energy his presence filled the office even though he was not of preposing appearance physically. He looked frail, his light coat a size too large. His hands more like claws than fingers.

"The incident at the tracking station." Shach was direct. "What are your conclusions?"

Pentham actually smiled. His previous concentration on his work dissipated as he relaxed.

"Officially they went volatile. Something snapped. Why I can only guess. Regressive genes. Probably deluded as well. Imagining that they were in contact, or attempting to make contact with some Reganian agent. Naturally it is all supposition as whatever they had on them or whatever they knew is now deleted. I've gone over their

files which Lord Gharbel graciously let me see. If there is a cell, if," he paused, "it is no more. They were probably isolates, working on their own. The system's have not been compromised." He finished off.

"And your conclusion?"

"I thought I just made that clear."

"Your conclusion."

"My opinion if I had one is of no relevance."

"Humour me."

"With no data to go on Dr Shach what is there to say, to suppose?"

"You deal with unique individuals. Sometimes there are patterns in social behaviour expressed in various forms of specific behavioural traits."

"You should really talk with Lord Gharbel or Qatus. I'm systems."

"Lord Pentham, one of your domains is planetary security. I'm referring to human resources."

"Oversight only."

"I am aware of that."

"Talk to Janon, or his operational commander Reno."

"So their files did not come through here."

"Not that I am aware of. Whoever sent you may have misinformed you."

"I have to follow up leads. And the systems are safe, secure?"

"Yes."

Shach changed tack. The more he uncovered regarding the strange fate of the astronomers the more this isolated event kept nagging him about Telafus's inactivity. "You know Telafus seems almost indifferent to what is going on. Some are hinting he should be temporarily relieved of his sacred duties."

"That would be most unusual."

Interesting. Pentham was not shocked.

"Some wonder at the state of his spirituality."

"It happens more often than is reported Dr Shach." Pentham said non committally. Shach was pleasantly surprised. To even question the pontiff's state of mind bordered in gross insubordination. Yet here he sat, taking Shach's dangerous suggesting in his stride.

"You don't seem surprised."

"Oh I am. Perhaps Telafus being chosen was premature. This is off the record I assume?"

"Lord Pentham, this case is so delicate it is the only way to get at the truth. We are facing an extremely difficult situation. It might be time to consult the Immortal here at the palace. The Trine as a repository is a powerful presence."

"Though the Immortals are accessible to all the people, seeking guidance, receiving spiritual succour, wishing to bathe their souls in the supreme divinity or merely reaffirming their faith, the Immortal encased at the palace seems a rather obscure way to deal with the real matter in hand. Immortals are the gateway, the path to the Great Mind. This Immortal unsullied by the more discordant resonant states of lesser supplicants. Maybe it should be delicately broached to Telafus to seek divine guidance given his apathy." which did not really bother Pentham. The ways of the Supreme Being would always be on a level way beyond their own mortal selves.

Shach was smart enough not to pursue his concerns too far or that of his superiors too intently. The astronauts aberrant behaviour cried out for a resolution. If they could be affected then anybody could. Shach was of course going to report that they were under the influence of some Reganian agent. It would tie up all those still unexplained ends which were his primary concern. The report would blame Regum. It would give them leverage. The Reganians would deny this of course as much as their agents on Regum played the same game. Yet if it could be revealed that greater stakes were involved so much the better. The Ecclesiastics wanted to instigate a cleansing. This could be the moment they needed to set a plan into operation. No one would be exempt from scrutiny. Not unlike after the Great Calamity when thousands were found wanting. They of course emigrated to Regum. If this were to occur again they could rid themselves of the more extreme Volatiles. Destabilise Regum. Create a dysfunctional society. It might even derail their expansion into space.

"Did the diagnostics come up with anything?" for the palace staff had closed ranks. Sealed off the event. Sealed and deleted. Aware of the rumblings, the secret whisper campaign sowing doubt about Telafus's capabilities. Two events. Telafus's reticence to act and the astronauts mentally screwed. Even Shach did not have access to what they made of the astronauts demise. From their view it occurred on the orbital. What Shach wanted to find out was if any were affected within their own ranks. He had the brief to not just investigate the astronauts inherent Volatility but given the need to question the relevant DLs to ascertain their own resonant state.

Shach was there to uncover not just the lay of the land but also which way the winds of change were blowing. Once established they could be fanned in the direction his superiors intended. Affect change. Times in transition. It was an opportune moment to

make the best of a bad situation. With a strong pontiff in place Prima could reassert its strength, its resonance and contain Regum psychically by undermining their minds, the primary intent of his investigations. For this the Domain Lords were essential. Not just to convince the people of the righteousness of their noble path but also to control Regum as well. Then with their technology under Primaian domination they would be supreme in this universe: They could take the fight to the alien race as well. Overwhelm them with superior force. But only once Telafus was removed. So to complete preparations Shach had to survey those in power, see who was on the side of 'right', convince those in the middle where their true duty lay and contain or remove those who were inimical to Prima's resurgence. Great times lay ahead. The universe there for the taking. Regum had shown the way, the aliens had proven what could be achieved and Prima would use that knowledge to finish the job. In a way the incident of the astronomers was almost a divine sign; that it was time to act. The age of contemplation over. It had lead to an inner weakness, one Regum used, one the aliens ruthlessly expanded upon. The weak were now a liability thanks to Telafus's misguided benevolence.

"Diagnostics came up with nothing." Pentham said at last. He had let Shach think whatever he was thinking. A natural manifestation of a deep mind. Reality was not flat, it was intricate and profound. Out of respect, and caution Pentham had not bothered to even probe Shach's momentary introversion. He had his reasons for analysing the situation from as many perspectives as possible. Truth might be self evident yet the means of achieving that truth, given sentient reasoning usually was convoluted. Unlike Volatiles who acted without much thought.

"If diagnostics did which it didn't I would have been alerted. No unusual activity. An induced mental breakdown relative to the individual. Nothing untoward in the system, or the Trine. Nor the Web either. An isolated if very unfortunate incident. I'm sorry that I cannot be of any help." Which was a half truth. The two astronauts though had gotten around the system. They could have been Naturals but now that they were dead no one would ever know. That alerted Pentham. There would be others then. This was not the end of it. He was not going to enlighten Shach. There was something about him that did not add up. He had the highest of clearances, direct from the pontiff's office. Not a monolithic entity. There were many departments many players.

Pentham dealt with planetary security through Janon and Reno who would he hoped be shadowing Shach. A cursory search revealed nothing about him. Varos concerned with Reganian science and technology. It could well be that they had inserted certain subroutines thus being aware of whatever they were engaged in. The

data of course was no more. So he would never know why such a top secret investigator would concern himself with what appeared straight forward. The mental collapse of two astronomers. Janon had found no waiting Reganian ships over Prima to make this supposed contact that was part of the findings. So even if they would have made it into the desert, then what? They could upload their data to some receiver on the Orbital, but then why come down at all? It would have been intercepted. The best place for any clandestine activity would have been up there. There were too many flaws. Not that it bothered Pentham. It was something curious at best and he was within his rights to do whatever he saw fit in pursuing this further. Janon found nothing. Unless the palace was involved in some intricate scheme. Aware that there were those seeking Telafus's removal. He could only think that somehow this was instrumental in achieving some secret agenda. He would make certain his end remained well clear of that. Even talking to Shach was loaded with unspoken implications for Shach was giving nothing away.

Shach was relieved that the system was secure. Pentham assured of his candid approach, enough to confide what he knew which was not much. He had spoken the truth as he saw and knew it.

"You don't seem upset though. Two vetted astronauts who used restricted data to pass on to the enemy. Under Reganian influence or some rogue elements amongst our own."

Pentham liked what he heard. Sowing seeds of distrust. So something was being hatched. Interesting.

"Dr Shach when you have been around as long as I have, these mental deformities become part of the norm. Otherwise we would have no need of asylums, or security departments."

"True enough."

"Is there anything you can tell me?"

"I'm not privy to the contents of what Roshati and Tregon might have assumed. I know it bothers some about Telafus rather benign approach to what we all face. But the two surely cannot be related. Nothing I should know about?"

"As this conversation is not taking place, what if the pontiff is being manipulated."

"An impossibility."

"Our astronomers belong in a way to the Exalted. Their resonance is supposedly secure. If what occurred up there did in fact happen then it is not impossible for something similar to occur down here."

"You know what you are saying?"

"We are all in this."

"If you could be more specific?"

"Alien activity of course."

"No change there."

Shach was not going to pursue the pontiff's state of decay.

Pentham was genuine regarding his ignorance of the deleted data. But not hostile to the suggestion that even Telafus was not completely inoculated in his soul against the incursion. At best he was the dutiful functionary. Politics he left to others. Devoted to the masses. Better than being affronted, or even feigning horror that the pontiff was not perfect. In short Pentham was not rattled. He had barely reacted at Shach's suggestion. It was enough for the moment.

"You have been most helpful Lord Pentham. Well that is all. Thank you for your time."

"I'm sorry I could not be of any assistance. My work is to overview the systems, not the users." Which was not quite true. He knew it, Shach knew it.

"Yes. But news gets around."

"Gossip you mean."

"Even that is information."

"As I said, Lord Gharbel is your best source. Maybe Qatus."

"I appreciate you having taken the time."

"A pleasure."

Pentham was so stable it surprised Shach. Maybe it was age. He probably would have come across so many discordant resonances that a few more made no difference, even if it did concern the pontiff. The trouble was this had never happened before. It had worried Gharbel who thought maybe something was amiss with Telafus. Pentham not concerned. He should be. They all should. If Telafus was going soft then that would filter down through them all. The outrageous idea that Telafus was under Reganian influence could not be ruled out. He tried that approach with Lord Gharbel who dismissed it as non-sense, or spread about by rumour mongers. Qatus merely laughed. Which was all. Maybe Telafus was Qatus's creature. Qatus the very opposite to Gharbel. His portly frame spoke of the good life. He was there to enjoy his status whilst Gharbel was intent on being the power behind the throne. So it made sense that Gharbel would be worried. Another pontiff might not be so amenable to Gharbel's power. He had learnt much during this investigation. The supposed serenity of the whole of Prima's social structure was really seething with various interest groups whilst the people, the Volatiles

were bordering on the anarchic. They just wanted to get on with their rustic lives. Politics they saw with honest disdain. Power to the elite for their own selves, featherbedding their nest. Their real faith was oriented to the Immortals. They accepted the priests only because they could unburden their souls, relieve their inner tensions. For the priests kept the social bonds in place, reassured the people that although the cosmos might be poisoned, as long as they prayed, kept to the divine path of final resurrection at the time of death and led a good pure life the combined resonance would protect the planet, their lives and guaranteed their future. As long as the beer and wine flowed, the harvests were plentiful and peace reigned, then all was well. Any change was not even considered, or that life could be otherwise. What Regum did was of no consequence. As long as the future was a continuation of the past they were content. In a way he envied them. They did seem genuinely happy. But Shach knew that there was a change in the universe. There were other races on other planets who would one day interact with the Reganians and that would have implications for Prima. He had to find out how they would deal with that. His superiors most interested in that, in how the future would play out.

After leaving Lord Pentham there was one more person he had to meet. Janon. It could be that Janon was holding back. That much was certain. The why's were too many. Pentham was momentarily kept out of the loop for several reasons. The official analysis and the mental state of Telafus massaged by the palace's own spokes people. What the Ecclesiastics knew they kept to themselves. They never released anything. The only way to find out what did occur might be hidden in the Trine the system of the Guardians. Another gift of the Reganians to block, reroute, reconfigure any assault on the planet, psychological or on the ground. Janon was one of the few who might get a tailored version of what had overwhelmed the astronauts. The obvious explanation of course was, and it could be true, that they really had suffered a mental breakdown. Unusual but not impossible.

As the VAV lifted off Shach was satisfied he had learnt as much as he could. Varos was already removed from the scene, whereabouts undisclosed if anybody wanted verification as to the data he had deleted. He flew back to one of Prima's secluded monastery out in the desert. Originally envisaged as a retreat for those with a mystical orientation it was also a clandestine meeting place to cover aspects of policy which the outer groups considered important. Upon landing, breathing in the clean fresh air, the purity of its isolation a welcome change from the latent humidity at the

capital. Assured that the loaded data was safely removed he could resume his more serene duties of troubleshooting the mundane aspects that concerned the usual Volatiles on the edge of a mental breakdown. Divines were the mentally aware for the daily grind, carrying out the orders of the executive. Shach's natural inclinations for all things scientific relegated him to an outer group who had some input but were left out of the loop of making real decisions. It gave him more freedom to pursue his own interests and Shach's was certainly his own man.

He had followed Regum's technical achievements with awe. Prima had to decide how far they could go and make that known to the decision makers. Officially developing their own scientific core was viewed with the utmost of suspicions. However if they were to keep up with Reganian breakthroughs they needed to understand not just how the scientific mind worked but equally if not more important how that knowledge was applied. For now the total removal of the data Varos deleted did not sit well with Shach. The evidence they so desperately voided had been a mistake in his view. It would only be a matter of time until another astronomer would stumble across the same cosmic phenomena that set this whole sequence in motion. Maybe not today, but chances were the same process would be repeated. He needed to know what exactly seemed so dangerous that any reference to its existence had to be denied.

So far his brief had gone smoothly. Acting on the palace's orders he and Varos had performed their duties. The termination of both Roshati and Tregon he thought more than extreme. There would be reverberations rippling through not just the astronomers but as it had occurred at the space port, there as well. Rumours were flying about coming to all sorts of outlandish conclusions. Maybe that was intended. It would help to confuse the issue at heart. Since he had not been told directly to make himself familiar with the content of the deleted data he would see if he could dig it out from the mystics. For the desert monastery trained the psychic elite. Some were destined to become DVs, not as the brave soldiers battling the alien field but those behind them for it was important to see the whole picture, not just the remnants and the dangerous information the DVs gathered. Context was everything.

He had arranged to meet with Varos thanks to information revealed by Janon. No order had been given that he could not make contact with the only person who knew its contents. He had also asked Janon to make his way out here. As head of the investigation Shach understood that keeping his section out would not hamper his duties.

Problem: Regum seemed unaffected by whatever passed through space. How could Prima have mentally suffered a collective hysteria back then yet the Reganian's

never even noticed anything unusual? In fact and this was only supposition, as he walked away from the plane viewing the austere building, more like a fortress, that Regum had made great strides. Moving away from basic robotics to the next generation of head inserted smart machines. Alien proofed or alien aligned.

Then there was the paranoia factor. Prima's persistence of being the chosen race. Infusing their benevolent spirituality amongst all sentients. Unite all in their holy embrace. The Reganian's would have none of it. Amendable to Prima's roving priests, the schools they set up on the twin planet orbiting at its opposite apex around their common sun.

A monk came out from the monastery. It's oasis now bare of the few crops they grew to sustain themselves, of the herbs they collected to make medicines and a potent herb liqueur which was very much sought after.

The monk in his white clean cowl had his hood up to shield him from the sun, his face in shadow.

"Welcome brother." Their universal greeting

"Celestial greetings." Shach replied. "Lead on." Taking in the pristine view. The previous thunderstorm, the short wet season they experienced had filled the water tanks using the rooves to collect the precious resource. There were several wells to supplement their need to water their crops, their gardens and the few sheep that grazed on the sparse grass that lasted long enough to supply if only a meagre amount of meat after their fine wool had been shorn. In the distant west towering lilac snow capped mountains that during spring augmented their water supply. An ideal spot for a limited number of people to adequately survive out here. One of the monastery's functions to re-educate the recalcitrant high personages who had strayed from the divine path when their spiritual devotions created a crisis of the soul. In a way they were regarded as being divinely unhinged. Too much too soon. Worth saving. They knew things that were best kept away from the population at large. Even Divines and Ecclesiastics. Nor bishops unless by papal dispensation, or on the advice of DLs in some rare cases. Maybe they could enlighten him as to what did occur back then during the Calamity.

Shach had his own view of the universe. It was a living entity, a pulsing being of which the Great Mind was it's projection. The mystics here saw it as an illusion, one tailored to their sentient consciousness, a mirage energized by the cosmos itself. That interpretation too was kept here, not to be disseminated except to a few who had a solid resonance so as not to come to the conclusion that the Great Mind was merely a chimera at best. It might lead to apostasy or following intrinsic logic to atheism.

They walked through the open gated outer four storey building and into the large quadrangle where in its centre was another well. Inside all were busy. There was a blacksmith to repair and craft agricultural implements. Outlying hills a day's ride away by mule was used as a quarry to repair the monastery and timber was brought from the distant forests at the mountains. The pack animals and their keepers followed the river bed during spring, to replace the odd piece of decaying hardwood. Luckily in the dry atmosphere maintenance was an easy task. The monks and ordained women who sought the mystical path lived in beatific harmony. Sex was not discouraged as long as they did not bond as permanent couples. The way was what mattered and being born of flesh, sex could not be avoided. Some of the mystics managed to overcome the urges of the body, using biological energy to transmute it into fervent spiritual vigour.

The monk led him through the courtyard, the inhabitants joyful in their work, laughing amongst themselves as they went about their duties with a serenity which Shach found relaxing. Every time he came here he felt like staying. He did go on retreat in this sacred place now and again, calming his mind and wonderfully refreshed after a few days of undisturbed meditation. Today other things mattered.

Amongst the busy workers Shach noted security guards. He was surprised and asked his guide as to their presence.

"As we avoid physical force the abbot deemed a small contingent necessary to keep the peace."

"There has been trouble?" Shach asked surprised.

"Some of our guests have shown signs of violence. Self harm. Some are deluded to the point of possession. They have to be restrained. As you are an esteemed visitor whose presence is always welcome and are familiar with our ways you can see the dilemma it posed for us." The monk deftly avoided some animal droppings. A monk near them hurried over with a spade and bucket and collected the dollop. It would be dried and used for fuel. Very little was wasted.

"I've come to see a guest." Was all Shach said. They walked into one of the many entrances of the building. Four circular towers rising high into the clear blue sky. The north facing tower was an astronomical observatory complete with a small telescope. Large enough to study their solar system. What the monastery did not possess were the necessary computers. Their only technology was a communications room to stay in touch with the distant world, distant not just in space but in time. The monastery dated back long before the masses converted to their singular god.

Going back to the very beginnings of their civilisation. They had survived the ancient wars, the incessant battles, the Calamity. Since they accepted the notion of a unifying god which he knew they secretly understood as a manifestation of cosmic energy the pontiffs did not consider them as being unaligned. They also produced through their devotions great thinkers, philosophers, scientists even high born seekers who after a few years returned back into society with a resonance of superior strength that impressed those whom they met.

That Janon was one such adept at first surprised Shach. Here was a man whose duties lay firmly in the mundane world yet in his youth he had sought enlightenment. Janon never alluded to his sojourn here. Some of the more egotistical minded saw themselves as having reached a stage of inner perfection. Janon considered this a false sense of the divine within. Perfection was something to be attained, a life long pursuit in itself. Maybe at death the apotheosis would be complete but until then it was the attunement towards the possibility of reaching some form of divine attainment which mattered. The path was the Way and the Way was both infinite and eternal. The body was not, the soul was.

They walked into the cool of a corridor, heading towards one of the towers climbing the circular stairs to the third floor where Shach was to meet his contact. He was starting to see the monastery in a new perspective. It was more than a retreat. Plans hatched, ideas executed, policy formulated. It looked as if the Domain Lords were not the supreme arbiters of Prima, not completely anyway.

Having reached the top floor the monk told him it was the last door before the stairs leading to the observatory. With that he left. Shach did not even have time to thank him. He walked on. The silence replete. The corridor had some windows into the courtyard below, the noises of busy workers muted. The activity below sounding like a mosaic of calmness. He felt himself enmeshed in the monastery's serenity, a part of an encompassing picture, a living enclosure separated from the outside world. The air was still, the quietude replete, a micro world at ease, everything in its place, the divine all around.

The last door. He knocked and a muffled voice bade him enter. Shach was familiar with the cells the seeker retreated to. Rooms that were austere. A bed, a writing desk near the window, a small wardrobe. At the end of the hallway the privies and downstairs communal showers. The solid wooden doors opened on oiled hinges. With the window lighting the room the two others awaiting him were silhouetted. As he entered his eyes adjusted and he saw Janon and Varos.

Varos or Janon his superior? Varos no doubt. Both here purely for the business at hand.

"Thank you for coming." Varus rose from the extra chairs provided for their meeting.

"Well, a pleasant surprise. Janon."

"Dr Shach. Please be seated. Some wine?" and Shach saw a silver pitcher with droplets of condensation glistening in the light with three silver goblets.

"No thank you, a little early in the day."

He sat with them around the small table. The view north was flanked on the left by the distant mountains, the light brown desert, the dry river beds cutting through the flat terrain, the sky a brilliant blue. And quiet. The stillness an element in itself.

From inside his jacket Shach retrieved his report and merely laid it on the table. It was one sheet only for there was not much to go on. No one knew anything, which perhaps was for the best. Lord Pentham unconcerned, accepting events as necessary if unfortunate. The other astronomers knew nothing at all and suspected nothing except that Roshati and Tregon had gone Volatile. The pertinent information, the supposed discovery of the astronauts not alluded to.

Shach waited, Janon was looking out of the window his gaze tinged with concentrated thought. When Varos was done he turned to Shach.

"Janon informs me that certain psychological disturbances are manifesting themselves. A sort of delusional mass psychosis."

Shach was barely aware of what happened to the people.

"I assume this concerns us? Me?" he asked.

"We have to deal with it. If this continues the overall psychic resonance will destabilise our world."

"Regum's Web."

"Not the alien incursion?"

"Maybe."

"Anyway our superiors have decided to act. A cleansing. It will create problems. We need to move quickly, isolate the Fallen."

"Alright."

"We also have to deal with Regum once and for all."

"I understand."

"Maybe you do." Varos said. "There is no mention in your report as to the content of the information. I hope there are no tell tale remnants around."

"No one knows anything. Of that I am certain."

"The Reganians might through the Web."

"Given the multitude of alternatives in there..."

"Yes, but it will get out eventually. There are illicit immersions on our side, meaning unauthorized access."

"Yes that is the case."

"And they cover their tracks, self delete."

"Very smart."

"The stability of our people is at risk. Perpetuated by Reganians. Maybe not themselves, but traitors in our mist."

"Janon?" Shach asked.

"We have lists."

"Good."

"There are those who are corrupting our people."

"Priests?"

"Some very high persons."

"That is serious."

"Without their conscious knowledge."

"Manipulated."

"Exactly."

Shach looked out the window for a distant rumble echoed across the sky. A powerful white gleaming dot, glinting in the sun was approaching. It was not a shuttle but a cruiser. What was that doing here? Maybe their mysterious master.

"The pontiff is most concerned." Varos said.

"I see." Though he did not. "There have been suggestions that things cannot continue as they are."

"What we thought of as a perfect incident seemed to have been ignored."

"You expected a reaction, yet those who were to be flushed kept their heads."

"Indeed. So we have to create another incident."

"To be sure."

"We need your co-operation."

"Of course."

"We need a defection."

"?"

"There are only a few of us who know this data exists."

"I thought it was deleted."

"Oh yes that is true. But the evidence is still there in reality. What Roshati discovered can be acquired by anybody, if they know what to look for. You for instance."

"Me? Why would I...?"

"Because you want to take it to the Reganians."

"But you just said they already know."

"My mistake. Suppose. It's a guess only. They have inserted many strange phenomena. Let those who stumble across it to draw their own conclusions."

"You want me to be a messenger. Why not yourself?"

"Indeed why not. Because I am coming with you."

"And Janon?"

Varos pulled out a stun gun. Janon looked surprised as Varos shot him. Janon never even reacted just slumped forward.

"It's only knocked him out. He will get over it." Varos looking at the prostrate figure. The sound of the jet above was now a deep rumble as it landed vertically billowing brown clouds of dust around it.

"We are going to walk out of here. I can stun you, carry you or you can come willingly."

Varos looked at Janon once more. Shach cornered, preferred to stay aware and alive. He understood now. Varos was working for Regum. No wonder they never knew their superior, there was none. It was Varos all the time, using Janon. Now Varos was being extracted and he was taking Shach with him. So the data tied in with the Calamity, and Regum could reveal the truth at an opportune time to get at Prima's status quo. They had caused the disaster to gain supremacy of their world. The alien field the excuse. How simple, how effective. The status quo was insecure as was their official ancient history. Would it work? Would it make any difference? The people accepted the cosmic view. Regum did not.

"Shall we?"

Shach decided to go along. Varos was making a mistake he thought in letting it appear that he was part of Regum's attempts to destabilise Prima.

He shrugged his shoulders, accepted his fate. Varos training the stunner on him, walked out of the room as if going for a pleasant walk. Some monks were approaching the sleek cruiser out of mere curiosity. The hatches remained closed, the engines whining in idle. Down the stairs and through an outer door. No one paid them any attention.

Shach was curious. To be amongst the Reganian's, what a turn of events. Luckily he had no real attachments here. The odd mistress but there would always be others.

As they approached the cruiser, brilliant white, a hatch opened and a step ladder cascaded out. They walked up and into the ship. Whoever was in control remained in the cockpit. The hatch closed and they secured themselves in webbed shock absorbent couches. The ship wobbled slightly as it began its ascent, then repositioning its engines to horizontal streaked off into the bright blue sky.

A short time later they were in space. Even if Prima sent a back-dated almost cumbersome shuttle after it this ship was far too advanced for any successful pursuit. They accelerated into space towards the orbital. Varos extracted a needle gun. Within it, the solution carried tiny nanoscale units of information. No need for crude BrainDraining or retarded psychological re- conditioning. Shach would feel normal.

"So what now?" he challenged Varos.

"Oh call it an inoculation. Stabilizing medication. Can't have you make up all sorts of insinuations. Not good for your mental state." and jabbed Shach. He passed out. Varos called one of the support team took a helmet from a cupboard and gently deposited it in Shach's head. They then with some struggle got him into his space suit. He checked the fibre optic links and allowed himself a smile. .

Hooked to the safety systems to make sure the space suit was functioning Shach's memories were slowly rearranged. The reality he perceived would not be altered, just his interpretation.

The ship approached the orbital at a leisurely pace. There was no defection to Regum. What was necessary was for the information to be isolated. Remain off Prima. The DVs were on the other side of the orbital so they had this part of space to themselves. By then Shach was coming out of his trance. For all he knew he merely passed out from the acceleration on take off. Slightly groggy Shach attempted to smile apologetically. The crew members along with Varos helped the almost inert figure into the double set of space-locks

"Well I guess this is where we part company." Shach felt a little strange. As if his mind was in remote control. Yet he felt perfectly OK. He had finished the job at the tracking station. Time to report back. Maybe now he would find out as to whom he reported his findings.

"Give my regards to your superior." Varos gestured for him to lead the way to the air-locks. Varos wanted him to tell the truth. That Shach was a Reganian double agent. That, Varos almost laughed at the simplicity of it would keep them busy. Spreading

disinformation. Another cog in Regum's intelligence units to drop hints that countered Prima's effective propaganda war. Shach the caught out defector. One at the highest level Regum managed to turn. If the Primaian's kept a lid on what the wave-field was about it would confirm to keep secure the real events of their own history. If it was released, even to a select few they would use that as propaganda against Regum.

As Varos had explained. Regum was starting to manipulate data through their extended Web in space, sow seeds of dissention. Maybe even respond with hostile intent. Position Primaians as aggressors. Destablilising their serenity and the peace of centuries. The people did not wish for any conflict or worse a real war. If they were appraised of the truth they might rebel. If not then the Reganian's were certain that the rulers of Prima were in total control. But if they were intent on reacting they would set themselves on a collision course. The Primaian's were adept at dabbling with the minds on the not so alien planet from Varos's point. To change these strange beings misguided view. To impose the historic evidence into their souls.

Varos, from counter-intelligence thought it was time for Regum to finally act. The trigger, Roshati's discovery and her termination. Considering what Regum had in mind, they were now ready to launch their mission and hopefully explain to the Martian's some uncomfortable truths. Reality would win out. Reality could not be denied if Shach acted accordingly to what the molecular data strings contained. Regum as a whole was not that concerned that the Primaians mind-warped their own people but they had no right in the universe to unduly poison other sentients with their monomania.

"We have sent a message announcing your return. Don't worry that you're on our ship. We don't want to be detained by SpaceKorps. So unnecessary."

"Well it's been a pleasure as always." Shach heard himself speak as if he were a third person. Varos hoped Shach would spill the beans. Create a little havoc, unloosen information. But would it set the Primaian's on a more rational course? Regum wanted Prima on side as first choice. This madness of theirs had to come to an end. Use any means to achieve at least an armistice in this battle of their souls with Shach the unofficial messenger. Revealing Primas monumental lies.

"You've got plenty of air, a triple pack of water, enough oomff in your attitude jets to circumnavigate the planet if you wish. We're positioned away from the DVs. We've also announced our arrival."

The monitor showed the orbital. It filled the screen. They saw the tiny short-lived white squirts of service bots.

"Until we meet again." Shach replied a little puzzled. He was under the impression Varos was his superior. Now he understood he was only his minder.

"Who knows. You did well. You're quiet the hero amongst our little community. Not that it will become public knowledge. And if you ever want to get out you know what to do."

"And the shadow programme is on stand by..."

"In case they try it on you? Yes. Your contents are secure. They'll only get out of you what we want them to. Double agents are of use to both sides."

"That was not always the case."

"Your own are learning. After all we are not the enemy."

"I know that. Until whenever."

"Where-ever. Maybe when you retire you can pay us a visit. You know you are always welcome."

"I appreciate that. You know it's not that easy. Torn between two home worlds."

"I guess it depends on what's on offer."

Shach smiled. That was true enough. Both sides wanted him. It was not that bad after all. If he did ever decide to retire on Regum it would be final. It depended on how they would deal with him the moment he was debriefed. He just hoped his people were as open minded as Varos's.

He went into the first airlock. He felt destiny awaiting him. His brain surged with excitement. So much to tell! The second lock opened. Infinite space. So open so inviting. No wonder the DVs wanted to go back again and again. Here was total freedom. The alien incursion of no consequence. Its informational content perhaps weird, its sentients more than just Volatile yet essentially they were not so unlike themselves millenia ago. He made a last check of his system status, the space suit fully functional. The small attached controls at the ready he pressed the forward button. His tiny jets pushed him towards his waiting companions. The orbital, with its many lights, looked welcome. He had only been up a few times to familiarize himself with the astronomers and their sacred duty to observe the beauty around them. So much to discover. He knew that if he could ever get out of intelligence he would devote his time to really study the cosmos in all its glorious and mysterious splendour.

"Why did Janon remain behind?" Heana asked. Another new face. Probably continual rotation so that no bonds could be established. "As intelligence agents they have to work and remain as much as possible in isolation. Avoid inadvertent cross

contamination. Exchange information not meant to be exchanged." She answered to herself. They were in the debriefing room. Triple sealed against electronic scanning, psychic probing and as an added precaution a containment field to make sure nothing got out mentally by inserted micro-boosters when dealing with anybody in contact with the Reganians.

Shach was puzzled. Heana, tall woman, rather thin, determined eyes, pursed lips, a thin nose, prominent cheek bones and being often in space short cropped black hair and pale. No ID.

He was sitting in a sensor chair, hooked up to diagnostics to vouchsafe his resonance for any aberrations he might not be aware of.

"He was to accompany you back." Heana said.

"Maybe he did not want to be seen being returned on a Reganian ship. Undue influence."

"We will get to that in a moment."

"You performed your duties at the tracking station. Your resonant scan," not bothering to look at the monitors "is clear. Yet no squirt or condensed messages present. Still we must assume you being on a Reganian ship..." Heana frowned. She had not been told Shach was a double agent. She was there to make sure the so called deleted data was not lurking somewhere else, whether in the systems, or his mind. Yet she sensed Shach's powerful essence. He was loaded. Unless it was the containment field suppressing his resonance. She decided to switch it off. His resonance became denser. His unconscious mind very active. She consulted her inbuilt pc on her sleeve.

Heana had to tread carefully. Without Janon's guidance she was on her own. Still Varos had dumped him here. Had he loosened Shach's mind controlled lock down mode so prevalent amongst Reganians. Both Gharbel, an assumption and Qatus were taking a direct interest in this event. From what she had been told Shach's data was dangerous. Not in itself but how it could be interpreted and used by the Reganian's. So it was imperative it remained permanently lost. That much was confirmed from the auto sensors running Shach's headspace.

Shach was reading her mind! Though naturally capable at that he was surprised that she seemed to almost present her mind's resonance with such clarity. So it was the data. That triggered off a sequence of thoughts. There was more to the data than a mere physical event. His mind bifurcated. One set of thoughts saw the Primaian end, sent by the Great Mind to counter the alien field, the other the more logical Reganian version a seemingly a natural event due to the massive absorption of black matter by their

galaxy. Like a forgotten dream something else was there. Not discernable with the ease of what his energized mind acquired but something hidden within this now inserted wave-field.

It was more than just energy, something was *embedded*. Encoded data. Subtly in phase, more like a carrier wave. So that was it. That was the big deal. The reason Roshati and Tregon had to be taken out. No wonder Varos had been so considerate towards him. They were after the same thing. Yet Varos had deleted the information. But that did not mean he had not absorbed it if he was EAI capable. That meant Regum needed confirmation. It was their way. One butterfly did not signify spring, but the butterfly was there. Shach had an image of the rolling wave spreading through space. Moving from its source, so there was a source. Of course his Primaian mindset explained it as the work of the Cosmic Consciousness. If that was the case then with this data-gate a set of coded field equations anyone capable would get into the mind of the Great Deity. Were the Ecclesiastics and the Divines concerned that if anybody could access the Supreme Being directly then there was no need for their presence. The whole theocratic structure redundant.

Holy shit. This was exciting. Even better his Reganian mind reverberated. It meant they could decode it. The only problem was the way it was dispersing itself as it moved out at almost light speed inside of his head. For the further it travelled the more entropy took its toll. The embedded information disassembled, infused with all the other waves along with the whole spread of the electronic spectrum so that the unity of the contents became mixed up with the rest of the universe's latent information making it harder to reassemble. It would need an array of super proportions to siphon out the inherent message within the dissipating carrier wave out there. It was all so clear in his brain.

Heana was aware of Shach's heightened mental activity. His resonance so dense her neural resonant awareness was overloaded with so much information that unless she went in, which was hard work and might influence her objectivity in debriefing Shach, could very easily create a false impression. He was a double agent after all. They were necessary but somewhat untrustworthy. It could all be disinformation.

Another woman entered. Tall, lithe, moving with a fluid grace, rich short auburn hair. It seemed only terrestrials grew their hair long.

"We need to e-scan you. It'll be a soft scan. It seems you know more than we expected." Heana explained. "Our system analyst." Looking at Elentra. "She's more attuned to the possibilities of AIs. We know Reganians have advanced in that field if only to counter our psychic abilities."

Shach was amendable. Only too aware of what was locked away within him. Thoughts were after all the tip of the mind's icebergs. An abstract conceptualisation and encapsulation of the greater wholeness of total consciousness.

From a locked cupboard Elentra rolled out a mobile trolley with a monitor, a console and a head brace. Thin optic fibres with touchpads at one end feeding into the main-drive, itself hooked with a thick cable into the recessed cavity in the wall. External linkage to their intelligence gathering data units.

"I wasn't aware Janon had to return with me. I told him what he wanted to know..." though he could not remember much of that. His brain pleased. He had said enough to satisfy him, knowing that it would never get out. As such he looked forward to uploading his contents into their system. Hardened. Deletion impossible. Ah things were working just fine. Keep on going ladies, I'm ready to be honest here.

What Shach did not know was the ruse Varos had used. The ship might have been Reganian but it was manned by SpaceKorps. The pretend abduction done to unsettle his mind. For Varos trusted nobody. Shach a double agent. But which side was primary? The nano packed information making him think he was Reganian on board the orbital. A trigger to unearth the deleted data.

"Don't forget this also concerns Qatus and maybe even Gharbel, not forgetting the pontiff." Shach reminded them trying to place Varos in the scheme of things.

Heana looked evenly at him. Intelligence was certainly moving up in all domains. He was probably being used by intel. That meant Pentham but he was value neutral. This was in Janon and Reno's court. Extending their domain into all sphere's of influence. Prima's intelligence agencies were planning something big his brain alerted him. He had to find out. It might simply be local planetary politics or it might concern Regum. He was fully alert.

Elentra put the headband on him. It felt warm, comfortable. Well they would be in for a surprise. He relished with anticipation the result of their probing.

Elentra fiddled with the controls, made sure they were functioning, slowly attuning themselves to his resonance. Moments later he heard the 'ping' that it was ready.

"Where is Varos?" Heana asked. Elentra was standing next to him paying attention to the read outs. Shach was flooding the system with his knowledge. His mind was now released, relieving itself of its contents. Shach smiled. Heana mistook it for keeping something back.

"He's gone."

"Gone?"

"Yes Heana, gone. Back to Regum. Not only that, he may have deleted the data from your system but that did not stop his AI from uploading it." Shach dissembled under the influence of the nano-inserts.

"He worked for Regum?"

"So it seems." Shach's mind answered for him. He was more amused than shocked that they had been totally fooled. "Check his history. I bet he came out of nowhere."

Heana looked at Elentra. "I'll have to call that up." She walked over to another part of the wall and opened up it's recessed terminal. She busied herself as Shach's mind continued to unload all he knew. The system was taking it all in, too fast for Heana to keep up with. He sensed her indecision. Shut down Shach and loose the data, keep Shach going and the secrets would move into their memory banks.

"All I got is that he's one of Janon's. First noted in SpaceKorp, then during routine checks decided through systems checks that his real capabilities were with computers. Came from the outlands, a Volatile. Moved through the usual training programme. Nothing untoward. Family normal as far as Vs go. So he must have been approached during his stint with SpaceKorps. This isn't good Heana. SpaceKorps have been infiltrated. What a shit. They'll all have to be scanned. That will alert whoever else is working for Regum. Shach here we know is a double agent. And he has to be ours otherwise he would have left with Varos." She gave him a cursory look.

Heana merely nodded concerned with Shach's download. The analysis was now starting to unscramble the data. Streams of numbers.

"Elentra you're more mathematically minded. This is dense coding. What do you make of it.?"

She came over, took one look and said: "Shut it down."

Heana pressed the escape, delete buttons. Nothing happened.

"His brain's taken over. He's embedded." Elentra said, taking the headband off him. The numbers slowly went into zero's.

Elentra went over to the wall console and translated the data into imagery.

Space and the foggy wave from the rear as it passed away spreading across the universe, getting thinner with distance. Tiny flecks of red, green, yellow and blues flashing enticingly, the inserted data in the carrier wave.

"This was done on purpose. They used him to feed us this. I'm glad I got full clearance to deal with this." Heana pulled out a gun from one of her jumpsuit's pockets

and shot Shach straight between the eyes. The back of his brain exploded in a mess of grey splatters oozing down the back of the couch.

Elentra merely raised her eyebrows.

"A bit late but..." Heana shrugged her shoulders. "Delete it all."

Elentra got busy on the console. "No joy Heana, its hardened. Regum is getting better."

"So it's in the system?"

"Only ours."

"Right. Rip all the data out. Get a team together. Wherever it is, rip that out. It's gonna cause some consternation but that cannot be helped. I don't care if the whole orbital has to be gutted. We were sent a cyber bomb."

"You think that will be necessary Heana? As I said only in our system." Barely looking at Shach's eyes looking a little glazed if not surprised.

Heana walked over to the com-link at the door and announced that all transmissions in our out from the Orbital were to cease until further notice. She would contain this. Then Elentra told all technicians to assemble in the operational room of the orbital's security centre. All she insisted.

"We got our work cut out. We'll be blind for a while. I'm off to the ops centre if you need me. Get some tools then I'll be back here and rip this place apart. Cables and all. And dump the body." Elentra focused.

"I'm going to send a courier someone I can trust, and not SpaceKorps either. Tell them we we're contaminated. Let them sort the mess out regarding Regum's attempt at sabotage. It looks like there's a war on." Heana passing a glance at the corpse.

Elentra looked at Shach's pale face, his eyes looking at the ceiling totally vacant.

"I guess we're now gonna have to scan all the double agents." Elentra said.

"Make that all agents. Luckily there aren't that many up here."

"That we know of."

"Yes. Still some rats might make a run for it." Heana replied. She walked back over to the comlink. "Attention dispatch and transport bays. No one is to leave the orbital. Anybody feels inconvenienced tell them to see me. This is an order from security. Any incoming are permitted to dock. Out."

"You know Heana, I'm a bit worried."

"That's understandable." She looked with distaste at Shach's dead body.

"I'm thinking of the DVs. They're supposed to be attuned to hostile activity. There's a group dedicated to our security." Leaving the rest unsaid.

"You got a point there. Well we'll have to ship him back for an autopsy. So no dumping. Maybe the Reganian's are really as advanced as they claim. If they can slide through the DVs just like that..."

"Tell me Heana, did you sense anything?"

"Matter of fact yes. His resonance was dense. Thick, viscous. Multiple layered."

"Hmm, now that is interesting. But then he had been with the Reganian's. He was configured. Opened up just like that. Then uploaded."

"We are in for a long shit fight."

"Pity we can't throw off all the Reganian personnel."

"Don't say this Elentra. But sometimes I think it was time the DLs, the Ecclesiastics and Divine's faced the fact that everything changed aeons ago. After the Great Calamity. We let the best brains leave. The few we have we train only to the barest of necessities. All to protect this divine state of ours. The Reganians are walking all over us."

"Heana, just because of Shach?"

"And Varos. They're gonna come back with this. It'll be in the Web. That means more teams to make sure all access denied. That means more have to be trained methodically, that means a weakening of our innate mind set. Shit we're going to have to be like them to beat them."

"Maybe that is a good thing. And I didn't say this OK?"

"I think we understand each other Elentra. How? And why?"

"Well, it's like this. The Reganian's are total techno-heads. Whose in control? Not us. I mean we need them just to keep this place going. We can't even build our own shuttles. I think it really is time to assess where we want to be in the future. Sure we can withdraw into our eternal spirituality. But I got this feeling the universe is changing around us. Alien or no alien incursion. And the change is passing us by. More than that, leaving us behind."

"You think it's that serious?"

"Something is going on."

"Then we'll just have to find out what exactly. Coddle up to them."

"Yeah right. As if they're gonna tell us what they're up to."

"We know what they're up to."

"And is it working?"

"Elentra there is a long term strategy in place here."

"I'm glad to hear it.' She sounded unconvinced.

"We're gonna turn that distant planet our way. Let the Reganian's think they're on top of us. When their resonance gets stronger it will form a common bond. Maybe not today or tomorrow. But we are making progress."

"I'm glad you put it in perspective."

"Elentra never loose sight of the big picture. What happened here and a few days ago we managed to contain. A close call. That's all. If they had gotten away with it then that would be another matter."

"Yes I see your point. Well you know more than me."

Heana said nothing. She did. But then that was only because she was at the cutting edge. As long as the Reganian's did not interfere on that distant planet things would work out.

"Anyway Elentra, so far even with their AI brains they haven't penetrated far."

"Let's hope it stays that way."

"Put it this way in case you forgotten. Our minds are far in advance of theirs. They just ain't got what it takes."

"Yes you are right Heana. Thanks for sharing what you know."

"My job in a way. Well we got work to do."

"We certainly have that." Elentra felt relieved.

Ung

Dislocation was temporary. Her awareness of herself receded rapidly falling into her head's inner data crypt. Her memory of her essence, knowledge, everything she knew disappeared. Momentarily. Instantly her mind filled again. Her re-emergent self reassuring. She was still Uno, with one difference: her embedded uploaded legend. More than complete. Assured that her entwined history wrapped into her molecular being irradiated the environment she was in. Her inserted programme would download itself into every one she came across. If there were computer scans the artificial construct within her mind would establish her bone fides. To those who dealt with her she was for real. Accepted as her persona's uploaded self.

Prima's limited systems were primitive compared to Regum's self-driven smartware, intuitive logarythms, self assembling data banks interlinked in the unitary whole of their two Webspaces. One Global, WebWorld the base and its extention Universal, WebSpace encompassing most of the universe. Her data total, current in this space-time continuum. She was absorbing information fast.

Inserted in space, fully suited up, taking a break. The space cruiser, the 'Ice Queen', instantly recognized through her probing smartware belonging to captain Fertig. Silhouetted against the backdrop of Prima well away from the Orbital. Fertig belonged to SpaceKorps, the only section where both Primaian's and Reganian's worked together. Both spying on each other. It was a satisfactory arrangement that suited both sides. The Primaians needed them more than the Reganians. Off limits to Prima's Domain Lords. Their secure resonance difficult to penetrate. SpaceKorp easier to read often disseminating false information to keep as much from Primaian or Reganian scans as possible. Or let them gain data meant for their consumption. It was a game both sides played assiduously.

Ung had come back on board and made love. Fertig accepted her presence in what Ung revealed about her self, her inserted self. It felt so natural that even she believed it. Her real self prior insertion no longer existed, vanished upon her entry.

Ung watched the glistening crescent of Prima's sunrise. The stars shone in their empyrean splendour arcing back towards the centre of the galaxy. She stepped out from a quick chemical dousing, a short burst of water in the shower, felt clean again after their tumultuous sex and robed herself in an emerald green silken gown offsetting her subtly yellow tinged whiteness.

The first rays of the rising sun poured through the portals of the ship, pearly light shimmering on Prima's circumference, another glorious morning in space.

"Ung." Fertig called out from the bedroom. She came back to reality. In space she felt so free it was overwhelming. The vastness duplicated the sensation of infinity in her mind. She sighed pleasantly. Loving was one thing, doting upon it something else. She felt their combined lust as a wonderful sensation but it was no more than that. Fertig was useful as well. He was more than just a captain in SpaceKorps. As with everything to do with Prima there were clandestine sub groupings. Both up here and even more so down there. Fertig in his prime was not just a good lover and conversationalist he also engaged in discrete assignments at a diplomatic level. Something Regum thought imperative to keep their communication with Prima open whilst the latter did everything to create as many difficulties as possible. Not outward rejection, they needed Reganian technology. Prosaic interactions on a cultural and personal level were currently less encouraging. Fertig detailed to find out why the orbital over Prima was in lock down mode. Computers down, links off, no com traffic, no space traffic either. He held off going on board just yet.

Ung pretended to be indifferent as Fertig tried to find out what the lock-down was about. There was a complex personality hidden under a veneer of suave breeziness. One of the few who saw the Reganian's in a genuinely positive light. Perhaps that's why he was chosen to be assigned to the diplomatic corps. Gaining valuable insights regarding Reganian politics. Not that that was easy. Regum was decentralised. A planetary committee as such did not exist. Groups coalesced around specific issues then disbanded. Rarely was the same face seen twice. Reganian's were not political. They were doers, whilst Primaian were thinkers. Feeling a repugnance for doing business with their fellow beings on the twin planet. Forever at opposite ends regarding policies whilst they circumnavigated around each other just as the planets arced around their common sun.

The other attraction for her to Fertig, apart from his healthy lust for her was his connections. He came from one of the Families. That included a privileged sense of opulence she relished.

"What are you doing?" he shouted impatiently with good humour. She merely grunted returned to the bedroom drying her hair with a towel. Fertig was getting out of bed in the mild gravity of the ship's generators covering himself with the top bed sheet. The sun lighting the bedroom. Her intent was of course to keep him interested in her and one way of achieving that was to ration out their sex. Keep him longing for more. It threw his reason off balance. It also made him talkative and the more she learnt the better. Her curiosity was as insatiable as his lust.

They had met at Prima's only fully fledged university. She had been slightly dysfunctional breaking up with her then boyfriend feeling dissatisfied with his incessant mood swings, his gossipy friends who bored her intensely with who did what to whom and where and how and the endless speculations of why. Primain's were always in each others heads. It was tedious. In the end she gave him the flick. He took to drink, moping frequently, declaring his undying love, wanting a permanent bond. That had done it for her. Then one day at some seminar Fertig appeared presenting a paper on SpaceKorp's cooperation with Regum. The intricacies of diplomacy. He was so polished that she barely paid attention to what he said. She hungered for him. He moved in a world far more interesting than her own family for her father had been involved in some diplomatic activity pro bono. He said he did it for Prima and could well afford to. They were not poor. After the seminar came question time during which drinks were served. It had been so simple. Demure she approached him and pretending, notepad in hand slipping him her com-link contact details. It probably tickled his ego that being ten years younger was enticement enough. It was.

"Just thinking." She answered vaguely watching the sun.

"Coming back to bed?" he asked cheekily.

"Why are you out of bed then?"

"To start again my sweet."

"Not now. You were so good, I'm floating. A cup of tea would be nice." She said dreamily even though it was an act. By being disinterested in what he did he could not help but fill the gaps she created. From what he related there was something happening on Prima. Religious fervour was everywhere even infecting the Families. Religious devotion was becoming a social obsession. Going all dewy and mystical, expressing in endless conversations the magnificent experience they all felt. Luckily Fertig kept his head. He didn't even pray, nor did she. At least they understood each other there. If the Great Mind was totally diffused throughout space it was also diffused within them. They were part of the Spiritual Cosmic Consciousness so having the Holy Spirit within them was

enough. Yet there was something else about this fervour. It was tinged with an obsession that harked back to the distant past. They were all in such an expectant mood of some great divine revelation. Never quite gained, always immanent and there it remained, keeping them longing for more. Pornographic spirituality.

Fertig found his own black robe, which matched his black hair, ambled over to the corner kitchen, pressed the microwave's programme for two teas, waited a moment as it was poured and handed one to her as he sat on the bed still hoping for some more sex.

"Fertig?"

"Yes honey bun."

"I've come to a decision." Her Brain told her.

"Oh?" he tensed a little.

"I'm thinking of joining the DVs. With your reference..."

"The DVs?" he asked nearly spilling his tea.

"Yes."

"Why?" he looked shocked.

"To help." It was a vague enough answer. Her Brain certain she would gain access. Once accepted she would be privy to their data base.

"You got any idea what that means?"

"Means? What do you mean 'means'?"

"Us"" He looked crestfallen. He was losing her.

"Us." She repeated lamely. "Us is good, but it's not forever."

"I know that." He was forlorn. A total surprise as it was for her. But something was guiding her in that direction.

"I sense the infinite. When I was out there just now."

"So it's gotten to you too."

"Gotten?"

"This religious fervour."

"Oh I'm not after that. I don't know. I'm after something which I can't explain. It's more than a feeling, it's like an urge."

"They'll scan you. Then again being Family they'll no doubt accept you. Then there is the burn out rate."

"That's the weak."

"It's the relentlessness of the task. Anyway we can't go to the orbital."

"Why ever not?"

"Well we can, but once there they're not letting anyone out."

"Really? How strange."

"Something happened. Not that they're saying. Even the com-links are out."

"When did this happen?"

"Whilst you were in the shower. Since I'm supposed to meet with a certain person being stuck here indefinitely isn't going to help my work. I tell you what. Let's go down together. Talk with your parents. I'm not against your decision. It's very noble..."

Well he recovered quickly Ung thought for she did not want to loose him entirely. Her Brain of course told her who her family was. With Fertig present it would help establish her bona fides. She even had a sister, or was that two? Fertig would probably have another lover sooner than later. Fertig would also be interested in her Family. To glean information? Father was in the great game after all. Well and good. How he would take her going off into space for good might not sit that well. Yet the kudo's that society bestowed on the DVs, the frontline in space would reflect magnificently upon them. It was hard to resist such a request. And she knew she'd pass the scans. It took a special resonance to be accepted. One of the few departments where aptitude was essential, no matter how connected, well placed, rich, established in their tiny social circles or one's pedigree figured in being selected as a DV.

Her Brain downloaded her Families history. Minor land owners as many others after the Great Calamity her Brain informed her. Regum an opponent of everything Prima stood for. During the Calamity with the mentally dislocated, the lost, the religious hysteria, the bloodletting, the fractious wars, the civil disturbances the Domain Lords needed all the help they could get in re-establishing the status quo. In a way her family became indispensable, having kept their heads. Siding with the people who were simultaneously in open revolt against the medievalism preached by the priests. Some life that. On their estate her ancestors responded by improving their workers living conditions, allowing them small plots to grow their own produce, the profits entirely theirs. It worked. Peace was established. Other more established Families grumbled at their enlightened response. Rather than putting the fear of divine retribution into their souls, her family dismissed the priests imposed on them and chose those who were more aligned to the spiritual needs of their workers. Priests who did not prey on their souls but actually listened to their concerns. Word got around and finally some Divines even visited their estate to see for themselves this social experiment. They came away convinced that a more gentle approach actually worked. Through auspicious timing their estate became a model in itself. Experts came, as did the bishop, even representatives of the divided ruling

council. Her Family quickly rose through the political ranks. Having dealt with such difficult conditions so successfully it was deigned by the powers that be that if they could assuage the Volatile's hostilities through negotiation, they were perfect as diplomats. Leaving the rantings of ideologues to the hard minded who were soon sidelined, other Families followed their example. Most of them were absent landlords anyway who had no idea what real life was like on the ground. Their Family had remained true to their roots. They sent their children to Prima's only university thus maintaining her Family's social standing and the power that flowed on from there. Over time the ruling council enshrined their reforms into laws. Their position was assured and had been ever since.

Fertig flew the 'Ice Queen' down to Prima's only space port. The futuristic-retro design, aerodynamic curves of his ship made it one of the top models from Regum's space factories to own. Guards were everywhere in their matte black full body suits patrolling the complex. Travelling light, their gear remaining on board Fertig to return as soon as the clamp down on the orbital was lifted.

Did she want to really become a DV? Ung nodded. Her Brain insisted this was the way forward. She could see no problems, she knew she'd be accepted. They were always in short supply. She sent a message home announcing her arrival. The return message moments later glad to have her visit. By sending the message, Prima's computer systems would note that, search patterns looking for subversive sub-texts thus inserted Ung's history; her legend. The same went when leaving the space port as they made their way through an internal security check. More subtle insertions giving her clearance to proceed to the adjacent airport.

Even though Ung knew somehow she was secure she still felt relieved with the ease by which she was accepted who she pretended to be. Everyone on Prima was under some sort of surveillance, even when accompanied by one of SpaceKorps major players. Fertig in mufti wearing a light grey suit instead of the usual uniform.

At the airport they went to the air-taxi stand. From the line of VAVs a young pilot detached himself from the group he was standing with, saluted smartly and said: "Ung good to see you. Captain Fertig. Your father sent me to pick you up." Ung gave a wry smile. They had sent their private plane to meet them. Fertig knew of the family but had not had the opportunity to meet them. He was looking forward to it. Maybe Ung might keep him. Love. Lust, Fertig enjoyed both.

"Why thank you, that was sweet of them." Ung beamed, Krost's friendly brown eyes smiled. They walked to the private apron of the airport. The brilliant white VAV was

there with the Family's insignia, a bunch of dark red grapes. Father had never been ostentatious like the other social elite. Their vineyard was one of the best on the planet. Fertig was relieved Krost did not engage them in idle chit-chat.

The VAV's doors folded out, a step ladder released, entering the plane both sitting behind Krost. He went through pre-flight checks, systems A-OK and having received permission from the control tower taxied down the departure zone. They lifted off vertically, wobbled a bit, the jets repositioned themselves and they shot off into the bright blue sky, the light brown desert below, the distant horizon slightly hazy. Flying in silence.

Ung was excited to come back. She had not visited since her graduation from university. She a social scientist specialising in what bothered the Primaian councillors, the theocrats: deviance. That included a special course in alien mind-sets. That part of the curriculum could not be discussed with anybody not even her family. She had been amused at their simplistic reasoning. The tutors not part of the universities teaching staff held their course in a special wing at the pontifical palace. Ung was entering all the right domains as her history slowly expanded itself through Prima's institutions.

The plane jetted over sparse trees slowly turning to forests, then the vast estates, furrowed land, the crops gathered, rolling hills below and in the distance the beautiful mountain ranges and their snow capped peaks. Her Brain receded now that her history was in place.

"Nearly there." Krost informed them keeping his eyes front. He probably used his HeadInDisplay but for extra back up used the HUD system on the windscreen of the plane, its light green configuration glowing lightly. "In range now." Krost announcing their immanent arrival. He vectored in the final approach she seeing their house. A two storey mansion, simple in design, surrounding veranda and the patio out the back looking over the vineyard, the rolling forested hills further out. A little to the east the tiny village of their workers clustered around a central square with its own house of worship.

Krost skilfully lowered the VAV at the designated LZ, a large white circle to the side of their house. The jet shut down, they got out. Her parents were waiting for her beaming happiness. Dad had a similar grey suit, his silver hair giving him a patrician look. Mum with her radiant golden hair, trim as ever in a loose fitting red gown waiting and smiling at her arrival.

Ung led the way. Fertig with Krost checking the VAV. Remaining outside even though they had a hangar. The weather was not going to change. Fertig might be called back any moment when the security blanket thrown over the orbital was lifted. He

conferred with Krost requesting to give the plane a full going over. He then joined Ung and her parents.

"This is captain Fertig, Nahif and Melos."

"A pleasure to finally have the opportunity to meet you."

"The pleasure is all ours." Melos said. "We took the opportunity of having a light luncheon prepared. You do have time to join us?"

"Yes, I'm delighted, thank you." Fertig replied nearly mentioning the shut down of the orbital.

They sat out the back under the trellised vine entwined patio, the mottled sunlight spreading in abstract patterns over the table with it's collation of cold cuts of meat, two salads, a bowl of fruit salad on a tray of ice, a cooler with a dozen small bottles of beer, two silver glistening pitchers of wine. Dad looked fit even though he was well into his sixties and mother as elegant as ever. Ung was happy. It was all working her Brain assured her.

During lunch they talked of inconsequential matters. It was not considered polite to badger a guest about his social position, his duties if any or being overly inquisitive with whom he was in contact whilst engaged in his work. Instead they talked about the difficulties with their herb garden, the soil so important for the grapes, the humidity and the ever present danger of fungal infestation. This years' crop was in, fermenting happily. They sold their wine in bulk letting the distributors bottle it. They did some themselves, well, Melos smiled their workers did that, sterilizing the bottles, a laborious time consuming task. Business was as good as ever.

The meal over they nibbled at the fruit. Fertig had drunk a few beers along with Melos whilst the ladies drank the rich fruity white wine they specialised in.

"How long are you intending to stay Ung?" Nahif asked, taking in Fertig. She was mature enough not to put them in separate rooms unless he or Ung requested it.

"A few days. Depends on Fertig. He's on call."

Fertig nodded. "Negotiations."

"Oh yes." Melos smiled. "So important."

"Always something to consider."

"That is true. Like you I too am on call, even though I've officially retired."

"More leeway I hope. Less constrained no doubt."

"To a degree. Not that I speak my mind. But certain hints can be dropped. It makes for smoother negotiations, gets rid of the wrinkles."

"Lucky you." Fertig finished his bottle and drank some water.

Melos poured more wine, uncapped another beer, Fertig declined.

Ung felt a certain reticence emanating from her parents. Maybe it was Fertig's presence yet they were used to dealing with a whole array of different people. Still it was there, just. Ung was wondering how to broach her wishing to join the DVs. She waited for an opportune moment. No hurry, Nahif rose and returned with a tray of coffee, some biscuits, milk and sugar and set them on the table. She poured for all of them but let them add what and how they liked their brew.

"So what is Mena up to?"

Her parents exchanged looks. That was a surprise.

"Don't tell me, she's got a life, a lover perhaps?" Ung teased.

"If only." Nahif said wistfully, looking over the fields. Ung followed her gaze.

"Gone hiking?" Ung suppressed the urge to laugh. Quiet, reticent Mena.

"She's joined them." Naïf said trying to hide her displeasure and giving a quick look at Fertig. He sensed this was family.

"I could check the plane." He said diplomatically.

"You're SpaceKorps right?" Nahif asked.

"That is correct."

"Being in mufti indicates something diplomatic."

"That is so ma'am."

"Please captain Fertig, call me Nahif."

"Then you must drop the captain."

"Of course Fertig. No you don't have to excuse yourself. It's not that personal. In fact," and she quickly looked at Melos who though frowning slightly was not ill at ease. "well, she's joined the Divines. Wants to immerse herself in holy meditations. Not just anywhere either but up there." There, she'd said it.

"Where is she now?" Ung asked. This might work out well since she was considering the same thing. But not from the spiritual angle. Ung knew what Mena was after, communion with the Divine Mind. She might even be recruited as a DV. That would be perfect.

"At some seminary, preparing herself."

"Wow. Well maybe not 'wow', I mean I'm both surprised at her decision and not, if you know what I mean." Ung said.

"Yes we feel the same. Not shocked exactly but surprised just like you."

"What made her do it? Her first love affair gone wrong? Not drugs I hope. I know how they can make one feel divine, or so I'm told. Maybe she got drunk for the first time.

Or a bad dream or even a divine revelation?" Ung blurted out all at once. Mena going mystical. In a way it did not entirely surprise her. Her Brain told her that she had always been reserved, withdrawn, ill at ease in company, probably terrified of boys.

"She didn't say. She just walked into their reception centre one day. The next thing we hear she's remained there, training for her vocation."

So the priests had her Ung thought

"What bothers us is she's excommunicated herself from us. Sent a message asking us not to contact her."

"That is dedicated."

"It's so sad really. We may never see her again."

Oh dear, and here she was intending to become a DV.

"Er, you may not like this then."

"What is that Ung?" Nahif asked.

"I'm going to enter the ranks of the DVs."

"You're not. Not you too." Nahif tried to hide her shock.

"Ung." Nahif said.

"What dad?"

"I know what they do."

"So do I. I feel the call of the infinite."

"Ah." From dad.

"Oh." From mum.

"I know it must be a blow. The two of us going up there. And we arrived at this independently. Honest. We didn't discuss this. Will you vouchsafe me?"

"You have thought about this? It's not just some whim?" Melos asked.

Fertig tried to look helpless. Nahif gave him a reassuring smile.

"Most definitely." She could not admit to having studied alien psychology, more like spy psychology, but it was a way of ascertaining what they were on about.

"Well it is an honourable calling. As is Mena's." Melos replied slowly. Then he nearly laughed: "Imagine the neighbours, the gossip."

"Oh yes, we will be the flavour of the moment." Nahif smiled at the deliciousness of it all.

A slight breeze was stirring the vines on the trellis above. The scene was peaceful, serene, bucolic. It was tempting to remain here Ung thought but for ever? She wanted to be out there. Space was freedom.

"And tell me Fertig, what do you think of Ung's decision?"

"Commendable. Personally though I would have some reservations." He nearly said 'regrets'.

"Naturally." Melos being urbane. "Life. So many avenues and not always in conjunction with the soul's desires."

"Well said. Ung will be in my heart though."

"For a time yes. But a new love will come along. As long as the memories are fond ones..." Melos lightened the pain of separation. "And you Ung? Maybe you have fallen out of love."

"Dad. It's no that."

"I know. I felt something similar when the diplomatic corps beckoned. It was the most exciting thing that ever happened to me."

"See?" Ung relieved this had gone so smoothly.

"Just don't burn out. You are stronger than Mena. But strength isn't enough for what you are about to engage in. Willpower, determination, eternal vigilance incessantly. Then there are the strange mental manifestations to consider."

"I know, that's probably what makes it so attractive."

"I will give you my blessing Ung." Melos said.

"With a heavy heart so will I Ung."

"It would be most improper of me not to second that." Fertig looked at Ung. Her heart melted for them all. Humbled she said: "Thank you. I won't disappoint you. I promise. I will do my best." 'You will' her Brain added.

"Alien psychology..." Melos hinted. Ung understood.

"Not that alien. They are sentients and as a similar life form by the very fact we can relate even to that alieness means they cannot be that far removed from our resonance."

"You think so?" Menos asked interested. Fertig attentive.

"I can't say I know so, not directly, not yet but from what we do know, they have a world of their own not unlike ours millenia ago. Who knows?" she brightened, "I may even get along with them!"

"We are supposed to repel them." Menos said stating the official line.

"Yes. Interesting isn't it?"

"I see you have your own thoughts there."

"Almost heretical."

"I would not go so far as that. A new infusion then."

"Exactly dad."

"If they let you."

"Well that remains to be seen, literally."

"They are extremely strict. Compared to Mena's chosen path..."

"Too vague for me."

"The divine path?"

"The approach dad."

"Ah. More wine? Beer?"

Fertig asked for another coffee.

"It could turn ugly up there." Melos hinted.

"You know something."

"The orbital is shut down. Something is going on."

"Maybe a security run."

"Maybe. The high DLs are busy."

"So you're still in touch."

"Barely. But the gossipers are at it, as always."

"Making things up." Ung said. See what he would reveal. Fertig was content to listen. The essence of discretion. He could be trusted. He would know some things and yet volunteered nothing.

"There have been staff rotations." Melos ventured.

"Now from your point of view that is something." Fertig responded.

"It's like closing the circle, circles." He added. "People are disappearing, being removed. The Web has gaps in it. Whether that is us winning that one or Regum removing data no one knows."

"That's official?"

"It is. And they are recruiting amongst the Volatiles. The Ecclesiastics are planning something. Some aspiring students are rejected. Many are failing the entry requirements. They are narrowing the intake."

"Yet Mena got into the seminary. Maybe she's a natural."

"So it appears."

"So you're saying something is up. And the DV intake?"

"That is unaffected. The battle continues."

"Battle?" Ung asked surprised. She took a biscuit, found it delicious and had two more, then drained her coffee.

"A slip of the tongue and an unfortunate expression."

Knowing dad, aware how diplomats expressed themselves this was no slip of the tongue. Were things getting complicated up there? Her Brain said nothing. She sighed.

"SpaceKorps is recruiting." looking longingly at Ung.

"Are they?" Fertig asked. That was news to him.

"You didn't know?"

"I was away."

"Ah."

"Looks like a shift of perspectives." Ung's Brain related.

They both directed their gaze upon her calmly, concerned for her well being.

"A change?"

"I don't know. Could be Fertig." Melos replied thinking. "You know we are both in a sort of difficult situation." He began not waiting for an answer. "I mean us, here, socially. You have your orders, priorities and well, I'm not completely out of the game. I can say this much. We deal with our people on Regum. Make sure they stay out of trouble. Conform to norms. If they overstep the line we smooth things over. That's the daily stuff. The broader picture is cultural exchanges, lectures, theatre, the arts. Of course it's one way traffic in our favour. Directives have gotten re-routed. Your department for some reason has taken on some of our responsibility. Your people are getting directly involved, on the ground. The interesting thing is, given we are still responsible for your people's well being, accommodation, venues and the like we are no longer told as to what their stated mission objectives are. That doesn't worry me, I'm out of that, finished with it. But if my old department doesn't know what exactly your people are engaged in, if there were problems, you know, the usual, an incident in a bar let's say well we were there to massage ego's. Now even that is no longer our domain. We're being rolled back, wound down. Not that it bothers me, as I said, I'm out of it. But if I were still 'in', cultural interaction is so important. Curtailed. What remains is student and academic exchanges. That has not changed. I'm not mentioning this for you to explain this change in policy but I'd thought I'd let you know of the shifting priorities, that's all."

"Thank you Melos. It is appreciated. Well you've been in the game longer than I have and must have seen quite a few changes in your time. Allegiances shift. Maybe they think, the ruling council that is and since we are minders in a way that by being more actively engaged we could learn from direct experience. Up to now we were constricted to space itself. It could be to broaden our perspective, a learning thing."

"You are probably right."

Fertig fell silent. If his division was taking over the normal channels of diplomacy then he was beginning to understand the reasons for his mission. The negotiations with Regum were more intense this time round. Heading in an as yet undefined direction. Strengthening their resources in dealing with Regum. If the civilian diplomatic corps was being moved into the background...but he let it rest there. It was enough for now. Speculation whilst useful would at this moment be more of a distraction. He was glad he had come with Ung.

"If you do meet Mena up there, don't tell her anything. We don't want her to worry. You know how she is." Melos changed the subject.

"Yes, she'd freak. Well she ought to be safe at the seminary for now."

"One would assume so." Nahif said unconvinced.

"Is Carias still around? I tried to get in touch but got some automated message. Cannot be contacted for the duration. Must be important." Ung's Brain released.

"We barely know, you were at college with her..."

"She seemed the smartest of our little group. Ah well, maybe later."

The rest of the afternoon was passed walking in the extensive park to aid digestion. The conversation petered out and Ung's parents went back to the house. Sitting under a magnificent ancient oak Ung told Fertig she might as well submit her application to become a DV. She activated her computer on her sleeve, submitted her 'history', details of her family, their resonant state, hers, all courtesy of her Brain and waited. Half an hour later the official encoded reply came back. She had been accepted as an inductee.

"I'm in Fertig." She was pleased. At last. Right at the cutting edge. The data self deleted in her pc.

"Well it's what you want to do." He replied a little unsure. He had not thought of Ung having any aims. Many of the Families remained private citizens. Often their children were empty bubble heads. The vague generation. Not lost, just not there. Unconcerned, indifferent their main concern their own welfare. A life of endless visits, parties, gossip mongering, of upmanship which was a bit hard to follow given the vacuous state of their minds. None of the DLs or the Council seemed to care. It gave the Volatiles a chance to grab vacancies. That gave the people hope that their sons and daughters had a future beyond the farm. And as Fertig guessed they were more committed knowing as Volatiles they had to perform better than their more well heeled fellow students.

"Sweetheart."

"Yes?"

"No matter what happens, be careful. The DVs are the tightest of groups. Not just through their isolation up there but also within. You'll be under constant surveillance, permanent soft-scan. If you deviate from their norms they will BrainDrain you. I'd hate to see that happen. You're too precious."

"I know." She sighed. Looking out at the beautiful scene. The still forest, the wind humming in the trees, the twitter of birds, the white fleecy clouds in the sky. So easy to remain here away from the struggle up there. The convoluted politics between the two planets, the state of Prima's resonance.

"The DVs are in a way the pathfinders as well. They're not just observers."

"I want to learn, to know, to experience what is going on Fertig."

"That is what concerns me. You have to be careful. They have direct access to your mind."

"Good." She answered defiantly.

"I did some checking, more out of curiosity about Carias."

"Oh yes? Her family?"

"I haven't dug that far. You met them."

"Yes once or twice. Strange couple. Her father really quiet. Don't even know what he does, if anything. His wife, oh boy what a woman. If she had power she'd be dangerous."

"Oh?"

"Total control freak. Her husband's more a cipher than a being."

"I've met couples like that." Fertig laughed. "A meeting of extremes. Some are like that. They want their lives organised for them, be told what to do or not. Both sexes. A bit rarer in us men."

"Yes I got that impression as well."

"There is something else. Someone has been making enquiries about me." Fertig said tightly.

"Is that normal?"

"It happens. Anybody can do it if they have clearance."

"You don't think..." Ung was thinking of her parents. Surely not. In the highest of social circles trust was rare. Then again with the games they played, more out of boredom Ung assumed any titbit was used to gain some advantage, socially for sure, sometimes political as well. Positioning themselves favourably.

Fertig shook his head. "Who else knows I'm here?"

"Fertig, the authorities for one. Whoever did this timed it so as to make it appear that maybe my parents instigated this search. What did you find out?"

"Only that." He relaxed, smiled. "I've got some neat hardware."

"Good. If it is malicious then these nosy mongrels will give themselves away."

"You think it's that?"

"Most likely. Though I can't think of anyone. But then appearances amongst us Families is all it is. Appearances. The kindest people can be the most vicious and those who are a bit, er, difficult often the most amendable. You did say you are in some sort of negotiations with Regum. It could be them. Find out who they, meaning you are dealing with."

"Very good Ung." He felt relieved. She might be right. What could never be revealed for his own personal safety was the nature of these negotiations. Even the Reganian's were extremely cautious. So was he since he was in contact with a cell of theirs. That was not so unusual for Reganian's. Fertig understood that these contactees were mere representatives not the main players. They would not have done this search. Not so openly. Preferring to remain out of the picture as much as possible. Set up for something or being vetted for a reason that could simply not be revealed until they were sure where he stood. He knew where he stood. SpaceKorps was expanding. He was rising with it. Uncomfortable with Prima's ever growing insistence of being the dominant factor in just about everything. They wanted to contain Regum. There could well be Reganians who did not take kindly to this change of atmosphere. Strife was brewing. It was not so much that he wished to be on the winning side, he wanted to be on the right side. If Regum proved to be that side he had no problems defecting. That was the easy part. He had no real ties here, except maybe for Ung and she was moving into DV territory. That could be useful if they remained in contact. He was tiring of Prima's politics.

They rose slowly walking back to the house. On their way he remarked he was going, returning. Back to where he did not say. He asked if she would stay or go. Now that they were expecting her at the orbital she would have to leave eventually. Did she want to get in touch with her friends before she left?

"Fertig, the friends I had at college are all over the place now. They do keep in touch. I did. It was tedious. All they banged on about was their work, their positions, their aims in other words their professions their big noting themselves. It was awful."

"I'm sorry to hear that." They neared the house. "What about your sister?"

"Mena? We were close. But now she's gone all religious..."

"Surely that is a good thing."

"For some." Ung said distantly.

Fertig did not insist. He didn't care what Ung believed or did not believe. He liked her for who she was: herself.

"So you coming with me then?"

"Might as well."

"That sounds a bit..."

"Indifferent?"

"Well, not your usual self."

"My usual self." She laughed. "And what is that?"

"Your cool serenity. This sounded almost like some burden, an unwelcome duty."

"It wasn't meant like that."

He nodded.

Back inside the living room Ung and Fertig said they were going. Mother said all the right things, that they were welcome to stay as long as they liked, father in the study came over and said he regretted the shortness of the visit. But they both understood Fertig's position. And now that Ung had made up her mind to join the DVs they certainly did not disapprove. It was her choice after all. Hugs from mum and dad, Fertig standing in the background. Nahif held back her tears, whilst Melos looked lovingly at his daughter.

"Don't burn out. At the first signs, get out." He said when he had recovered from the pain of parting with his daughter.

"I think you should say that to Mena."

"Well she said she's happy and that is what matters in the end." Nahif being philosophical.

"Remember Ung, keep in mind when you're up there of the bigger picture." Melos advised her.

"Space is the big picture dad."

"I meant our orientation. Things are shifting, perspectives are changing, political stances realigning. I see difficulties ahead."

"Isn't that always the case? Maybe you're too close to it all."

"I may be close Ung but you will be in the middle of it."

"I know." Her eyes flashed excitement.

"It's more than just an adventure."

"But dad, for me it is."

"Maybe that is the right attitude. Not burdened with their entrenched views. Don't let it get to you."

"I'll remember that."

"If you have any problems, don't hesitate to get in touch. Even an open channel. I don't care. You're important to us."

Ung was touched.

"Don't be too inquisitive." Melos warned. Fertig thought of the search done on him. Was Melos dissembling? He hoped not. He made a mental note that later, much later if the search pattern was still on file somewhere he might locate it's source. But then if whoever it was instigated this they would not reveal their actual location. It would be done remotely. Unless he was meant to find out. If so then it was a warning. But warning him of what? What he was considering he kept to himself. Ung didn't know. Neither Lehra nor Drassid would have done this. It could be a routine check. He was overreacting. But in his situation one could never be too careful either. The best thing for now was to let it go. Pursuing it would attract attention. It would indicate to the watchers he had something to hide.

"I won't be playing any mental games dad." Ung assured him.

"Good. Be safe, stay safe." He said and they embraced once more.

They walked over to the VAV. Krost had checked the plane and handed Fertig his log report. Shipshape to go. The hatch opened, they both waved and made themselves comfortable in the cockpit.

The ship could fly itself but Fertig wanted to stay familiar keep his skills tuned. Krost in the rear. A final systems check, he activated the engines, her parents well back as the vertically set jets roared into life blasting dust and leaves around them in all directions. They lifted off slowly, the house getting smaller, then reinclining the jets slowly at an ascent angle flew into the slightly cloudy sky. As she was thrust back into her seat she felt a sense of elation, of freedom. Being a potential DV was even more exciting. To be at the frontier, at the very edge of their universe, it couldn't get any better.

At the space port, Ung and Fertig said goodbye to Krost and entered the 'Ice Queen'. Being SpaceKorps they were not denied permission to leave Prima.

After a while roaring into the stratosphere, Ung asked what he was going to do? It was a general question but her Brain was inquisitive. It suggested Fertig had something on his mind. But without instigating a scanning probe and thus alert him the old fashioned way would have to do.

"I've got meetings to attend to."

"I meant," she covered herself, "About us."

The sky was turning dark purple, the first stars coming out.

"Oh I'm sorry. My mind's on other things. I'll get you to your destination." Then frowning said: "I know once you're there it's practically over for us. It's not like you're under contract with the DVs. You will be with an extremely tightened down domain. But since the DV's know *things*, you will be isolated with a rarefied group."

"Yes. I'll miss you."

"Me too. It's been great. Err one last, ahm fling?"

"No it'll make it even harder."

"You're probably right. Best to let us move on."

"In a way it's not an end you know. More like a beginning."

Fertig became curious as to what she meant by that and waited.

Her Brain soft scanned him. No discernable deep mental activity. That could be extreme self control. Nor was she inclined to probe further. When her Brain found out about the search on him it read the data, then isolated it. He had secrets. A clandestine meeting at a habitat. Reganians had thousands of habitats in space. His duties being in the diplomatic corps did not make this in itself unusual. But it was of interest. She wanted him to know she was with him on whatever he was engaged in. Her Brain revealed that much.

"You're going to come to some decision aren't you?" and held her breath.

Fertig tensed. How could she know? Unless she was psychic. Of course. No wonder her application had been accepted so quickly. Yet he had revealed nothing, had not thought about meeting Lehra and Drassid. It was completely out of his mind. Then again she could be guessing. But why would she want to know? Who was she working for? Was this some set up? But then normally an agent would have tried to steer the conversation and in all this time that never occurred. Then again good agents were not that obvious. If she was one. Mentioning this in his ship was also the best opportunity to broach anything delicate. His job always required some sort of decision. Ung not the curious type. She never mentioned much about herself either. This was more complex than he was prepared for. He adjusted quickly.

"Well Ung, whether to keep in touch. It's not that you're not allowed to receive incoming messages, or reply. I'm wondering, since we are parting whether to stay, err, friends."

That was well done Ung thought. He is smart.

"And?"

"Am I? Of course if we move apart, that's life. You might find someone else, I may eventually, sometime in the dim distant future."

"Yes." She breathed out. "Do you trust me?"

"In a way."

"What's that supposed to mean?"

The sky was black now, the blue glow of Prima illuminating the scene below them. The stars shone in their glory.

"In my work I have to be careful. Now that you're with the DVs, they are real siphons for information. Even a chance remark can fit into their data and be used in ways I would not even consider Ung. So I trust you as you are, but once you're in, it becomes somewhat complicated."

"You must have wondered about me." She changed tack.

"Naturally. You're an interesting person."

"I meant from your professional angle."

"I never did a search if that's what you mean."

"You didn't?"

The engines cut out. They had enough thrust to propel them onwards.

"Never. My superior's might have, probably did. I should have said this. But as no alerts were raised they seemed satisfied that you are who you say you are, what you are and the rest of it."

Whilst not the real answer it satisfied her Brain that her legend was securely in place.

"Any one else perhaps?" Guessing.

She laughed. "You'd be onto it in a flash."

"That's true."

"Anyway they wouldn't find anything that your superior's didn't know already."

He concentrated on the read outs. The ship had it's own systems checks for those on board. AI capable. Ung dormant. He hoped so.

"By the way, what your father said, about burning out."

"Yes?"

"Please don't"

"I wont."

"The alien infusion."

Now Ung was alert. "What I'm gonna say may not be the official line Fertig. OK?"

"Trust me."

"The alien field. Look at the science. They are photons. You know how weak they are. A candle is a trillion times more powerful."

"It's the informational content they carry Ung."

"Yes, granted. But they are so weak they can't penetrate the planet, during daylight anyway. The telescopes needed have to be so powerful to unscramble them, way beyond our mental capabilities. You get my drift?"

"In a way."

"Fertig. If such powerful instruments are necessary then what does that tell you? I'll tell you. It, they can't affect us."

"It's the content Ung." He replied calmly. He agreed with her but had to make sure they were on the same wavelength.

Ung was not too sure where her Brain was leading her. There was something hidden in space, that much was certain. It felt like a hunch. Maybe an event Prima was not revealing so camouflaged they were obsessed with the alien field. The Reganians certainly did not care. Nor were they affected.

"Hard to argue against. But the Reganians aren't off their rocker Fertig."

"Which annoys the superiors."

That was interesting. Mentioning the Primaians as a third party. Thank you Fertig she thought. She was getting somewhere.

"Be careful Ung."

"I'll be my demure self. Don't worry, I'll be so not there they'll barely notice me."

"The perfect subject." He had wanted to let slip 'agent'. But if she were Drassid or Lehra might have said something if there was one this end. Another complication unless, unless there were some on Prima who were not entirely convinced either. Ung wasn't.

"Well I wouldn't go as far as that Fertig."

"You'd make a good agent." And he turned his head a tiny fraction to get a glimpse from his peripheral vision to her reaction.

"Ha. And what secrets have you that would have me be one?"

He said nothing.

"I meant Fertig that there are other ways of finding out." It was as good a guess as any.

"Such as?" see what she knew.

"Well, one leaves a path behind. Pick up the pieces. An agent does not have to be in place."

"True. You could be the distraction."

"Yes I could, couldn't I? But I got no idea where you been, don't care. That you're here is all that matters."

"I do take you for what you are Ung. A student who wants to learn. As to what, well, if I were there to find out I would have asked."

"You are, now, in a way. And I will tell you. I don't believe the spin. But the DVs are onto something way out there. That is no secret. The Primaians boast about it. I want to know the truth."

Fertig was all ears.

"I do. In a way I feel removed from everything Fertig. I'm here but not really in, if you can understand that."

"That usually happens to spacers. Must be a new experience for you. Officially they would say you're alienated. And you know what that means."

"Close observation."

"Which you will be once on the orbital."

"I know. But there is another part of me that can relate, if it wants to."

"Well make sure it does."

So he wasn't probing about her state of mind, minds she corrected herself. Fertig certainly was not your average Primaian. That boded well.

"I think we understand each other."

"I think we do."

"I hope we meet again." She hinted. It could be taken both ways Fertig thought.

"I hope we do." He encouraged her.

"Time will tell."

"It will indeed." He concurred. "Don't let them get to you."

"They won't get much."

"Keep it that way. You have potential." He hinted.

"I feel something stupendous, at the edge of my brain. I know it's not the alien field. This sensation is persistent. That's why I have to be with the DVs."

"It's the best position for you to be in."

The orbital made contact with the 'Ice Queen', still in lock down mode. He acknowledged and said he would deposit Ung in space and they could bring her in. They accepted his decision with some reluctance but agreed in the end. Ung started to get into her space suit. When they were closer, the orbital filling their view it was time to part. She was both excited in her new venture and a little sad in leaving.

"Don't overreach yourself."

"I'm aware of the dangers." Meaning the orbital could be listening in even if the ship was shielded, as could the DVs. The spacesuit had embedded transmitters and could be uploading the conversation. But they were referring to the danger of burning out.

"I'll try and not to overdo it."

"Don't take the whole burden on yourself."

"I'll be in good hands."

"The best." He grinned at the joke.

Even from within her helmet she sensed his sadness. He checked her space suit then escorted her to the double airlock. The locks open she jetted towards the orbital. He saw two other suited figures move slowly towards her, their tiny jets leaving gleaming crystals in their wake. Ung was in.

Fertig returned to the cockpit. Somehow Ung had helped him make up his mind. He would have to play a double game. Not entirely unexpected. His department wanted to know what the Reganians were up to. They might not be enemies just yet but they were certainly antagonists. Why did he feel almost certain and equally comfortable that Ung was more than just an aspirant. True the quest for knowledge was a potent decision maker. Given Prima's restricted education, the almost impossibility of accessing Regum's Web the DVs were her best chance to find out whatever it was she was after. And now he wanted to stay in touch to see what she found out. What ever was out there, cursory searches revealed nothing which his ships computer accessed during their flight up here. Maybe Ung's curiosity might reveal what the Primaian's were up to, something even his department had no knowledge of. At least he had an informant. Things had worked out rather well. More so than he expected. Ung had been a lover and now she was a DV. Serendipity. He felt good, he felt great, he felt free. It was a marvellous feeling.

He set a course for the distant asteroid belt. It was where Regum's space factories were. And Prima being engaged in industrial espionage would not deny him access there. It was also full of bored miners, workers who welcomed a new face. A great place to pick up information, meet people. People who had their own agendas. The place was full of dreamers as well. For after their decade long stint there many were wealthy enough to pursue those dreams. And they did not necessarily concur with Prima's or even Regum's. The spacer's were becoming, along with those in self seclusion

in their habitats a people with their own ideas. A new civilisation in the making. Exciting times.

Mena

"Mena will be a worthwhile acquisition. Candidates of her resonant calibre are rare." Dross said to his superior as they watched the young woman sitting with calm repose in the interview room. Senuf stood next to him observant behind the holographic portal on the wall. All Mena saw was an image of the DVs positioned in space, a glorious dazzling star field behind them. 'In search of the miraculous' emblazoned below on the holo screen..

"Yes. One of the Families." Senuf replied. A smaller bank of screens ascertained her resonant state. Remarkably steady at the high end of her spiritual being. Her overall mindset a tight field. Barely a flicker of Volatile tendencies let alone the accompanying associated disturbed mental activity.

"Worthy." Dross was impressed with her mental state.

"There is the status of the Family to consider." Senuf continued. "Diplomatic Corps, secular tendencies. Could be a cover. Dealing with Reganians. One elder daughter Ung accepted as a DV. Passed the induction tests a while back and now an instructor to the aspirant acolytes. Two members from the same family. Given their parents Resonant State you'd think they were manoeuvring them to embellish their social standing."

"You think they're being positioned?" Dross asked. It would not be the first time that Families used their offspring to further their aims.

"Menos semi-retired would be in limbo. Loss of privilege and the rest. What better way to enhance their status?"

"I won't disagree there. True. Mena is remarkable. Solid resonance. A Natural. Rare. As you alluded to." Senuf making the final decision had to consider all the angles. The burn out rate dictated its own rationale. Those results were conclusive. Such purity of mind so antithetical regarding her parents. It had to be divine guidance. He was for accepting her.

"It could be worse. At least not Volatile."

"You find her to be correctly attuned." Dross said encouragingly. "She has mentioned her wish for spiritual salvation. She could even be a mystic. We do need them. The watchers, resonating with the Divine Mind. The control end of the spectrum."

"I know." Telafus taking an interest. Why now? Senuf wondered.

"Do you have any specific plans for her?"

"You tell me." Senuf smiled expansively.

"Acceptance. Not Domimax level. Leave her unaffiliated. See which way she drifts."

"An unusual view." Senuf looked Dross's way.

"Aligning her might pre-empt her natural orientation."

"Good point." Senuf agreed. "The trouble with mystics is their urge for some spiritual escape from life itself. Very individualistic. Even if we do need their divine state. Not just to expand their resonance into the Great Mind, but to show the way. Pathfinders."

"She seems almost desperate to be there. Signs of latent depression. Could be the result of the Families secular tendencies. It should recede once she is up there, away from their influence."

"Keeping her in the public domain would be a waste. Unduly influence her. Dark forces are at work and not just the Web Dross."

"Of course." He agreed with the policy directives. "So I gather we accept her?"

"As an act of good faith on our behalf." Senuf half smiled. Make Mena feel grateful and indebted to their magnanimousness.

"Who knows? With her expansive resonance she might pick up bits of information as well."

"So we are agreed?"

"Yes Dross. Work with her priest Lenox. He is her mentor. Speaks highly of her. It's all going in her favour. Who knows she might be the one that can get at the source. The DVs are still being repelled. Or rather only get so far..."

"Whereas she may get further?" Dross asked hopefully.

"Correct."

Mena sat in the bare room with the star studded screen of space idly looking at the picture of the suited up DVs. The infinity of space beckoned. Her soul ached for it. This room was so sterile it disappointed her. It was not like the holy house of worship, engraven with beautiful abstract patterns hinting at the soul's brimming matrices when

the mundane mind was released from the daily images it was cluttered with. The microcosm within reflecting the beauty of the holy consciousness of space out there. The Divine Mind reaching out to searching souls. Maybe the sparseness of this room was to remind her that in the end it came down to herself, her own effort to align to any given situation. From now on only her own determination would get her to where she wanted to be: enmeshed with the Divine Being. Nothing less. This could be the last image, the last memory of being on Prima. Maybe the room's starkness hinted at some similar state of mind, that in reality all the visionary presentations were distractions. That in reality, the secret of the divine resided in emptiness as the mind understood it, releasing the potential of the soul.

The memory of Ung. So vague, on the verge of not remembering her at all. A shadow in a living dream. Flash impression: her parents perpetually immersed in a social swirl of meaningless activity. Another distraction to leave behind. Even the alien field did not unduly worry her. Rather have its presence laid bare, its dark effulgence contained. Dissipated. An expression of the aliens soul's contamination. The trick Lenox told her was not to fight it but to void it, as she had to void all her mundane memories. She grasped his point. Prior her decision she had prayed assiduously, fervently with the result that Ung nearly faded from her memory. Ung. Always distant, in her own world. When she considered it there was so little that remained. Letting go Lenox said was part of the divine path. What remained was its glory. She accepted that.

She looked involuntarily around the blank white room. The very opposite of where she would soon be. All over down here. Hoping her memory was less burdened with her longing. Behind her the door opened.

"I'm Dross." He said pleasantly, dressed not in priestly garb but a business suit. His soft eyes grey, his appearance so normal looking it disappointed her. He smiled at her. His radiance warmed her despite his mundane exterior. Dross looked around him and said: "Not much of a place."

She looked at him with hope. He must be significant to be so casually dressed. Mena remembered that often when important people had been at their home for some reception those who mattered often looked almost invisible. Whilst those who thought themselves important dressed impressively.

"Come let us take a walk." He gestured. Out into the corridor, into a pleasant small courtyard. A garden in late bloom, delightful in its serenity, vines covering the surrounding walls, bushes untrimmed growing riotously around the perimeter, tall trees offering shade. A slightly cloudy sky above and beyond that her destiny.

He lead her to a bench and sat. A fountain burbled, the sound of the water calming her.

"Ah this is much nicer."

She nodded.

"Not an easy decision is it?" Dross asked kindly.

"Oh," she felt refreshed in the garden after the starkness of the room, "once I knew, it was rather easy. I certainly could not have done this at home. Even though I have nothing to complain about home was more a distraction slowly suffocating me."

"I concur."

"Endless chatter, constant movement, continual distractions. It was hemming me in, crushing my soul, squeezing it into a tiny compartment, crying for release."

"I fully understand." He said calmly. "It is a good sign. This is no mere whim."

He understood. She believed him. He was speaking from the heart. He continued: "Many who seek guidance, even enlightenment do so for all sorts of reasons. Boredom, wanting a novel experience that is fulfilling. When that does not satisfy for there are no instant results on this path you have chosen and I'm sure Lenox mentioned this..." she nodded, "...good. We believe you have been chosen. It is a sign, a divine blessing. The rest is up to you."

"I understand. I am ready."

"Up there," he cocked his head skywards, "everything will be done to satisfy your special needs. You will be isolated, left in peace to pursue your inner dream, your calling. There will be no group seminars, no course work. You will have a guide of course. Further advanced than Lenox. He to make sure you understood your decision. Many feel the call but do not have the spiritual make up you have. There will be times when your soul is in turmoil. It could be the alien influence, it could be the Web presence, it could even be yourself. Only you will know the truth from now on. You are the vessel of your own redemption."

She felt invigorated. She could listen to him for ever. He spoke from the depths of his own soul, his own experience.

"One or two questions Mena. Is there anybody whom you think might be under undue influence? Spiritually contaminated. A strong word I know. Acting under strange compulsions."

She was slightly taken aback but understood the need to remove such fallen ones for they corrupted, through their own volition those around them. She thought that was the duty of the priests. He must think highly of her then.

Noting her reticence he continued: "Don't think as if you are going behind their backs. It's for their own salvation. Our priests can only do so much. Your uniqueness makes you special." Her heart surged with inner happiness.

"A sort of friend. Not close. It's funny you know..."

"Dross."

"...Dross. I always thought my sister distant, locked in, locked out, locked away within herself but now I know I was wrong. She is with the DVs."

"Ung."

"Yes. Well I never really thought she had strayed but this friend, Carias, she really is strange. Talks of fantasy worlds."

"Oh?" Dross becoming interested.

"She might not be fallen but I think outside influences possess her mind."

"How is that?"

Mena was slightly perplexed confused about Carias.

"She's very dreamy. In a real sense. Talks of her dreams, used to I mean. I haven't seen her in ages. It's like she's in some trance. Maybe she goes into the Web. I don't know."

He nodded slowly. Those like Carias were a danger unto themselves. Fantasy worlds. She could be under the influence of the Web as Mena said or worse be infected by the alien resonance. Creating false realms manifesting dissatisfaction with their home world. Regum's attempts to waylay their minds with their false realities in the Web. Carias would have to be checked out. If her mind was really what Mena just said, she might even have to be put under observation in an asylum.

Mena having unburdened herself felt better. It was for Carias's own good. She had even influenced her for a while. But instead of longing for an alternative world, another reality it had opened the possibility that behind this illusion, for that is all it was, was something else. However that something else could not be as great as the Cosmic Consciousness. If she could be at one with that, then everything else, including Carias's fantasy worlds would fall into place, loose their possessive hold, relinquish its tantalizing power to delude her pure soul, her estranged mind. She felt lucky in that she had chosen the right path. Carias a puppet, an automaton lost in a world of alien designs. She shuddered involuntarily.

"What is it?" Dross watching Mena withdraw for a moment. She told him what she just thought. "You are very perceptive. Not only that but strong, resolute. Blessed."

Her heart soared.

"Do you want to see your parents one last time? You will be gone for quite a while Mena." He asked solicitously. She was touched merely shaking her head. "I understand. It would bring back memories, feelings, emotions creating inner turmoil."

How right he was.

"What now?" Mena asked.

"Why, your journey is about to begin." Dross exuded.

"I am on my way?"

"You are indeed young lady. Welcome to your new domain."

"Oh Dross, I am so happy. Will you tell my parents I love them?"

"You can communicate with them. The isolation I referred to up there is in regard to your spiritual schooling. Not in the classical sense. No classes. You will have your own private tutor, one who is knowledgeable who can answer your questions, concern yourself with your inner welfare, suggest guidance, orient you in case you deviate. For what occurred to Carias could, I say could Mena not would or necessarily will, assail you. It is not a smooth path as some would have it. There will be set backs. There will be crisis, moments of doubt and pain for the mind is both a wondrous creation or it can be its own worst enemy. Up to now you have lived a certain way of life. Your memory is full of that. The mind wants that to continue. When it realises that that life doesn't exist any more it creates its own longings. A sort of mental hunger for the past. But it is your blessed future that will guide you from now on, the Great Mind your focus, your redemption, your salvation."

Mena was partially shocked. She was under the impression that once immersed in holy duties, the inner radiance she felt would overcome all. Yet what Dross said made sense. She was ready. Difficulties. Let them come. Knowing they were mere memories, that her chosen reality was different now she said: "I'll keep that in mind Dross."

"Excellent. It will take years you know."

"Years?" another surprise. She thought she was already on the way, partially immersed in the divine radiance.

"But after around three years of constant practice in the devotional arts of inner enlightenment, your strengthened resonance will be unassailable. Now that is something to look forward to."

Her sudden dismay vanished. "Yes Dross." She said strengthened by his wise words.

"Shall we?"

"Go?"

He nodded like a proud father.

They walked towards the rear courtyard wall. Dross brushed aside some vines and inserted a key into the wall. It opened into a hangar. Several VAVs and two shuttles gleamed under overhead lights. One of the white shuttles was positioned at the front with three figures standing near the mobile stairs leading into it. The priest Lenox, Senuf and the pilot. Delighted to see his charge once more Lenox said 'goodbye' Mena thanking him for his patient guidance. Then they all climbed on board. The pilot up front had done his pre-flight checks. The three of them comfortably behind. Senuf handed the pilot a disk containing their destination, security and access codes letting them leave Prima and be accepted by the orbital still on full security alert.

Wrap-round masks popped out from above each seat. An extra precaution even though the cockpit was pressurised. The hydrogen engines whined into life and they slowly moved out the open hangar, down an apron and onto the runway. Control cleared them for take off. Thrusters full bore they powered along being pushed into their seats. Mena felt marvellous, great, fantastic. As the shuttle lifted off at a steep angle, the ground tilting rapidly Mena sensed freedom, she was leaving her past behind. The future beckoned. She was expecting fantastic things to happen. In the distance the desert, the space port's buildings rapidly becoming tinier. Through sparse cloud cover they thundered into the blue sky above. Her ears popped. The sky changed colour slowly turning a light purple then richer in colour as the first stars appeared. Upward and onward.

"Towards your new home." Dross smiled at her.

"My new home." Mena was happy. At last she could pursue her dreams, fulfil her inner longings..

"The orbital is a city all of its own. You will be in a special section of course away from the bustle. The DVs have a sector to themselves. As a neophyte there will be some initial interest in you naturally. New faces are always welcome. I assume this is your first trip up?"

"Yes. I've flown in planes, not often."

"This is momentous for all of us. We value you highly Mena. I mean it. You are extremely rare, a Natural."

"I am? Lenox said so himself."

"You are. Your parents must be proud having two daughters up here."

"I guess so."

"They were not that endeared? I guess it makes sense. After all it will be a while until they see either of you again. You know, unlike the DVs if things don't work out for some reason there are special circumstances if you think you may want to return Mena."

"I can't think of any."

"Homesickness. Some are still debating if we should be in space at all."

"Really?"

"Well we were created to live on a planet. Space is a hostile environment."

"Hostile?" she asked a little worried.

"Well there is no air."

"Of course how silly of me."

The sky was getting darker, nearly black. The stars spread in front of them.

"Then there is the radiation. The universe is full of lethal rays. Nothing to worry about. This ship and the orbital are well insulated, protected. As is your space suit." Dross explained.

Mena was fascinated by the glorious splendour of space. So enticing, the stars shining like brilliant diamonds. She was awed by the richness of their radiating light.

"Were your parents surprised?"

"A little. They took it in good faith."

"That is recommendable. Lenox will visit them now and again, keep them informed of your progress. For progress you will, you have the faith, blessed by the Divine Mind." Dross said solemnly.

"My parents never big-noted themselves. I know other families who went on incessantly at the success of their sons and daughters."

"Understandable to be happy for their achievements."

"Just the way they went on and on about it."

"Everyone is different to some degree."

"They all seemed the same."

The cabin lights were off. The darkness apart from the glowing console controls, the HUD patterns in the screen the only glow. They all looked eerie.

"Not nervous?"

"Excited."

"This is a big event."

"Finally in my own space."

"Indeed that is so. As infinite as the Great Mind itself."

"Oh I can't wait to get started."

"Very commendable."

Mena was off to commune with the Ultimate, let her soul be immersed with the Immaculate fulfilling her craving. The sense of otherness, so tempting, enriching but always dispersed by the clutter of her mind concerned with everyday things was all past now. The call was strong and she ready to answer it, fill herself to the brim. Let her soul soar.

"We in visual range?" Dross asked the pilot.

"Not yet but the remotes can call it up."

"It can wait." Mena said.

"Leave it." Dross informed the pilot. Then he turned to Mena. "Watch, for you will have one of these embedded into your space suit's sleeve." He pressed something on his sleeve and a tiny screen lit up. A dark ball studded with lights. Some winked red, others green, tiny white points of light flashing momentarily in space.

"It's your own computer. Makes sure you're OK and so you can communicate if you have to or be informed or called back in. About three days worth of nourishment in tubes, plus water. That for your space suit."

Mena looked fascinated at the image.

"Tell me. If you do manage to become One with the Cosmic Consciousness, what will you do?"

"Do?" Lenox had posed that same question. A bit differently but the same.

"I honestly don't know. I didn't know anything could be done with it. I thought it's a state of being."

"It is Mena. It is."

She had no answer as she never even considered doing anything.

"What do others do?"

"Some return as priestesses, some devote themselves to the Immortals, others serve on a more practical level at the palace, some teach."

"I see what you mean. Probably teach them of the spiritual beauty residing within our souls."

"That is excellent. Some progress as DVs, some are Divines. You may even become an Ecclesiastic. So many possibilities Mena."

"Or retreat to a monastery."

"Or that. Others also go to Regum to spread the good word. Have you thought about that?" Dross asked. They could use someone like Mena if she were steered in the right direction.

"Regum?" she asked perplexed. The planet was too confusing, too restless, too disorganized, chaotic.

"I don't know. They seem so distracted, distracting. It would be worse than being back...home."

"Plenty of time. The Divine Mind will guide you. Something will lead you towards your fated destiny."

Mena had never really considered anything at all. They were expending resources on her. It was only natural she would help them in whatever they thought best.

"Final approach." The pilot informed them.

"See the orbital up ahead?" Dross motioned.

In the distance a partially lit round object. Just like the screen showed on Dross's arm. The great moment was arriving. Glowing crystal ice blew out in front of them as the pilot slowed the shuttle. On the HUD a trajectory was glowing yellow, their vector in.

"Are there others like me?"

"Yes, a few. As you will have your own specially tailored course it might be some time until you run across them. Naturals such as yourself are given the freedom to be left alone so you can pursue your divine calling with the least amount of disturbance."

"That is good. I'm not really a people person."

"Then you are indeed blessed." Dross was pleased.

Mena's heart was racing. 'This is it.' The gateway to eternity, the path to divine infinity. The orbital slowly expanded, tiny lights everywhere, some hovering like fireflies around it. A busy place.

"It's huge."

"It is."

A brightly lit hangar, the landing bay glowed in front of them as the pilot manoeuvred with dexterity the bulky shuttle. Then they were inside the orbital, lights above, on the walls, guide lights on the approaching landing zone. They twinkled merrily. The shuttle came to a smooth halt.

"We leave you now Mena." Dross said for though the orbital was still in shut-down mode Dross had special clearance to leave. They were not coming into contact with anyone on board. Mena saw space suited technicians repairing a multitude of strands and wires.

"We'll help you into your very own space suit. There will be a spare one as well in your cabin." Dross said.

Mena was a little disappointed that they would not introduce her to whoever was going to look after her here. He rose along with Senuf helping her into her suit. It felt bulky a bit top heavy in the artificial gravity. She felt like jumping for joy. She was rearing to go. Even the niggling reminder of the alien resonance which Dross studiously avoided mentioning did not bother her. The Divine Mind was greater than that. Since she was going to concentrate on its potential what was the alien incursion? Just another distraction like Regum's Web. Maybe she could contain either or both, master it, prove that the Great Being was more than anything else in the universe.

A white suited figure came through a small exit above the bay's floor, moved down slowly and waited at the bottom of the stairs. On the face helmet her name appeared. Wow. Neat.

"I guess that person is for me." Mena said.

"Yes." Said Dross. "Her name is Niatu. She will be your mentor. Go down the ladder and may your blessed spirit soar." Dross said by way of saying goodbye.

"All the best." Senuf added. "Great expectations await you. You have our faith Mena. You will shine. Your resonance is stable, you are indeed infused with the holy spirit."

"Thank you Dross, Senuf. Give my regards to the pilot. You will visit?"

"Time permitting." Senuf answered. "We will not forget you. We will watch with anticipation your successful progress."

"Thank you again for giving me the opportunity to make my dreams come through."

"It is a pleasure to be of service." Dross said humbly. "Be off then."

Feeling light, not just because of the lesser gravity she literally bounded down towards Niatu. She extended her hand and they walked up the ladder. Menu turned to wave. The shuttle was rotating on the landing zone's turntable.

"Better get in. Before they engage their engines." Niatu said over the intercom. Mena followed her into a corridor, through two airlocks. "We'll take off your suit in your quarters."

Cables were strewn everywhere. The place looked a mess. Along corridors meeting not a soul. It all looked a little cramped. Then they passed several doors.

"This is where the others are." Niatu said. Mena understood, her own kind.

They stopped in front of one door, the light went green as Niatu inserted a card. The room was tiny. A fold out desk, a blank screen which Niatu activated. A logo came

on showing the orbital. "It's for updates, personal information, messages, that sort of stuff."

A perspec tube which Niatu explained was where she would sleep as the cabin would be airless, saving resources. Niatu helped Mena out of her suit. Then managed to extricate herself out of hers. She was the same height, slightly brown skin, probably once an Outlander from the distant provinces. Short cropped black hair, deep dark mysterious eyes.

"I'm Niatu and you of course are Mena. I've been updated. I'll be your initial mentor and guide around this section of the orbital. I'll show you around, where the canteen is, where my quarters are should you need me. Unlike Dross or Senuf I won't be asking you questions about yourself. You're here because you were Called. That is enough. I'll answer any questions I can of course. There won't be any lectures. Your mind, your resonance is your own. It is your decision how or what you think. That is none of my business." Which was not true but as long as her mind stayed within the parameters she would leave Meana to her own devices.

"Now in the inbuilt wardrobe is your spare space suit. Always check the air levels, water and liquid nutrients. Nothing has ever occurred here that could be considered an emergency." Which was true. The odd asteroid hit, some penetrating the outer shell but that had been about the worst of it. Management was negotiating with Regum for lasers to blast them before they hit. So far they were dragging their response out.

"Time to stretch your legs. These slip on shoes have special pads that give a feeling of full gravity, stop you drifting about. You've noticed the handrails of course, even on the ceiling. We've never had a gravity failure, we've never had any failure really. The Reganian's certainly know how to built these things. Oh yes. There are Reganian's on board. They're off limits in this section and a few others as well. If you see any report them to me. They have their section. Maintenance really. So if they're not maintenance, like I said. They'll have that marked on them. But they like to snoop under any pretext. They'll also try and engage you in conversation. It might mean nothing, then again it might not. They can't get into our heads, not like we can, well some of us anyway. I'm not that psychic, I don't know about you. The mind is a wondrous organ, it is full of surprises as you will find out in your devotional meditations. So let's take a walk."

Niatu showed Mena the canteen, the escape routes to stand-by escape pods which reassured her. The way out through innumerable air-locks which they would be using tomorrow. She told her they were in stationary orbit over Prima to keep the bio-rhythms and mental time sequence in place. Certain sections of the orbital, unless

reprogrammed or overridden would deny her access away from her own section. It was to protect her from unwanted distractions. Mena a little surprised concurred. She did want to be left alone. Niatu seemed so practically minded not what she expected. Then again she had no idea exactly what to expect except perhaps a retreat with devotees. Niatu must have been here for a long time. Yet neither Dross nor Senuf, not even kind Lenox mentioned what type of teachers were up here. But she understood the need to think clearly with a certain focus on how the orbital functioned.

And a relief that Niatu did not badger her with questions about herself, where she came from, her family or even how or what she intended to achieve apart from the obvious. Then they were back at her cabin. Niatu went over it once more, how the chemical shower, a cubicle and toilet worked, how to use the terminal, her access code which was the same as for her door, then when Meana could not think of anything further bade her to relax, meditate if she wanted to. She'd be back at around ten the next day. Meana thanked her for the guided tour.

Mena, left to herself squealed with delight thinking: 'I'm there, I'm in, I'm free'. Finally she was on her way. It was really happening. She was too excited to consider any meditation. Everything she needed was here. She sat next to the fold out table and chair, and looked out the porthole. The screen in front of her glowed softly. Outside, space. The odd white short burst flare which had to be the DVs coming back in or going out. She would be there tomorrow. She could hardly wait. Technology was not all bad, it depended how one used it. How weird she thought. Here was the best, the most advanced, her means to salvation. She wondered for a moment about the alien field yet sensed nothing. She turned the lights in the cabin off seeing some of the white suited DVs. So calm just drifting there.

She played with the computer. Took a virtual tour through the orbital. Visually no access was denied, at first. As she travelled down the many passageways some areas were no-go zones. Mainly the engine rooms, the power stations at the core. She could even venture outside. Winking lights indicating antennae arrays, micro-dishes, solar panelling, outer shafts, maintenance hubs attached for repairs, tiny bots like bulky insects doing their job, personnel keeping others out there safe. So marvellous, so different. Prima a million miles away.

She opened a file to send a message home. Everything was fine, she had her own tutor, the place was huge, a marvellous reality. A message to Ung that she was here now. She entered her parents address now another reality far away. Life was so tiny

down there, so limited. Up here the opposite she wrote. She felt better already. She sent them her love. Then pressed send. Message delivered.

Ung felt the strangeness. On duty shepherding her eager wards, ready to flex their psychic capabilities. They crackled slightly in her head with barely suppressed anticipation. As novices she guided them in their adjustment to immerse themselves in the spatial field floating with them. Remarkably easy letting 'go' of her active conscious mind. Which others took years to accomplish. Her task to ramp them up for 'assault' mode in containing the alien field incursion. Then to tunnel through to the source. Advance them to the next level.

It was whilst minding her group that her Brain sensed an opening within space. Leaving her natural mind free to observe what seemed to be an influx of latent energy. Not her students. Her Brain was reading them at their current low probing level. She told them not to get too excited, just 'be', adjust slowly to the field, get the feel of it. Any anomalies at this stage should merely be observed. Study the phenomena, it may not be what it seemed. But keep the source in mind.

The data coming in massive wave like images of life from that distant planet, extremely convoluted. Her Brain receiving inherent future states hovering within the field, of probable realities as opposed to the actual reality of relatively primitive minds. Sensing the different orientation of thousands of minds. An alien group mind to be assessed only. Ung perplexed that an advanced technological future state was hovering within the incoming data-field. She told her charges they were possibilities not actualities. The primary mission was to eventually guide these alien minds along their resonance. Forget the technological diversions. Ung followed her Brain's instructions. Ung's idea was to *allow* these future states to remain so that this emergent race would achieve their potential. That of course was her innate programmed instructions. She had to guide her novices so as not to cause any suspicions of the Domimax since her instructions were completely divergent to that of Prima's.

It was easily enough done. Keep the DVs busy with the lesser resonant state of the developing pre-technological race on that distant planet. Leave the probability states well alone she advised them, the advanced DVs were dealing with that she lied to them. She had a sense of some great overriding principle at work but that was about all. It was vague, hovering like a ghostlike sensation throughout her Brain which fed just enough data to keep her oriented. The idea was to keep Prima's DVs in check. By concentrating

on the lesser actual manifestation, the greater possible reality would thus guide the future development of that race towards its destined evolution. So far. Early days.

Some of her students were locked on this future possibility. She explained without believing it that such odd revelations were possibly Reganian distractions. Ung's Brain analysed a discordant mind on the loose, did a soft-scan to burrow back to the source. Her DVs were ignoring it as instructed. All they were required to do was to practice consolidating their psychic state, establish their base-line as Ung had. Ung knew her capabilities were far in advance held in check by her Brain. The idea was not to alert the Domimax and the lesser Domimus who actually dealt with the individual DVs on a case by case set of procedures. She did not want to come to their attention. They were in effect an extension of the DLs, with *their* active, pragmatic over viewing psychic minds. The controllers keeping all the DVs in line.

One open mind. Not an active DV, a lucky novice maybe. There had been a delivery of a neophyte flown up just yesterday. A special shuttle flight for just one individual. That in itself was rare. They must have found a Natural and now this individual was open minded. No that was not the case, something *else* had opened up. Luckily her DVs could not tell the difference. Obedient they followed her instructions aware that taking on something beyond their as yet latent capabilities could cause premature burn out. That was enough for them to retract their psychic capabilities. Ung was free to explore this new spatial sensation.

The resonance was strong. The image of Mena appeared, asleep in Ung's head. She was in phase with her, riding her mental meta-field, aware of her imagery as Mena's mind accepted her vivid visionary dream. The combined field, that of her boosted sensations coupled with an underlying spatial field felt comfortingly warm. Space was supposed to be absolutely cold, neutral from the outside, yet rampant with possibilities within its quantum states. Mena was 'leaving' her reality. She was neither perplexed nor apprehensive. Welcoming the effect of being drawn away, plunging in.

Mena was minddrifting. Part of the mental makeup of being sentient, a natural disassociation that occurred when impingent realities converged. Mena's vision of the orbital receded as she travelled away from her location. Ung in the background, letting herself be carried with the field. The visceral sensation of warmth remained, gelatinous, the context of this energy field as yet undifferentiated, undefined. Ung sensed a presence but it was vague. It could be a probability state thus explaining its non-specific configuration. Mena thought of the Great Mind something Ung had not considered.

The planetary system receded rapidly. Along some trajectory they both were following, Mena involuntary, Ung only because her Brain was now active. Mena's reaction was pleasant, Ung's Brain itched. A telltale sign of probing. So the field was extremely information rich. That meant a source, sentient or artificial. The difference might be material or it's opposite, another probability manifesting itself in this universe.

Mena's mind, her soul, her psychic being expanded rapidly. Ung held herself in check. She felt the elasticity of Mena's ballooning unconsciousness, infinitely subtle. It allowed for easy access in Ung's current reserved state of being. The field self-energizing. A barrier built into the field. Mena thought she was being reborn.

The reassuring warmth had to be some sort of program. According to Mena it was like an essence of an ancient god, not alien to her perception, just a hint of unfamiliarity. The sudden change nearly froze Ung's mind as it froze Mena's. Something *other*, still vague. Mena a solidified soul. A perplexing transfiguration of an active mind into a passive mind hinted at sentient intent. The sensation of eternity, a false construct within a vast bubble, vague recognition in Ung's Brain. Without time. Thus the impression of eternity for in a way it was. This inner field almost entropy free. That could only mean a huge intake of energy yet the source remained hidden. Mena's reaction was that she had gone too far with this. Her thoughts of her struggling mind shattered like ice crystals. The field inserted a sliver, a low spectrum spike base into Mena's open state. Like some laboratory experiment, a determinate operation. Then Mena's fluidity of thoughts, emotional responses refocussed, then contracted, contained. Stable.

Mena desperate which was understandable. Ung was torn between ascertaining how the field operated on a functional level or whether to let her be and go for the source herself. Her Brain advised otherwise. A flickering moment as the stars spiral arm momentarily vanished. The operation was not over. Ung held off away from the embedded data field. Mena concentrated on the stars trying to will herself out of its weak embrace. A data field. Sentient? Too vague, too early, too remote.

Its inherent unfocussed non localized centre reluctant to disengage. Had Mena stumbled across something that took an interest in her? Ung undecided whether to continue or abandon the process. She let go. Space regained its elasticity. Mena's mind reactivated itself, filled the void that had been opened within her. This vagrant insertion close to collapse, removing its contents, some fleeing apparition avoiding detection. Had she been the cause? It was not aware of her presence for Ung remained steadfast in remaining in the background, minimizing her presence as the distant observer.

Mena was drawing on her own resources. She must have an exceedingly solid, tightly packed resonance. The field's hold dissipated as space re-emerged in its natural state. For a moment the re-emergent universe a blur of streaks of light. Mena travelling at near light speed. Panicked momentarily thinking she was going to crash literally into the orbital. Ung nearly laughed. She braced herself then woke feeling completely unnerved by her experience. Ung remained behind as Mena's memory started to replay what she experienced. That though fell away, whether into space itself, the probing vanishing field or her unconscious mind Ung could not tell. Her Brain avoiding these competing sub-realities.

Ung was perplexed. This was weird. Or maybe there was more in space than previously assumed. Her own data was not much help. Possibilities were after all endless as far as future probabilities were concerned. This had been one of them. Had Mena been targeted? Had it merely probed and used the first available mind? Was it real? Was Mena the source projecting through her psychic imagination what was psychologically within her? Whatever the answer was Mena was not your average Natural. Then again Primaian's were capable of amazing mental feats. They had drawn down from Regum their orbital, extracted enough technical information to manage space flight, use containment fields to control their people, invent a universe to their own design. Either it was a massive hallucination which her Brain was at odds with or it was real. Real is real. Which didn't help much.

Ung blinked to make sure she was where she was supposed to be. Her three students in front of her. None had noticed the event. Taking her advice and ignoring any outside intrusion. The memory of her experience receded just as fast as a waking dream vanished. Only the knowledge that something occurred remained. It was enough even without any detail. Her Brain noted the memory of the memory. Speculation was useless with nothing left to latch on to.

Mena woke confused. The vividness more a grasping attempt to reconstruct her dream. Surely this could not have been the essence of the Divine Mind. It was the fount of life. She shivered still feeling the iciness deep in her bones. She punched in the air intake for her cabin and waited in her sleeping tube. Then when it was safe to exit took her chemical shower, a burst of lovely warm water, her body regaining its inner warmth. The weird dream now a mere distant remnant occurring so long ago it was of no relevance. Just the gnawing residue of something alien. She put it down to the invasive

field. A dark shadow flitted through her mind as if just by thinking about it something materialised within her, yet did not remain, gaining no foothold. A ghost.

She got into her jumpsuit and wondered what she was in for. She wanted peace, not this. She wanted inner communion, not some outer revelation. Maybe the priests were right. They were all infected. Then she would be determined to be rid of this bourn.

Carias

The present locked in, transfixed, nailed down. So potent the past receded, vanished. Her memory with it. Closed off. Everything she ever knew. All gone. All that remained was the present. Vibrant, static, rich in texture. Glowing pastel colours, the kitchen picture perfect. Not a blemish in sight. No dust, germfree, sanitized just like her mind. Not quite. A memory of an alleyway, graffiti covered, dull colours, garbage strewn at a dead end amongst grimy dirt covered grey industrial buildings. Bare concrete, chipped, weathered, eroded, pockmarked, smeared rust stains, dull metal air ducts. A grey sky as filthy as the surrounding impression. Then that vanished too.

The incongruity barely registered as Carias sat in the brightly sun drenched kitchen. All gleaming, glowing in its pristine suburban purity. Even the floor as she directed her gaze down with infinite slowness reflected the glorious morning sunshine. The table in front of her spotless, not a crumb in sight. The benches gleaming, without even a grain of sugar left over. The light warmed her, the kitchen radiating comfort as she saw her mother, her hair looking like some permed whig, a glowing golden hirsute nimbus. She seemed distracted waiting for something or someone. Carias could tell. Mother was all dressed up as usual. Their eyes met. Mother's smiled forced, or reassuring. But of what? Perplexed Carias managed to think for that one moment. Then reality flooded her leaving her mind warm and blank. Out through the window, the shrubs and hedges vibrant with vigour, a clear blue sky, the sun shining. Everything happily bright, pulsating with the joy of life itself. She was bursting with well being.

The empty cup in front of her and could not remember if she had drunk from it, or what she had just consumed. It must be hers for it was right there with a brown stain inside. She smacked her tongue and tasted nothing in her mouth. 'All gone, everything gone.' She thought idly, stupidly. She felt like some child, no a baby, happy to just be. Her hands didn't look like some four year old yet she had trouble remembering her age. All she knew was here she was.

Her mother gave her another bland smile. She was definitely waiting for something, anticipation oozing out of her. Why didn't she say anything? Because there was nothing to say, to tell. They were happily sitting here in the eternal present, the sun still in the same place. The world had stopped turning.

A picture in her head of her sister, vague, trying to reconstruct her. Her memory gone. She didn't care. Everything picture perfect, except for mother's hair. The warm fuzzy calmness returned, so serene it removed all doubt. Of what? Through the door the living room as spotless as a show home. Mother's plastic smile. What was wrong with her? That idiot grin. Had she no brain either?

Carias felt slightly disembodied. A third person in some movie just before the screen went blank, like her mind. Something had gone blank inside her as well. Try replay. Replay what? She had played something within images, had been somewhere outside all this. Outside the house. She looked at the glowing garden, the light reflected here and there on shiny leaves like miniature stars, where it all ended. No beyond. Surely not the grimy alley? Garish graffiti splattered in palpitating thick gore glistening under wan strip lights the smeared filthy sky above. Painted over windows, cracked, encrusted with grey dirt and smudged grime, don't press 'enter'.

For a moment she sensed a lost something, momentous. As dilapidated as the scene was, anticipating an enticing adventure behind or within it. A pumping musical beat, the crash of cymbals, thumping bass notes, silhouettes in dark motion. Dull glowing thick clouds, on the threshold of a lost world. The dark filled with exciting life, make believe menace, with attitude she smiled. Her disassociation complete. So not there, other, beyond vacant. Vacant. So Vacant. No past, just this scrap. Tattered fragments of a ripped out past, sucked away, way down the cyber toilet. Then it was gone. Almost.

"That's real, that present." Carias mumbled, her tongue thick, heavy.

"Which one this time?" mother still smiling a little tighter now, the muscles doing their job of looking friendly through an effort. A volition. Defying gravity in the effort. Why were they sitting here at all? Maybe if she moved but even merely thinking about it was an effort in itself. She looked down, yes her legs were still there. But she could not feel them, just see them. But then what? Where was there to go? Another room? What for? More of the same. Where would it get her? She was exhausted, immobilised. What was going on? Was anything going on? Mother thought so. Did it matter? She was not waiting for anything. Everything was so perfect why change perfection?

Ung, her best friend. Radiant with a slight mischievous smile. Her eyes agleam with delicious secrets, a cute nose, large dark eyes always glowing with something bizarre she

could never grasp. What happened to her? Was she some illusion like that industrial wasteland? Mother wouldn't know. Carias could not even remember when they had last spoken. So why this togetherness?

Ah, not everything was gone. The headband! The gateway to the real world, not this tacky pristine purity, cut-out, makeshift semblance of pretend reality. There was, is, another world out there. Far more complex than this vacuous state just like mother's mind. Carias knew, knew! Shadow worlds vibrant with life, peopled with strange enticing entities, perplexing sub-personas filled with ambience, breathing shadows slipping in and out of reality just like her. Except she was here. Reality taken from her. Deleted. Access denied.

It was too deep. Ha! She had pulsated to machine machinations, the sombre rumble of dynamic pounding rhythms. Maybe if she tried really really hard it would all come back. Just thinking of these images exhausted her and something else, this film, this reality kept on *superimposing* itself. The kitchen was too real, the colours too intense, too palpable. Infusing her brain with this static sense of eternal well being. Mother deliriously content.

Carias looked closely at her. If she looked any harder her face was in danger of sliding off her skull kept in place with her plastic smile. Maybe it was an impersonation, an actor, a wrong sequence of events, all fake. But then how to explain the familiarity between them? It was so casual this connection, so normal, so *wrong*. That means she had been somewhere real. Here the silence of the tomb, yawning emptiness, devoid of substance, devoid of life. A puppet in front of her. Mother had taken the substance away, removed her life, her reality, her past.

Ah I know! Too much life. Too many realities meant to be explored, lived, experienced. Multiple minds equalled multiple realities. So that was it! But why why why? Meta-realities, ultra-meta-realities, not this flat two dimensional pastiche in three D imagery. This was the dead end, a tiny sub-set of the greater deleted whole. Being so tiny, compacted, this reduced reality physically expanding into this space making up for its lack of substance. It pushed everything out of the way. Being compromised in that other realities existed at all. Mother blotting out what Carias did remember.

"Where did you hide it?" meaning the head-band. The words absorbed by the thick air. Her mother's eyes glowed deep brown for a moment, just a moment, then they went flat, like the surroundings.

"Where is it?" Carias demanded

"Where is what dear?" the woman with her mother's face asked.

"The headband."

At last the secret was out. The warmth eddied a little inside of her with that declamation.

"Destroyed." The mask said, "Like you destroyed your room." The change of expression was really badly acted. It shocked Carias, this change of mental states, which one was real? She should not have mentioned her room, she knew there was one but could not remember it. She was barely able to take all this in without adding to her burden. And she had not destroyed her room, merely rearranged it. Big difference. Her room had been all wrong, that was all. Just like this woman. She was creating this false reality so that Carias would fall into the same pattern. Never!

Ung Ung Ung. Mother had tried twisting her as well so that mother could reduplicate her reality, like she was doing to Carias. But why? Did it matter?

She suppressed the urge to laugh. Now she remembered. She had painted her room like the alley she saw, recreating the entities dwelling there, to keep the thieves of reality like her mother out. With their one dimensional thoughts, their substitute pseudo-realism, their clone like behaviour mimicking other clones, repeating masks pasting their thin veneer over everything. Doing their utmost to shut out the meta-worlds that beckoned.

"I have to go." Carias said and somehow was standing at the same time. No effort at all. She was free! Except deflated sat down. Stuck in this reality. Why was she being denied *her* reality? Mother had hers, was that not enough? She had her blandness, the answer to everything. Why deny Carias hers?

Forlornly she looked out of the window. An image duplicated the tiny boxed in gardens, then more and more, cascading outwards in all directions as far as the horizon. Self contained permutations, self replicating, spreading like a disease over the surface of the planet. The whole planet was *infested*. Lifeless, soulless, truncated, deleting everything in its path. Its spread, dominating all the meta-realities and squashing them into this flat dimensional quagmire.

All doing what her mother was doing here. Sitting in their stupid houses, with their boring reality, dreaming vacant dreams of meaningless drive. Did these people do anything at all except to spread their flat brained world into their self compressed, enervated gutted brains?

Well mother could smile all she liked. Ung would return, and then, and then...maybe this prison would explode. Destroy the pap, the crap, the morbid delusions of bright happy faces day in day out. Carias would never be like that. So why was she

sitting here? The warm contentment rushed through her entire being in an ocean of bliss. Her torments receded, shrunk to a minor irritation then vanish. The world was beautiful, everything was right. Picture perfect.

Ah, the feeling of contentment rushed to her head. She understood the emptiness. This was indeed all wrong, all false but it went deeper than appearances. It was a false meta-world. Her mother the bait, the trap, the one who comforted, who made things just so, just right. Shelter, warmth, protection from the evil reality lurking in other distantly removed shadow realms.

The whine of a vehicle pulling up outside. Mother acting relieved. Good. Take her away, anywhere but here Carias thought sluggishly. The stupid wait finally over and she would be free free free. There was something definitely wrong with that woman. No one could grin like that for so long and think that is normal. Maybe the meta-beings had come for her! What a surprise then! Ha!

The awful doorbell chimed. It's two tone `ding-dong' summed it all up. Vacant happiness, vacant conversations, blathering vacant minds a-calling. Then she freaked. If the head-band was destroyed she was stuck here in not just this house but the whole surface of the planet. Its sameness everywhere. There was no where to go except into her head and that had been removed.

Subdued voices in the hallway. Indistinct as if conspirational. Well if it gave meaning to her mother's life then let them enjoy themselves. She strained to listen, woops mother was gone. Could she move or what? Maybe this was a meta-reality. She heard snatches, the sounds inaudible, desiccated.

Two strangers entered. Total unknowns. Not that it mattered. She hoped they wouldn't engage her in their happiness, not that she knew or remembered them. Then again they were all alike. Yet they looked young. Oh no, mother has arranged for me to meet some suitable friends she groaned inwardly. Suitable company. Neat shiny short hair plastered down, not a strand out of place. Oh dear. Neat grey suits and yes the same contented welcoming smile. As if they knew her. So familiar already, so friendly, so respectable, so urgh. They acted as if they knew her. Even mentioning her name. Not that she could remember theirs or them. But then mother always introduced these instantly forgettable types.

Now standing at the door of the kitchen, talking nonsense, a little fidgety. Maybe a blind date. But two of them? Unless unless, no, never, they couldn't be coming for mother, surely not.

No, maybe yes. So confusing. They were coming in. Well she had nothing to say. Maybe they had a secret life. If there were people like her there could be others. Hope upon hope as distaste was replaced by a certain if ever so slightly welcome from Carias. How strange, they both moved towards her. No not a hug, anything but...please, she thought. Instead one of the nice young men shoved a silver gleaming needle gun into her extended forearm.

She nearly melted that's how good she felt. These guys were something else. Reality had more substance, the colours went cooler yet richer, everything had its own dimensionality. That must be it. Mother's present for her. And here she thought all those things about her. How could she have been so wrong? And yet she destroyed the headband. It didn't make sense but then she didn't care. She felt great, greater than great, so great she could explode with greatness. Her head languid, cool, calm, together, immaculate, smoothly infused with an ultra calm serenity. She was queen of the fucking universe. What a way to live! Maybe mother had understood after she had painted her room. Thank you mum, thank you friends.

She raved a little about how superb this surprise was as they led her outside. Adventure time. A third person, the driver was waiting next to a stretch limousine. This was getting better by the moment. A chauffeur as well and two handsome dudes to go with that, yes please.

Mother had come out as well but that was about it. The lovely two young men in their pressed suits kindly opened the door and she slid onto the soft cushioned seats. Funny that's not what a stretch limo looked like on the inside. For as each of them sat besides her they strapped her in. Games she thought. At least they weren't tight. How thoughtful.

Outside mother said to the chauffer: "She will be alright."

"Madam," he replied solicitously, "she will be in one of the best asylums."

"I'm glad."

"You did well in slipping her the special concoction. It makes it easier for us,"

"Anything to be of help. Thank you again."

"Rest assured, as this is voluntary she will be treated accordingly. It is for her own good."

"We can visit her?"

"I am sure something can be arranged. Thank you for organizing her admission."

"She was..."

"It's alright. We understand."

After the stretch limo departed Droonor walked back into her home brimming with satisfaction. She looked around her lovely house content in having done the right thing. Carias was losing her sanity. The episode of destroying her room was proof enough. It was better this way. To have her committed voluntarily rather than being ordered was an appropriate course to take. First the discretion. All the neighbours would have seen was the unmarked limousine. A status symbol in itself. No one would know. A public order would have created a scandal in her elite circle. She would not have coped in explaining that her daughter was an Unstable Volatile. They would assume the whole family was flawed. Invitations would cease, she would be ostracised.

She blamed Regum's Web and Carias's make believe friend Ung. Conversing with an illusion. Her eldest daughter! The infamy of the deceit. And where was Ung? Who was Ung? She never said. Who knew with what undesirable company she mixed with in that false reality. And what did her husband Neghar do? Indulge Carias. Look where that led to.

The house now empty without her. She could take solace in the suffering her wayward daughter caused her. At least she could seek consolation amongst other concerned parents. That the young were susceptible to the Web. It was an outrage that the authorities had not shut it down, deleted it. As long as it existed it would lure the weak of mind, the innocent turning Volatile. Regum's insidious plot to corrupt them all with no thought to the anguish they caused. Carias had fallen into the cyber-snare which had shocked Droonor to her very soul. It was as if an icepick had been driven right through her. Her resonance barely coping as she walked back into the kitchen, absentmindedly rinsing Carias's cup which had contained the drug that had made her task so much easier.

Neghar was of little help. As a systems surveyor he was always busy, rarely home. At least he was doing something to contain Regum's attempt to brainwash them all. It was Droonor who brought up their child. She sat, looking around her making sure everything was neat and tidy as it ought to be. Reflecting on the events leading to Carias's crises of the soul. She chided herself for not having paid more attention, seeing the signs. Carias neglecting her devotional studies, her meditations, letting her divinely given innate resonant state be corrupted. How stupid not to have acted right there and then. Carias could have poisoned her own family with her decaying mind. Who knew how many others she had infected.

Droonor reinforced her decision as she sat pondering her actions. The whole notion of the Web was a ruse by Regum's criminal classes to subvert the purity of their souls. It was as simple as that. She had hoped her daughter would have risen to the challenge, not fallen to their insipid snares instead. Even Neghar could only do so much. She was proud of having acted independently. She had sought advice from the neighbourhood priests as to how to deal with one subject to Regum's infection the Web was loaded with. She had prayed for her daughter's redemption. But as the priests said, once Fallen the return to sanity was a hard road indeed. Better to act sooner than later. She was proud of having come to the right decision. The bright kitchen cleansed. Carias's remnant resonance no longer a blight on the family.

Droonor was surprised to hear the approach of a VAV. The sound came closer. An important visitor. She felt better, made sure she was presentable and awaited eagerly her guests. And no announcement either, rather unusual. Then it dawned on her it was probably her husband. The timing puzzled her. Had he seen the limousine perhaps? Well what was done was done. By volunteering Carias to psychiatric care the judicial authorities would of course take a benign view. She had done her duty. And being voluntarily committed they enjoyed certain rights. No BrainDraining unless absolutely necessary, no social downgrading, no stigma to herself. She would be seen as a courageous mother battling under difficult conditions to make sure the purity of the embracing and protecting resonance remained unsullied. She sighed. It was still a burden though. At least Carias's soul would be cleansed, she would be 'stabilized'. Given the best treatment the asylum had to offer. Even having to trick Carias by drugging her was the priest's idea. It would facilitate a smooth transfer of the patient. It would be painless for both of them. And so the good deed was done.

Neghar walked in with a sprightly step followed at a respectful distance by an associate she had not met before. This was an honour indeed. She had risen, smiling of course for all was right with the world now. Whatever remnant corrupting hyper-illusions Carias might have harboured were now removed. The house was pristine again, as it should be. A model of discretion and harmony re-established. It was a relief.

"Ah darling. This is Troess, one of my superiors."

"An honour to meet you." Now this was as it should be. It was not every day someone so important came into their private house. The neighbours could not but have noticed the VAV landing right in front of the house. She was delighted.

"We have come to talk to Carias." He said as if he had a surprise in store. And Neghar was thoughtful enough to bring one of a higher status along. It could only reflect

well. But the shock of wanting to see Carias didn't fluster her. She felt so fine in having done her duty she could not let it be known in front of their esteemed visitor that Carias was on her way to the asylum. As her husband was with Systems Surveillance, doing what she knew not, this was not the time or place to reveal her accomplishment. They might even intercept the limousine. The last thing she wanted. She would not as yet have arrived so she dissembled.

"She's out somewhere, seeing friends no doubt." It was weak but it would have to do. She had not even thought about this situation. Why would they both be interested in Carias? Unless it had to do with her accessing the Web. Of course. She relaxed. Carias was now locked out of it. Her soul secure.

"Gone? Hmm. When will she be back, did she say?"

Must he put her through this? As if sensing this Neghar said: "We have discussed," and he shot Troess a quick glance, "of our daughter's slightly aberrant behaviour regarding her infatuation with the Web."

How could he! It was preposterous. Completely out of line. She smiled though hiding her confusion.

"Please rest assured Droona," Troess said kindly, "that we can actually help your daughter."

Now that was a surprise. What could they do the asylum could not? This was perplexing. It was Neghar's fault as well. Had he confided in her this would not have happened.

"Well if she isn't here she isn't here. We'll discuss this later." Neghar said reassuringly. Troess nodded politely.

What Droonor did not know was that Neghar had found a way around their dilemma. Volatiles, though suspect were also extremely useful. They could imagine scenarios a stable mind would or could never conceive. They were in their own way free spirits, thus potential agents. What made Carias's case of considerable interest was the way she could handle the Web, deal with it's content without being under its influence. The episode of Caria's repainting her room the trigger that got Neghar thinking. Some became addicted like most of the Reganians yet individuals like Carias seemed immune. It was that alone that made her an attractive proposition to their work. What Troess had suggested was, if this was the case concerning his daughter as System Surveyors they could use one familiar with the Web. Carias was not self deluded. Apart from her imaginary friend. But they knew that was an uploaded persona in the Web. She was no head-case to put it bluntly. She might be bored with what the real world offered, a sign

of youth though suspect to the Ecclesiastics. But Neghar could not voice that to his wife. She was an insatiable gossip.

"So we don't know where she is? Call her."

Now Droonor was panicking. She had to take a chance and agreed.

Neghar called her on his com but the receiver was blocking incoming calls. That was very unusual unless Neghar smiled she had a secret lover.

Droonor was watching anxiously.

"Can I get you anything?" she added quickly.

"No thank you." Troess replied, then turning to Neghar said they might as well go. Neghar consented saying they were busy as usual. They made their way out front. Droonor was relieved and thought for a moment. Troess did say he wanted to help Carias. She walked briskly outside and caught the two of them just before they were entering the VAV. With steely determination she admitted what had occurred. To her surprise Neghar merely nodded but said nothing. Troess barely reacted to the news. Droonor was relieved.

Once in the air the two men said nothing for a while. Finally Neghar felt he had to say something: "A complete surprise. She acted of her own accord."

"Understandable." Troess said.

"My wife is very proper in this regard. A true believer."

"Commendable." But Neghar could tell he was not that pleased. There were other candidates of course but recruiting within a family of an employee was the easy option. It would remain clandestine which was paramount in their case. This was not Troess's idea though he was amendable. It came from up high. Troess understood that Neghar could not discuss his work at home.

Truth was they had to get into the Web. For the moment it was a scouting missions only. All was not lost just yet. They would have no problem accessing Carias at the asylum. A quick enquiry would locate her. In fact Troess mused having Carias working from within an asylum assumed a certain poignancy. They needed focussed Volatiles for whatever plans his superiors had in mind. Carias would need little training, if any. The DLs might be in charge of the asylums yet as System Surveyor's they had certain powers and were granted certain privileges. When it came to planetary security even the DLs would have to listen. The DLs might be in charge of the day to day running of these institutions but they could not deny them access to their patients. And certainly not family members.

Troess would work something out. He could of course have her released. It was only on the `say so' of Droonor that Carias had been picked up. But it would attract undue attention if they interfered. The last thing they wanted.

"We'll work this out Neghar." Troess said assumingly.

"Yes. I appreciate it."

"If only, the timing, it's uncanny."

"These things happen."

"And you had no idea?"

"None at all."

"Would you have blocked your wife's decision?"

"Well we would have discussed it. But then our order only came through today. I would have suggested we think this through first. Consider our options. That would have staid her hand. But, well, we have to plan for the future now. You still want to recruit Carias?"

"Oh yes." What Troess did not say was that he had been aware of Caria's cyber-escapades. It was also assumed that Neghar would know his family was under normal surveillance anyway. All staff were, even the clerks. It came with the territory. Better them than the priests. Troess had been impressed with the dexterity Carias moved through the meta-worlds in the Web. Her resonance was not showing signs of mental strain which was a big plus. She moved amongst its many states with the ease of a practiced Reganian. That was rare.

They were approaching their headquarters, an insignificant four level office block in the commercial part of the holy city. The VAV landed on the rooftop.

"We need some legal clout to effectively recruit valuable assets." Neghar suggested as the engines shut down. "I have broached this with Reno. Hopefully he takes it up with Janon. But we can't make waves."

"The Ecclesiastics and their Domimax get the best of the pick for their DVs. If they can so can we. Eventually I hope."

"Let's keep them out of it. They're fanatics." Troess gave him a warning look. "This is our operation. Will be."

"Of course."

"It had to be said. We need ops like Carias. They have the capability in not getting confused in there. We don't want some warrior caste head-crashing themselves into the Web."

"Definitely not." Neghar concurred.

In recumbent languor Carias looked about feeling royally serene. The plastic straps merely confined her rather than strapped her in. With super-cool attitude Carias dismissed these lackeys for that's all they were, doing their master's bidding.. Either security which still made them mere employees, or considerate thugs. Whatever they pretended to be it made no difference. She was amused at their deference at first. Now that they had her they studiously ignored her as the limo negotiated its way through the suburban labyrinth, designed with convoluted intent to confuse its inhabitants, entrapping them in this maze of twisted streets, reflecting twisted minds. Taking her out. It could not have been easier.

With her non-challance she was above it all. Her sense of superiority supreme. They might have her body but they never would have her mind. She deemed that communicating with these mere servants beneath her. Their sense of duty amused her. If they weren't careful, dealing with one as exalted as her, they might be at the receiving end themselves. Not that she cared. They were nothing. Not even close to her level of supremacy. They might think by serving their master they basked in his glory but as beings they were nothing but useful appendages in a game far beyond their limited self deluded comprehension.

The game. The great game of planetary power. So they had one player, her. Big deal. The tacky houses with their manicured gardens and scrubbed brains inside passed with monotonous succession. Yes do take me into your lair. Just wait and see what you have on your hands. Parklands appeared. The limo accelerated speeding her towards her destiny. A glimpse of a shrine and the usual desperate believers. Conditioned since their school days to accept the priest's pithy belief. Or on holy days when in the forecourt of the Pontiffial Palace the multitude allowed to bask in the pontiff's blessing, praying together by the thousands, feeling the instinctual need to harmonize resonantly, feel the inner surge of belonging to this outrageous lie. She like a few other individuals understood that they were the real chosen irrespective of what the priests advocated: submission to a great fantasy. The combined spiritual strength they experienced was nothing compared to what Carias felt, sensed, realized and comprehensively encompassed: her supreme mind, self-enhanced into an inner realm that in itself was in direct touch with the vast open cosmos. It's infinitude harbouring possibilities the masses barely grasped thinking themselves under the guidance of their spiritual captors of belonging to some exalted race.

The sprawling suburbs were behind them. Woodlands appeared driving at speed hurtling down the empty highway. Her captors mute or under orders not to communicate with her for fear of being bested. If they expected her to be out of sorts with her abduction then she was ready to disappoint them.

The limo slowed and turned into a walled estate through open gates. Driving slowly she saw something akin to a monastery ahead set amongst immaculate gardens. Some people were strolling about, gardeners tending to shrubs and flower beds. No guards. A retreat of some sort. A cover for their sinister machinations. Why else the subterfuge? Her smooth mind still in its expansive mood, her body suffused with an inner comforting warmth. For some reason she thought of Ung with a deeper comprehension. Ung a pathfinder. Maybe a recruiting agent for through her Carias accessed the Web. What these beings feared. The meta-worlds. Present, real, cyber-enhanced, inviolable, impertinent in its presence, irradiating minds into magnificent data rich realms. The great taboo.

All left behind. Not gone, merely out of reach. Yet its very presence by merely being there was enough to give her strength to live on the outside, in this contrived illusion of reality. Their reality, not hers.

The limo glid to a smooth halt. The stooges got out, the braces unclasped, receded. She was escorted with dignified grace accepting her presence as homage to her person. Up the few stairs through gilded oaken doors into a reception area. Hovering near two brawny white clad male nurses. She looked with barely suppressed disdain around her. An asylum. Well well, what a surprise she thought cynically. So mother had committed her. At least she was out of the suburban wasteland. An older lady, prim, conservative dress gave her a winning smile. Carias was ready to snarl but returned the gesture instead. No point bothering these people with what she thought of them. The lady gave her stooges a hand-held pc. They iris scanned her, returned it.

"Welcome Carias. You are our guest. We wish to make you comfortable and your stay a pleasant one. Someone will show you around. You are free to relax in our extensive grounds. You may converse with whomever you wish. There are no restrictions regarding social interaction, we welcome it." She made it sound like some exclusive retreat. How nice she thought cynically. She must thank mother for her consideration.

The goons left. The burly nurses approached keeping their distance.

"We'll take you through the grounds first." One of them said. They looked like duplicates. Short black hair, slightly tanned, well built body guards. Back out the front through the manicured grounds. The grass a soft green, not a weed in sight. No wonder

mother had chosen this establishment. Some bushes were in blossom, trees everywhere providing cool shade. Inmates sitting under them, others strolled about taking the air.

Well she knew of these places. It had been uncalculated in college. The Fallen, victims of an alien disease. Not to be chastised for having lost the way but pitied for their troubled souls riven by unhealthy tendencies of mind, thought and action. Meaning they didn't conform to Prima's strajhackeded rigid social system.

The sun was shining, birds flew amongst the trees, twittering, a gentle warm breeze caressed her. She felt at peace, at one with her new surroundings. Who knows she might find similar minded guests she thought wryly. A meeting of very select individuals. She looked magisterially around her. It would do, for now.

Another building, less pretentious, plain three stories trees well back, open windows, some with grills. A smaller entrance, plain rather than the ostentation at reception. On the ground floor the dining room now empty. The twins in steady step with her. Long benches, cutlery set, gleaming silver, porcelain plates, shining crystal glass. They guided her up a broad staircase, a banister of polished wood, a sky light above. Some guests passed seemingly withdrawn. She could tell, avoiding eye contact.

On the top floor her room. Tiny lights above the doors glowing red, yellow or white. At the end of the corridor her new repose. One nurse entered before her the other remained behind. The room spacious. A large bed to one side, a huge window overlooking the park, no grille and the distant wooded hills. A desk, two chairs ornately carved with an ensuite. One of the nurses opened the inbuilt wardrobe. Long white gowns, simple maybe even elegant. The drawers full of underclothes, flat sensible shoes as mother would say.

Her attendants stood back.

"Anything to read?" she asked. No point thanking them, they were employees doing their duty.

One of them moved a wall panel revealing maybe fifty books. She remembered reading at college. A rarity only for the select. Books were considered mentally disturbing. They created unrealities in the mind. Except devotional books of course. On a side table gleamed a glass cut pitcher filled with water and two crystal glasses.

"View-screens?"

"This is a retreat Carias. Rest for the mind. There is a com at the door. You may receive visitors at your pleasure, but you don't have to answer. Sometimes staff have to enter to clean the room, change the linen, pick up your laundry. They will identify themselves and have e-tags. Only those with clearance can thus enter. There is another

link to your bed for emergency in case you get sick." He handed her a tag. "Wear this at all times."

She stuck it onto her shirt.

"Later someone will speak with you about your presence here."

"Some head-case specialist." Not hard to guess.

"Meal times are announced over the intercom. It's only obligatory."

"What about family visits?" she was thinking of her father, of Ung, no more, and with some distaste her mother.

"Any time. Cleared by reception, bona fides established."

What the nurses did not say was all the rooms were monitored. Scan the patient's resonant state, activate the containment field if necessary. Negate the need for drugs. Too unpredictable for many of the inmates. Apart when installing guests such as herself. Drugs had their use.

"Anything else?"

"You're free to move about at will. Except the administrative building where reception is located. Unless accompanied by a member of staff. Enjoy your stay."

"Thank you then."

She expected them to bow but they merely turned and left. The door clicked shut. She was free of her mother. Free. The room had a nice feel to it. She sat at the table taking in the bucolic scene. The trees rich luscious, vibrant. She felt their urge, like her mind to reach for the sky. In the distance the purple mountains, a thin line of white capping them. Somewhere beyond them, above in space, within space the Web. Other realities. Now out of reach. For the moment that did not matter. That much of her memory remained in place. Mother could not take that away from her.

She felt the comforting world hardening slightly, going edgy, its smoothness being replaced taking on substance, her mind more brittle. The feeling of inimitable expanse dissipating. Another reality moving in, uninvited. She noted the difference of perception. The feeling of being exalted vaporising, diffusing.

A jolt of reality hit her like lightning. One reality trying to subsume the other meta-realities. Trying to suppress ultra-realities. Carias insisted on remembering them no matter what. That could not be deleted. She would find a way to get back in. She had plenty of time. Forever maybe. With concreteness trying to lock out her effusive mind Carias used this new invasive energy to focus upon her inner loci imagining it as a vortice. She closed her eyes focussing inwards. The feeling of boundlessness was still there, less intense as obstructions infused themselves trying to lock her out. The only way in was through

spirituality. She did not feel spiritual, never had. Reality was what mattered. Realities she corrected herself.

When she opened her eyes again the shadows were longer, the distant mountains darker. Time had sped up. She became suspicious. They were playing tricks with her. A malignant control system at work here trying to disorientate her. Well let them. She was good at that. It almost excited her. The challenge not to beat them, but to play with them. If that is how they wanted it, they were in for a ride then.

She would use whatever they threw at her. The challenge was enough to invigorate her sluggish mind. She felt drowsy, drained, exhausted. What a change from that moment ago. The shadows outside even longer, the room darker. One layer of reality subsuming another, the divergence within her receding into the same darkness as outside. Let them do what they wanted. She didn't care. If they wanted to reconfigure her perception she would use that as well. She was used to other realities. This was but one of them.

No wonder the Reganian's thought Primaian's strange. Self enclosing themselves into just one reality. Infantile. Pathetic really. Well she knew what lay beyond their superficial reality. The falseness of their supposition woven on a cloak of spiritual tedium. It was braindraining. She slumped back in her chair.

A soft chime sounded in her room. Dinner to be served shortly. Just when she was getting somewhere. But she had discovered enough. She rose feeling heavy. Should she change? Too lazy. The room steeped in encroaching darkness.

Buoyed by her knowledge that this place was full of tricks Carias felt a little apprehensive at meeting the others. Open or closed minds? Little jigsaw minds. All part of the great mosaic of life. She was going to keep a diary of her thoughts. Not her real thoughts. She would encode them. That way she could keep track of their mental machinations. Keep the inner gates in place.

She found a drawer at her table. Pen, paper. How thoughtful. She wrote down using buildings as the code for their reality and the parklands as the greater reality of her mind. It was obvious they would read it. All they would get would be picturesque ruminations. The sun outside was setting. Having jotted down her initial thoughts she was ready to meet the other guests.

The dining room was almost deserted. A relief. In the centre of the long table a huge soup tureen, platters of cooked vegetables and the remnants of a rump of lamb. Bottles of water. The few left were engaged in conversations. She sat at an empty table

helped herself to the luke warm brown soup. One of the staff cleared away the empty plates. She wasn't that hungry after her soup. No one paid her any attention. Good. Finished she rose and wandered into the living room. Pictures of wooded scenes, still lakes, clear skies hung on the walls. Soft lights above, armchairs everywhere, small tables for coffee, the room animated with the patients conversations. A group of empty armchairs she wandered over and poured her coffee, keeping to herself. On a sideboard a platter of small cakes.

From next to her one young woman, long black hair, a plain face with a hint of character said: "You're new here." Well that was obvious.

"Today." Keeping it simple.

"You here voluntary?" her rich brown eyes curious. "I'm sorry I really shouldn't ask." No you shouldn't.

"A present." Carias answered instead.

" – " she didn't know what to say.

"My name is Fehna."

"Carias."

"Nice to meet you." Sounds like mother. "Voluntary. Why would anybody volunteer?"

"It's better. And you?" Carias countered.

"They listen." Fehna answered instead. How obscure, how wonderfully bizarre. How real.

"They?" wondering what she was on about. Maybe Fehna flared out gaming.

"The staff." Fehna smiled.

"Probably bored." Carias answered lightly. So what?

"Oh no." Fehna looked nervous. "No no no no no no." as if trying to make some point.

"What then?" might as well Carias reasoned find out what could be going on. Either in Fehna's head, or with the staff.

"If you're voluntary they don't mess with you that much."

"Mess?" Carias apprehensive. The mood change in her room for starters. Some sort of mind control.

"To get your secrets."

"Secrets?" Carias bluffed. She was getting the drift and thanked her luck that this Fehna was clueing her in. Carias studied her. She looked both serene and troubled.

Maybe out of sorts. Maybe a real Volatile! Yeah, that'd be something. Though mother warned they dragged one down to their level. Well let's see then how low she could go.

"You ever Gamed?" Carias asked. Might as well dive in the deep end.

"No way." Fehna said quickly. "Horrible things happen to you in there. That's why there's so many burnt cases. You did, didn't you?" half smile, fascination mingled with fear. "You could be infected. Taken over." She pulled back involuntarily nearly spilling her cup.

"It's only make believe Fehna." Carias said gently, amused.

"Yes but it's real isn't it?"

"So it's real make believe. Everybody knows that."

"That's how they control you."

"They?" time to find out.

"Them, the Reganian's."

"They're behind it?" Carias faked her surprise.

"Didn't you know? It's not the Volatiles. And they wouldn't reveal that now would they?" she said with certainty.

"You sound like..." Thinking of mother.

"I will never be one of them. They'll never get me here. That's why I'm here. To get away from them."

"They can't get in here?"

"Oh no, we're protected here. Whatever it takes."

"Takes?" curious.

"Isolate them, destroy them. That's what they want to do you know. If you fall into their domain."

Carias put her cup down. Were they all like this? Why was she here then? Whatever mother thought, like Fehna here, more insane than the insanity Fehna seemed to suffer from. Maybe mother should be here as well. Safe and secure. She had to find out how they blocked the Web. That meant humouring Fehna.

"Destroy them." Carias prompted.

"I was captured by them you know."

"No shit. Really?"

"That's why I'm here. But I never played, never. I can't remember, it can't be real. I mean I feel so normal, sometimes when they're not watching." Though Carias could not tell whether it was the Web, which couldn't really, or the staff who could. How could the Web watch one? Unless they downloaded your resonance. Then they'd have a fix on

you. Maybe they could then make contact with you! What sounded like outrageous paranoia gave her hope. If, and it was a big if, Fehna was right, then she could get out. Mentally at least. Still access the Web.

"They pollute our resonance." Fehna said primly. Mother again.

"Could be accidental. You know like a glitch in the system."

"Oh no, they're too smart for that." She frowned at Carias. "You're not polluted. Maybe just a little. And you were really in the Web?"

"Bits of it." Carias said carefully.

"And they didn't target you, siphon your soul? Muck with your resonance?" she was almost in awe of Carias.

"Don't think so."

"Well something must be wrong otherwise you wouldn't be here. They'd know that. They might have buried something nasty deep in your mind and you wouldn't know they did that. Like some bug or virus. They can do whatever they want."

"Maybe." Carias said agreeably. She rose knowing this conversation could go on for ever. "Nice talking to you. Thanks for introducing yourself. You've been of great help." She added trying to make Fehna feel nice about herself. "I am obliged."

Fehna rose as well. "Want to see my room?"

"Another time. Thanks. I mean it. My brain..." Carias trailed off.

"Yes, know the feeling."

Carias walked out of the warm living room and up the stairs back to her retreat. Even if Fehna was just a tiny bit right, the idea that the Web had a fix on her, which she doubted, gave her courage to put up with her enforced stay. Maybe the Web was impervious to deletion. Maybe it did subsume real space as the priests would have it. Maybe it was everywhere. She hoped so. Maybe she was 'fixed'. Maybe her persona was still in there. Maybe maybe maybe. But without her headband hope was all she had.

Her head hardened inside, her resonance lifted itself above her. That's interesting, jarred. She finally realised what her mother had done. Drugged her! No wonder the present had been so intense back in the kitchen a mere half a day ago. Now imprisoned in this beautiful setting.

She sat at her little table, staring into the infused blackness of night. She seemed to be both in it as it was in her. Was that how their primitive ancestors felt? Night as an entity. Guide lights along the paths gave the gardens depth. As did the shining brilliant glowing star studded profusion above. Reachable. What had their ancestors thought. Suspended lamps once they mastered fire? She knew nothing of her planet's past. Just

that they had at some stage crawled out of their caves, formed farming communities whilst others became keepers of herds of cattle, horses, sheep, goats, pigs, chickens. Then incessant wars, the formation of city states, mass murder by Outlanders, the Great Calamity, spiritual salvation. Thousands of years compressed into one line of thought. Surely there had to be more.

She suspected those distant cave dwellers had certainly not bowed down to their singular deity. If they had they would have been stuck on the cave-age. Accepting their lot as they were required through theological injunctions to accept their lot; whether as Volatiles, or chosen Naturals, gifted spiritualized souls or the mystical inclined. A jolt as her brain solidified into its concrete self. Drugs. Is that how all this came about? Sensational visions of some Great Divine Being projected *onto and into* the cosmos? Were drugs then curtailed, written out of the mental equation for if drugs infused one with a sense of some universal holiness the need of priests would become superfluous. Drugs created false sensations it was claimed. So how real was the Divine Mind? Some claimed to have seen and experienced it in their dreams. Dreams, the dread of other realities supplanting this assumed reality. How did Reganians view it? Whatever they thought was certainly not made clear to them, to her. Since her para-legal forced infusion of whatever the concoction which her mother had so sneakily tricked her into taking her whole *conception* of the universe was changed. Mother and her advisor, some local priest no doubt had made an egregious mistake. She knew of her own *crypto-divinity*. She had tasted infinity and that could not be deleted. It would remain with her until her dying day, or night. What then? Dissolution into the divine entity, or as the ancients would have it, transcendent, becoming divine like an eternally radiating star? From the stars we came. Really? Interesting.

She was getting tired of all this thinking. Knowing was enough. They had made an agnostic of her. All because they felt the need to drug her to accept her fate and destiny. Instead her mind, her soul, her essence, her radiating resonance expanded instead. But no sensation, no hint of the ever present Web. So what were the theologists so uptight about? Oh yes, its meta-worlds. She smiled to herself. Somehow she knew instinctively she would be back. It gave her hope to go on, something to live for.

Fehna's paranoia. Being watched, scanned, spied upon. Were they reading her thoughts now? She looked around the room. Unless she took it apart there was no telling if sensing devices, softscanners were in place. Some claimed to feel the probing like a secondary something inside one's head. Maybe the drugs were overriding their tentacled intrusion. Another maybe. No wonder the patients were disturbed,

unharmonic. Encouraged by the asylum's mere presence to fall into the very mental states they claimed to obviate, occlude, diminish, delete. It depressed her. She might be here for a long long time. If she could get to her father he might be able to extricate her from this madhouse. The others this evening appeared so normal. Then again that could be due to molecular stabilizers, enforced normalcy by truncating their hyper-active imaginings, like Fehna's. Poor girl, woman. Possessed by her own obsession, all too real for her. If they were watching so what? What was there to watch? Her resonance? Prying into souls. Sick voyeurs and legal at that.

Dr. Groben, head psychiatrist working for the great man, the pontiff Telafus watched with some irritation his unannounced visitor. Gelat, gaunt, emaciated, probably a religious fanatic by the looks of his haunted eyes, his aged lined face, thin pursed colourless lips in the robes of a pontifical representative looked challengingly at Groben's soft features. Groben had to deal with the likes of him on a continual bases. They were searching for specific Volatiles. Whether to study them, comprehend their sense of the divine, seeking out heresies, or potential DVs often meant that he could not treat them according to medical dictates. The hopelessly confused, the emotionally unstable, the left overs who were beyond hope of curing, of strengthening their resonance were left to his staff whilst the pontiff's agents cherry picked the best. Those whose resonance was particular solid with potent empathic tendencies to be as one with the Divine Mind. Then the Ecclesiastics took over through the Domimax, the religious order up on the orbital. Almost feared and revered simultaneously they themselves were contained up there. As should be. Prima off limits.

It was Groben's job to inform these pontifical representatives, forever rotated for some spurious reason, of potential patients. To be used as the pontiff saw fit in their clinically mono-maniacal fixe idee of the alien infusion. Groben accepted the facts as they were presented. Privately wondering at the substance of their claims. He understood how they used that information to keep the Volatiles in a perpetual state of fear. Distorting their resonance, potent alien suggestions threatening their sanity with homicidal thoughts, evil intentions, self-deluded, unaligned threatening the group mind of Prima's collective soul. The repeated injunctions of their destabilizing society a mantra, incessantly repeated even to Groben on occasion. Some of the possessed who were utterly fixated on the Divine Mind were sent to Regum to sow their spiritual message of divine redemption amongst that planet's indifferent populace.

Groben guessed as to Gelat's presence. The voluntary admission of their latest patient Carias. Drach, Groben's executive officer was in a meeting with Lord Qatus, formulating policy directives. Maybe Gelat thought dealing now with Groben gave him some advantage. Gelat was certainly superior to both but Drach could hold his own sometimes refusing to release a targeted patient on the grounds of their latent insanity. Studying the condition of their patients for their own agenda, a directive coming through backdoor channels. For some of the inmates had the amazing acumen to block the CFs installed in their rooms. There the suffering individuals could let their disturbed state express itself. It was the only way of observing directly their condition, watched by the gardeners, who were trained psychologists observing the patients surreptitiously.

So when Gelat asked for Carias's file, which Groben had just studied prior his surprise visitor he was up to speed.

"The readouts suggest there is nothing intrinsically wrong with her, except her addiction to Gaming. Illegal as you know. Yet it did not destabilise her." He did not allude to her imaginary friend Ung.

"The very reason why the pontiff has taken an interest."

Data on patients was leaked to even the intelligence services, human management, the social controllers which Groben had to accept as a given even though patient confidentiality was supposedly sacred. Volatiles were becoming more and more of interest to these control groups. Even Telafus. Never in their recent history had a pontiff taken such a direct interest in them.

"I assume you want her released." Groben anticipated Gelat's reason for his visit.

"On the contrary Dr Groben. We have discovered to our dismay that many Volatiles are acutely aware of how they are being used. That causes friction."

"I bet it does."

"They often self-sabotage their rehabilitation. Many actually want to remain unstable. This is extremely worrisome."

"Well if they received proper care..." Groben was direct. Gelat waved that away.

"We need them for our divine mission." Another one. He sighed.

"And how is that going? Getting many converts?" Groben almost sneered. Not that he did not believe how important it was to get the Reganian's re-aligned. Using individuals like Gelat, with their pompous self-importance.

"Not as many as we hope. The Reganian's are recalcitrant. As long as their WebWorld, really now WebSpace is in place, whilst this heinous artifice remains our

difficulties are made more obvious. What I would like, this is a request you understand..." Groben nodded his acceptance, "...I would like a list of those Volatiles who are immune to the CFs"

"That is extremely privileged."

"I am requesting Dr Groben."

"I know. But that is a matter for planetary security." Groben countered. Security, it was beginning to override all other departments. Janon was extremely dexterous in enhancing his status through no doubt the unaffiliated triumpherate of Lord Gharbel, Qatus and to a greater extent, Lord Pentham. Their domains assuming total control, subsuming all other departments, including that of the Pontiff's. Groben liked the political ramifications. It would enhance his role, as it did Drach's who was actively engaged, behind the scenes of making at least this asylum secure from outside interference. Yet the pontiff was the supreme ruler. He could not be denied or so Gelat assumed.

Groben understood the nature of the visit. Carias was an excuse to flex his political muscle. If Groben gave way a precedent would be set. Drach would never forgive him.

"Anyway Carias is really normal. You have the pick of the whole planet for types like her."

"It is not for me to decide. I follow orders Dr Groben." He hinted darkly. "No what is being envisaged here is not her removal as I have made clear. We want her to be studied assiduously. She is a special case." For the pontiff's political agents were also flexing their muscle. If certain departments, like System Management, a euphemism for counter-intelligence began to use patients such as Carias they might, in dealing with the Web become too enmeshed, maybe even being turned. For whilst the pontiff wanted WebSpace shut down, they saw it as a useful tool to be used against Regum. Yet by accepting the validity of the Web they accepted it's logic and that logic was alien to everything Prima stood for.

"I want Carias to remain here, no matter who asks for her."

That surprised Groben. So policy was changing.

"You think Carias is that important."

"What about visitors?"

"Even more so. Who. We need to know this."

"Collecting data are we?"

"Maintaining social harmony. She is a lodestone. She could even be under Reganian influence for the Web is everywhere. The CFs of course make this place a

vacant bubble in their system. But as I said, what is of interest to the pontiff is who is interested in her."

"That include family?" Groben was displeased that his asylum, its inmates were now being used to spy on their visitors. So why not the security arm? Too overt. Was he after a nest of turned Primaian's? That had never occurred to him. Were they getting too paranoid? Or was some hidden agenda at work here. He suspected as much since this request was counter intuitive.

Gerat thinking. Whether to reveal that Fehna was one of their agents. They kept her unstable enough through the judicious use of molecular tailored drugs to give the appearance of her disturbed mind. They had nurses working for the palace. All he knew was the programme was in place. The order came from up high, but how high he was not told. But to Gerat that did not matter. The order itself sufficed.

"May I see the report on Fehna." An order.

Groben rose and walked to the one and only filing cabinet. He entered the password, it opened. He looked at Fehna's file. Stable Volatile, just. Schizophrenic and all that entailed. He handed it to Gerat wondering why this interest in her. Not that unstable in her natural state. That meant she was useless. Yet Gerat was interested and what interested Gerat now interested Groben.

"I would think she would make a good companion for Carias. Make her aware just what a borderline a case Carias is."

How would he know? This place was a sieve.

"We want to see if Carias can be destabilized."

Another surprise. One that went against his duty as a doctor. What was going on?

"You look surprised Dr. Groben. Well..."he allowed himself a wan smile, almost a sneer, "...the idea is that if Carias can be made to go over, then we can assume the Reganian's are responsible. You understand the implications?"

He did. So these religious proselytes had another agenda cooking. Things were hotting up. And what destabilized Regum was good for Prima, or so the logic went. But if they succeeded in this insane idea, the Reganian's would become a loose canon. Given their technological prowess it could backfire on the whole planet. Was this wise? No. Was it rational? Unfortunately yes. Would he agree to it? He had no choice. But he would mention it to Drach. Reading his mind Gerat said: "This is in the strictest of confidence. Should this get out prematurely, I will hold you personally responsible."

"I could say the same Gerat. No offence. Remember we have psychics amongst us. Whose to say your mind is so secure that even some involuntary entanglement might not occur. Your statement is of limited substance."

"Let me rephrase that." Gerat retreated. "If it can be proven..."

"Oh I see. How kind of you that you place such faith and trust in me. Whose to tell that someone might not be reading your resonance? Maybe a bored DV?"

"My thoughts are contained. I practice my devotions continually." Gerat asserted.

"Right now?"

"Even as we speak."

It was not impossible but Groben was not so sure. Knowing how shaky a mind could be at some unguarded moment, no one was completely secure.

"Anyway. Encourage Fehna to feed Carias's delusions."

"She hasn't got any Gerat."

"Addiction to Gaming Dr Groben. Is that not enough? She hankers after false realities. If that is not a delusion..."

Groben thought of quite a few natural delusions so called normal people had. But that might cause offence to Gerat. So he kept his peace.

"Drach. He is my executive superior. Having Carias fail will be a blot on both of us. I will have failed in my duty to do my best for Carias, Drach in not overseeing my failure as well."

"That will all be taken care of Dr Groben."

"I suppose asking for this to be in writing is out of the question."

"It is."

"So if this goes bad..."

"You and Drach will be protected."

"On your word." Groben was dismissive of the promise.

"On my word as the pontiff's representative. I think I need to state the obvious here."

"It would help."

"We have an agreement Dr Groben."

"So it appears."

"This is too important for personal agendas." Gerat warned.

"It is not I who has the agenda Gerat." Groben countered. "I understand that the nature of this experiment is not just unusual, but audacious. Maybe it would be better if this was being done by the proper authorities."

"No, not in this case. The proper authorities you mention could be infiltrated. They are the glaring target. No those who have made this decision know exactly what they are doing."

"Which you are not at liberty to reveal."

"I am not. Given the nature of the mission."

"Regum's sanity."

Gerat's face was set in a determined expression.

"Fehna already knows what she is to do, how to do it, when to do it. Carias will never suspect."

"What happens if she doesn't?"

"Doesn't what Dr Groben."

"Flip."

"Well then we will have to try another approach." Gerat said evenly.

"You mean regression."

"Progress Dr Groben, progress. Think positive." The interview over Gerat rose. "I shall see myself out."

Do that Groben thought.

Ratze

"Ratze." The voice familiar, feminine, tonal recognition. Eyes open. Out of stasis. Momentary lethargy. No not stasis, deep induced coma, the deep sleep. Hard to tell which. Nano-molecular-combinants feeding her Brain.

'Must be my turn.' She thought. The tube displayed her read outs more for the technicians monitoring her state than herself. It reassured its sleepers upon waking that they were in a controlled environment.

Alert she punched the escape button, a dot of green light above her. The oblong transparent capsule slid her out on its tray.

"Ready to proceed with insertion." The transitory sense of dislocation passed, her memory returned. As she stood slightly flexing her leg muscles she felt the reassembly of her normal self. In her jump suit, with smart-ware, inbuilt processors their energy supplied by the motions of her body, the ambient EM spectrum, solar all kept her on-line in the real-time environment. She assumed this was reality, not cached. A-OK. Everything was as it should be her Brain told her.

One other empty container. Ung's. Nervina peacefully asleep in hers. Ung the scout, the base-line, the control. She floated to C & C. The Facilitator looked familiar. The briefing. The Controller gave her a reassuring smile. Looking wise as usual. Loaded with data fields. Ratze hoped that even if she had a tenth of what this woman possessed they would succeed in unravelling the Discrepancy. Something about the fabric of space.

"All set to transfer?" the Facilitator asked. He was a little older than Ratze. Same short cropped hair. Ratze nodded. She walked into the Virtual Quantum Computer, right inside. The hum of its light driven processors reassuring. Previously scanned, her individual specific data blocks virtually in place at the other end, location classified. Located beyond the huge star field of Andromeda. No distortions.

The dozen vacuum beams engaged and isolated the cube from real-time space. A tiny singularity, its presence non existent. No EM leakage, an energy loop feeding on itself. In space the cube vanished. So did her memories except who she was but not

what she had to do. Outside the cube absolute nothingness. Absolute zero. Atoms, molecules now absent as were her two supervisors. A zero spectrum field.

The same white room, four chairs, a table.

"Ratze. Time to go."

She was ready. Mentally rearing to go, physically calm. Her Brain's enhanced state, partially reconfigured to accept at neuron active levels her supra-consciousness where her mission was configured along complex protein strands. Non localized.

"Ung as you know is already with Prima's DVs." Her controller began. Reassuring her of Ung's successful virtual jump and insertion. "It went fine. No problems. The field is clear, relatively speaking. Some activity though as expected." Not mentioning the DVs. "Subtle phase-change in progress but well below that of the detection capabilities their end. Our," she paused, then "your end. Now Reganian science is advancing rapidly. They've made the transition to quantum computing. Not only that but they have succeeded in instant matter transfer. In a way they are kin now. It won't impinge on our operations. Just letting you know their potential. Demarcating the difference regarding Prima who remain as they are. Their decision. Mars is under Primaian influence." No screens for Ratze to familiarize herself with that planet. "As you know they've made contact. Some field distortions in place which should not affect you. Your Brain primed to the as yet non-existent source, our prime objective. That much is uploaded." the Controller finished with the last briefing.

"Fine."

"Good. Any questions?"

"Direct insertion into Prima's area of activity?"

She smiled.

"No. Two agents popping up might reverberate at their end. You will be inserted at the periphery of Regum's sector of space, embedded history included. We have programmed a scenario that will get you into Primaian space."

"Not hostile."

"Not the field no. As for you they will think you're one of theirs. The Reganians need inserts into Primaian space. Given their psychic abilities the Reganians have been unsuccessful. Where they have succeeded though is in their spatially expanding Web. Completely dominant. Needless to say Prima is trying to sabotage that. You may experience some minor interference. Nothing your Brain cannot handle."

"No heavy EM flux?"

"None anticipated." Which did not mean it might not occur.

"My Brain is familiar with my history?"

"Yes. Data released depending on the environment, your phase-field."

"What they call resonance."

"Correct. Ready?"

"Ready."

The Controller and Facilitator in position. The beams on, QPWF on target. Her data-field removed along with the cube. The vacuum field switched off. For one fraction of a second Ratze was in their configured real space-time continuum. The VQCs taken over by QCs running on full power inserting Ratze into her designated arrival zone.

Drassid looked at the DV expert. The first defector using WebSpace to transition. Using their virtual jump gates to lure Primaians across. Watching Ratze's scan results. Minutely different to the DVs.

"Possibly an Enhanced Stable Volatile, with a totally new configuration. If the Primaians are experimenting with their DVs on a computational level then they are beginning to catch up." The technician cautiously aware that Primaians were possibly self boosting their own inherent potentialities .

"I'm worried about how muted they are about the disappearance of one of their own."

"Well Drassid they are active in our Web."

Drassid merely nodded. Success or a set up? After all he had suggested to his superiors they use the Web to get a DV for themselves. The Web's jump gate formed a cordon around Ratze the moment she appeared on their radar. The extraction had gone easier than anticipated. They expected a failure. Removing a real-time entity had never been tried before. But with their brand new QCs the theory worked out, the possible entropic flaws ironed out. It was possible to move anything to anywhere. Ratze instantly blacked out, removed from WebSpace, inserted via a safe containment field then transferred whilst in an induced coma into one of their secure secret establishments ready to deal with Primaian defectors. They watched Ratze's recumbent figure. Attached were fibre optic soft scanning links downloading her complete persona into an isolated computer.

Drassid aware the Primaian's were after total domination. So far none knew what the details of their plans. As DVs were their forward defence or so they claimed, they were really advance guards trying to dominate space as the Reganians were doing with their Web. The DVs tried to burrow into their heads and now it was time to return the

favour. No wonder they were muted at the loss of one of their own. In fact they were remarkably quiet. It confirmed the theory of extraction. All one needed was their full resonance, download it as a field, then move that field using QCs via the back up VQC's which prepared the ground for Ratze's presence.

Drassid looked at the readouts. Ratze an advanced instructor of which there were several levels. From the data gleaned thus far she seemed to be a free roaming DV as well. That was extremely rare. Conversed with their op heads. Mission specific. Knowing broadly what that entailed. Total domination of their Web and their planet. Only the details, the operational end, the clandestine manoeuvrings absent. For the moment all Drassid could ascertain was who Ratze had been with, not what went on. Maybe she was merely making contact, preparing the way for something. A fishing expedition amongst their own. Not Regum focussed at all. That might be deceptive. The only satisfaction Drassid got was that Ratze was some new configuration, heading into AI territory. Maybe she was what they called a Natural. Primaian's were more or less connected to their planetary resonance as Reganian's were to the Web. That the two fields clashed was common knowledge. Drassid wanted to know what the Primaian's were planning. The DVs their best lead. The Primaian's basically advertised their stubborn intent.

Then Mars appeared in her head. The analysis never lied. It somewhat confirmed what they knew. Psychic entanglement through the DVs. Maybe Ratze was the rational end of their spectrum. Imitating Regum's mind-set. That could get tricky. If they could masque themselves as Reganians a new phase in intelligence, operational directives were being planned by Prima. He gave orders for her to be treated as a patient who had had a brainstorm. Information overload, borderline burn out.

Which she was, she just didn't know it. The DVs never did when it hit them. Ratze had experienced a multispectrum fluxblast. The spike was there on the screen. The computers came up with an increase in entropy. It could mean anything. Specific regarding Mars, non-localized indicating a sudden phase-change in space. Or anywhere in between. Drassid left the control room to report to his immediate superior. They would have to wait and see how she would react to her new environment. It would also put the Primaian's in a quandary. Had she been turned? Was she still stable enough? Was she corrupted with their incessant obsession regarding the photon information from the other universe? Or had she successfully avoided all that and remained in situ? Her brains cans indicated the latter. Strange: some white noise did not

make sense. To the computers it was a spread out spike, non-localised. Their astronomical observations revealed no activity out of the usual. Most unusual.

Ratze's head felt thick. Sluggish as if drugged. Her inserted nano-bots were lying low letting the body's natural reactions do the job. Her Brain receded into her unconscious mind. Establish her active persona. All she remembered was being in space, then some confusion, rapid changing images, some sort of vortex and now she was in a hospital bed. She hoped she had not burnt out. Her mind felt alright so that was OK. Fragments of abstract patterns floated around her head but made no sense. Patterns in space. Probably the Web. Her area of operations when not training advanced DVs. Working as an Isolate to penetrate the secrets of Regum's WebSpace.

Hyper-space. Had she fallen into a Reganian trap? Had they gotten to her? She moved her head. Wires and tubes connected to silent observant machinery. A hospital. She wriggled her toes, moved her fingers, checked her body. No injuries. So it had to do with her head. Everything was fine, nothing hurt. The overhead strip lights were soft. No constraints. So not perceived as hostile or violent. They had probably scanned her head. She the first DV entrapment. Or had she been recalled? BrainDrained? She felt herself to be herself. Hard to tell, impossible really. If she had been BrainDrained what had she known that had to be removed? Nothing on the inside. Full circle. The monitors were keeping silent watch. Some drips on her left arm. Nutrients? Stabilizers? Drugs? Intentionally snatched? Regum? Prima?

An open entrance in front of her. A silhouette appeared, crackled momentarily as he walked through a sterilizing field. Maybe computer virus checked or if she had AI capabilities. Anything could be possible.

The silhouette was tall, lean, the face middle aged, easy movements. He looked at the monitors satisfied. Removed the drip feeds.

"How are you feeling?" smooth voice.

"OK." She rasped, her mouth her throat dry. He handed her a glass of water from her side table. It tasted sweet. Glucose, minerals, a touch of bitterness, maybe vitamins as well. Or just sugar and lousy water flowing into her empty stomach. That meant she had been here for hours.

"Try moving your limbs."

"Done that."

"And?"

"Nothing wrong."

"Motor coordination is fine then."

"So it appears." No point asking him what she was doing here, how she got here, where she was. Soft comfortable cotton pyjamas.

"Try getting out of bed."

She rose, no effort really, feeling completely normal.

"Have a shower." He opened a side door. A chemical shower. So she was in space. Hospitals in space? Maybe she was on her orbital. Maybe the Websnatch an illusion. Maybe. The jets of powder surrounded her in a white fog. Airblasted, the exhaust fan removed the fine particles. A quick luke-warm shower to wash off the remains. She towelled herself.

"You can get dressed now." He said from inside her room. She saw the door to her wardrobe. Jump suit and all her undergarments dry cleaned.

When she returned refreshed he was busy downloading the monitors' data into a handsized pc. Glowing optic strands. She ran a hand over her short cropped hair. Gear like that indicated Regum. Indicated. Nothing certain.

"Well doctor, what now?"

"We check you out. You're well enough to leave." No explanation as to why she was here, apart from possible scanning.

"What was wrong with me? What happened?" she bluffed.

"Nothing wrong with you Ratze. You're free to leave. Someone is waiting to pick you up at reception."

"Where am I?"

"In a hospital."

"But where?"

"Just follow me please." She shrugged. Well it was no civilian hospital then. They walked through the crackling barrier, her brain itching, a soft scan. He walked ahead of her down a more brightly lit corridor, the room behind her falling into darkness.

"So you're not going to tell me why I am here."

"I did not bring you here. My job is to make sure you are fit and healthy, which you are. The admitting doctor is currently busy."

Sounds military. But Reganian's had no military, just SpaceKorps. Maybe they had their own facilities. They entered a reception area. A nurse behind a semi circular desk, computer screens showing other patients status. The young nurse picked up a com pc and said "They're here". then gave the doctor a smile. He smiled back saying "Thank you". Then asked Ratze to take a seat at the only bench. The place smelt sterilized, the

air fresh, pristine, pure. From behind reception the doctor handed her a small sealed bag.

"Your personal stuff. Data access card which we haven't touched. All there." She could not remember what she possessed. Then familiarity returned. Credit account, ID and her com unit. All standard.

A servo-bot appeared, a cylinder on triple wheels to climb stairs, a stretcher with a patient, a net-cap on his head followed by the second servo-bot rolled passed. Next to the patient a glowing clipboard indicating his state. The data in yellow, borderline to good. Ratze wished she could remember more. In Reganian space then. Prima had none of this. None that anybody knew of. There had been others, all too vague, there and not there. Like some sub-routine with implanted memories. Remain neutral. Gaps in information.

An older woman appeared, a senior nurse with a glowing clipboard handing it to the doctor. He got his light pen out, signed it and handed it to Ratze. A release form. She signed at the bottom.

"No need to download that." She said to her meaning her embedded pc on her jump suit's sleeve. So they didn't want her to have that in her system.

A non descript business couple entered reception. Trim, neat, confident. They talked to the doctor, who signed something on their hand-held. Then walked over to Ratze introducing themselves as Nados and Kari. The doctor turned and left. They had to be agents. Nados looked bland, but observant. Kari more engaging.

"Transport's outside." Kari's voice soft.

She followed them into an airlock and straight into a shuttle. Definitely not Primaian. She was in Reganian territory. That complicated matters. She had been snatched! No ordinary shuttle. A couple of view-screens, four reclining chairs, a partition to the cockpit. No portholes. They strapped themselves in. Her escort in neutral mode, indifferent. Ratze at ease. The shuttle's doors sealed them in, disengaged from the airlock and accelerated. Well at least they did not treat her like a prisoner.

Nados had short brown hair, slightly podgy. A friendly soul, his brown eyes a complete blank. AI capable? Running through some sequence? Most likely. Soft hands, manicured fingernails, squeaky clean. Kari in a simple business suit as well. Almost identical. They certainly did not hide their professional status. Tell-tale ear studs indicating up-links. Kari a little older, skin just as smooth, sensuous lips, slight elongated nose, same dark short hair like Ratze's. No response from either of them.

"So you're my escort?" just to see if they were going to react at all.

"Correct." Kari replied.

"What was with the hospital?"

"See if you're OK. You are." Kari answered. She was probably the superior of the two.

"What happened?" not that she expected an answer.

"Don't know. We're here to make sure you get to your destination."

De-brief. Not that she could tell anybody much. She knew almost nothing. Her brain vacant, pleasantly so.

Should she tell them of her uselessness? They certainly were not venturing anything Ratze could use. Totally focussed both of them. Yet unfocussed as well. All capable, had to be.

"How do you feel?" Nados asked.

"Fine, thank you." Ratze smiled. Nados was not the smiling type. The look telling nothing.

"You remember much?"

Here goes. "One moment I'm there next thing I'm here." If you won't reveal anything neither will I. Not that she could, her mind still in some sort of free form, a non-state. Her unconscious not coming up with anything, her consciousness there, content-free.

Then silence.

For hours.

Ratze tried to rummage through her mind, her Brain but it refused to release anything at all. No memories of the past. Now that was familiar. Where had she experienced that before? Somewhere, sometime in the distant past even though it was so familiar. Not a double abduction!?

So where were her real time memories? Unless she had been reconfigured. The moment of understanding passed, receded and was gone. So she was in some sort of configured mind-set. So far so good. She sensed nothing from her two companions. Not trying anything. Three blanks in space. She thought this hilarious but suppressed the urge to smirk.

"How long?"

"Nearly there."

No sense of time. The screens read outs only revealed their cabins integrity. Nothing else regarding visuals, or if there was it was hidden from her seeing it. That set off a sudden stream of mental events. Secreted information, hers. Hidden data realms not

unlike the Web. Self isolated, pregnant with bifurcating multitudinal expansion points. Vortices. Mathematical analogies of running analogies using infinity equations, computer programmes exploring space's hidden potential. The sensation receded. Her Brain had let her know her capabilities, but not the reason why she had this installed in her. 'At the right time' the thought came to her. Well that was alright then. She felt more confident.

"So where am I going?"

"A place." Nados said evenly.

"You mean facility?" she tested. "You two would not come all this way up here for me simply for the ride. Such attention as I am receiving is rather rare I gather."

"Someone wants to talk to you."

"Hm. You know who I am?" probing.

"You're Ratze." Nados replied.

"I hope so." She joked. A momentary flicker in his eyes. "BrainDraining can reconstitute a person. Create a new persona. I might think I'm me, I am me. But am I who you think I am?"

"That is for others to decide."

Ah others. So they were an outfit, an organisation.

"I'm not in the public domain anymore."

"You're, we're in space Ratze." Nados answered.

"Real or cyber?"

"Both are real."

"Only the mind is real. I could be..." and her Brain stopped her from continuing for she nearly said 'ruse'.

"What?"

"Anything."

"Others will decide that."

"I thought I decide who I am."

"That is your right."

That reconfirmed them as Reganian agents. What will they think back on the orbital. Compromised? Polluted? Reloaded? Preloaded? Unloaded?

"You're intelligent people. What do you think. Nados? Kari?"

"What we think is irrelevant." Kari replied.

"But you will have to report something,"

"Your safe arrival."

"Protecting me from what?"

"Just making sure Ratze."

"How do I know you're not a rogue outfit?"

"You don't."

Ah. Definitely security. Giving nothing away except what they were.

"I'm surprised you did not engage me in idle chit-chat. You know get me to reveal bits of this and that, the tricks of the trade."

Blank looks. Not telling. Kari momentarily preoccupied. Data exchange.

"Entering the atmosphere, it gets bumpy now."

The shuttle did start to vibrate a little, then shuddering, shaking as it bore through the upper atmosphere of what could only be Regum. She understood why she had not been hijacked straight to her destination. To give the appearance she was still up there in space. It could be easily done. They had her persona downloaded and could fake her presence easily enough to be anywhere they wanted. Then send a cloaking capable shuttle to remove her real self. The hospital was probably similar to a habitat her Brain told her, not known to the Primaian's. If she is damaged goods they might think twice about reinstituting her as a prime DV. Then again they might have allowed this to occur so that the Reganian's were made aware just how capable their advanced DVs really were. Frighten them a little. A possibility especially with a chameleon programme inside of her.

The shuttle was really shaking them up now. Probably glowing enough for even Prima's radar to get a fix. Unless the shuttle's radiation was loaded with information making it either vanish or pretend to be something else, like a cargo vessel returning from a factory ship. Her Brain did not try too hard to unscramble the data. It was not that important.

The shaking steadied as they bored through the lower atmosphere. Then glided smoothly lowering their approach speed. Moments later a short bump, touch down, a jerk as retro rockets slowed them down. Then taxied to an apron for her transfer.

They came to a halt. A soft clang as a projecting walkway attached itself. The doors slid open and all she saw was the constantinad extension. They unstrapped Nados led the way, Kari following, passed a sealed partition. No one at the spaceport would see them, down another empty corridor and straight into a smaller compartment of a vehicle. Again they strapped in and this time lifted off vertically. No windows either. They were revealing as little as possible. For a moment the itch, another soft scan. Her Brain let it sweep through her vacant mind. She understood why she could not access her memory, so that they could not either. Whether it was her companions or remote her

Brain was not about to give away its potential. Good Brain. These two were masters at hiding themselves. That meant they suspected Ratze did have potential, she was a DV after all. An advanced one at that. Maybe the DVs were searching for her, maybe. It could well be that the intention was to loose her.

They flew on in silence. It was several hours, hard to tell isolated. Ratze aware neither Nados nor Kari felt tired, or bored, or anything. Nor she. That meant inserted molecular energy was slowly released to keep her alert enough not to be tired. The same went for them. The VAV slowed, then started its descent coming to a smooth landing.

Night, starlight, darkness, temporal substance. The silhouette of a chalet, black outline standing in a backdrop of pale mountains obscuring the glow of the galaxy. The cool air refreshing. Out of the VAV. Nados led Ratze glad to walk, Kari behind. Two vague shapes waiting in silence. No greetings no chit chat no status reports. Just the wind in the trees looming around them. A pine forest in the foothills.

The path pebbled, probably with sensors and pressure pads all around. No parking bay for ground vehicles. Secluded. Probably not on any map. The two cut out shapes moved forwards and up a few steps into the foyer as discreet wall lights came on glowing softly. Barely dissipating the gloom within. No reception. A large banistered staircase, polished to a high gloss finish. Opulent thick carpeting.

The two suited figures in front, heads shaved gleaming slightly led the way. No identifying markings, smart tags unless embedded in their clothing. Ratze's mind left alone. No probing. They probably had her down already. That meant her legend was dispersed in their system. At the foot of the stairs, the rest of the corridor unlit showed a series of doors. One man one woman, discreet in their rectitude. The place deserted, not a sound.

"This is Choss," a quick smile with slant observant deep black eyes, "and I am Scaag." Treating her like a valued guest. "Welcome and may your stay with us be a pleasant one."

"Thank you." Ratze was amused. Getting the treatment even though she was technically their prisoner. She wondered how the Primaian's treated theirs. "We will show you to your quarters, make sure you're comfortable, see to your needs. Tomorrow someone will want to talk to you. Get you sorted." As in what? She wondered. Paying her the utmost of discreet attention. Observant without undue inquisitiveness.

They made their way up the stairs the lights going out behind them and coming on in front, just enough to illuminate their immediate presence. Guide lights along the corridor.

"We're not on Prima." Ratze ventured as they walked past more closed doors.

"What do you think?" Kari asked behind her.

"I don't know." They were testing her capabilities so answering in the negative was the safest option. Her Brain withdrew. Whatever this place was it looked like a retreat, more a debriefing centre well out of sight.

Their silence did not intimidate her. Part of the scene. Intel. They stopped in front of one of the doors and opened it with a key. Surely that could not be its total security. The room was lush. Rich dark velvet curtains, drawn, ornate chairs, a writing and coffee table, a plush bed, a wardrobe though Ratze was travelling light, soft ambient wall lights, no tell tale terminal, isolation. A shower recess. Old world comfort.

They left, the door shut but was not re-locked. She sat at the table, pulling open the curtains. A window, completely sealed, air conditioning up the top. Utter darkness outside, the forest set back slightly. She was tempted to do a soft scan but thought better of it. Wait and see if they scanned her. A metal pitcher of water and one glass. She took a drink, the water tasted nice. Mountain fresh. No nano's present. No internal alerts. Plain water. The wardrobe had a suit, a gown, blouse, pants, jumpsuits for space travel, jumpers, scarves and in the cupboard underwear, socks, white beanies.

She found the light switch and turned it off. The silence cool in her head. Soothing, refreshing maybe ionizers. She could make out the trees and nothing else. The quiet absolute. She sighed not feeling sleepy but got into bed anyway.

So who am I? An advanced DV. What do I know? Not much, her memory was no help, her Brain not there. A blank. That will be fun tomorrow. At least no inserts had been implanted in the hospital. She had done a body check with her last shower. Instinctively she ran her hand over her head, the back of her neck. No lumps, minor scar tissue or patches. She was as is. So why the interest in her? Unless this went on all time. The Domimax would never admit to losing one of their own. They might have a pool of replacements, eager neophytes ready to join the cause. Prima's cause. She might not even appear on any records now that she was missing. Deleted, plausible denial. Reverse insertion perhaps. Something was going on but what?

An intercom at the door. Internal with just two buttons. One to send the other to activate? She pinched her arm. Real, no cyberspace this. So what made her so special? Unless maybe to set in motion some sort of exchange of captives. Bargaining power. Or

being subtly recruited. Not impossible. She was 'in' at the orbital. Trouble was she could not remember 'in' what? Her Brain wasn't telling.

She felt restless. Concentrate on your breath. She fell asleep after a while.

"Ratze." Scaag's voice on the intercom. Morning. Light shone through the window at a high angle. Daytime.

"Can you hear me?" she asked from her bed.

"Loud and clear."

"What?"

"Time to get up. Meet and greet. Half an hour."

"OK." She got up feeling refreshed. Showered in real water, awaking.

Half an hour later a soft knock at the door. She was in slacks and a jumper.

"Morning. Bit bored last night? Miss your stims?" a funny way to be greeted. Surprise the mind.

"And the rest." She added not sure what she was alluding to.

"Understandable. Handling it well?"

"Surviving." What had he meant? Her abduction, this sensory neutral environment, reticent minders?

"Feel like breakfast?"

"No. Coffee or tea will be fine for now."

The corridor was as dark as the night before, tiny lights on until they came to the staircase, light flooding in from the closed glass front door. They walked down into the small dining room. Choss came out with a tea tray, milk, sugar, biscuits. They let her drink her tea. Choss withdrew. Scaag was relaxed, as if they were friends. When she was finished he asked if she wanted a walk in the grounds. A burly middle aged woman was in the hallway. Scaag told her they were taking the air. She said nothing.

"Not a recuperating centre is it?" Ratze asked as they stepped out into the bright sunshine. The air crisp, the smell of pines. She felt free which didn't make sense. She felt good which was alright in itself. The VAV was still there. They walked around to the rear. The wind hummed in the trees. Bird sounds.

"It's a retreat." Scaag informed her.

"Just for me?" she smiled.

"Just for you."

"Away from Prima's prying minds."

"One never knows." He lied. The building was riddled with smart ware, dampeners, false inserting programmes, cloaking capabilities. Solar panelled rooves, generators in the basement, com-links hidden in the roof.

"So I'm your guest?"

"You could say that. Comfortable?"

"Yes. Even if a little bare. Rather depriving. No books either."

"We want you to have a well earned rest."

"I haven't done anything."

"Your journey, jet lag."

"Not me."

"Used to travel?"

"Must be." He was adept at the soft approach. Whatever they were after they weren't saying. "We are on Regum?" The thought of another planet momentarily flashed through her mind. Keep her in suspense. "If you told me I could adjust, relate." Ratze hinted.

"You're a person of interest."

"I have gathered that Scaag." They ambled over cut grass coming out the back of the chalet. Several park benches overlooking the forest now hiding the mountains. Fleecy white clouds above.

"You live here? Stationed here?" she asked.

"I follow my assignments." He answered vaguely.

"Must be interesting. Not being stuck on one place. Which means this has to be Regum."

"Why is that Ratze?"

"Because you said 'I follow my assignments'. Prima is into containment, specific zone oriented, or conversely exclusion zones denying open interchange of people. Unless for holy rituals. No signs of the Divine Mind, no religious representations. Even the orbitals have prayer rooms. None here."

"This is not such a place. It's for special guests."

"I could lodge a complaint. Denial of religious observances."

"No one is stopping you."

"So what do you know about me, and Scaag why am I here?"

"You're of interest."

"So I am beginning to understand. As a DV?" trying to probe his reaction. Her Brain remained mute.

"There is something you know yet might not be aware of." What Scaag meant but did not say was that as a DV she ought to be loaded, unconsciously at least yet the scans revealed a great emptiness. That was most unusual. She was some next level operative. Special extraction methods might have to be used. Not as severe as Prima's BrainDraining, that was too confusing, too much as it sucked out the lot, including the persona and its content which muddled up what they were after.

In the control room, Nados, Kari and Choss were monitoring the bank of surveillance screens plus Ratze's mental state. Scaag with his head-webbing was interacting with Ratze when she had slept in her room.

"Easy to get in, not getting much though." Scaag said to them.

"We'll try the next scenario." Kari replied. She was boss. "Create panic. It may get her to protect secreted data. She's smart, smarter than the average Primaian. They tend to show off. Ratze knows what is going on. She's well acquainted with debriefing methods. Either the Primaian's are getting better..."

"Or something is not quite right." Nados finished.

"Could she be one of ours?"

"No noise from any quarters. You two wouldn't be here." Choss replied. "Run the next sequence."

"Ratze." The intercom.

She was awake. Wonderful sleep. Disturbed. A conversation, it faded and was gone. Nothing from her Brain. No significance. "What?"

"Half on hour." It was Nados. What did he want. She showered, dressed in slacks and a pullover, refreshing warm shower, real water.

Nados was there just as she finished dressing. Same suit, no Kari watching over him. A one on one. Kari was a reptile compared to Nados. And she at the bottom of the food chain. Nados was all smiles, camaraderie. He didn't watch like Kari, he was merely there, a presence, a reminder only. The soft touch. 'Well that would be interesting, see what he knows.'

They got into the VAV and took off away from the mountains. Nados at the controls. Trees and undulating hills. Mid morning. After a while, passing a glistening river she saw the metropolis in the distance. Tall grey structures. Regum, nothing like this existed on Prima. They flew over the outlying suburbs, little houses squashed together, then apartment blocks, trams, traffic, people on the streets.

"So what's up?" Ratze asked.

"Slight change of plans. We've noticed a sweep. Could be them. We'll find out." As he looked over the controls. "Nothing so far. Routine probably. Happens."

The sun reflected off the glass of the tower blocks. Some had hanging gardens, breaking the monotony of stark brash designs reaching for the sky.

Ratze strangely familiar with the setting. Her Brain thought so, then receded. Secure. They approached a triple towered complex. Balconies with lush plants, vines dangling down, swaying in the breeze. Venting systems, angled solar panels jutting out between windows, very organised, very abstract. Nothing from Nados. Then: "There is a persona after you."

She knew what he meant.

"Persona?" acting dumb.

"Cyber presence or DV activity, we can't tell."

'You should.' She thought. Then again, her Brain kicked in, DVs could assume alter ego's. Their own or that of their targets. Cyber presences would only be Reganian. This looked like Regum City. Were they a Primaian cell working on Regum? Why her then? Whatever they wanted could be gotten on the orbital. Or was Prima active in the Web? They claimed to have infiltrated it.

"Prima in your Web."

"It's vague. Their scans are open spectrum. But that could be a ruse, or simply to annoy us." He explained. Made sense. Keep them occupied. They approached a landing zone on the triple complex. Below a multilevel plaza, tiny tables chairs and people. Not like the near deserted cities of the privileged on Prima. Easily observed, down there an ant heap. Her Brain revealed no scanning. They had to be good. Her Brain hiding. No response no result. Simple.

The VAV descended smoothly on the roof. A buffeting wind up here. Must be thirty stories easily. No one was waiting for them. Unannounced? A lift. Down ten floors into the guts of the building. She felt different from the retreat, so isolated. Why this feeling of abandonment. No help from inside her head. Trying not to become a beacon of activity, mental or otherwise. She felt calm on the outside and fraught with unknown concerns on the inside. The disparity was annoying.

Then she sensed, felt the danger. Like someone stalking her. Did Nados notice. He looked his usual relaxed self, but then again it was more likely a mask. He was an agent after all. How had they, whoever, got a fix on her. Unless it was him. The apprehension of immanent danger rose. It was disconcerting. Like a hunter having sighted its prey: her.

The sense of doom mounted. Keep your head together Ratze. Nados was certainly right about a persona after her. She could almost reach out to it, which could be what it wanted. Not yet.

Slowly the panicking passed. Her nano-bots. She needed to cover herself in ambiguity, feeling an adrenaline rush. Maybe some carbon copy clone trying to link. Not Prima. They barely understood basic computer language. But the enemy was out there somewhere. Or in this building and they were walking into a trap.

The lift stopped in a hallway. Then into another lift, down one floor and into reception. The dolly bird merely motioned them to walk through. What sort of an outfit was this. No nametags, nothing on the door, anonymity.

A secure room? This portion of the skyscraper non existent on any files. The office spacious. Behind a huge desk sat Kari. She smiled for the first time. Next to her a recliner, monitors behind, a skull cap. Deep scanner. So at last. They wanted her data. Momentary panic. Take a trip Brain. Anywhere, some unconscious realm. Whatever else was in her head they could have. She barely knew herself.

Kari saw Ratze looking at the recliner.

"Something has come up, is coming up Ratze. We think a persona is after you." She lied having created the adverse scenario. "Prima's using the Web as you know. It's shadowing you. We need your own persona as a back up. Use that to divert attention. When you're done your double can give it the run-around."

Ratze reclined.

It sounded plausible. But why not at the retreat? Split her persona there. Then make a run for it. This was wrong. Even if this persona got to her, then what? She could play with it instead. Ah a memory, gaming. Someone is playing games. Focus on that. Escape into the Web, leave a shadow-ghost behind. Something told her to drain her Brain. How? 'Just do it.' Not her voice or her Brain's. Extraneous. This did not add up.

"Stand by." Kari said as she placed the head-net over her cranium. This was not right. They had been talking to her with consummate ease. This change of plan was not the way, it was too forced. Were the Reganian's desperate to get at whatever she possessed?

'Go vacant.' That was her Brain. 'OK, concentrating on my breath'. She became calmer. The incessant thought processes receded though not stopping, running interference. The image of a vessel unstoppered with gas leaking out, or her essence or the contents they were after. No not her essence, otherwise she would not be feeling herself as within herself. She let go feeling porous. Entropy, random dispersal segregating

the codes from their content, then settling in their quantum state. Ha! Try and figure that! The dispersal complete, the self deletion, the escape sequence finished. She felt relieved. She might not have whatever she did once possess but neither would they. Whether in the Web or real time, the secret remained. The dispersal complete she did not feel drained, more like a fulfilled husk. Now that was strange. The image of dissipating molecules was complete. Moving through the Web, the Web? So where was this persona that was after her? This is bullshit. Some designed scenario. 'I'm out of here and if not, then I'm going to sleep. Bugger this.' And let the first REM states of sleep take over. She felt calmer, lighter, at ease, free, relaxed, indifferent, unconcerned and oddly secure. 'Let them work out whatever.' She drifted off.

"Well that didn't work at all." Kari said hiding her frustration. "I hope that what she released was the data. Well at least we know she's was in possession of something. Trouble us now it's in the Web totally deconstructed. Some job getting that back."

"All we have to do is rerun the sequence. No big deal." Choss suggested.

"Well people, I think it is hot air. The system's not getting much. More an exhalation of her unconscious. A smoke screen. But we got something of her persona's responses and defences. We will just have to keep on plugging away till we hit the lode." Kari focussed.

"Except," Nados informed them, "the more we do this the smarter she is going to get. Unless we excise her memory, dangerous at the best of times, she's gonna learn more about the Web and our role in there than we will from her."

"BrainDraining is so messy." Choss added.

"Not the way we do things. We don't want a vegetable, we want what Ratze's got, and we are going to get it."

"Right." Nados was unconvinced. Ratze could replay this escape scene continually. The unconscious was eighty per cent of brain activity. They would have to read her dreams. As a DV she was one of the best. A hard nut barely conceptualised the difficulties they faced with her. Until this part of the interrogation was called off they would have to continue with null results. Ratze was either just another higher-order DV, which meant she could self-isolate or there was really nothing much to her. Though the deep scans showed too much order. Too stable. At best a Natural. Configured but still a Natural. A stable Volatile. Either way there was something about her that was not the same as the other DV's.

Mena

A soft chime woke Mena. Her vivid dream, so real receded all too fast. The momentary glimpse of another state within left its memory of something having occurred, somewhere, in space. She could not recall exactly what. As her cabin filled with air whilst she waited in her tube, green lights and numbers scrolling across its surface she willed herself to recall what had transpired. Something stupendous, gone. An image of Niatu appeared.

"Good morning." Niatu smiled.

"Good morning. Time already?"

"Aha."

"One moment. Where are you?"

"At your door."

"That late?" Mena had always been an early riser. This dream must have been something to keep her occupied. If only she could remember. It had felt like an essence was involved, unseen, behind appearances, animating her experience. An intelligence? Certainly not the Great Mind. Maybe one of the Immortals! A guide slowly making its presence known. Not dangerous. Just potent.

The tube opened. Mena allowed Niatu to enter

"I'm sorry to be late." As Niatu entered. "I'll have a quick shower. Then I'll feel more awake." Wondering if her dream had been monitored. Most likely. Niatu though was simply there, relaxed. Her shower done she got into her white space suit.

"I'm ready."

"Breakfast? Sleep well?"

"Very." A little hesitant, it could be nothing now Niatu was here. Just a dream. An indistinct memory for a moment, like washed up debris on an ocean shore, the next wave covering it, drawing it back in. A message left in her mind. Niatu was studying her. Might be nothing, she was her tutor after all.

They made their way to the canteen. People about, some techies, a few others in two's and three's. They punched in their choice, Mena not hungry merely had some tea. Niatu fruit and water. Precious water. Out of the corner of her eye Dross appeared. She sensed his rich resonance. Calming. Niatu was more neutral. What did they make of her? She couldn't tell. She was more a loner not really caring what others thought. Maybe they sensed her self willed isolation and kept a respectful distance.

As they made their way with their selection to a table Dross joined them.

"Mena, how are you?"

"Fine thank you."

"Niatu."

"Dross."

They sat. Dross preoccupied. Had he read her dream? It was a possibility. Instead he said: "We have decided to accelerate your programme." Watching her reaction. His presence now stronger, more intent, probing. But there was nothing in her mind that resonated in response. Whatever she had experienced was gone. So she let him continue, attuned with her. With his rich resonance his presence was calming, smooth emotional waves making her at ease. Quite sensuous. Latent possibilities within him but like her dream so undefined. Had he been the source? Accidental unity? She could not tell if he had been within this realm. Were there hidden realms within space? It certainly was not the Web. Not that she had any idea never having gone in. The smooth sensation receded, disengaging. She felt lighter, relaxed sipping her tea. Niatu focussed on her fruit salad. Keeping out of the way.

"Accelerate? Sounds exciting."

"Normally," Dross said, "neophytes are acclimatized to space by a virtual programme. That surprise you? Some things Regum invented can be put to good use. You see some cannot handle the vastness of space. Too overpowering. In a controlled environment we can adjust them, or if they are not suitable then at least no damage done, to them. You though Mena seem ready. Your resonance is steady. Your attunement solid, filled with the right amplitude. It all sounds so technical I know but we do keep an eye on all our charges, have to. Part of our job to make sure your resonance is not, ahm, disturbed. The last thing we want."

So they were watching her. It made sense. Her resonance like a bubble, expanding, reaching out towards something out there. Then it dissipated. Had Dross's presence somehow dissolved it? Could be her imagination. Niatu isolated, keeping out. Dross in soft contact with her. Reassuring. Niatu must be strong being able to contain

herself. Amazing people. She was glad. They had something she never found down there. Down there. Only one day up and she felt she had been here like the others for ages. How quickly her resonance adjusted. Space was not so frightening after all. Comforting. Filled with possibilities. Dross most likely familiar with her sense of immanent fulfilment.

"That is reassuring."

"You are special Mena." glowing at being appreciated. "The programme calls for the souls expansion into the Divine Realm by degrees." He explained patiently. "Opening one's soul too quickly can lead to an overwhelming influx of too much divinity. Can there be too much divinity? You could ask yourself and the answer is yes. Each individual is unique. As are you. So we think you are ready for the next level."

"Thank you for that." she drained her cup. Niatu had finished her fruit salad and seemed to be back with them.

"You think I'm strong enough?"

"Indeed we do." The 'we' did not worry Mena. Whoever they were they thought highly of her. What Dross could not reveal though was that the pontiff himself was taking an interest in her. That could be a distraction.

"On my own?"

"No. Even expert DVs have minders in space. You are never alone. There will always be someone rightly attuned to back you up should your resonance be destabilised. Not that yours will." He added quickly. "But you know yourself that our space is somewhat corrupted."

"The Web." Mena said dutifully.

"Correct. Niatu is attuned to you. Don't worry, we have never lost anybody out there." Dross reassured her. They had but he was not about to reveal that to her. They needed Naturals like her, true mystics to read the actual state of the Cosmic Consciousness.

"To be truly united..." Mena was enamoured by the idea of cosmic union.

"Straight in?" Niatu asked.

"I can see no reason why not." Dross replied.

"I feel honoured."

"And so you should be Mena." Dross said kindly.

"Ready then?" Niatu asked Mena. Suited up. Through the last airlock and they were out. She was excited. Anticipation. But Mena knew that even from her devotions

back home, how distant it seemed now, that often, the result always was silence. Maybe the Great Soul was unvoiced. Maybe they as thinking beings projected their sense of self onto its infinite state. It would be interesting how she would go here.

The final airlock opened and all she saw was space. Prima and the orbital behind them. Then as her eyes adjusted the thin strands of outward reaching stars along their spiral arm. She would be like them, also reaching out. At first the helmet seemed to constrict her mind, enclosing her. But with the large view it was designed for seeing space in its awesome beauty it did not matter. Niatu's voice was clear. She answered she was ready.

The controls were easy to use. A handheld, attached cross design for manoeuvring, top forwards, bottom reverse as they had strap on attitude jets attached on a belt around their waist. The moment they moved out, Mena attached to Niatu with an umbilical chord as a first timer she was tugged out of the air lock floating freely in the almost zero gravity. She felt like squealing for joy it felt that good.

After a while they passed DVs hanging there in repose. The silence was wonderful. She felt so free.

"I'll only respond if you feel like saying something Mena."

"Alright."

"If you feel disoriented don't worry. It happens. My systems are monitoring your breathing, your heart rate, your metabolism."

"Fine." Could she read her mind? Did their innate abilities work out here with all the interference from the Web and the alien field now around them? Nothing. No response. Maybe she was stronger than she thought.

"You may feel being overwhelmed. If it's too much let me know."

"I will. Thank you." Niatu led the way into space.

"Any last questions?"

"I feel good. No. No questions Niatu. And thank you for being there."

"My duty to you Mena. Now nothing can physically harm you. You may accidentally sense the Web. It will come across vividly. It's only illusion."

"What about the alien field?"

"It's weaker than we all assumed. Still there but our resonance is strong Mena, never forget that."

It was reassuring.

"Anyway I've said enough."

"So I can begin my meditations?"

"Yes. Over and out."

Mena could not believe she was up here. Finally with the Cosmic Consciousness, within it.

The stars around her both distant yet wonderful close. At first she was aware of her breathing then slowly became calmer finding her inner rhythm. As familiar as back home. No don't think: be she reminded herself. Ah the mystery of the universe and she in it. And it took Reganian technology to get here. Guided by the Divine Mind so that they could benefit spiritually from that. It made sense. The reason for Regum being how it thought. By being waylaid into the technological way of thinking spared Prima from being distracted and thereby focus on what really mattered. Regum was not evil, not even heretical. Well they were but for good reason. Concentrate on your devotions Mena.

Breathe in, breath out. Breathe in, breathe out. Her mind dissolved, her thoughts less there, distant, receding. Still chattering but not distracting her. Breathe in, breathe out.

Something came through. A field. Superimposed onto space. It was heavy, filled with latent energy, unseeable, blacker than black, irradiating the universe, pregnant with its own unrevealed possibilities. A dormant sentience? Huge, vast as if it could be the Divine Mind. But Mena thought the Great Divinity as being light, not heavy or so dark.

Fascinated she managed by sheer will to continue to breath in, breathe out, letting the revelation hover around near, her resonance attuned to it. So vast, so seemingly infinite within. Then foreboding. Interesting. She really was the observer now. Completely detached from herself. Hovering. Intuitively immersed in her resonance. Such strong sensations had lasted mere moments in her dream. Now more solid even though the vast black potent darkness was both vacant and not. That the stars had vanished seemed almost normal. This was a field within space. Waves. Perturbations writhed within it, like water about to boil, in an oscillating pattern. Coalescing into some not yet apparent pattern. Nearly recognisable, even familiar. Definitely her dream! She remembered it now, pattern recognition in this vast diffuse emptiness. Momentary cohesion, like a net, a membrane with innumerable vortices, nodal points. Not threatening, revelatory. It was in unformed turmoil, trying to be calm yet agitated by inherent dark energy warped into indefinable patterns. Strange mutations, no logic to them, trying to lay some foundation. An eruption pouring out this black opaque mass, its

dark radiance. The effulgence of an alien mind unleashing its twisted, contorted, convoluted consciousness, a corrupted resonance.

Then it was gone. The sparkling spiral arm reassuring once more. Her thoughts felt oddly disembodied but eventually centred back upon and within her mind. Her breathing regular. Given this apparition, whatever it was had not directly stimulated her. The Great Architect seen darkly through her soul?

"Niatu."

"Yes Mena?"

What to say?

"How are you?"

"I'm fine Mena, yourself?"

"Good."

"You sound different."

"Just the sense of space. Humbling." For that's how the remnant memory was. Had this been the presence of evil? Full of twisted nightmare creatures, riddled with the insane babblings of riven minds. It was something else, something so completely other.

"You want to continue?"

"I had a sort of vision, but now it's gone."

"Ah. Something. Good?"

"Strange."

"That's alright. You'll adjust to that. It can get strange as you said. Nothing to worry about. A new experience will leave that impression."

"Did you feel strange?"

"At first yes."

"I meant just now."

"No. We might all be united Mena but our individual resonance, well, resonates differently. That's how we are."

"Ah." So it was her own experience.

"So what do you want to do?"

"I think the point I reached is done with me."

"I know what you mean. You had a moment of enlightenment. Might not appear as such but the soul is fulfilled for the moment. It's funny how it cannot be reached again, just like that. Takes a while until it has seeped in properly, infused itself, absorbed. Then when that process is done you will be ready again."

That was true. But what if this otherness took her over? Maybe she had projected her own hidden fears onto it? Maybe she had sensed the essence of space. From there it was just one step away from divine revelation. Maybe a quirk of her mind.

"You're right. Might as well go back." Mena admitted. Niatu manoeuvred herself around her, tiny white jet bursts, turning into crystal flakes sparkling momentarily being slowly pulled around. In front of her the orbital, a half illuminated ball, wonderful Prima a huge backdrop shining in the sun's light.

For the moment the memory of the weird sensation re-receded just like her dream had. Maybe they were the same. She hoped she was not going Volatile. No, she had felt extremely calm. Had handled it. She was proud of herself. The trouble was even if Niatu had said that she had sensed nothing, was this true? So what had it been, an ancient god? An ancient god! Were they still around? Maybe. Reaching out to those who wanted cosmic convergence with the Great Being. But then others would have mentioned that as well. A little confusing but very very interesting. In a way she could not wait to get out here again. Maybe if she practiced her devotions before going to sleep 'it' would come back. Then she was disturbed. She was after divine bliss, not this. Was she being guided or trapped? Now there was a problem. Should she tell Dross? Niatu? No, not yet, a bit premature. It had not threatened her, merely revealed an outer cloak. Niatu kept to her own self. Mena felt better. There was nothing to be done for now. She felt satisfied within herself as if she actually had achieved something.

"So tell me, how did it go?" Niatu asked Mena in her cabin. Just like hers. The sleeping tube, the tiny desk, a comlink and screen, shower cubicle and built in wardrobe, the round portal looking out at space.

"Fine. I even sensed space."

"That is something. How was it?"

"Like a substance, an invisible sense of energy." Which it was to her.

"Wow." Niatu smiled. "You are making progress. Dross was right. He will be pleased."

Mena basked in the compliment. Her interpretation could have been wrong yet the familiarity of the dream and this was more than just coincidence. She was onto something.

"Are there hidden realms in space?"

"Apart from the Web and the alien field you mean?" Niatu asked interested.

"Like where did the ancient gods go?"

"The Great Mind reabsorbed them."

"Are they dead?"

"Did you sense one?" now really alert.

"I don't know. Don't think so. I mean I did not see anything, just space filled with awe."

"That would be you being awakened Mena. When the inner soul opens it still has you with it. Often taking its images with it. That is why we always remind ourselves that spiritual visions can be our own expression, our own exaltedness. The Cosmic Mind is beyond our imagination. We see only a fraction and since it is the completeness of all we would have to be just as complete, which we are not, to perceive its totality."

"I understand."

"Good. So it went well."

Mena smiled at Niatu.

"Well, if there is anything else...?"

"No, not really. Why you throwing me out?"

"I'm sorry I didn't mean it like that. I meant your experience."

"Ah, no. Unless you want the minute details."

"That is up to you entirely."

"I'll see how I go. If there is a pattern I'll let you know."

"Good. Keep a diary. A written diary." Niatu emphasised.

"Alright."

"Nothing into your cabin's computer. That is for normal stuff. Keep everything private, even your reason for being here stays out of the system. It's not secure Mena. They will find out."

"We can't have that." She smiled back understanding.

Ung, being with her group in space had intuited the embeddedness of the field. It had materialised all around not her. Ung outside of it. Her inbuilt capabilities sensed...Mena as the source. Some neophyte. If it hadn't been so vast Ung would have concluded it was a psychic projection. But it was not. It did not seem to affect the others which was strange. Well they were still in their distracted mode even though she had been with them for months. Progress was slow. The conscious mind in some just would not let go. These DVs were hopeless. Which in its own way was good. Less interference in the grand scheme of things. Just what grand scheme, apart from the obvious she could not

tell. Not that the Domimax would reveal that. Whatever and wherever this Domimax was. Just another level in Prima's convoluted multi-layered stratification.

A field in space, interesting. At least her Brain was alert. It was enough.

Andromeda Station

Ung's Facilitator recorded her link with Mena. He noted the mental shift uploaded automatically into the computer's protected memory banks. Encased in a set of algorithmic fractal shifting matrixes to shield the data within a complex of generated confinement fields. A subsidiary layer of boosted electron shells to keep any hostile DV activity out. The upload done, he let the web of fibre optical strands detach themselves from his head. They glowed momentarily from his residual brain. After the upload was completed his EAI self deleted any real memories he might have had of the event.

Hooked into the QCs environment he would be able to remain 'out there' for the rest of his biological life. His real life did not exist, it too had been retrieved and saved. No contamination from his consciousness. Able to retrieve Ung's pure data. The glowing graphs on light-screens flowed in their wavering lines indicative of her subsumed natural idling state.

The Controller transferred from station three through the quantum jump gate to debrief the Facilitator. Make sure the data was empirically and statistically pure. The Virtual Quantum Computer which surrounded him released it's exit gates as Two rolled off the slab with practiced dexterity, awaiting the Controller. The tandem VQC was capable of tracking and downloading whatever went on in Ung's head. It always helped to have backup in place, as a double bind receptor.

"What do you remember Two?"

It was a simple enough question. Two thought for a moment then replied:
"Nothing."

The read outs confirmed his mental status. No remnant memories. He was clean. As his mind was voided regularly there was no chance of his being targeted by the DVs or any other cyber probes that might equally exist with the Reganians.

Satisfied the Controller left Two in his computer's environment. The back up VQC, creations of the real quantum computers captured PWs coming not just from Ung but the

actual space she was in. Two's data in Control's Centre. She went to the jump-gate and returned back to whence she had come.

Though instant she always inadvertently braced herself, feet apart as she materialised at the other end.

Her commander waiting. A man in late middle age, his round beaming face always pleasant.

"I've had a look at Ung's wave-patterning. Well the QCs have," he continued by way of conversation, "and it is intriguing."

Her EAI was not hooked up to receive, simply for security. During jumps there was a pico-second of exposure when her own PWs were in real space. An astute DV could sense a 'presence', then deduct sentence and the cover would be blown. But with no data that would be all they would get.

"This field," the Controller replied, "is of concern."

"Indeed it is. One of the strangest aberrations ever discovered. And the incoming mass of black matter only muddies the already almost infinite variables we have to work with. Infinity to a power of unknown potential."

He seemed relaxed. "A classic quantum conundrum."

"Is it ever. Still we got something." Then waited.

"I've done some projections, running probability and chaos equations. Chaos is winning at the moment. Dominant as expected, too dominant for my liking."

"So the PWs are still messy?"

"Messy." He laughed. His office had several light-screens running projections. "No phase-states as yet. That is disturbing in that everything is a phase-state, or would be at some time or another. It's the 'another' of course that is of concern. With Ung in place we got confirmation. Was this Mena's head generating this wave-field? It cannot at this stage be ruled out. Not until we know more. Once we get a source then one of the inserts will go in. With certain risks. Whoever does go in will have to be an Isolate."

"And we could loose whoever does go in."

"Depends on the strength of the field. What level?"

"Hope it's not a three or..."

"If it is galactic we'll barely be able to handle it. Not beyond our capabilities but anything above that..."

"Does not bare thinking about. But is it possible?"

"Controller." He mock admonished her.

"I am aware of that. Though exactly how anything above a level three can even be achieved would need either a galaxy that..."

"...is the size of the one we're studying? So far its gravity well is just that. Drawing in gravity waves. No big deal."

"Ha."

"I agree. It is a big deal, far in the future. By then we'll be at the periphery watching the fireworks."

"Three galaxies on collision course. Until then a lot can happen."

"A lot will happen. We might all be Isolates by then, independent of it all, space, time, the continuum, pure meta-consciousness, eternal in mind if not in substance, self generating."

"How are we progressing there?"

"Well there are those who think what evolution has given us had been given us as the best possible answer the universe threw up."

"You have a way with words Commander."

"Well it's true. Which brings us to the other sentients and their environments."

"Yes." Wondering exactly which ones he was referring to.

"According to projections now that the Martians are being observed by Earth means they will advance."

"Will or might? Prima's DVs are running some of them."

"The outcome is not certain. In fact it is very uncertain." He frowned.

"Uncertain?"

"One probability amongst many. Earth has a stronger field projection. Haphazard, wobbly if you will, oscillating if you prefer a more clinical analysis."

"Some certainty there." Being cynical.

"Yes. Now Regum is more or less in place as itself and Prima isn't going to vanish. Or change."

"All interconnected. Talk about entanglement."

"The data flow is rich even if the content is tainted by Prima's potent psychic capabilities. Makes one wonder..."

"Why they're there?"

"Yes. Maybe some sort of cosmic balance. Technology at one end of the spectrum and they at the other."

"Maybe we are intended as sentients to all interact."

"Without a doubt. But Prima wants dominance."

"And will they get it?" the Controller asked, concerned.

"As a possibility, yes. Probability close, actuality, too early to tell. It all depends on this annoying discrepancy, this aberration."

"So we're back to where we were. No progress."

"None what-so-ever."

"How can that be. Some sort of stasis-field?"

"Now that would be something."

"It wouldn't be natural. The VQC's...?"

"On a small scale it's a yes."

"Back to where is the source."

"Possible future meta activity. Conditions just aren't right. Although..."

"What?"

"Well space is at a low end, has been for millions of years. It can't go on for ever."

"Must be millions of years away."

"Yes."

"Something is bothering you."

"The timing."

"You mean when galaxies collide. The trigger?"

"Could be."

She relaxed. "Plenty of time."

"Time. So relative."

"Yes but there are physical constraints. The very structure of matter for starters."

"Like junk DNA we have junk matter."

"Black matter."

"The great unknown."

"You don't think it's subject to phase-changes."

"Nobody knows Controller."

"Well it will give our scientists something to do. So what are they saying?"

"Nothing yet. Anyway it's a matter of energy conversion."

"Which brings us back to the future source."

"You got it."

"Annoying isn't it?"

"Not being able to even run probable simulations on it. Yes."

"There and not there. Very quantum."

"Very."

"Someone or something ahead of us." the Controller guessing.

"Can't be ruled out."

"Another civilisation way past a quantum transitional state. Now that would be exciting. Maybe an answer to the universe itself."

"The ultimate."

"It's like that joke. If the universe is the answer, what is the question?"

"We will have to find out Controller."

"Let's hope the Inserts will."

"As long as we get them back. Otherwise..."

"Yes. You think this is some sort of end-game?"

"I hope not."

"An end-game. Fascinating and frightening."

"Why frightening?"

"You really asking?"

"I am."

"The unifying theory complex. If the final answer is revealed then it's the end. No more knowledge to be discovered, no more searching, it would all be over. With no quest, no search, no interest in finding anything out, we would be in some sort of neutral entropic state and that would mean no more evolution."

"Maybe the universe is heading that way. There is only so much information. Once that is all available Controller then perhaps the ancient mystics were right. Apotheosis."

"Eternity?"

"The very opposite Commander. The end."

"Maybe that's how this universe we're in works."

"The complete state. Yet with no information exchange, the universe would...transform. It would not be what it is now."

"Maybe it's our perception. It's never total. Well it is in a way with our understanding of PWs. All data available."

"Which becomes a `then what?'"

"It does indeed. Anything from Ratze yet?"

"Nothing like Ung, yet."

"Well there is Nervina still to go."

"When is she going in?"

"Not yet. But to more basic matters. Regum will send a mission to Mars."

"Do they know it yet?"

"Our VQCs are shadowing their QCs. Trouble is whilst we have knowledge of their mission, at their position there is a blank. A data deleted probability. Still if I was them, knowing what Prima is up to, I would go for it."

"Sounds like they have secrets just like everybody else. Say why don't we prepare the way?"

"Controller."

"I know. It's just we could get it over and done with. This is all taking so long, it's so slow."

"I understand your frustration. But slow is good. Means we can run all the possible future states. Time to prepare for all eventualities."

"And have we?"

"Too many variables at the moment."

"Ah."

"You understand."

"I do."

"Good. For now we wait, let our Inserts do their scouting, see what they stumble upon."

"Hope they don't fall over."

"So do I."

"Still a huge uncertainty factor?"

"At present, yes."

"So my task stays on course."

The commander nodded.

"And Ung is the most active right now?"

"She is. Yet Ratze is moving, stirring things up."

"And you said no interference." She laughed.

He let it pass. "Well I'd better get back then."

"I'll call you if anything develops."

"Thank you commander."

"That is all controller."

"Err..."

"What?"

"Any surprises coming up?"

"Not yet."

"Then I'm on my way."

Carias

Carias was getting bored. The regimen, if one could call it that was non-existent. She knew only of the rumours floating around about what went on in the asylums. So far no doctors had taken any interest in her. She was a guest and that was that. Out of the way. Isolated. Why? Because of her Web insertion? Was that it? So she had gone a little overboard with her room, so what?

She felt distracted. The feel good drugs had worn off never to be replaced. At least they didn't drug the food or spike the water. Not to her knowledge. But she missed, almost craved the experience inside WebWorld. Reality was so pissant, lacklustre. The vibrant colours, the amazing detail made the everyday appear banal. The characters inside left one alone, more or less. They at least had a focus in there, but outside, the inhabitants were too busy messing with each other's heads. Total tedium. Here she found, inside the asylum there was none of that. Everybody left everybody to their own devices, their own selves. In a way this place, this community of aberrant souls was refreshing. One could live one's life without constant interference. It made the outside world appear out of sync.

So mother had gotten her way. Was she some sort of hindrance? But as to what and why eluded her. Sitting at the window, staring out over the park it had lost some of its allure. Well there was Fehna. A bit strange, no very strange though enticing. How not to screw your head. Fehna was definitely paranoid. Maybe so were the others. But Carias was not interested, Fehna just a diversion that she toyed with. Maybe there was some truth to her imaginative duality complex. Were 'they' really watching, probing, searching for something deep in their psyche? Hers?

Agitated. With nothing to do she wrote in her diary not caring who saw it. No doubt the attendants would report her inner thoughts to some faceless doctor. Well she would tell them of her frustrations, the incessant insistence of social conformity according to one's status, the continual harping of living up to other's expectations. Maybe that was what irked mother. Yet dad seemed so unconcerned, so remote, so not there. He

was no help going along with whatever Droonor wanted, demanded, expected. Some life that. She was not going to get married if this is how it turned out.

How to get out of this? Become holy? A joke. She would never make a Domain Lord, no woman ever had. Breed a family? That meant being self-enclosed as a family unit. If that was the norm, forget it. There were the professions. Trouble was these types were more concerned with their status than anything else. That left WebWorld now off limits. Escape to Regum? Only priests were allowed off-planet. Some future that. No future at all. It was depressing.

So who cared that the Web was deemed anti-social, threatening to fracture the planet's resonance. If that were the case it would have happened ages ago. Society here certainly was not fracturing and she had done no wrong. She smiled at the irony. This place was totally anti-social. Removing her from society for the good of society. How many had the authorities locked away? Possibly thousands. Maybe if or hopefully when she would meet a doctor he could throw some light on all of this.

Her room's intercom announced she had a visitor. She answered she'd be down momentarily. A visitor! A diversion. Hopefully not mother. Maybe dad. She made her way downstairs and in the foyer was Ung. Ah what a relief.

"Carias."

"Ung." She hurried over and they embraced. Ung was in a smart two piece, elegant cut, no jewellery and a visitor's tag. Ung five years older, her only friend. In fact one of her few friends she could actually relate to. They got along well. No rivalry as they were never in competition for boys. And Ung was the one who had got her the headband as a birthday present last year. That had totally blown her away. Ung the survivor dating someone from SpaceKorps. Maybe that was her way out and off this stifling planet.

"Good to see you. Your mother told me so I came as soon as I could." Ung beamed.

"I missed you. I'm bored. Let's go outside for a walk."

"Sure."

They linked arms and walked into the pleasant grounds.

Ambling over the soft spongy grass, birds in the overcast sky. They sat near the large pond at an empty bench. The view serene.

"How's tricks?" Carias asked.

"Oh you know, quiet for now. I'm with the DVs."

"They let you down?"

"I have ways." She smiled.

"What did mother say about me?" Got to get the gossip.

"Well mother blames father for you being here. Not being responsible. I mean how stupid is that? She wants him to work to get ahead and maybe he is, then turns around and bitches about him. Mad I say. Accusing him of not seeing the signs."

"What, my room?" Carias laughed.

"That was neat." Ung laughed. "As to your going in. I didn't think it would end this way. I'm sorry Carias." Ung looked crestfallen.

"Don't worry, it was worth it. I mean it." But too polite to ask if she too went in. Not now if she was up there with them.

"I thought I was doing you a favour. There's more to you and well..."

"Don't let it worry you. This place ain't so bad. Boring as hell but then so was home. As for my friends, well, I don't know if they ever were. Just acquaintances really. Accept you. You came."

"When you messed your room..."

"Yes?"

"Why?"

"Oh," Carias said lightly, "for the fun of it. A reminder of that world."

"Big mistake."

"Obviously." They both laughed.

Ung put her finger to her lips giving Carias a winning smile, her dimples enlivening her deep eyes. She pulled a miniature pc out. "It's smart stuff. Scrambles the conversation into something else. What we say is modified. My visitor's tag is a transmitter. They are listening and will get nothing but banalities."

Carias did not ask where she got that piece of hardware.

Then Ung continued: "Your dad is helping you. I don't know what or how. Could be his department. Your dad's got plans for you."

"Oh goody." Not even wondering how Ung knew this.

"The idea was for you to explore WebWorld, get you used to it. Your mother of course didn't know, and if you hadn't trashed your room..."

"Oh boy. I guess I got carried away."

They laughed.

"All I know," Ung continued, "is that he must be doing something really important. I don't know if they are `watchers' or something." She added ominously.

"You know Ung there's this girl here, Fehna, who said the same thing. That `they' are listening. She's totally paranoid."

"Really? Well she's in the right place then." And they chuckled at that.

"You were tagged when you were in there." Meaning the Web.

"I was?"

"It's like an experiment or something. There are others as well..."

Carias was tempted to ask if that included Ung.

"Something is going on in there."

"Ah and I was supposed to find something out? What?" and here am I Carias thought that WebWorld was just for fun plus all of Regum's knowledge. It was that which she thought made the place off-limits.

"Maybe they don't know either. Or can't. Or haven't got what it takes."

"And I have?" Carias felt proud. She had navigated the Web with such ease it came naturally to her. Maybe normal Primaian's were clumsy or too obvious or just plain stupid.

"It's been said some of the scenario's are loaded."

"Yeah? Really. What with?"

"Well the Reganian's it is said are looking for potentials. Like you maybe."

"Oh boy. That is good. Going over to them inside. Yeah."

"Those chosen download certain stuff which one then brings back here."

"Sneaky. What though?"

"Well I bet you didn't know this. Prima has its own Domains in there."

"Shit. What? Really? So they're in there as well."

"That surprise you?"

"Of course Ung. All this hype and they're..." Carias was astounded at the duplicity of Prima. "So I was being groomed."

Ung nodded. "They got their own in there, pretending to be Reganians. They don't last long, others are more adept. Like you."

"Like me." Carias said dreamily.

"But your mother blew it."

"So why am I here?"

"It had to appear natural once she acted. If you knew why you were there, well you might have been spotted. So going in as an innocent was deemed the best way."

Carias noted how Ung did not differentiate between Regum or Prima. Just their WebWorld and Prima's substitutes. She wondered how Ung got all this. And mother

proud of having her here? Then this stuff with her father's work, being a dummy agent. Groomed, checked out, now abandoned. She sighed.

"Where's my headband now? You sure all this is safe to talk just like that?"

"Yep. 'Headband' for instance might be 'clothes' or whatever once decoded."

"Wow. Impressive."

"I removed it."

"You found the secret place?"

"Where you buried it in the garden. Obvious. Fresh dirt."

"Lucky you not her."

"So, what now?" hoping upon hope that dad might be able to do something. She was here voluntarily after all. If they found nothing wrong with her they could not keep her.

"I don't know." Ung sighed. "Interfering directly is too dangerous. It has to be done through back-channels. It may take a while. So don't do anything absurd."

Carias's head was in turmoil. Both excited and forlorn. How to convince doctors who did not take any notice of her to let her out. Maybe mother interfering, overreacting.

"Just remember, here you're under constant observation."

Carias wanted to say the opposite seemed to be the case. But then what Fehna said might be true after all.

"This is all so unreal Ung."

"That's Prima for you."

"So what do I do?" she was almost frantic. Stuck here, no way out. Asylums were run by DLs. They were supreme, a law unto themselves.

"Nothing. Be yourself. Act differently and they will get suspicious. Remember this conversation isn't happening. Now I gotta warn you. Nothing in the end is certain. This can't be pushed. It might go nowhere." Ung looked searchingly at Carias and felt sorry for her. "Let's say," seeing her mixed emotions flit across her soft pale face, "with so many variables in play I don't know just how much anyone can do."

Carias nodded solemnly at that.

"We got faith in you. You've got potential, something that shouldn't be wasted."

"Thank you for your confidence." Wondering just how connected Ung was.

"What a friend."

Ung smiled.

"Ung I am totally so off beam here."

"You too?" She said primly then laughed together.

"This all gonna be in?" nodding at her hidden little pc. How did Ung get that past them? Must have some cloaking device built into it.

Ung talked about her ex lover. Carias reflected on her experience with boys. Usually dreadful. Overheated roosters, brains totally gone, obsessed with sex. Wanting marriage, babies. Not her. So it didn't bother her that she was still a virgin. She just was not that interested. In her head yes but when she faced the reality something shrivelled up inside of her. If that was love then she was happy without it. Less complicated for starters. Then there was mothers `arrangements'. Total dorks.

"I can't handle boys. I mean," Carias added hastily, "they turn me off." getting that off her chest. Change of conversation.

Uno gave a knowing smile. "It can be the pits."

"How do you do it. I mean put up with them, never mind the sex."

"I don't know. I go for brains."

"Brains! They're so...vacant."

"You'll get lucky. It happens so fast when it's natural you don't even know it has happened. And you will be genuinely happy. Then the adventure starts. And don't forget there's a universe out there as well."

"Like SpaceKorps?"

"You got it."

"I feel like I'm stuck in a maze."

"Maze?"

"Suburbia. Where we live. And you got out." Carias said wistfully.

"Your time will come." Ung apparently certain. Carias was not too sure. Still if dad was trying to get her out, then maybe she would be able to escape this maze she felt herself trapped in.

"You know Ung, I can't even remember what was inside the Web."

"Drugs. They mindfucked you."

"They did? Those drugs had been great. But I feel so normal."

"Oh not all drugs give you highs. Not psychiatric drugs. They can create whatever state they want you to be in."

"So why wipe my memories?"

"They want the unconditioned you. See inside."

"No one's seen me yet."

"Another trick of theirs. So that by the time they get around to you, you will be relieved that they are paying attention to you, you'll tell them everything just so that you get some response."

"Shit. Mind games."

"Oh yes."

"Will I get my memories back?"

"Yes."

"You sure?"

"Yes."

"Sure sure?"

"Yes Carias. And I got something for you as well."

"What?" she asked eagerly.

"Your diary."

"Shit hey?"

Ung looked around her slowly, as if taking in the scenery. She was looking for spy-cams, watching the gardeners who took an inordinately long time over the weeding near some bushes, or trimming some trees. They had to be observers.

"Get ready Carias. Those gardeners double up as watchers."

Carias pulled a face but understood. Then she slipped the little book into Carias's pants pocket.

"You look through it?"

"Couldn't resist."

"And?"

"Interesting. Sort of unique. Romantic undercurrents but more of the world, the universe, not boys oriented at all. Like a soulful longing for other spaces, other realities, other realms, other beings Carias."

"Yeah." She said mournfully, something tugging at the back of her mind.

"If they find this on you they'll definitely think you're under that influence."

Carias was tempted to look at it but given what Ung said about being watched, what Fehna said, she worried her room being under observation. She said: "Ung, take it back."

"But I brought it for you, help your mind, re-orient yourself."

"You're right in being under observation. I believe you. Say when you're ready, I'm holding it right now in my pocket."

Ung looked around her again. The gardeners had barely moved.

"Now."

Carias passed the small book back and felt relieved.

"I'm keeping a diary of my own."

"Be careful."

"I will Ung. And thank you, and thank dad. And tell mother..."

"What?"

"I don't know, that I love her. Hope that'll confuse her. Hey," she brightened, "maybe she'll think my brain's OK." She smiled wickedly.

"You're my friend. I'm proud of you. Hang in there, good things will happen."

"You hope." Carias replied knowing how precarious not just her situation was but dad's as well. If he was going to get her out of here. She smiled. She had something to look forward to. She saw Ung in a new light. She felt better.

"Well I'd better go."

"I guess you must. When you gonna be back?"

Ung did not know. Nor could she tell Carias what she was up to. She was 'in' after all.

"Soon I hope."

Carias nodded. It might be some time. She understood.

"I'll walk ya back to the entrance. Hand in that tag."

"Oh yes, can't disappoint them now can we." And they passed a conspirational smile between them.

Ung left Carias and the asylum by the frequent shuttle bus back to the city. Taking a SpaceKorps car, its insignia would have attracted undue attention. This way she had plenty of time to think. A group of visitors were waiting as well having seen their own disturbed kindred souls. They looked like all families, more or less the same. Discussing their diagnosis, their recovery, their relapses, their strangeness. The patients faking normalcy. Then again that was due to the regimen of their drug therapy. Now to see if she was being followed. In civilian gear she was just another visitor. Whatever the tag picked up would be banal, the intuitive program saw to that.

If she was being followed then whoever they were, were good. Being constantly on the alert took its toll but Ung enjoyed the game. As a DV she was extended certain privileges, allowed more freedom of movement with less surveillance. What Carias's father proposed included certain inherent dangers. Only DLs and their designated agents could access WebWorld. What the department, thinking of SpaceKorps was

considering was surreptitious as well as covert. Carias's removal might have received a setback but they would get her back in. Being in the asylum was the least of her worries. WebWorld could be accessed from anywhere and getting her in right under their noses amused Ung.

The shuttle bus came, disgorged its passengers with Ung getting on last. The ride was uneventful the bus meandering through vast parks outside the city, then the suburbs. By the time she reached the centre there were only one or two passengers left. She got out several stops before reaching her destination, walking the rest of the way. No one had gotten out with her. She was in the clear.

She walked into the low rise building marked 'Human Resources', the cover the organisation used. Officially it vetted candidates for just about everything possible as far as vocations went. Whether as priests for Regum, or technicians for the orbital, they covered it all. In the foyer were the novices with their mentor priests, workers being assigned their locations all seeing middle managers who interviewed them, soft scanned them for delinquent resonant tendencies, up or downgraded them.

Ung walked through the inner scanning device that, with her pc's access data cleared her straight through. No need to report to the front desk. She was no visitor, or a member of the public coming in for their appointment. She would not be tagged, like so many others who were of intermediate pass coded level of entry. But she saw the watchers mingling in the crowded vestibule, on the look out not for infiltrators but those with an aberrant resonance. Hers was secure, tight, steady.

She walked along the corridor passed countless offices and out through the rear into a small courtyard where the workers could relax during their breaks. An open canteen was busy, it was the lunch break, the best time not to be noticed. She saw them sitting in the pleasant courtyard. Carias's father and some functionary. Rarely the same twice. Officially Ung was now working for SpaceKorp as a human resource manager. That meant more or less to make sure everybody did their assigned duties, that they were in their place and more importantly did not deviate from their duties. A watcher. Doubling as an agent with the DVs. Resources were Watchers as well. Linked with SpaceKorps through agents such as herself, the staff unaware of her duties. Some section chiefs disliked this overview, it implied distrust which was quietly resented. But there was more to her job than just making sure everything ran smoothly. Like what was happening now.

An older man, in his sixties was with Neghar, who looked younger than his mid forties. They both rose from their seats.

"Troess meet Ung, Ung this is Troess." Ung bowed respectfully. With Neghar you never knew who you were actually dealing with. Just names, never a designation. Exuding a calm serenity in the knowledge of the power they wielded.

"Lunch?" Neghar asked. Ung nodded. They caught the attention of a waitress and placed their orders. Neghar went for a mixed salad and Ung likewise. Truss asked for the baked fish and sautéed vegetables.

"Wine?" Ung shook her head. She would have coffee after. They nodded their agreement.

They talked in general terms about Carias, her potential capabilities, hoping by assigning her a role, unsaid within WebWorld that she would have something to focus upon whilst creating an appropriate cover. 'Human Resources' an excellent organisation to hide agents.

"Neghar speaks highly of both of you." Troess remarked, his voice soft, smooth, rich, vibrant. One that commanded respect.

"Oh really?" Ung smiled back.

"Well even taking that into consideration we think Carias's role will be most useful."

"I agree. She's a Natural when it comes to it. Not easily distracted." Meaning inside WebWorld. They knew the allusion need not be stated.

"Normally they waste their time in there, get a little ahead of themselves which often leads to tendencies of self-delusions."

Ung nodded. "Not Carias."

"No." Troess said thoughtfully. The waitress arrived with their orders. When she left he continued: "Officially it's considered psychological sabotage. Your own work branches into this domain as you know yourself." Being informed about Ung's duties. "The Ecclesiastics are appalled of course. It disturbs them that this invisible field cuts right through the planet's resonance."

"I bet." Ung agreed.

"Now Ung, how is Carias?"

"She's fine Troess. I mean it. Not exactly happy, but she's handling her situation remarkably well."

Troess nodded, then remarked on the weather. After they had taken their coffee they went back inside, up one floor, entered an office which had a lift and took them down into the basement. They were heading into their secure zone. Ung was not surprised, it came with the job. In the office, bare except for a few view-screens, off-line,

a computer bank the size of a filing cabinet, a plain desk and some chairs. Troess motioned for them to be seated.

"You have her resonance?"

Ung retrieved her hand sized computer.

"Good, thank you." From his jacket pocket he took out a rolled up headband. It fed off the body's ambient energy, sunlight, powering itself with inserted ultra thin batteries as back up. "You can give this to Carias. We have doctored her file. She's allowed in, part of her therapy." He smiled pleased with his achievement. "A study in deviance. Dr. Groben, whose assigned to her case will have to go along with this. At first he was put off. But we explained that to combat the deviant states of mind WebWorld creates one has to study them. Carias's data of course bypasses his systems. Well some of it." His smile remained. Very engaging.

Ung was not totally ignorant. Her ex lover, Fertig had accessed WebWorld externally, in deep space on his ship. They had navigated within its realms as surrogates if only to find out if they were being shadowed. They weren't. Its inhabitants were too busy with their inner realms to pay any attention to them. Surrogates did not interact. There were a few others who entered remotely, tourists, who were ignored. And to see if they could uncover any Primaian inserts. They were usually more cautious, almost too self conscious of their surroundings, not handling it that well. Gamers of course played tricks on them, immersing them in their sub-realms just to freak them out and freak out they did.

"Now we don't want you to go in." Troess reminded her then continued:
"because of leakage."

"Field generation?"

"Something like that. You go in and you become a source-point, a beacon. Anyone with AI capabilities can get into your head. Trap you in their sub-domain. They'd uncover, or rather cover you. It takes a pro like Carias not to be fooled, or if so, play the game which is expected. We want Carias to be active of course, but you Ung are too important to be in there."

"I understand." Did he know she'd dabbled in it? He wasn't saying. But she heeded his warning. Anyway Ung thought she was too busy to even have time to go in. Her assignment with the DVs necessitated extra caution. Neither of the two men alluded to her current situation.

"In a way things are not as bad for Carias as they appear. Now that her file has cleared her. It's better having a patient in there than say her being a trainee operative.

Running it from one's home attracts surveillance. Droonor has actually done us a favour. Asylums do not release data. They are one of the most secure places on Prima."

"I'm happy for Carias then. When this is over, she'll be out?"

"We are working on that." Troess said reassuringly. Her father smiled encouragingly.

"What about the DLs?"

"Oh, they're busy chasing shadows." Troess said vaguely. Ung wondered whose shadows, or what that even referred to. "There is something you have to tell Carias though."

"Sure."

Troess looked at Neghar.

"There is some EM residue in there. Not active. Not yet anyway. Some enquires were made, outside that is and came up blank. We ran diagnostics of course and no contamination in our system. No alerts either, but something is in there."

"Background radiation." Ung suggested.

The two men looked at each other.

"Interesting assumption Ung."

"Well it's a strong field. It's gotta have foundation."

"Trouble is it's chaotic."

"You got me."

"Well chaos would make their system unstable, yet it is not."

"Mimicking space?"

"Good point. Or space has invaded WebWorld."

"I'm assuming this is important."

"Ung, that is the other reason why you're here. You have access to space and the DVs. You've are there for a reason."

"Aha, I see." She brightened. It was good to feel important, wanted.

"We simulated it but it didn't work."

"Hm. And Carias is to, err, probe this as well?"

"Exactly. Could be anything, could be nothing. Trouble is it's something."

"And the DLs?"

"Nothing from them. Not that they'd tell us. We're too low for that." Troess said realistically. "Anything recent?" referring to her stint in space. She thought of the strange event Menas went through but let it pass. Could be anything.

"We're on the ground here Ung. You're our best lead in space."

"So a field that shows instabilities within its domain. Interesting."

Troess nodded. "Getting astronomical data is impossible. The sacred science, for DL assigned staff only, astronomers aside. Now there was an incident at the tracking station. It may be related, it may not. We think they know something and want it to remain hidden. It might be the alien field but this chaotic field is too far away."

"And it's in, where? The Reganian end? They bothered with this?"

"Interestingly no."

"Well then it might be EM leakage. Excess power or back up data secured with chaos equations."

"My you are remarkable."

"Us spacers are Troess. Well in theory anyway. I'm not even supposed to be saying this."

"There is so much we are not told."

"Most of it is crap Troess. Believe me, it is. The DLs, Es, Ds invent a lot of stuff. More to confuse the masses, keep them guessing, keep them edgy, keep them on side with their cosmological view. Space might be a deadly environment but it is not overtly hostile."

"You know what you are saying?"

"Only to you Troess. I don't go around advertising it."

"Good, keep it that way. What Carias has to find out, what we want to find out is whether Regum is planning something big. Getting ready. Using this strange field as if laying down the foundation that might have drastic and profound consequences for all of us."

"A plot in the making." Ung said excited. She did not hate the Reganians. She was impressed by them.

"Basically what I'm saying is we want you as a go-between."

"Officially?"

"No. I mean first would you accept?"

"Anything to help" A triple agent. More access. More knowledge.

"That is understood. Unofficially you would be with us. As such we can do only so much should this come apart."

"But you said you'd arranged it at the asylum."

"We have. But there is another security department that overrides every other."

"So this is clandestine."

Troess remained silent.

"And?"

"We can cover this in that we are monitoring Web activity. Part of our brief. Anything outside is beyond our jurisdiction."

"Ah, so you are venturing beyond your domain. I like it." Ung replied reassuringly. "I'm in."

"Nothing to your boyfriend."

"He's ex. Our own secret then."

"Precisely."

"So you are recruiting me?"

"Yes."

"I see. But officially there would be nothing on file."

"Absolutely not, you have my guarantee." Troess replied solemnly.

"Which means if something goes wrong you disown me."

Troess tried not to look too despondent but it was written all over his calm face.

"I understand."

From his coat pocket Troess brought out a small flat-screen computer. "Just put your palm on it. What this means is you accepted our offer. There are benefits. Certain clearances uploaded into your pc. You've got SpaceKorps clearance anyway, but this broadens your access to certain domains. We cannot reveal them. Foreknowledge would only compromise you. But if you try and do access restricted realms at least no alerts would be triggered. It would appear as an accidental mistake. That would be logged and the intrusion sequence would reveal not you but a persona to cover you. This little gadget is now building up another you."

"That's handy."

"Well, congratulations are in order. Welcome Ung." Troess smiled as she returned the flat screen.

"We are proud of you Ung, very much so. Your persona will be in their system, not you. So if they check, well, they'll have fun trying to find the 'her'."

"No point asking who this persona is?"

"Let's say," Troess said delighted, "we have done our research. This is 'human resources' after all."

"What if I do get blown? Or confronted. What means do I have at my disposal. Like a stun gun perhaps?"

"Weapons need licenses. Just be yourself and you'll be fine. And remember, this is all unofficial."

"Thank you for the faith you bestowed in me."

"Believe me the pleasure is all ours Ung." I bet. "Now visit Carias in a week. We know you will be back on duty soon after."

Ung nodded.

"Well, that's that. We'll leave this building separately."

Troess passed Carias's file to Reno. As CEO of counter-intelligence, his severe countenance was the bane of those who trespassed into forbidden territory, showed alien tendencies which covered just about everything possible, as Carias's file revealed. Troess had decided to cover his back regarding Carias's insertion back into WebWorld. But he still let Ung run with his other idea of giving Carias a headband. If Reno accepted his proposal no one would be any the wiser. Reno scanned the basic data then left the rest to his expert aide Janon.

Reno went over the minutiae. What Reno did not know was how Troess had doctored the file. Carias was deemed a Natural. They were so rare they were accorded a StableVolatile designation, sought after by the Domain Lords down to the lowliest vicar. The bait was there to be taken.

They sat in Reno's office, an adjunct of 'Human Resource Management', which in a way Reno was. Well, Troess mused they were all doing whatever it took to harass Regum's WebWorld, influence the inhabitants and counter the alien field in space. Whatever it took by whatever means. The state of their planet's resonance had to be kept pure at all costs.

"I see." Was all Reno said. It was obvious this scheme of infiltration worked only for specific individuals and Carias was one of them. He knew where Troess was leading him: use Carias and the asylum as an insertion point amused him. Drach would have a fit. Groben would be amendable as Troess had paved the way indicating how important Carias actually was. Troess having outlined his proposal was relieved to know Reno concurred.

They got into a ground vehicle and drove over to the asylum outside the city limits. Straight past reception, watched with interest by the staff for the two of them were in civilian garb. No point announcing who they really were.

Groben alerted by Reno of the surprise visit of 'human resource managers' regarded them with a hint of reticent suspicion. Groben, with his large head looked like a school master who never realised his full potential. As such he was suspicious of anybody above him whilst demanding obedience of those below. For a doctor he acted more

the bureaucrat which was really Drach's responsibility. Moments later Drach himself arrived. He had probably done some checking about his visitors and had to accept the fact that Reno overrode them all. Drach was aligned with the Ecclesiastics. Reno knew that. They jealously guarded their domain like some ancient medieval lords. Some things had not changed since the great Calamity. Groben tried his best to make Reno and Truss feel like supplicants but they were having none of it. They sat there sure of themselves. It was best to humour them.

"Your visit is most unusual." Groben remarked in a way that hinted at obstruction. Drach was quite happy for Groben to wrestle with these two, see what he was made of. In the end as far as patients went Groben had the final say. Drach was more concerned with the political implications and its consequences. This was the pontiff's designated asylum after all. Without bringing up his exaltedness, Drach had no intention of hiding behind his holy cloak. Depending on how this went he would inform the palace accordingly. He knew the pontiff was taking an interest in this case but left no orders regarding how they handled Carias. Was the father behind this? Perhaps. As a voluntary patient she had certain rights which though vague could not discount interference of her therapy. At least Troess had not brought Neghar along. Family pressures were common enough so Drach was thankful for that.

"Unusual." Troess replied slowly as if the word seemed out of place in an asylum. "We are all working for the same end." Groben looked at Reno who merely returned the probing gaze with a hauteur that was intended to put both in their place. He had the fullest confidence in Troess. He expected full cooperation.

"I should hope so." Drach interjected as if they needed reminding.

"For starters, we all know there is nothing wrong with Carias." Troess got straight to the point. Reno smiled inwardly.

"You say this as a trained psychologist?" Groben countered, the school master coming out in him.

Troess wasn't buying it. "Dr Groben with due respect I, we," without looking at Reno for back up, "deal with operatives. You can form your own opinion but without the insight of common sense and its practical application we would not be able to run our agents. We all have psychological insights."

Groben was rankled. "Yes, that may be so, but a sense of objectivity is necessary to truly ascertain a patient's mental state."

"Well that is why we came." Troess now looked at Reno.

"It's like this. We want Carias to access WebWorld, here."

Drach hid his surprise, Groben stared at Reno dumbfounded.

"Planetary security."

"Ah, of course." Groben said cynically. "I heal heretics on a daily basis and you come at me with this."

Reno looked levelly at him. "Developments Dr Groben. You might deal with individuals but we deal with a far greater spectrum of events. Carias can enlighten us regarding these events which may be inimical to not just this planet but the universe itself. That includes the Blessed Consciousness."

"Praise be." Drach replied. Reno was not certain exactly how Drach meant that.

"So you are willing to risk Carias's sanity." Groben countered.

"She's been in before Dr Groben with no adverse affects." Troess kept his own levelling look in place.

"She has Isolate tendencies."

"All the more reason. Means she won't be in there to socialise."

"You would be prepared to sign a release form?" Drach asked.

"No." Reno replied adamantly. "Security reasons."

"Oh of course." Groben shot back. Drach gave him a look and Groben retreated into his officious mask. Displeased.

"It leaves a trail. Let us say you are broadening her therapy."

"She could destabilise the others. WebWorld is everywhere. We have cases who could be influenced merely by the field being active."

"Gives you something to study." Reno answered.

"Interesting." Drach said neutrally. "Can you guarantee this experiment will not get out?"

"How can it? Maybe some sensitives will pick up images generated in the Web but as I have to reaffirm it really is in Carias's head and nowhere else."

"It corrupts the planet's resonance."

"Dr Groben the alien field is doing this anyway." Reno explaining the obvious.

"And before I forget we are not having this conversation. Any of this leaks out both you gentlemen will be held responsible."

"It's an..."

"Order." Reno finished off. "You cooperate and our report will mirror your positive attitude at the highest of levels." The tempter was there.

"She could fracture." Groben still at it. Drach enjoyed this. He was amenable but Groben had to make the choice. "The holy pontiff is interested in her if I need to remind you. What do you think..."

"It's not what I think Dr Groben it is what I do."

"What if this affects the Immortals. It would get into the Infinity Chip, weaken the Trine Guardians..."

"Dr Groben, one singular entity will not crash the system as you well know. What are you afraid of?"

"I'm concerned for Carias's sanity."

"Really. Well I'm pleased for your concern. But as I said, this is bigger than us. Even that is privileged information." Reno surprised Groben would bring higher domains into this conversation. "We all know Regum is continually expanding their cyber-world. Carias may have found a weak link." Reno bluffed.

"If that is so Reno..." Drach interposed.

"It is." He kept up the pretence.

Groben looked lost.

"Your Domain Lord is in agreement?" Groben's last resort.

"Out of your jurisdiction. I cannot comment on that."

"So he does not."

"It is none of your business. I have my brief. It's as simple as that."

"Very well." Drach broke the deadlock. "I agree to the proposal. As long as this institution is absolved by any negative impact. If something unfortunate were to occur the responsibility is yours."

"No it is not Drach. That is why trained psychologists such as Dr Groben are here in the first place. He is the expert. He has the requisite knowledge as he made so clear. Naturally if he fails in his duties, fails to apply his understanding of Carias's mind I cannot see how I or my department is responsible. Put it this way, we can get Carias released. Well Dr Groben?" Drach looked at him.

"I cannot agree. However given your status neither can I refuse. I will do my best. But I will insist on a control."

"Without their knowledge of course." Reno underlined.

"That is what a control is." Groben replied as if to a slow student. Reno let it pass.

"Who might that be?"

"Her name is Fehna. She has befriended Carias with positive results."

"Thank you Dr Groben. Drach. Your cooperation is noted. Rest assured it wont be buried or ignored. Telafus will be notified." Reno replied without adding that Telafus might not even be advised depending on the results. One did not bother superiors with daily task. The system would be jammed with useless information. Groben looked mollified now that he had been mentioned personally.

"Her father will visit Carias. That is all."

Reno rose, Truss likewise and they walked out of the office.

Father and daughter embraced then walked over to the pond in the magnificent parkland of the asylum. Ruffled water by a light cool breeze, fluffy white clouds moving across the blue sky. Autumn was approaching.

They talked about mother, Ung sending her apologies for having been called away. Carias understood. There were no gardeners in sight. Neghar was relieved. Drach was keeping the watchers back. Reno and Troess had managed to persuade Drach and Dr Groben of their plan.

"I've got something for you." Neghar beamed.

"Thank you dad, what?"

He ceremoniously pulled out a small gift wrapped box. "Open it in your room."

"Why not now?" half puzzled half delighted.

"Because angel it's a headband."

"Really? Dad how did you do it. I'm confused. They're forbidden. I don't understand." Happy, excited, a little taken aback and relieved.

"Let's say it's compensation for being in here. Now it's chameleon configured. Looks like a thick scarf. Make sure the batteries are always charged. Solar mesh panels, picks up your body's ambient energy and any other source around."

"I am with you. Oh how can I thank you. I bet mum doesn't know."

"You're right there. Do you want to see her?"

"Hm. Not particularly. Tell her I'm not feeling up to it, just yet."

"I understand."

"How did you do it?"

"My department has its uses." He said vaguely not revealing his true intent or that of his boss. They had to find out all they could. Carias was a natural in there. Telling her what to look for would pre-empt her mind and given Regum's technical capabilities could unmask her persona's intentions in there.

"I am, I feel wonderful."

"You are wonderful."

"Does that mean I stay here...longer?"

"For the duration. But we are working on your release." He was not too sure how that would work. It depended on Dr Groben. From what Troess told him he was none too happy with the turn of events. It could make him negative towards Carias if not outright hostile.

"Your doctor knows by the way."

"Amazing. Your department has some clout. I bet he was not impressed."

"We convinced him it was part of your therapy."

"You did? Amazing. Oh I'm so happy. Reality at last. My reality, not this." She pulled a face.

Neghar frowned when she had said that. Maybe she was addicted but they needed the information, any information to turn WebWorld around or shut it down. Whatever Carias discovered would be useful.

"So how are they treating you?"

"So so. Actually I haven't even seen my doctor."

"They want to see how you adjust first. Study you remotely."

Carias thought of Fehna and how she said 'they' were watching. Now it made sense. It wasn't some strangeness in her mind, it was real. Her paranoia only rearranged that knowledge. She had guessed as much, the way the gardeners hung around except now. Ung was right as well.

"They also want to see what your natural capabilities are without their interference. Once that is established your therapy will be tailored to your needs and hopefully rehabilitation follows."

"But there is nothing wrong with me dad."

"I know that sweetheart. Hang in there, it will all work out. Now I must go."

"Already?"

"Work."

"Ah."

"Don't get into any mischief with this. Or any mischief at all."

"I promise to be on my best behaviour. Now that I got this I got something to look forwards to."

"I'm glad you're happy."

"Happy dad? Delirious with joy."

He rose. They hugged for a long time, enjoying the unspoken bond between them. Then he walked away without turning back to the car park. Carias contained her excitement. She had to pretend nothing much happened between them, looking forlorn now she was on her own again. But calmer. The breeze had dropped, the waters serene just like her.

Reno read Janon's report regarding the incident as he called it at the monastery. Varus. Infiltrated. Compromised. He had to believe it. Janon was on leave but on stand-by. The stun gun had been merely that. Not loaded with molecular distortion sequences. Scans indicated he was clean. But Heana's report was disturbing. Regum had gotten into Shach's head. It had nearly stuffed up the orbital's computers. BrainDraining Shach would have achieved what the Reganian's intended, turn their systems into an open quagmire. The death regrettable. Three now.

If anything Varus had done Reno a favour. The Kabal revealed. Roshati and Tregon's pertinent knowledge of the great Calamity. Except the information was gone. First the two astronomers and now Shach. What had they discovered that made them react with such terminal intent? This set a dangerous precedent. No one had been deleted for the greater good in centuries. Was this Regum's work? Sow dissention? So far no repercussions anywhere, including the DLs. The silence deafening. Varus had gone over. Maybe the Carias woman might stumble across something. He could not alert any of his agents anywhere regarding this. Whatever it was had to be discovered accidentally. A probe and search team was out of the question. Even Janon had no idea. All he knew was that Roshati and Tregon had accessed out of limits astronomical data. What that data was was anybody's guess which three living souls had paid with their lives. Heana had acted correctly if it was true that Shach's mind was loaded with a Reganian stealth programme. It was a close call. Now it was up to Carias.

Just as Carias was rising, one hand in her pocket making sure the headband in its box was real Fehna waltzed into view.

"I saw your visitor and thought, better wait. I see he brought you a present. Gonna open it?" she seemed bubbly, hyper, eager, on drugs.

"Not now. I want to surprise myself later."

Fehna pulled a face as if Carias was weird. "You know you gotta get it checked."

"Checked?" Carias panicked, then remembered it was a chameleon shroud.

"And cleared by your doctor."

"Fehna," Carias said walking back to their quarters "I haven't even seen my doctor. I don't even know I got one."

"You will." She said pertly. She was high on her medication courtesy of Groben. Get Carias to react. This time positively, maybe reveal something.

"I am so thirsty." Fehna was buzzing. "How come you're never at prayers?"

"I pray on my own, in my room. Can't stand all that dewy eyed spirituality."

"It's good for your soul. Us linking, being one happy resonant state."

"Happy." Carias said with disgust. "It's not what it's about Fehna."

"What then?" she asked chirpily.

"It's about being."

"Oh." Which did not seem to make sense to her. "The others disturb you."

"You got it. They're distracting. Then there's the mumbling..."

"It's called praying."

"Whatever. To me it's mumbling. I can do that myself. Don't need them."

"We all need each other." Approaching the entrance. Carias was hoping Fehna would go to her own room.

"Anyway they are crazy so how can that help? They're distorted."

"Prayer purifies the soul."

"Yeah, then why are they still here?"

"That's...awful."

"It is, isn't it?" she turned the statement around on its head.

Carias hated any group. It turned individuals into some group mind, losing their inner essence. She was hanging onto hers.

"You know if you don't attend, they know."

"Good. Gives them something to do."

"It only makes your stay longer."

"Yeah? That so?"

"Honest. You don't want to be here forever."

"How long you been here?"

Fehna's eyes clouded over, for a moment. Then they brightened again. She was high. But she did not answer Carias. Carias didn't care. Up the stairway Carias was already thinking of her expectant insertion. Glittering cities, the orbitals, the glowing data spheres like mini universes exploring them in your own designed space ships. Strange beings, fantastic shapes glowing eerily, fascinating, predatory looking serpents, dangerous reptilian animals, insectoid shapes, androids, symbiotic half machine half life

forms with hidden intent, some with amusing pets...she couldn't wait. No wonder Primaian's freaked out in there. And stopped on the landing.

The vision real, a flashback. Her memory was returning.

"Carias." Fehna's voice came through.

"What?"

"You were drifting."

"So?" someone shut her up.

"It can trap you."

"It? What it?"

"Them." Came the enigmatic reply.

"Oh them." She did not want to disabuse Fehna of her paranoia. Otherwise her ravings might be taken seriously. She wanted Fehna some distance from her head.

"Maybe they are Fehna. Be interesting to find out who exactly they are." That should get her thinking.

"It's no good."

"Well here is the perfect place then."

"So what did he bring?"

"I don't know Fehna." walking along the top floor. "So why are you here?"

"I don't know, 'cause I like you."

"I mean...never mind." She stopped at Fehna's door. "See ya." She tried to sound positive, cyber-space was calling. She felt it, her brain almost tasted it.

"Oh." Fehna looked dejected. She was not very convincing. Maybe the high made her crave company. Too bad. Fehna was not a bad person, just a little too familiar. Maybe she was a happy soul, disturbed but essentially happy underneath.

Mena

The three women, Ung, Mena and Niatu were at the airlock ready to go out. They checked their linked harnesses, rocket propellant for manoeuvring, distress beacons, auxiliary air-tanks and water. Their homing devices and com links functioning they jetted out into the vastness of space away from the main body of DVs concentrated along the western axis whilst they headed south. The huge spiral arm glowing pristine white, a somnolent glowing swathe of bright shining stars spread out in front of them, the massive orbital behind them.

Mena felt a surge of empathy. Something familiar seemed out here, enticing and loaded with unfathomable potential.

"Your metabolic rate's a bit high, try and relax Mena. I know it's exciting and that you're looking forward to your experience, so try and regulate your breathing." Niatu said over the comlink.

"I'll try." Mena replied displeased at having her thoughts, her feeling interrupted. She felt space as an ethereal substance diffused within the darkness.

"That's better. I won't interrupt you when we're in position."

"Thank you."

She was pleased she had two instructors. What she did not know was Ung could phase herself with Mena's mind. The young woman oozed resonance. Mena was open unlike most Primaions who used their resonance as a protective shell. Mena was different. Very readable.

At first her breathing disturbed her equanimity but as she closed her eyes and concentrated on her mind, her vast mind, her open mind was ready to receive the Cosmic Consciousness. Delete your thoughts. Easier said than done. Ride the rhythms within you and you will be there. As to what the 'there' was she left undefined. Breathe in breathe out.

Becoming calmer, lighter. Something trembled within and around her. A mild shudder followed making her feel disquiet. The apprehension passed. A warm glow

suffused her state of being. Something prickled in her head, not unpleasant, a minor irritation which receded soon enough. She felt as one with the cosmos, though something held her back, probably herself.

The wave passed through her, huge, oceanic as it rose and fell, deepening the sensation of illimitable vastness. Remnants remained behind but she did not wish to focus on that. Let it be itself. She a vessel containing some invisible substance, almost graspable but too vast to fathom. Like a rock pool on a beach with minor waves criss crossing each other then slowly it settled within her. She felt fulfilled

Ung sensed the wave. It was not a spike. Possibly a loaded programme. Then a deepening of the fabric of space. Indeterminate, undefinable, a non-phased probability in which embedded within this smeared wavefront the possibilities. More like probabilities. A harbinger portending monumental change in it's wake. She tried to locate its source but it was too vast, too spread out not just as a field but multidimensional, going both in and out. She the fulcrum balancing on the edge. Her EAI wanted to encompass it but Ung held back. The only way to make sense of it was to let it reveal itself. At least it had direction, extending outwards into the pure blackness of the infinite beyond, and within. Within! The thought struck her as unique. She tried to think and found she could not think. Without panicking. Brain stabilised. Effect normal, almost natural. At peace. The warmth it exuded was comforting. She could stay immersed in its wake for ever. For ever. Surely this was not Prima's Supreme Mind. It certainly was not the supposed alien incursion. Its resonance too weak, its photonic intrusion even weaker. Something.

Then Ung's mind locked, on hold. Stuck in a temporal frame. The moment seemed to loop. Shift. What was going on? Something focussed upon her, she felt the telltale itch of a scan. Something drained her mind leaving just a hint of its residue. Then the sensation stopped. Attempted download. Blocked by her Brain. It occurred so fast she could not locate its origin, then relaxed, relieved knowing it was past. Her connectedness to something else cut off. The feeling of being observed momentary. The vague memory receded into her Brain which locked it in, or conversely locked her out. Good. Something stored for a future reload. Out of her head.

Ung focussed on Mena's resonance. Mena linked, surging. Confirmation. Washing through her. A confined set of waves reverberated within her, then settled slowly under low level entropy almost neutral, subsiding, levelling out, spreading out, linking Mena to the remnant field wave-state. Mena was 'in'. Very handy. Ung had a focus without the need to insert herself into this vague phenomena. Strange that there was no information

or data blocks, no strings of codes, more like a...template! This was big, very big. Ung aligned her Brain. The rich texture of space vibrating on so many different levels overlaying this wave- field of a template. There were gaps. Darker than dark, a vortex, miniature energy wells, insertion gates and on the other side...strange singularities agitated, bubbling, then her perception blanked out. Retrieval obviated. The remaining wavelike current full of negative positives. A strange attractor. Her Brain sucked into itself an abstract version, just the barest details.

Ung checked the radiation levels doing a quick outer mutli spectrum analysis. Nothing showed up out of the ordinary, even when played back.

Mena could not concentrate anymore. Whatever happened was over, passed away, moved on, moved away. She tried to get back into her serene state but found herself too distracted. That feeling was just so good but she could not calm her mind anymore. The moment had definitely passed.

Ung thought about the strangeness. Like a substratum travelling *within* space, beyond normal detection capabilities. She checked her readings one last time. Nothing there accept the standard readouts of her Brain. Interesting.

Mena fell into thoughtful silence awed by the inner vastness of space. Her heart was racing. Niatu said nothing. Maybe she was meditating as well. She decided to just hang there until Niatu was ready. Her inner glow of placid serenity was reward enough. Her soul felt satisfied but the warm calmness was soon interrupted by her thinking mind, the spiritual harmony gone. The residue a soothing balm, a calming essence working its magic upon her. She had touched the divine. The vastness around her now appeared loaded with potentials she could not even guess at except they were there. The revelation had been real.

Niatu reached out to Mena, softly, calming her resonance back to normal. It had expanded, held its state, seemed to energize then slowly resume its natural ground distribution. Her read outs revealed nothing. Mena had had an experience. Good on her and on her second day. This young woman was a real find. Nothing in the micro frequencies either. It had been spiritual but why had she not been aware of it? Probably day dreaming, it happened often when Niatu tried to ride her resonant state. She checked the air supply. Plenty left. Mena slightly distracted now. She would not get back into her contemplative state for a while. Time to head back.

Niatu escorted Mena to the orbital. Ung felt slightly apprehensive, disturbed. She knew enough about space to comprehend that this phase-state was not normal. The

event piqued her. It's essence felt oddly enticing yet somehow corrupted as if in decay. That made no sense. Entropy was an exchange of information in the form of discreet levels of energy moving naturally from a low state to a higher state until equilibrium was reached. In a closed system. This universe was a closed system with its boundary defined by the greater universe around it. Yet 'it' seemed both high and low simultaneously. Only an artificial state could achieve that, a cyber-state. Cyber-states could be anything depending on the design constructs, the parameters, their definitions setting its internal behavioural patterns.

The regards sent to her parents Mena stared at the blank screen slumped at her desk. She felt weird, strange, disconnected, apprehensive, nervous, exhausted, indifferent and distracted. The missive did make her feel proud being up here, so far above the daily tribulations, hers more than anything else. Still she missed some of the familiarity she left behind. Then whilst engaged in conversation a part of her mind detached itself like a balloon rising into the void the deeper contents floating off within her mind. At first it was just a curious event. Her mind drifting, expanding inside her head yet seemingly appearing outside of her consciousness as well. She was barely listening to what her mother was saying, something about Carias being picked up by a stretch limousine after a VAV had landed at her house.

Mena knew Carias from college. Not intimately as friends, more as acquaintances. A part of her brain felt lighter, more relaxed given her fraught nerves and strange exhaustion though she could not fathom why. Usually she felt better having meditated or just now being remotely united with her loving parents. In the end the conversation petered out, Mena merely nodding and acknowledging at the right moment something her father was going on about. It seemed all so unreal, like some newscast where people tried to be interesting and failed to be convincing as their lines were rehearsed to make the angle more appealing.

She gave them her love and cut the link. The moment the image faded she stared through her porthole into the big black nothingness and the dim reflection on the plexi window. The mental bubble was now just a tiny circle, shrinking. She tried focussing upon it. The feeling of warmth associated with it made her feel calm and cosy, even secure, relaxed, at one with herself and her new home. Half drowsy, too lazy to move Mena relived her revelation, a vision etched into space. Etched into space the thought repeated itself. Surely not the Cosmic Mind? She could not remember if she'd told Niatu. In fact she could not remember anything prior her conversation with her parents. Except

that they were her parents, recalling some childhood memories, the trip up, father Lennox but what had occurred in space prior the vision too hazy, a blank.

Cushioned in an ethereal presence. Her heart beat a little faster. Maybe she was on the right track. That thought jolted her. She felt alive, joyously happy, delirious. She would go to the canteen and just be with some other like minded souls. She pulled down her face mask, to be carried whenever leaving one's compartment, clicked her door which rolled open being set at a slight angle, which with a spring-loaded mechanism would shut after her exit. A simple fail safe mechanical device. The corridor's inner portholes showed the central spine, the radiating support struts, lights at the central core, tiny mech-bots busy with their tasks keeping the hull secure as tiny micro particles continually bombarded the huge orbital, sealing any holes in the outer hull.

The canteen had a few off duty personnel present. Some were taking a meal, all auto serves, others sharing a drink, others looked cursorily at her as Mena made her way to the rows of dispensers. She took a cream cake and tea, still on a natural high and wanting to celebrate. As she did not drink, desert was her reward. Since she knew nobody she sat in the middle watching the door from whence she entered just in case another acolyte such as herself might appear. She had thought of getting in touch with Niatu but as she would be seeing her tomorrow and she really had nothing to tell. The tiny light blue bubble, she remembered its colour now, appeared but as a memory, not an occurrence. What on earth had left her mind? The ridiculousness of the question never occurred to her. How can a part of a brain detach itself from itself?

"Mind of I join you?" a woman's voice spoke. Where had she come from? Mena saw a smallish, slim, pale under the strip lights with slightly slanted deep black eyes look at her. It could have been a trick of the light the way those black eyes really did look at her. She must have come in as she was making her selection. A kindred soul perhaps. She oozed coolness as if her body temperature was lower than the canteen. Dressed in a white jump suit. Almost boyish except the face was feminine.

"My name is Ung. I'm an instructor here. We were out earlier." She smiled, tiny dimples showing.

"Oh? Oh yes, my training." Mena said between mouthfuls. "Please, be seated."

Ung sat slightly to one side of Mena. Ung to Mena was assuring without exerting her presence. Her mind went blank as she ate. She had wanted to tell somebody of her strange experience and now when the time was right reluctant to do so.

"How's it going?" Ung said after a while, watching Mena eat.

"Fine."

"No problems?"

"Problems?"

"Adjusting."

"Oh that." For a moment Mena thought Ung was referring to her experience. There were many Primaian's who could read minds easily without the subject knowing. Maybe Ung was one of those who did have that capability. Ung seemed to wait for an answer. Mena continued eating. Why was she so reticent now? "Better than I thought."

"Not easy. I was disappointed at first. As if getting nowhere." Ung prompted.

"I want to be with the Divine Essence. I'm a seeker I guess. Have been all my life and now here's the opportunity to live my dream." She said with certainty. To her surprise Ung appeared indifferent to her fervour. That was disconcerting.

"Giving your soul for the greater good." Probably referring to the planets overall resonance.

"If it helps, then yes."

Ung barely nodded. Mena was a little disappointed. Niatu was far more positive than this...creature. Now why did she think that? Maybe Ung was from Regum. There were Reganians on board, managing the technical side of the orbital. Yet she had said she was an instructor. Had been out with her. As if Ung could make her resonance vanish. Intriguing. Maybe with time one acquired a steadfast mind which being calmer left less of a residual aura.

"I've always wanted to do this."

"How you progressing?" Ung aware Mena did latch onto something out there and she was curious.

"I don't know. I mean," she hastened to add finishing off her cake, "I've done this down there but with so many distractions I felt I really need true solitude and the best place is in space."

"You're certainly correct there." Ung answered trying to steer the conversation her way.

"Funny isn't it? You know," she took a sip of her tea, "space is supposed to be filled with this evil yet I sense...nothing. As if it is bypassing me."

"The evil is not as strong as it's made out. One's resonance sees to that. Don't let it worry you. It will only divert your concentration Mena."

"I won't let it." Mena was determined there.

"That's good."

Feeling a little strange in Ung's presence. As if she were someone else. Maybe she had drawn that bubble out of her mind.

"The reason I'm here Mena is that next time you're out with Niatu I'll be there again. You don't mind?"

"Mind? Nice having two instructors." Mena being polite. She did not know if she wanted Ung with her. Yet she could not refuse either. Why did she bother her. Maybe one to guide and one to ascertain her spiritual state.

"To smooth over any aberrations." Ung added. "Niatu can only do so much."

"Aberrations?" Mena tried to hide her surprise. The images flooded back. Vague now. More sensation than revelation. Otherness. Was Ung aware of her thoughts? Her eyes remained steady, searching whilst holding back. Ung was checking her out.

"Space has many secrets Mena. Things that will surprise you."

Did she know then? Ung looking at her directly.

"It could put your mind into a discordant state. Derail your meditations. It's good to talk about it if it does occur. Lightens the load in a way. We're all here to help you." Ung sincerely concerned. Should she tell her? "Often," Ung continued, "the mind coming across something unusual, something it is not used to has a tendency in some to create impressionable fantasies. They're not real in themselves, more latent than actual." Ung probed. She paused when Mena did not answer then said: "The best way to handle that is to let it be Mena. It will dissolve eventually. Focus upon it and you'll only feed it, then it's got a hold on you."

Should she broach what was on her mind? After all Ung just about summed up what Mena knew for certain had occurred out there. So odd, the shadow re-run in her cabin whilst being in touch with her parents. Strange.

"I did sense something Ung. I can't explain what. It seemed like a presence without form."

"A presence." More a statement than a question.

"I told Niatu, I think. I can't remember, it now seems so long ago."

"That's good." Mena was surprised Ung did not ask her what that presence was.

"It means your resonance is strong. You'll be fine. It didn't disturb you?"

"No not at all. Distant yet close. Is that normal?" Mena had to know.

"Normal." Ung smiled. "Nothing is really normal Mena. The path to enlightenment is as diverse as the seekers themselves. Each path is unique, each experience equally so. What goes on in your head is singular in itself, a sub-set of the total. Most of the

strangeness is your own inner self. It slowly opens up, like new terrain. It's an adventure Mena."

She felt better now. What Ung said made sense. Though she never as yet experienced, apart from that momentary feeling, a terrain, an apt description. Ung knew what she was talking about. Mena was getting used to her distant and oddly focussed way.

"It is isn't it?" Mena smiled back. Ung rose.

"It's been a pleasure. Thank you for your time."

"Thank you Ung."

Ung walking back to her quarter's felt she made some progress. There was something out there. No. Something was too vague. Mena's mind indistinct regarding her experience. This whatever had the makings of a field-wave-state. Pure speculation. Remnants of a long gone physical presence, a decayed Cyber-realm or, or, one in the making? A possible future state leaking into time, its potency too intense, so packed, so dense it irradiated not just its own state but also to a lesser order of magnitude the current space-time continuum. Construed as a presence. Something other definitely. Or, she sighed as she made her way back to her quarters, just Mena hallucinating. Ung chided herself for being too focussed on Mena and Niatu. Still part of her homework. Check out who was who. Get the lay of the field. She was certain it was something from beyond, given its current opaque state there was plenty of time to investigate, surreptitiously of course.

Andromeda Station

Ung's ever observant facilitator, one of three on rotating shifts received her aligned phase state's download. Run through QCs to edit out all extraneous quantum activity the data came through in near real time. No need to use his HID since controllers and facilitators were EAI capable. The QCs tailored through the facilitator to be in tandem with their target scrubbed of any other sentient interference values which may have had similar values and thus inadvertently added to their contextual information. The incoming field-wave clean. Ung came through as a sentient virtual presence. Ung's EAI directed Mena's total state into a separate data realm. They were building up her race's profile, studying their resonance state and matching that with that of Prima's resonant envelope. The computers making sure the data was purely empirical.

With a rush of anticipation he and the Controller saw the full spectrum results on various light-screens the imagery now crystal clear. Ung's Head-in-Display linked directly to the station's QCs. The first thing they both saw was the star field broaden out as Mena's response expanded exponentially. The wave-field-front discernable though weak rushing towards her carrying embedded bits of incomplete data. The equations drawn out by the QCs garbled. Swamped by steady state junk data. Still from Mena and Ung's position that wispy field had the appearance of distinct forward movement. On another screen the quantum foam of space superimposed, the quanta represented as energy nodes of pinks, lilacs, browns, ochres, yellows, crimsons, reds and blues, all representing various intrinsic energy states. The wave contained the full spectrum of space itself. But thinly stretched, dispersed. More like a tattered net than a unitary whole.

Different sub-routines in the QCs diverted the hard data into sub-domains adding to the wealth of information of their data bases. The quanta were slightly energized agitated by the ripples caused by the wave-front like wave. Space was scalar and Mena's alignment along with Ung's the levelling agent. The wave-front unseen accept for its effects. Not a constant for the wave peaked then slowly, similar to an ocean wave reaching land, smoothened out spatially after cresting. Two occurrences entangled. First

the wave then the spread. The quanta rose and fell away not yet forming analysable geometric configured patterns. Not conclusive if it was either intelligent design or intelligence itself. Current ongoing analysis could not be certain since its origins had no insertion point, no original state, not even verifying entropic states given that that universe was a closed system. One thing the event was not was the make believe unitary cosmic consciousness the Primaians insisted was spread throughout their space.

"Remarkable." Was all the controller said. The facilitator nodded in agreement.

The discreet packets of energy were on the verge of merging into a definable self sustaining system but the parameters to achieve this phenomena were not as yet recognisable let alone subject to analysis. The QCs were floundering trying to make sense of something so unusual. The flare down continued on a smooth receding curve powering down to space's original phase-state. Accept like a fractal curve it would never reach the original state that had been disturbed. Close but not equal to. An energy state remained behind.

The sequence elongated in the wake of the wave. Mena's sentience in stationary transit. Quantum superimposition. Her body remained, as did Ung's where it was. The energy packets started to intertwine revealing convolutions caused by the wave in the quantum foam.

"Run the direction backwards." The Controller suggested. This wave had to have an origin. Energy waves could not just be dumped 'as is' unless they were as advanced as themselves. She felt a strange anticipation that this might just be so. If that was the case then they had discovered through Ung and Mena a totally new phenomenon out there. Someone was using Quantum Probability Waves. Though as yet on a much smaller scale. Anyway the whole universe was filled with an almost infinite array of continually collapsing PWs. It made reality for what it is, was, and would be.

The facilitator ran the sequence, going back in real time. Within moments the QCs had created a probable future-past state. The redesign steadied into a fuzzy smeared out white noise orb like image. Its directional outward oriented energy state with interlocking configurations as yet undefinable. To the controller it looked like same giant, unformed data domain without it's effects, wave aside. The QCs mutli-broadscale-spectrum analysis tried to hone down the excess data of the incoming frequencies exiting by all appearance from the centre of that giant galaxy with it super-huge gravity well. That was due to its massive size and had nothing to do with what they were studying through Ung's quantum entangled data stream. The QCs ran through various micro-frequencies and came up with an image of a radioactive bright lilac-blue high energy

centred mass. The blue spectrum due to the relative motion of Mena's approaching sentience thus shifting the frequencies, plus its own volition moving outward. Analysis confirmed it was both. The underlying configuration steady at last.

The QCs went through all the latent energy levels, the fuzzy vibrating orb shifting its spectrum. Within its delamination was a pulse, not dissimilar to that of some stars. Mimicking one huge mega-star being formed next to the giant black hole at the centre of that galaxy. Radio activity was normal yet these wavelengths had too many variable configurations encased within this pulsing phase-state. The pitch, the harmonics did not equal that of a star.

The QCs were processing it all, starting to reach their computational capacity. 'How much information was in that thing?' The controller thought to herself. Buffers were now in place as the data streams levelled out but continued to send its unrecognisable content into space.

"Activate the quantum security field." The controller said. They had enough.

"Activated."

"Activate deletion sequence."

"Activated."

The data kept on coming in.

"Insert previous pre-sequence parameters."

"Inserted."

The QC warned them that data loss was immanent.

"Enter accept."

"Entered."

The QC warned of immanent memory loss including analytic procedures and designated associated functions, applications, temporal memory storage, back up devices including all recent point targeted assembled data.

"Accept."

"Accepted."

The pulsing opaque orb vaporized. The stars and the quanta in space turning into long lines of multicoloured light streams, the image receding away from them.

"Computer's asking about the user log."

"Delete second last command sequences."

"Deleting." Now the QCs had no knowledge of what they had engaged in.

"Delete logging sequence."

"Deleting."

"Delete log foundational states."

"Deleting."

The QCs seemed to hesitate. This overrode all security measures. The controller erring on the side of caution. The unverifiable data which had the power to affect the quantum state of space itself could thus affect the QCs own quantum states. Not only that it could also configure their EAI capabilities. Until more was known this phase-field had to be kept at bay.

The QCs deleted the memory of its memory.

"Cycling down."

All but one of the pertinent light-screens vanished.

"Now delete remnant cache history."

"Deleting."

"Delete initial prompts." The controller moving back to the initial starting point.

"Delete back up shell files and associated architecture."

"Deleting."

The QC warned them that the associated applications of its focussed utility drive would also be deleted.

"Do it."

"Deleting."

"Now we do a systems check. Call up internal data processing logs."

"Searching and coming on screen."

A light screen re-appeared. At least she had not crashed that part of the computers internal logistics.

"Maintenance on sub folders please."

"Coming." The facilitator hoped. Ung had already vanished at some stage of the disengagement.

"Active."

"Good."

The Commander, an older man in his late age virtually appeared next to the controller, alerted by the QC shut down sequence. Normally he should have been notified first but he knew she would not have activated the emergency procedure without good reason. He merely stood there saying nothing, observant.

The maintenance log showed the initial activating point.

"Run and delete its tracking status."

"Run and deleting."

The scrolling numbers vanished off the screen.

"Now check status of the temporal quantum field. External. Light scan only."

The facilitator engaged light sensing devices duplicating their EAls.

"Steady state scan. All is normal. No signs of activity internal or external."

"Right." She said relieved. "Now the boring bit. Full diagnostics."

"Starting."

"Block all coordinates for that sector for the moment."

The commander was now intrigued. "Black list?"

"Until we know what this is, yes."

He merely nodded. Explanations could wait.

"Also do a search pattern, internal and external of any unusual quanta activity then dump them into secure containment blocks."

"Entering procedural commands. Commands inserted, local transfer in place."

"Resume normal visual and audio status only."

A moment later he said: "Done."

On a third light screen the diagnostic progress scrolled down the screen.

"What is going on Controller?" the commander asked. He had watched the feed the moment the phase-wave came through. But when the Controller went through the overriding negation sequences he knew this was no normal incoming data.

"I wish I knew commander. The QCs didn't but they were quantum entangled."

"Really?" he was surprised. There were different levels since entanglement was part of the strange mix that made up the universe. Minds, consciousness did it all the time as did EAI linkage. That's how it all worked.

"Yes. The data is unknown and seems to have, in this wave-front the capability of perturbing the phase-state of space. I thought contamination was immanent. Something huge is out there."

"So it appears. Any clues?"

"Not from the QCs"

"Too massive? Meaning the data flow."

"Yes. Some future state is out there using PW configurations which I thought were both premature and dangerous."

"Dangerous?"

"Alike attracts alike."

"So it's an artifice?"

"Could be. Then again, we haven't really studied this super-galaxy this close. It could be natural, giving birth to some new event unlike anything discovered in the universe."

"Well that will give our astronomers something to interest them."

"With caution Commander. There is something *within* that state of events."

"Yes I saw the quanta...fascinating."

"That's the problem. The QC's were soaking it up. Too fast and they reached their max internal memory capabilities. It would have flooded the rest of the systems..."

"Flooding. A prosaic description."

"Very real as well."

"That much data?"

"Yes."

"Unusual."

"Isn't it just. What do you make of it?"

"You kept anything at all?"

"No commander, I deleted everything. Anyway we know of its existence. We can always go back at a later stage."

"Correct. How is the agent?"

"Ung. During the deletion process she was disengaged. She should be alright."

"Let's see."

"Facilitator. Get the QCs to do a remote scan on Ung. Just the status level. No probing."

"Onto it."

Another light screen came on revealing Ung's EAI activity. "She's clear."

"That's something."

"So what's your analysis?"

"As I said commander, too early to tell. I cannot see the universe, or this galaxy doing this on its own. Something or someone is behind this trend. And that is all I can safely assume."

"With abnormally high data realms."

"I hope not. It's always been postulated that that is what our universe could be. Now we know that this universe started out as a singularity in a bigger previous universe. I know what you're getting at commander. And I shudder at the possibilities."

"Another singularity?"

"Possibly."

"I see." He was in thought. Neither dared to speculate too far, but on the face of it the evidence, what little they had made it seem as such.

"Should I run simulations?"

"Why do you ask. It's in your sphere."

"I'm worried about the QCs Commander."

"How?" not that he did not know but he wanted her opinion.

"They could all be taken over."

"That deep?"

"That deep commander."

"Do you consider this a threat."

"The scenario indicates something so massive our QCs were being pushed to their limits. This has never happened before."

"Accept once, you may not remember. It did not have the same effect, but neither was it on such an intense level." He hinted seeing if she knew.

It was before her time. He had sacrificed his mortality to become an Eternal, being downloaded at his biological limits. Then when a surrogate mother was found his memories were uploaded into the new birth. Not unusual but not common either. Most at the end of their lives seemed burdened with their accumulated knowledge. It was as if any living sentience was meant to cease, the mind actually accepting the finality, the finiteness of real life to be reborn if one's inner psyche had built up it's strength to transfer through natural birth into a new life. Deep scans had found that the vast unconscious was an amazing repository of all the knowledge acquired in one's previous life. Death was but a transitional state.

But the commander, and those like him were on a mission, one they kept secret pertaining to their continuation. Superficially they lived their configured reincarnation to gain further knowledge. They also knew that even this universe might not be permanent. Another would replace it and when that moment came they with their QCs would make sure that they could then, in the distant future transfer that knowledge into the next phase of the cosmos's sentient driven evolution. Their civilisation would thus continue unto eternity. For data was data. Independent, like consciousness of the space-time continuum. And now with this discovery the Commander was concerned that perhaps this phenomena the controller had gained via Mena through Ung hinted that the seeds of a new universe being put in place. But that was pure speculation.

She cruised through her memory but as the commander had been wonderfully obscure she could not nail down his allusion.

"Prima's great Calamity." He said at last.

"That was similar to this?"

"A wave front, less intense had moved through their universe. Some remnant high energy particles leaked into our universe all those centuries ago." What he did not say was he had been alive then as well. Eternals did not advertise the fact of their transference capabilities. They were more than just the gate keepers of their world, they were also its repository, as well as that of the QCs and Virtual QCs that backed up their accumulated wisdom. The laws of physics might reconfigure the VQCs and with hyper-inflationary expansion smear them physically across space itself. The data would be spread across light years and take thousands if not millions of years to reassemble. Thus the need for Eternals to re-re-incarnate into the possible next universe. Yet projections were so far into the future that even all possible worse case scenario's had this universe continue for over ten billion years. Accept for what they had just discovered. The commander had to gather the Eternals for a meeting at some future date.

"It was the same? Similar?"

"Similar commander. Less intense."

"And...?"

"You mean did it affect the QCs?"

She nodded.

"No, it was noted, cached, secured and restricted."

"You mean I cannot access it?"

"No one can."

"That explains the rumours then."

"Oh yes." He granted. "The Prophecies."

"The Prophecies that one day another civilisation will run the universe. And it ain't us."

"Something like that."

"Is it true?"

"Not quite. Another civilisation will arise."

"Well there's quite a few in place. Gonna reveal which one?"

"If I did that Commander we would, through foreknowledge actually create the very conditions thus restricting the advance of the others."

"Mars or Earth or Regum? Don't tell me it's Prima."

"They would like to think so." He hedged.

"Well we know they have made contact with Mars, and to a lesser degree Earth. They're not having much luck with Regum." She answered.

"That is correct. Put it this way Controller. Whilst each and every one of these worlds has the same potential it does not necessarily translate into an actuality."

"Can't they all develop, each to their own sentience?"

"That is what we are hoping they achieve."

"Hoping, I am noting that Commander."

"I'll keep myself informed of developments Controller."

"Good. As long as this doesn't get messy."

The Commander merely smiled. She searched his face for any clues but he was as inscrutable as ever.

Ratze

Ratze woke in her warm cosy bed. Relaxed, very comfortable, serene. Ah this was the life. She lazily dozed a while. No hurry, free to do nothing. Just be, drift, enjoy life's offerings. The vacation...vacation? The thought passed. No, not vacation. What then? The upload came back to her thanks to her Brain. For a moment her head expanded inwards. Independent residing deep within her consciousness. That's better. Confirmation. Of what? She knew who she was and that was the sum of her knowledge. Even the strange dream...no not a dream. More a distant domain populated by intelligences with whom she had a conversation. Detail. Think. Nothing. She another person in that embracing environment. An order given details lost in muted conversations. She had been with some higher order beings, taken into their confidence. Nado's white podgy face, the lean mean look of Kari, almost swarthy, sombre, the manipulators moving Ratze into place, moving her here.

Even what they discussed was not accessible. There were others as well. Vague adumbrations chattering in the background of her head. Yet no matter how she tried as she lay under the cover, her mind associated the abstract to the actual. A surge of realisation. Under cover the thought resurfaced. With no idea as to why, never mind the how. There had been something else. Very important, out of reach no matter how hard she tried to recall her own past. Contained within what she was now. A data field? Isolated. For the moment. By the very fact that her Brain let her remember this much must mean there was a reason for this blanketing, this blank. Blank.

Contained. It bothered her. She got up lost in thought. Thoughts which bounced around an empty skull. A vessel waiting to be filled, a prepared domain and when the right moment came, when she was in the right context, when the parameters matched she would be ready to receive something. Ahead of herself. The gap between where she ought to be, somewhere else and where she was, here, created the spatial distance in real time.

The shower refreshed her, water pouring down the drain a bit like her natural brain having been leached of pertinent data. This void natura, meant to be. She was in some chalet she remembered now. Nados and Kari looking after her. But they were not

the reason for her presence. They assumed control of her for the moment. She had gone along with that like a small stream that found the first gully to course through on the way to somewhere far broader in scope than her present situation. Situation. What situation. This? Only the beginning. To what? No idea. Not that bothered. There was a reason for her presence with the niggling annoying impossibility to ascertain the full extent of her immersion. An insert.

The place set at the foothills of the mountains as isolated as she was from reality. Prima. She flushed, the water was hot. Prima. The problem, Regum the solution. Intertwining opposite civilisations at odds with each other. Prima forceful, determined. Regum relaxed, indifferent. With discrepancies. She watched the suds eddy and swirl away, the detritus of memories, of her memory flowing into her current environment.

She indulged in the warm flowing shower. Her Brain probed her surroundings. The room, the building was chock full of scanning sensors, resonant probes not unlike the huge QCs, then that image faded, sucked deep into her head like the water gurgling down the drain. Gone gone gone. The room if not the building one vast resonance chamber. No wonder she knew nothing, it was downloading whatever her mind conjured. No joy for Kari then, or Choss or Scaag. She was as vacant as vacant could be. And understood the reason now for her vacancy. So they could not unearth what really lay embedded within her Brain. As long as that held she was safe. Involved in something big. It was enough to re-establish her mental balance.

She was finished, towelled herself, feeling fresh, pristine of body and mind. The vision of her memory flared for a moment into some heightened state of awareness. Her presence somewhere else impinging on her consciousness. Some strange realm, again undefinable, loaded with information, pregnant with strange unlimited potential. Shrouded technology elsewhere. A sun, space, background radiation spikes flaring, then subsiding, something moving through space, origin unknown. Was that what they were after? Her Brain having released this snippet of information.

She shook it off, dressed in her jump suit, woven, configured for space. Certainly not your average gear. An image of a decaying city, decrepit buildings covered in grime, low rise, washed out dirt smeared colours, faded brown facades under a sulphurous pungent sky. Then it was gone. A future glimpse, a threat accomplished, its purpose as a city negated. Huge grey almost black skyscrapers in the background, now empty, their functions utterly destroyed. A vision of Regum. Regum...a knock on her door.

She touched with her foot the pressure pad and the door rolled open. Nados in an immaculate cut suit. She looked searchingly at him making sure she was in the real

world and not some cyber-realm. The image seamless. He appeared as did her surroundings real enough. No analysis from her Brain. Real was real.

"Why didn't you say I was being monitored?" Ratze said by way of greeting, surprised at the question her Brain inserted.

"For your protection. May I come in?" she stood aside as he entered and stood in the middle of the room.

"Protection? From what?"

"Good morning Ratze, slept well?"

"Yes thank you."

"You see? Protected."

"You still haven't said what Nados."

He sighed. "During sleep the mind opens. Anything could be inserted. WebWorld is everywhere, even expanding into space as we speak. There are programmes hunting for specific minds, such as yourself. This building, this room shields you from cyber-hacking, alien insertions."

"I guess I should be thankful."

He let that pass and accepted it as a compliment.

"Breakfast?"

"No, not hungry. You?"

"Later then, we are expected."

"We are?" Ratze was amused. Nados excited. This visit something to look forward to. For Ratze it was a diversion maybe a useful one. She could not imagine, given her blankness, who would be interested in her. Did they think she was an unspecified agent? Maybe. She certainly had no memories...when the crumbling buildings under that bleak sky momentarily reappeared. A future with a calamity that had the power to take out a whole city. Prima was planning something. So that is what I'm here for. Her Brain though did not run with her thoughts. Rather it quickly shrouded them before they could be picked up by the resonant scanners.

"Who would be interested in me." Ratze coaxed. Nados remained silent.

"Those who are."

They walked down the empty corridor, past deserted reception and into the bright light of day. The mountain air refreshing, bracing, invigorating. Her thermal protection barely noticed the temperature difference. The majestic trees of the estate, a soft cool breeze coming down ice capped mountains behind her. It was picturesque serenity itself.

Ratze heard the whine of an approaching ground vehicle which pulled up smoothly in front of them. The engine idling the passenger doors gulled open. They got in the rear, Kari greeting them both. The car moved off.

"How are you Ratze?" Kari asked. More of an examination than a friendly question.

"So so." She answered indifferently. Kari probably wanted to know how she slept, whether she noticed her being scanned her Brain thought. Yet there were no alerts coming from it. All was well. It made her feel comfortable for she understood why she was so vacant. Her Brain wanted it this way.

Ratze in the middle sensed Kari's inquisitiveness.

"Slept well?"

"Wonderful."

Kari resumed her neutral role giving nothing away. Nados was watching the trees, the forest slip by. He too was attuned, just feigning indifference unless he let Kari do the talking. He the junior partner.

They were deep in the forest now, the road starting to wind up and through a series of low wooded hills. Ratze wondered what they wanted from her. She was tempted to ask but knew instinctively Kari would certainly not enlighten her and Nados probably knew nothing much that would help her. Maybe they were going to interrogate her, using deep scanning techniques. They had her isolated after all.

It happened so quickly Ratze had no time to react. Kari whipped out a stun gun and jabbed Ratze. She passed out. The vehicle continued on its way.

Ratze was sitting in an empty room. Her head felt thick, her mouth dry yet she was relaxed, drifting in and out of sleep. She was comfortable, she even felt good. Drugs. She nearly laughed. Why this circumlocution? Oh yes, the stay over at the chalet. They must have scanned her, assembled the data and now it was time for verification. Her Brain focussing in and out of inner reality. Never quite getting there as if either trying to get her attention then recede from her consciousness.

Strangely enough she felt like an observer, a third party. The room was empty, blank walls, just like...but the memory of something similar, almost graspable like some wisp of fog too immaterial to grasp, to focus. Don't focus her Brain told her. Saying, 'let it be'. Her Brain reconfiguring itself, turning opaque, self draining its data deep into her unconscious. When done her subconscious wrapped itself around totally isolating both it and its content.

She was ready. The effect of the drugs good. She looked lazily around the blank walls, the empty table and the few chairs. She knew about the waiting game. Almost like sensory deprivation. Unnerve her by deleting as much as possible for the incessant surface mind to latch onto something. So by the time her interrogator appeared she would be only too happy and relieved to engage in conversation. Get her to worry what it was they wanted. She could tell now, just, being soft scanned. The room was loaded. Not deep penetration, just running a surface scan whilst they had to be watching. No tell tale one way portals such as mirrors, pictures or even cameras. But then walls could be cloaked giving them the appearance of solidity when they were merely camouflage making them look solid. 'Let them', accepting her situation.

The drug potent. Waves of euphoria basking in its soft, smooth mind enhancing realm. She felt heroic like some mythological being. Were they real then? Or did the ancients use drugs to be gods? To be the heroes and heroines of distant lore? Well they had resurrected that mind state by infusing her with some molecular equation which locked in nicely with her physical brain, tailor made to be brilliant, fantastic, cool, calm and very together.

Her essence a third person and at the same time she was that third person. Her true persona, whilst it lasted. The drug gave her so much confidence as to be so on top, both mentally and physically that whatever they came up with would be of no consequence, to her. To them. A game she understood. Start with the individual. Any piece of information had ramifications. Pieces of a puzzle, with no puzzle about. Not that she of knew anyway.

"Ratze." The disembodied voice said at last. So no face to face. Ah well.

"What?" she countered more amused than disconcerted.

"Good of you to be here."

"Here as in here? This planet? This universe?" she was amused.

"Just here will do. Tell me what are you hiding?"

"Hiding? Ha. I'm vacant buster." She countered feeling emboldened, throwing care to the breeze.

"You think so?"

"I know so."

"No one is vacant Ratze." The voice said patiently.

"Well I am."

"If you are then you have been tampered with."

That stopped her. 'Tampered'. Interesting.

"Well then you'd better untamper me." She joked.

"We can BrainDrain you."

"I think you missed that session. So you gonna keep me here until my insides are out?"

"As long as it takes Ratze."

"Hope you brought your lunch."

"Do you think this is the real you?"

"I know."

The room vanished. She was in some village. It looked very familiar even though she was not surprised at the change of imagery or the location. Her past, so distant, almost another life. Another life. Was the voice saying that was real and this was not.

"Well?" Ratze got in first.

The room came back.

"Perception is so fragile." It said.

"Maybe reality is and perception isn't." Ratze on top of this.

Silence. Ah, scored a point here. Though how reality could be fragile escaped her. She knew reality was a matter of perception. The universe was what it was, only the interpretation changed the image, not the substance. And there were as many answers, as many perceptions as the mind, any mind, all minds could think of.

"Shit for brains." Ratze said when the silence continued.

"A bit prosaic."

"Isn't it just. What do you want?"

"The truth about you."

"Me?" she knew where this was heading. Law enforcement did it all the time when unsure about a suspect. Make them feel guilty about something, anything. In this day of uploaded persona's, reconfigured resonance states, BrainDraining anybody could be anybody. The soul's core restructured, a new persona inserted. They must think she was one such being. Still Ratze felt as certain as could be she was herself. Definitely so. No doubt about it. None whatsoever.

"Yes Ratze you." It said patiently.

Maybe by inserting that image of the village, the thatched rooves, the mundane scenery, the bucolic setting, the verdant fields, placid grazing cows, the slow change of seasons, the squawking chickens, barking dogs, crowing roosters, all so familiar yet so disassociated sparked something in her memory. She told her life story, born a Volatile, discovered, uncovered by a priest who saw her potential, technical college, failed. Then

as she became older, a teenager latent psychic possibilities developed, the seminary and then a DV potentiate, moving up to the Orbital to become an instructor. Then something happened, a blank, a surge, something big, which she suspected they drained out of her. Yet it was not a real BrainDrain or otherwise she would not be here. Either they missed something, wanted something, sought something she was supposed to know and yet had no idea.

There, she had revealed all. Accept for the gap. Well DVs had all sorts of strange experiences. They did not deal with reality as such, more with potential states of mind and their perception of reality.

"Satisfied?" Ratze smirked. "Really eventful wasn't it?" she added jovially.

Everything flickered as if the lights were playing up. The room morphed into a lounge. Brown panelled walls, paintings of mountains and rivers, lakes and streams. Soft wall lights, an office desk and herself on a cosy armchair, Scaag looking at her, with a bemused smile. Dressed in a business suit. Behind the glare of daylight, some trees and grey low rise buildings behind her.

Ratze still under the influence of the drug took it in her stride. She would have anyway. Such sudden changes of scenery occurred in WebWorld all the time. Being in there until... Or was she mixing this up with something else. No matter.

"Impressive Scaag." Ratze replied.

She gave her a wan smile as Ratze took in her surroundings once more. Plush carpet, ornate lamps, Scaag giving her a thin smile.

"You're a bit of a problem Ratze." Scaag now focused business like.

"Oh I don't know. I'm not a problem to me Scaag."

"Exactly. Something happened to you up there."

"The blank you mean."

Scaag just looked at her.

"You tried at the chalet, the room's loaded you know, if not the whole building, then the feel-good drug, good shit by the way, and now this. Something tells me you're not having much luck. Maybe because there's nothing there that is of interest."

"That is for us to decide. You certainly have not regressed to your volatile state so that is something. However we think you picked up something as a DV up there which was then transferred instantly elsewhere. The trouble is it was transferred across space in an unconventional manner, more like *into or out of space*".

"Meaning?" she was impressed.

"You linked up with either, directly, WebSpace, WebWorld, the same really."

"No third alternative?"

"Such as?"

"I don't know. Maybe the aliens got to me." Ratze said dismissively. That should give her something to consider.

"Maybe they did. What do you think?"

"I thought you knew that by now Scaag." She loved being so familiar with her.

"At least your history is as is. By remembering it convinces me I'm here with the real Ratze."

"Glad to know that."

A view screen came on, replacing one of the pictures. Space, the DVs in place. Three in the foreground. Obviously her and two others.

"Me I suppose."

Scaag nodded. "Just watch."

"I'm watching." And saw nothing untoward. Her Brain was in the background of her head now, interested yet subdued, like some discreet butler awaiting a signal to act, or not.

"You didn't notice it?"

No point asking `what'. Ratze waited.

"Replay."

For one moment Ratze went slightly blurry, vibrating. One pixellated frame.

"Hm. Space is full of radiation, and," she nearly said `your', "the alien stuff. It happens." She shrugged it off even though her Brain went into alert mode.

"Could be. By why just you and not your charges? You were targeted Ratze."

"So that is what all this is about." She felt better. She knew that somehow she was connected to something, but her Brain was not saying, not even hinting.

"It is. And it's my job to find out."

"And what have you found out?"

"An energy flux."

"My my." Yet Ratze's mind fully alert. Her Brain self-dumped into an explanation.

"Tell me Scaag, this place is secure?"

"Of course."

"But you're recording, scanning."

No answer. Not that she expected one.

"I've got a hunch. If it is true then I want immunity."

"The best I can do is say you are a protected source."

"Good enough. Right. The orbital was shut down. All systems went off-line. So yes you're right something did occur. Don't ask me how I know. Us DVs are not normal, you have to remember that."

Scaag nodded.

"What does that tell you? Or rather were you told?"

An indifferent look from Scaag. A mask of discretion.

"A wave front moved through space Scaag, origins unknown. Now why would a wave front be so important? Anyway," Ratze continued, "the orbital's computers go off-line which means that probably that data was deleted. So what is the big secret? I don't know." And she didn't for this was coming from her Brain. "All I do know is that maybe my own capabilities picked it up. It may well be that since as DVs we're under constant observation that someone deleted whatever I uncovered. Thus my vacancy regarding whatever it is you are chasing Scaag."

She had listened attentively saying nothing. Ratze had covered herself.

"As for the others, I got no idea. I was yanked out obviously and here I am. Body snatched." She was amused the attention she was receiving.

"From what we have discovered about you, at that moment, your psyche went volatile."

"Not good?"

"Not unexpected. You did not burn out. Others would have."

"That close?" her Brain feigned concern.

"That close Ratze. The burn out was horrendous. Lost quite a few DVs. Yet you were the only one unaffected by this surge."

"Another reason for your interest in me?"

"Correct. You're stable again, very much so. Very rare, very unusual. Your profile is tight as is your resonance. It's as if..." Scaag paused, "...you are a new breed."

"Well please don't let this get about. I mean the attention is fine, I feel like, well up to today that I'm on vacation. But I can see..." And she stopped before she said too much. The drug influencing her relaxed candour.

"What Ratze?"

"Oh nothing, I thought I had something but it's gone." She said slowly nearly panicking inside. She knew she was not average even at DV levels. The dead city had come into view once more. This cross feeding of information could only be due to the drug she was influenced by. The image not some relic of an ancient past. The skyscrapers saw to that. On Regum. A future state. Not just a possibility but an actuality.

Prima was going to destroy Regum Central and get away with it. If she knew that then maybe her mission was to give them warning. But if she did that her DV status she could kiss good bye. Worse she would be seen as a traitor and they might send a hit-squad after her. Not a good position to be in for there was something else she had to do. Except her Brain was not releasing that information.

"Maybe it was this?" Scaag changed the view of space. What appeared astounded Ratze. The very image within her head. There under a dark threatening sky, the dark outlines of non functioning sky scrapers. On the ground abandoned cars, tram wrecks, others stalled, burning buildings, wreckage and debris everywhere, a pall of smoke pouring into the sky blotting out the sun.

"Shit. My vision!"

"You kept that to yourself."

"It was too weird Scaag. And too momentary. Too fleeting. You know us DVs are volatiles and our imaginations do play tricks on us."

"You know that everything has to be collated."

"I know, that one slipped past me. I totally forgot about it."

"You had it here Ratze." Scaag admonished.

"That's the drugs. As such I held not much store in it."

Scaag accepted her explanation reluctantly. Then continued: "Your status is under review. First you don't burn out..."

"Neither did many others Scaag." Ratze reminded her.

"...and now this. You know where that is?"

"Regum."

"If this calamity is real you know what that means?"

"I really haven't thought about it. Honest." She was telling the truth.

"It means," Scaag smiled, "certain victory. But perhaps someone else can explain this." And a side door within the panels opened. A middle aged man walked in briskly motioning for the two women to remain seated. He pulled up another armchair next to Ratze. Dressed in a non descript charcoal grey suit, black tie, short white stubby hair and soft brown eyes which belied his chiselled granite face.

"General, meet Ratze." Is all Scaag said.

"A pleasure to meet you. How would you like to work for us." It was a statement.

"You certainly don't waste words or time."

"Time is of the essence." Ignoring the appalling destruction on the screen. Scaag voided it. Pleasant mountain scenery replaced the dreadful vision.

"I see. No more DV activity?"

"They have plenty of others." He said lightly.

"Err, doing what?"

"First please answer the question." He held her gaze.

"Who is `us'?"

"Let's just say we have certain privileges."

"Ah, like that?"

"Like what Ratze?"

"Undefined."

"Precisely."

"Privileges. That include immunity?"

"To a degree. Ratze your progress is noted with interest. You have shown aptitude in the field out there, your resonance is remarkably steady given you're a V, you've got more potential than you realise. Your scan results are near perfect. You are also almost immutable to interdiction on the psychic level. But that is not what you will be doing if you accept."

"I dare not even ask if I refuse."

"No better not." He said his face changing into a hard mask.

"It's to do with that vision."

"It is."

"Let me guess. You want me to find out if they know what is coming at them."

"Ratze you have just signed up."

"I have?"

"This cannot get out. The only alternative is..." without elucidating. "Take your pick."

"I'm in general."

"See Scaag? Easy."

"Yes general." She answered dutiful.

"Ratze, you are now a colonel. Congratulations. It will never be official of course but you have our resources at your disposal. You're mission is to find out what you can. Unlimited access all areas. Welcome on board colonel Ratze. A drink perhaps?" his eyes twinkled.

Scaag must have pressed a button for a flat topped servo-bot trundled in with three glasses of a clear liquid filled to the brim. The tiny glasses reflecting the wall lights like miniature distant stars. They helped themselves.

"To colonel Ratze." The general beamed.

"To colonel Ratze." Scaag looked proudly at her.

"Thank you." Ratze replied and they downed the smooth alcohol. It instantly warmed her insides, making her feel mellow, even though the drug was still having some effect on her. She felt jubilant. Get a grip she reminded herself.

"Am I SpaceKorps Intelligence?" Ratze asked as she replaced her empty glass on to the burnished silver servo-bot's top.

"Not bad. But that will remain classified. Your ID has already been upgraded." and from his coat pocket he retrieved a small insertion gun that would micro-chip her, her status upgraded. "You will have no cut-outs, no minders, no controllers. Otherwise the enemy would be all over you. You will go in as a civilian. That way you will arouse minimum attention."

"I'm still Ratze, right?" Wondering who this general represented. They felt Reganian yet spoke in general terms regarding both her status and her new mission. Primaian black op on Regum or Reganian black op targeting Prima. Or more pertinent finding leads for the coming calamity. If it was real and not an active hostile DV insertion. Prima stirring the pot.

"Oh yes. Your persona remains the same. Now bare me your neck please."

The insertion pricked a little. She was tagged. She wondered what her Brain made of that but it was mute, accepting her upgrading. It was like two worlds on this planet.

"Now for some explanations Ratze. We are a stand-alone operation. You are familiar with that?"

As vague as he was she nodded.

"Correct. We are independent advisors. We also liaise with SpaceKorps. But we do not take orders from them. Your orders colonel come from me or colonel-major Scaag. Understood?"

"Can I be hacked?"

The general smiled. "This implant is the best. If something better is created you will be upgraded."

"How do I know my orders, or whatever comes through is secure?"

"Good point. Encryption, fractal motion algorithms."

"Sounds neat."

"It is colonel. Rest assured the enemy will try and hack you. They may even try and turn you, recruit you."

"What do I do then general."

"Play along. As long as you remain with us being a double agent, should that scenario arise, is not altogether counter-productive. They will feed lies but to make lies palatable and appealing a kernel of truth has to be there as well. It works both ways of course. The requisite data your chip possesses will release what is necessary when applicable. It is resonant attuned. Even if it were to be removed it could only be pried open with your resonance. And since each resonance is unique...which by the way cannot be downloaded from you. The chip is your private fortress. Any questions?"

"So I am to find out regarding this future calamity."

"Correct."

"That it?"

"Primarily yes. So apart from that, anything else you come across that is of interest to us you check it out as well. Conversations, attitudes, orientations amongst the elite. Scientific and technological developments, even discoveries, their knowledge of space for instance."

"A broad brief."

"Essential. Too narrow a focus would give the game away." He thought for a moment. "Which brings me to my last point. The alien planet."

"Oh?" her Brain mute.

"As you know the DVs are in contact. It will only be a matter of time that others will, unless they have already not done so, take an interest. We must be prepared for all eventualities."

"Forgive me general but I thought the DVs are handling that."

"They are colonel but verification on the ground adds to the substance."

"Understood."

"Can I return when my mission is accomplished."

"But of course." The general lied. Maybe when they were in control, but until then Ratze's trip was strictly one way.

A silence between them.

"To your success colonel Ratze."

"Thank you general."

"Good luck Ratze." Scaag smiled.

"When do I leave?" Ratze tried to call up their `reality' but her Brain remained mute.

"After lunch."

Mars

Riding the configured probability wave, generated by QCs at a secure research laboratory on Regum, the space cruiser *Explorer I* materialised in geostationary orbit over the pink planet. Dark pools of oceans rimmed by green vegetation, huge brown snow capped mountains fed rivers into smaller lakes, wispy white clouds moving below, sunlight glittering on water. Huge glaring white ice caps at the poles.

"The insertion worked." Perdus, captain and team leader announced in his dry academic manner. A mop of white hair, his usual serious expression tinged with the slightest hint of satisfaction. "Everybody fine?"

Nuhan the scientific officer was checking the screens for possible malfunctions regarding the insertion. The system was steady as an embedded state. He noted they were real, the ship was real and over the planet. One moment they had been in place in Reganian space, then the laboratory's QCs powered up inserted the coordinates ahead of their arrival. The Probability Waves containing the complete data of themselves and the ship, the transfer, en-phased and successful. As long as the PWs remained in place so would they. What Prima's DVs accomplished in the psychic sphere of forward remote viewing they managed to do in real space.

Jez a diminutive figure who was their parapsychological expert was calm as she had known it would work. She was there to read the inhabitant's state of mind below and whatever influence Prima's DVs exerted on them. She said she was fine.

Los, the technician whose duty was to maintain the overall ships integrity was busy looking at internal diagnostics. All systems steady, satisfied as she nodded at the read outs. Her wiry frame brimming with latent energy.

Mirn like Perdus was an EAI. She ran back-up, linked to the onboard QCs, the mind of the ship as head EAI in the Probability Field Wave environment. Making sure the waves stayed put. On the alert should the quanta fluctuate due to potential DV or possible real time interference from Prima. Now that the deed was done Prima would in due time discover their achievement to emplace a ship and its crew anywhere in the

universe. Time was precious. A simple matter of coordinates, the data of their scanned bodies and mind plus that of the ship and by merely inserting that data onto the configured PFWs, they created their own reality in real space time.

Perdus satisfied all was well, made sure just the same that everything was a-ok. "No aberrations?"

"Well the weak sentient resonances match with those below." Jez replied. "But yes there are aberrations. Of lesser content, though not in intensity."

"Please explain." Perdus said watching the status of the ship's systems, its integrity and the stability of the PW field-state.

"The resonant components match, but there is a weaker internal density of data. What had indicated technical capabilities which the equations confirmed are completely absent."

"Interference perhaps from our end?" Perdus asked. It was not serious yet was important. They had expected a stage two civilisation, technologically capable yet Jez informed them this was not so. "Could the carrier wave have picked up our own data? After all the Web and our own expanding EM field might have become entangled."

"Possibly Perdus. Either way they appear a stage one world."

"Understood. Everybody got that?"

The others, assembled in the lounge of the ship nodded..

"We adjust accordingly. So no techno-dazzling on our part. We don't want these sentients to see us for what we are not."

"Magicians or gods." Jez added.

"Exactly. We all know why we're here. Make contact and find out just how potent the DVs influence is, who is targeted, the effects of course and to disabuse them of any incorrect assumptions. We're here to clarify the situation they find themselves in. And not forgetting of course to see if they are amendable to our friendship. Give them whatever help they require. We are not here to dictate what is good for them, that is their decision and not ours. Nor are we here to change their history but rather advance their natural evolution. If they are destined," Perdus looking at Jez, "to become techno-savvy then so be it. If they are meant to become a race such as the Primaian's then so be it as well. We are not here to change them, merely to guide them. I know we all know this. Just be aware of this at all times."

They understood.

"Have they sensed our arrival yet?"

"No Perdus." Jez answered.

"Not yet. The ship is cloaked." Perdus looked at Los. She nodded.

"Good, this is more for our protection against DV activity. Jez of course will inform us the moment they make any contact, or merely a lucky broad scale sweep. After all they are focussed on certain intervals below. They are our primary concern."

"I'm surprised the DVs are so open about this." Jez remarked.

"They are feeling supremely confident. They know our Web extends this far. Our EAI capabilities have been kept under cover since we started using them. All the Primaian's know is that we suspect there is an alien civilisation somewhere and that is that. Even though we are here now we must keep as low a profile as possible. So try not to use the E component of your AIs if it can be avoided. That includes me of course." He allowed himself a reticent smile.

"Perdus. From what I'm sensing, the alien field does not match the resonant states below. The field is there but this planet is not the source."

"It could be a remnant civilisation elsewhere." Nuhan suggested. "All electronic data fills space from wherever the source is. It's direction indicates this quadrant of space but it really could be anywhere. It could well be in another galaxy. They might still exist so I guess I got something to do in finding its source. But if they have moved on to stage three and maybe like us using PWs to forge their own future, unless we lock in, then this stage two phenomena might be really an ancient remnant that took light years to reach us. A lot can happen once a civilisation makes the transition to stage three."

"I understand Nuhan." Perdus replied. "So to recap these beings below are for the moment our primary concern. What has the ship made of this field Mirn?"

"The field is there that is all I can say."

"But no effect. Los?"

"None what-so-ever."

"Good."

"Any DV activity?" Jez shook his head.

"So far so good. Meaning no change."

"So our integrity is in place?"

"It is." Los replied, Mirn confirmed it.

"Then let us proceed. Ship systems to go active. Just in case we become a primary target." Perdus cautious.

With geostationary orbit achieved the ship's gravity drives were on stand-by, shielded to not leak any gravity waves which might alert Prima's orbital. The outer sensor arrayed radars, passive detectors both audio and visual came on line, internal

computers analysing the incoming data and broad spectrum EMFs. Detectors to monitor their position and study what was in this universe. Looking both into the centre of this galaxy and out, reading the complete environment. They watched fascinated the rich band of stars as the systems looked into the centre. At least the structure was familiar, almost like its neighbouring galaxy.

A fried egg shape galaxy with this solar system near its edge.

"Everything steady." Los said.

"PW field holding." Mirn confirmed. The virtual real.

"Time to seed our target area with our passive probes. Nuhan?"

"Activating launch sequence." starting the 'go' code. "Launching T minus ten and counting." As he entered the release codes. The ship's recessed mini bays opened up and by explosive charges sent three probes off towards the planet below. "It will be night by the time they land. If detected, seen I should say they may look like meteors for a moment."

Perdus nodded. He was happy with the group. The mix of personalities a right blend. Enough individuality so necessary in space when contained at close quarters to stop the group from forming into two distinct camps of thought causing unnecessary politicking later. Nuhan their science officer relaxed, open, easy going. Jez very self contained, almost his opposite yet not so far apart as to break their common bond between the purely psychical and the determined empiricist. Los, the technician uninvolved with personalities, though a little cynical which should keep things interesting whilst Mirn was often sceptical, taking nothing for granted. Perdus hoped that he would not have to get into conflict management.

They watched the tiny probes drop down. Below the pink planet. Swirling clouds, open spaces, blue waters, green vegetation. Thick cloud cover to the west, flashing strobe lightning of a huge thunderstorm. A new world.

"No activity below." Jez informed. "Given the position of the sun let us hope the chameleon envelope absorbs any reflecting light."

"It will. No reflection anticipated." Perdus said calmly. "We won't be seen. Anyway there are enough stars in the background even if a stray photon beam does reflect."

"Let's just hope the PW field remains undetected." Nuhan thought out aloud.

"Yes, the big one. Luckily its projected away from Prima. And given its distant position unless something unusual were to occur the projections indicate it could be months at worst, years at best until the field is discovered. By then we should be done.

This is an initial contact mission, nothing permanent. Anyway now that we know it's working on the macro scale, inserting individuals will be the future scenario. The only reason we're in a space ship is for our own safety. They might not like intruders below. We know nothing of their belief system. We know the so-called alien field has certain hostile tendencies encased within it which may have influenced those below." Perdus reiterated.

"So you're running with Prima's view." Nuhan observed.

"Until we know for certain of their predisposition, yes."

Nuhan was satisfied.

"As long as we don't get entangled." Mirn suggested.

"I'll be there." Jez easing their fears. "I'd know if there was a change in anyone's psyche."

"Including your own I hope." Los added. "I mean you being a sensitive and all that, you might go under first and not know it."

"Los," Perdus replied, "our EAls aren't exactly dormant. You should know."

"Yes but I also know about entanglement. The ultimate superimposition, and once the wave collapses who would know any better?"

"The ship's system is the control." Mirn reminded Los.

"What about entrapment from below? What if they're even more potent than the Primaian's. What if they already know we're here, waiting for us to come down and be well, entangled? We'd be in their control." Los continued with her worries.

"If they were I'd have known." Jez said with her usual certainty.

"You might be under their influence right now."

"Los, don't worry. The ship would have alerted us that we were being targeted. Whatever comes in, at whatever phase, frequency, superimposition has to get past the ship to get to us."

"I know I know. I just don't trust anyone with potent psychic abilities. The temptation to impose one's will, one's certainty about whatever, the urge to reform, reconfigure reality to one's individual wants is there in any sentient being. I mean that's how we achieved what we have."

"Los, your concern is of course your primary focus. Remember, future case scenarios, probabilities, it's all been run through, we're gonna be fine." Perdus assured her, assured them. "And Jez is one of the best, an alpha. Aligned with EAI capabilities. If she were unduly influenced she would be as one with the alien field and as far as I can

tell by the very fact that the alien field is still outside and not within her head means it isn't in ours either Los."

She nodded reluctantly. Perdus was right.

"Now back to our briefing. We may as well be seated now that the excitement has abated."

They had remained standing because the transfer having been a success was exciting, amazing, stupendous. Unbelievable. The quantum laws of physics were now not just a phenomena, they had become a tool in itself. Using its inherent a-logical states to be anywhere in the universe. All that was needed was the requisite energy and a lot of data.

"Now we use fibre optic links, as opposed to wireless for security purposes to connect with the ship's EAI capabilities. That way we know if we're entangled."

"Why didn't..." Los started, then shut up. Mission control really did think of their mental welfare. Perdus merely reminding them.

"And symbiotic links. Some of the ship's processors are bio based. Nothing beats a sentient brain, still it's the ultimate computer. It's its own coherent processor. Not only that but if the ship, or the environment does show signs of intrusion the ships bio-capabilities can reconfigure. In other words it can think itself out of its own design parameters, think itself out of the box."

Los was impressed. They had not told her that at their last briefing.

"It's ceramically constructed in part, so it can handle high energy states both within and without, uses photonic pathways, more like our brain's moving constantly between reconfigurations so that even if targeted it will have changed it's internal architecture so that the lock-on effect is negated."

"Neat." Los was pleased.

"Not only that but it's data domains are e-bubbles, micro-domains swimming in a sea of probable quantum fields, which also phase-change. So Los a secondary protective layer is there as well. All powered by nano sub-atomics, dimensionally squeezed generators. And the crowning achievement, our E end can therefore become an encapsulation of these chaos equation driven protective fields, which due to the constant changing outer layered shield, its quantum fluctuating characteristics makes intrusion virtually impossible."

"I stand, sit I mean," Los allowed herself a smile, "corrected."

"It was fine what you brought up. It had to remain under wraps until we were safely deposited. This defensive set is the first working model. If it works as intended then

the go-ahead will begin so that all our systems will have this security level and its counter interdiction response capability."

Los monitored the descent vectors of the probes.

"Modes holding, dormant until landed. Then we'll really know why the differential between the fields is there. Confirmation is expected in around six hours." Nuhan explained.

"So when do we go into E status?" Los asked.

"We already are." Perdus replied.

"Trying my best team leader. I am still getting over the success of the transfer. To have the universe as our back-yard, how many civilisations can boast that?"

"We seem to have made history. This is true."

"Free from the DVs."

"Err, I wouldn't count on that Nuham." Los said. "Distance means nothing. Just a dimensional construct. You should know how multi-dimensional the universe really is."

"On the Plank scale, yes. So my EAI is running? I expected some sort of inner sensation."

"Ah, a common misconception Nuhan." Perdus said easily. "In fact the reverse is true. Completely seamless."

"I expected a surge of some sort, like some drug." Mirn suggested.

"Or data bursts." Los wondered.

Nuhan zoomed in visually on the three probes slowly falling planetward. A tiny degree off the vector and they could be deflected by the atmosphere's envelope bouncing off or being forced into a steeper descent vector. All was fine. The ships computers kept them within their trajectories. Now and then the data flickered yellow which the probes self adjusted returning to green moments later. On the far right the thunderstorms continued with its light show, flashing brilliant bursts of crimson, lilac flickering, momentary purple afterglows within the broiling clouds. It was majestic.

"Phase two approaching." Nuhan said as his E algorithms united at equivalent logic gates within his AI routines. Multiple architectural fail-safes sub neural pathways engaged so that his now multi-functional brain's command sequenced patterns ran control without interfering with his overall mind set. All systems steady and holding he thought. This was great. He was happy.

"And counting, three, two, one, dispersion." Nuhan announced. The three probes spread out. The numbers expanded out on the screen accordingly. The three probes were heating up but not enough to make them glow too brightly as the energy was

absorbed by their cells storing it. Yet they shone yellow and a lucky observer below would see three meteors as they continued in their graceful arc. They were into cloud cover now, visuals lost. Radar continued to monitor the final run-down.

"I'm getting something." Jez said. "It's sentient, extremely powerful, reaching out, non-specific. Must have been the probes. Someone is watching and intently at that."

The ships interior went black. No screens, no status lights, absolute darkness. Yet with their E capabilities they still were aware of each other's presence. The air ducts were hissing. So not an EM attack.

"Why aren't I panicking." Los said being on-line with Perdus, Nuhan and Mirn.

"It seems like a ramped up version of the alien field. Similar configuration, but intense, broad sweep with dormant focus standing by. More line of sight oriented, guessing. It's not value neutral either, cautious though not intently hostile. Searching." Jez said calmly. "It can't do anything."

"It's blacked us out Jez." Mirn answered.

"Headspace only. Some sort of inversion in our heads."

"I thought the ship is protecting us." Los replied though the ship had nothing to give her.

"The presence is rather calm."

"That's nice of it." Los cynical. "We arrive and before you know it, we're on notice. What's it saying?"

"Nothing Los," Jez replied calmly, "just a search."

"Potent though." Los added.

"Probably after our resonance. Can it lock in?" Perdus asked calmly.

"Not if your EAI is reconfiguring itself, going stealth."

"What about you?" Perdus asked Jez.

"I'm not responding. That would be a big mistake. It'd get a lock-on."

"Is it sentient, artificial or DV active?"

"Since we cannot see anything and the ship's still here meaning the PWs aren't being affected, indicates this darkness is psychic. In other words a blanket's been thrown over our perception."

"Effective." Mirn said. She tried to scan the space around the ship and found the same darkness outside going right back like an expanding cone down to the planet.

"Well it's definitely from down there folks."

"That's good." Perdus said at last.

"It is?" Los nearly laughed.

"If it is sentient then we have just had a taste of their capabilities. My E end is saying the ship's still functioning. So no targeting please. We remain mute. It can't get a fix. By the fact that the ship let this through Los means there is no flash-back, no signature."

"Good ship."

"Good design parameters." Nuhan added.

"That's nice to know." Mirn smirked. "Our interested friend might have discovered the meteors were not meteors."

"A long shot Mirn." Jez answered her. "You have to remember that the ancients thought meteors were messages from the heavens. A falling star was a sacred event. The god's sending information to their believers. So it's only natural that some powerful magus would scan the heavens for an answer."

"And we're the answer." Mirn said off handed. "So let's be gods then, don't want to disappoint them."

"Mirn." Perdus said sternly.

"I know, just thinking of the possibility."

"Perdus should I patch myself into the ship?" Los asked.

"Do that, but detached, go in as a third party meaning your EAI goes in, not you."

Los switched to HID capability. A cyber flash illuminated four dark shapes as Los found one of many ports to hook in to. Pulling an optical fibre from her sleeve she inserted it into the ship. Then synchronised. The ship revealed a broad resonance not unlike Prima's DVs, psychic's or Naturals. The ship opted for the latter. Los informed them.

"That's heavy stuff." Mirn replied.

"Well at least we know what they are capable of. No one take a hit from the DVs?"

"Jez." Perdus admonished.

Vision returned.

"It's gone. Los got the ship to do it."

"Be interesting what it found out." Nuham thought for them. "Los?"

She disconnected. "Ship was neutral, no return search pattern. Only Jez might know and she remained mute. At least we can handle it. No real threat implications."

"Not yet." Mirn reminded them.

"No hostile intent. Just a broad resonance spectrum." Los informed them.

"Good ship." Mirn repeated. She thought of it as an entity in itself.

"No infection, no remnant anything." Los concluded.

"So it was sentient."

"Assume so." Los reeled in the milky white fibres.

"Nuhan?"

Los sat down with the others then chuckled.

"What?" Mirn asked.

"Oh, us. I mean here we are in this probability field, over a strange planet, in a weird field trip with a powerful psychic entity below sitting around as if all this is so normal." Los answered stretching her arms behind her head.

"The way it should be Mirn." Perdus reassured her.

"Los get an e-bubble going. See what the ship comes up with."

She rose again, shooting a wicked smile at Mirn and re-ran the sequence. In an instant the answer was there, a Natural in anyone's parlance.

"I assume we still go down Perdus." Nuhan queried. "I mean," he continued, "if they can blank out our minds, catch us unawares, how safe are we from committing self harm for instance?"

"Well Nuhan, our E component could easily block any attempt to interfere with our minds. Jez has her own protection. We had to let this run to see what it wanted. Us of course, by default though. Maybe it sensed us, maybe it did not. If it did, it would think us as powerful magicians. Of course it could have been a re-route. From Prima through them to us."

"Remote viewing via a second party." Jez said uncomfortably.

"That too. It cannot be discounted. We may have been discovered. That remains to be seen if it occurs again. If not then I think we are in the clear for the moment. But that was always calculated into the probabilities."

"What if they have our capabilities? You know some fusion of Primaian psychic abilities and our E capabilities? They might not even need technology then. They could be an alpha level world. Jez?" Mirn asked.

"Everything is possible until we get down there and know for sure. Remember Mirn I'm still in value neutral mode."

She nodded at that.

"Remember too everybody that our active E processors can come up with answers before we have thought of them. We'll be fine." Perdus said reassuringly.

"I hope the ship can think as well." Jez remarked.

"Have no fear Jez." Los answered.

"Do you think this presence could have picked up anything?"

"Doubt it. No one reacted, right?"

They all affirmed.

"Remember any probing or scanning and we get the telltale itch." Nuhan reminded them.

"Well that is that out of the way. Now Jez, you can go active. You others, engage your EAls, we are going down once the probes start transmission."

The ship's AI system was scanning the surface. The information came through thick and fast. Atmosphere breathable if a little thin, vegetation similar to their own, photosynthesis, iron rich ground but as yet no sign of life. Oceans were salt water, ice caps as expected, temperature cold, near zero. A fairly dry planet, low humidity, earth tremors meaning shifting tectonic plates, volcanic activity, slower rotation than Regum and a longer solar year given its distance from its sun.

Hours later the three dispersed pods landed. Tiny chemical rockets assured a soft landing. Upcoming data matched with that of the ship.

"There is one thing we must and the ship is looking out for. Centuries ago there was the Great Calamity. Source unknown." As Perdus waited for that to sink in. Then continued. "Some sort of carrier wave had moved through space. We think it was some sort of black-hole radiation or strange gravity assisted phase-wave. All we do know is that as black matter is being sucked into our galaxy, which is huge that when saturation is reached there is a discharge which caused the Calamity. It was seen by Prima as divine retribution. The rest is history. You all know the revision involved regarding this astronomical event. So what our scientists are on the alert for is a repeat of that discharge. It could come now it could come in a thousand years. Astronomically it's soon. Our ship is on the alert. If it does reoccur then all systems including our EAI's will automatically shut down until the wave front has passed. Just thought I'd let you know if everything goes off line. You Jez of course won't be aware of this. So if we all go into down-time you will know why."

An image of the front of a small pyramid appeared on one of the screens built into a small mountain range. Two sided. Dust billowing up where one of the probes had landed.

"Now that is something. Confirmation of civilisation. Weird design." Los said.

"Could be symbolic." Jez suggested, "Crypto-religious."

A fuzzy image appeared of it's interior. A vacant space and a raised platform. An entrance chiselled out of it's rocky facade. No sentient activity.

"Abandoned?" Nuhan asked himself.

"Architecture implies mathematics, the universe's decryption content. So is it outer or inner oriented?" Perdus asked rhetorically.

"Or both." Nuhan suggested.

Perdus concurred. "Fascinating though."

"With a priesthood perhaps." Jez added.

"Looks empty." Mirn was thinking.

At the laboratory on Regum the team was delighted with their success in not just inserting the ship and its crew but maintaining it within their designated PWF as well. Having confirmed that sentient life did exist on that distant planet with the probes feeding data directly back in the PW field-state the need to study this civilisation became paramount. The broad spectrum psychic scan had nearly panicked their mission head to create a decoherence to recall both ship and crew but the ship's systems remained steady. Water through a sieve. For now they were to hold off contact. That way the probes could gather enough data, upload it to the ship. Then let the wave continue its information target specific phase with the collected data available to them. The darkness that had enveloped them had also alerted mission control of new and possibly disturbing variables. That would need to be checked out. Was it a DV attack or curiosity below seeing the probes float like some star down from the sky. MC discovered it was not hostile. Definitely not Primaian snooping. On board everything normal. For the moment they were being contained in near zero time. As the probability wave continued to hold, so did they. Data banks full of useful information regarding Mars. The inserted missions thousands of years in the past having homed in on the ancient resonance frequencies.

Mars – circa 20000 BP

Nada and Amos were snug in each others arms. The sweet warm glow of their bodies satiated from their lovemaking, basking in mutual bliss. He pulled the soft sheep skins over them as they began to cool from their tumultuous lusting indulgence. A slight breeze entered the sturdy canvas tent's flaps. Outside the horses and camels were at ease having been fed and watered prior their urge to satisfy their love for each other. A whiff of rich dung wafted in the breeze. Outside the servants laughing preparing the evening meal. Potatoes and goats meat swimming in a rich succulent sauce followed by dried fruits and nuts washed down with cool white wine under a canopy of stars. The heat of the sun was slowly dissipating as it started to set, long purple shadows from the nearby mountains falling onto the tents.

Amos was lazily watching the small flicker of flames in the small brazier at the foot of their bed. The brass work held the glowing embers of hardwood, scented with herbs to sweeten the air and keep at bay the usual hordes of flies that always materialised out of nowhere, the air god Oebell's scouts it was said by some. To Amos flies were flies, it was the breeze which listened and carried their thoughts to the god.

Nada was playing with Amos's long black hair, twining and untwining it as if weaving her own dream around him as he looked up at the hole at the apex of the tent. Watching curlicues of smoke waft up and out. When the smoke was absent she saw the first sparkling stars. Nada worshipped Bahlir queen of the stars. Her starry eyes glowing eternal. Protectress of all life. Above her Urus empress of the empyrium, all knowing. She had paid obescience prior their love tryst offering prayers to Astralon, ensconced in the holy city and Jaffir their king to vouchsafe him long life and keep the city eternal.

Amos turned his gaze upon his love, her deep brown eyes revealing her beautiful soul, her steadfast companionship radiating inner contentment.

"You know we are lucky that our parents have accepted our prenuptial union given my father's, ahm, reticence." She murmured half in admiration of his gracious attitude towards Amos.

"You are precious, an only child. He probably indulges you and," he paused smiling, "I have my uses." She laughed and pushed his face gently away. "And my family whilst not as exalted seem acceptable to him."

"Just." She mocked.

"Oh yes. My father." Amos said slowly. "The older I get, the more I think I know him, the more I find him a mystery shrouded in some secret design of his or his gods making."

"The bond is strong." Nada said with certainty. "Now me I rarely see my father. Like all merchants, for ever on the move. Even staying in that circle, charmed some say by the will of the gods, sometimes surprising the earth goddess Rena to be granted favours. Reaping benefits with chests full of precious stones, and other riches." She frowned. "Sometimes I think it is all so transient. That it could all be whisked away by some capricious god who thinks both our families are just too lucky."

"Luck and politics." Amos added darkly.

"It's the way to overcome tribulations. Connections at court."

Amos staring up at the tent's slightly moving canopy. A slight breeze stirring.

"Whilst my family has to use servants to get introductions, written supplications and submissions from priests even. And my father a humble distiller of spirits and brewer of beer."

"A worthy task. To gladden the heart and free the spirit from its cares. He makes the best and thus is in Jaffir's favour." Nada reminded him.

"Sometimes."

"He has chosen a worthy profession. When times are good people drink to celebrate and offer libations to the gods. When times are bad people drink to forget what fate has decreed and accept their change of fortune soothed by the spiritual essence of his brews. And what, pray will you do?"

The sweat was drying on his body. He rose, Nada admiring his physique, his taut muscles, his cute bum as he walked over to the water urn and using the ladle washed himself, then with a handy cloth wiped himself dry.

"I honestly don't know. It's not an automatic guarantee that I follow my father or my mother. Brewing is precarious, the imps play tricks and can make beer sour. As for being a presenter at court, I don't know if I have the patience to listen to people's wants, their supplications be it to the priests or the king."

"You have graduated. You have the makings of an interpreter of dreams, gifted by lambar seeing the future in the flames. Your mind searches and finds obtuse answers

in the simplest of questions. Interpreters of the world, the sky, the messages hidden in nature are your gift. There can be profit in words as the priests well know."

"Yes but which priests? Those at court barely acknowledge my presence. The black priests seem to think I am one of them." He paused. Then: "They are the dregs. Sure they claim direct lineage and descent from our older elemental gods, vagabonds among the great empyrium..." And stopped as he held out his hand. But he was only balancing to put on his trousers and she laughed thinking it had been a sign. "And they want favours as well, which I cannot give them."

"Yes being at court has its price. The new faction of priests have Jaffir's ear, mind and probably his soul. Belonging to the Blacks even if the kings' favour is still precarious."

'Precarious' Amos thought. The new priests, who left the desert retreats, walked away from the monasteries and straight into court. Instantly accepted as a sign by the gods of a new age of enlightenment. The earth gods, the elementals were deemed dark, subterranean coming from a past that no longer synchronised with the new way of thinking. The very basis of their belief system was undergoing a change. To them for the better. The kingdom was flourishing, there was peace, the nomads at rest, trade flourishing with those distant hamlets and villages. Even the ancient holy centres seemed to acquiesce in the comfort of the burgeoning prosperity.

Amos though was waiting for a sign to show the way, which way he would orient himself. Until then he held his peace. Ideally he wanted both, the mysteries of nature and the empyrium of the stars. Maybe it was his mission to combine both. Maybe. It was in the hands of the gods to bestow their favour and enlighten him. Until then he remained in limbo.

"Well at least your father gives those who annoy him the worst of his brews claiming the mercurial gods have changed the wine or the ale. They grudgingly accept this as deemed by the will of the gods."

"And always there is Castari. Pretending to be some vice-regent." Amos complained.

"He is the wealthiest of merchants. His sons are working the bazaar."

"I know. Not easy for your family."

"Not easy for any family. But we're doing alright."

"Then there is Verhart at odds with this Efhan who claims the gods are really silent. Does not the thunder and wind speak their essence? Then there is this Bohlum, who claims everything is in the mind and that is that. Strange signs everywhere Nada."

"The strangeness is within them, not out there. Everything is as it should be Amos." She snuggled comfortably under the covers. "Your concern I can understand. You are of age and have not pledged yourself to any one god or gods. You are waiting for the sign that determines your fate and our destiny. Myself I will commit myself to Urus Empress over all, the sky, the stars, ruler of the universe. Might as well go to the top." She said delighted. "Then these priests will be her subjects, black or white. And Vehrat is merely deluded to think he is master of all. He will fall, the gods will not let him rise above his station."

"Except he has his spies. He is a dealer, accruing wealth as we speak."

"Yes his star seems on the ascendant. But stars also fall Amon."

"Oh yes."

Distant thunder rolled across the sky as the sun disappeared behind the volumous clouds. Adur the water god making his presence felt to remind them that the Elementals give their essence to nourish life, and withhold it if Nurdass goddess of the Sun wished it so to parch the land. The lightning flashed, lambar god of fire joining in the interplay of nature's forces. The gods were alive no matter what Efhan and Bohlus said in that desert school of theirs. Outside the horses were restless, the odd camel braying, in communion with the gods or those entities that were not-gods but still potent to cause mischief, even death. She felt their presence, their immanence. Out there hovering between the realm of the gods and that of earth. Exploring every crack to gain entry and cause havoc, master to none, controlled by none, answering to none.

The air was moist now, some of the servants offering prayers for the elemental gods to fructify the earth goddess.

"You know I went to see the king to receive his blessings as a teacher." Amos finally revealed.

"You? That is wonderful, if it is what your heart desires. I hope you receive the bounty you deserve. I can see why the black priests take an interest in you."

"Yes. But until I really know where my destiny lies, I refuse their advances."

"Ah a foot in several camps. Very wise. Learn you father's business whilst collecting paying students and be a prime philosopher. Give those muddled headed teachers out there a run for their money. Well the student's money." She content with his decision, or lack of for now.

Nada rose gracefully, her lean naked body reflecting the flames on her ochre skin, radiating it's light, a sign of lambar endowing her with his light. Then the dark thought of Verhart claiming no allegiance to any god, unpunished so far even though

an apostate. Yet he held the riff raff, the beggars and thieves at bay. As such Jaffir tolerated him. Amos had learnt much from his last visit at court. The servants for ever gossiping and receiving rewards for their information which everybody sought. It saved the royal treasury on spies. Verhat knew the pulse on the street, which meant he had the king's ear as informant. Even Nohrat, the military commander listened to him.

The distant thunder rumbled like his thoughts. The court was becoming more and more enmeshed in intrigue. Whether by design or the will of the gods Amos could not tell. A gust of wind shook the tent, just like his thoughts. Oebell was listening, carrying the thoughts of mortals to the gods. He hoped they sent his troubled mind to them so that they could show him the way. It was like a labyrinth in the holy city, so convoluted as to be confusing.

Nada dressed in warm pants and leather jacket, warm boots and a skull cap for the coming night. "Let us watch the storm. I don't think we will be moving any time soon."

"I thought we were going to meet one of the caravans."

"They will meet us on their way through."

"You're well informed." Amos said admiringly.

"Coming out? I got to relieve myself."

They came out of their tent. There were several others though not as grandiose for her servants. Her parents' caravan was on its way. Nada had been to the nomads on the desert fringe bargaining for camels and was waiting here at the oasis for her father. Nada now of age and a trader in her own right.

The air was surprisingly balmy. The wind gusted around them, to the west the hidden rays of the setting sun lit the thunderheads flashing with bright lightning, followed by a sonorous thunder. The air smelt moist, fresh. Nada went over to the dug out latrine, pulled down her pants and squatted, giving him a cheerful smile. Amos turned and surveyed the makeshift stockade which held the horses, camels and goats.

"Look at that." Nada exclaimed, "Behind you."

Three white streaks, three falling stars.

"A message from Bahlir. The goddess's messengers. Three, how divine." She said pleased.

"I sometimes wonder at the fire in the sky." One of the meteors came down close disappearing behind the low rise towards the dark hills.

"A gift for the earth goddess Rena. We," she continued, "should be thankful the gods communicate with us."

Amos was watching the other two meteors spread further away from them.

"They are precious ores, gifts. Don't belittle the wonders of the heavens Amos."

"The gods know best. Maybe they are displeased. Yet no auguries."

"Reminding us of their eternal presence Amos."

The sun was setting behind the bank of clouds, a rumble, a soft earth tremor, the stars coming out.

"It is a propitious sign Amos." As she looked to the west. "Shall we look?"

The others in the camp were excited, their voices carried by the wind, their words swept away in the presence of divine powers.

"You seem enraptured Nada." Walking over the hard ground. Tufts of grass and thorny bushes was all that grew in the semi desert.

"It is a confirmation."

"A dream?" he asked curious.

She was searching for the right words. The breeze dropped, the silence reassuring, creating it's space around them. The gods were at peace. Nada felt both something immanent, disturbing, as if warning signs were present yet still hidden from her.

"I felt alone in a barren landscape, nothing like this." Walking slowly into a dry gully. "A world devoid of everything, abandoned by the gods. No life, no trees, no shrubs just the desert and the mountains. No life Amos, you know how that feels?"

"Maybe...no, I don't know. Perhaps," he brightened, "you were on another world."

"Another world?" that thought had not occurred to her.

"You might have seen this place before the beginning. When there was nothing. To show you how it was before the coming of the gods, before we were created." Thinking it made sense. He dared not consider this could be the distant future. He gave her a reassuring smile. "Anyway no one else had this vision. It was just a dream Nada."

"Yes but dreams..."

"Not all Nada."

"No not all Amos." She tried to reassure herself.

"A time before the gods. Interesting. Never thought of it."

"It just felt both familiar and alien. For everything was gone." She shuddered.

"Yet you were there Nada. Maybe the gods have shown you a secret place that is yours."

"You think so? Hm." What was the point? What could she do with an empty world? Still she had been so serene. No sense of danger. "The vast emptiness seemed natural."

"A priest or a seer might know. Another world. Look at the sky, countless stars. Maybe you were up there. This world has a sun, so there could be others. It could be," he said vaguely, "this is where your soul will sojourn when the passing of life comes. Your future realm. To create as you please. A goddess."

"Ah Amos my love, you could be right you know." Though a little far fetched. But it was nice he thought of her. "Thank you, I feel better now."

They crossed the gully, a trickle of a stream two hands wide and clambered up the other side of the bank. The clouds flickered crimson in the evening sky. The gods returning to their own realm. All was as it should be. Otherwise the meteors would not have come. And three at that.

Amos wondered if the message was for him, a sign. The fall of three lives perhaps. Their lofty aims brought down to earth. The magus Verhat who was in league with the black priests, the white priests still had the ear of Jaffir. Then there was Nohrat, the king's military commander. Were these three doomed? Or the merchant families with everybody else spying on each other. Castari was the king's financial advisor. Then there were the gods in groups of three's. Nohrat suspicious of all the priests. Castari, down to earth, good natured. He kept an eye on the doings of the merchants. Seeing who was in or out with whoever. Another trinity counting Castari. It might be that they were predestined to be united. He let it go. Let the gods reveal what they will when the time came.

They reached the top of the rise, the valley spreading out below. The large black waters of the lake, reflecting in liquid silver the lightning, the clouds blossoming lilac momentarily, the air fresh, the silence once the thunder had rolled away complete. The animals of the night would soon come out to the lake. They both had their knives but Amos wished he'd brought his hunting spear, or even his bow and arrow. Feeling drawn to where the meteor had landed hoping to find some answers and getting some peace.

They stopped at the ridge. Amos scouting for the heavenly rocks. His mind felt like the wind, agitated, disturbing his concentration. Some dark shapes were at the water's edge. The first nightly visitors.

"When we are all back amongst the stars this is what this will look like."

Amos took a second to realise Nada was still with her vision.

"Possibly." He concurred. He could not imagine life ceasing as long as the gods were there. As they were eternal so was life. Could there be a future end?

"As long as we have visions and dreams, all is well Nada no matter how strange that vision. After all the insane have their dreams whilst fully awake."

"Vessels of the gods overfilled with their power. It could be that when we are gone in some distant future the gods have no need of this place."

"It is all speculation Nada. Wait and see." He reassured her scouring the landscape for the fallen stars.

Another flash of lightning. Then he saw something silver. A strange shape.

"There." He had been looking too far, it was before the lake. For a moment it flashed brilliantly, then darkness resumed its mantle of night. The object a silhouette looked like a panelled ball, shape shifting whilst remaining the same. Nada was walking towards it, her tread light, cautious as if on a hunt.

He followed her down, lightning lit the sky and way beyond her at the foot of the mountains past the black lake the triangular entrance of the ancient temple. Night threw her cloak over the landscape. He had sensed hoary malice, an ominous presence shrouded in preternatural gloom. Then it was swallowed by the night. Amos blinked to make sure he was awake and not dreaming. The darkness at the base of the mountain exuded a brooding palpitating ethereal recumbent sinister intelligence. Awake, no, more like a dim heartbeat. Each thump pulsed through the air, through his body, vibrating within him. Its vibrations ghastly, surging around him, drawing him into its void like realm. The presence of an unknown god.

Nada felt it too but thought it came from the weird shape some distance down the hill they were standing on. She had seen visions of outlandish buildings, cowled priests paying obeisance to a monstrous sky god who as giver of their lives demanded total and complete obedience. One god and one god only. Those who clung to the past were driven insane as divine punishment. Maybe it was this god that had emptied the land of life! She shook with barely suppressed emotions at the monumental threat. The vision made sense now. Their gods were to be destroyed!

Dark waves pulsed through her. She saw cities fallen into decay, people dying, the heavens on fire. Dark cracks of night the sky fracturing, the ingress of the wrathful deity supreme. Those who did not bow to its will were doomed. No afterlife, just ashes blown away by the winds. Dispersed and their souls captured, ensnared, ambushed into its fearsome region of malignant hate. His acolytes lived in its thrall dominating the fear

stricken who wished to remain alive. Enslaved to its monstrous demands of complete obeisance and doomed like the serfs of old to toil for their hard task master.

They heard the snorting of horses, the jingle of stirrups, the spell broken, a mist wafted away by the breeze. Or absorbed by whoever was behind this horror, dispelled, the voice familiar: Verhat.

"Ah the beautiful daughter of Ramradi, Nada and Amos, son of Krahtus." He said amused. Turning they saw he was with two companions.

He dismounted throwing the reins to one of his aides. "Surprised?" his levity suffused with his cock-sure barely contained hauteur. "Lady Nada." He bowed, almost mockingly so.

"Verhat." She answered graciously her gaze holding his. Most people avoided eye contact for fear of being possessed by his powerful personality.

"Seeing what the gods have delivered unto us?" he purred.

He too must have seen the falling stars. Or was he connected to the strange temple? Amos thought. His father a court astrologer as well. Amos familiar with that families machinations in the temporal and spiritual world his father shared. To know the secrets of the stars. Verhat barely tolerated his father seeing him as a competitor for the kings ear rather than both being complementary. The overweening pride of Verhat jockeying at court to be the kings most trusted advisor.

"To seek celestial answers and to walk with the gods on a divine night such as this. So many revelations Verhat." Nada replied with deliberate mystery. Amos understood she too had sensed this obsidian outpouring, this dangerous void like elemental force.

"So the gods have spoken." He said as if commenting on something mundane.

"They bring the gifts of prophesy Verhat." Nada held her gaze as the two were now locked in some mock battle of who would disengage first.

"Oh yes, the minor powers of the cosmos." Verhat could not help but trumpet his heretical view that individuals, such as himself, were the measure of all things. That he controlled his destiny and forged his own fate using the gods for his aims. "Useful creatures." He mocked.

He told his men they could return to camp. Custom dictated any traveller be accommodated when in the distant lands and semi deserts between the isolated settlements at the edge of the kingdom. They grunted and veered round, trotting of leisurely.

"Shall we see what the gods have bequeathed us?" and walked slowly towards the strange glistening object. They followed Amos keeping alert. Wondering whether the

ancient temple had anything to do with Vehrat's presence. But he seemed focused on the odd looking heavenly stone. Nada and Amos exchanged glances as if saying: you sensed it as well.

"Oh yes," Verhat in his long flowing black cloak, "Bohlum's school of Natural Philosophy. Denying the gods. Not good. Corrupting young minds. The king has let him live. So we agreed to banish him. He is now on his way out of the holy city and banned from setting foot even in Kahleff. We'll see if his nature philosophy will see him survive with the nomads." Vehrat said dismissively, letting Nada know just how much influence he pretended to have at court.

Bohlum Amos knew was an old man, and his nature philosophy both simple and confusing. To Bohlum, if the gods did exist they were in the cosmos, their powers secondary. Nature was suffused with energy, and that was that. It was impertinent to think they would be behind every falling apple, every sneeze, the voiding of bowels. For if they were they would have no time to keep order in the cosmos. It was an intriguing idea one of course denied by the priests and priestesses.

"Soon the revelation will reveal all." Verhat continued as always, preaching a new spiritual age when some supreme divine revelation would usher in a new age of spiritual redemption by an as yet unseen manifestation of the gods who accordingly were in council to combine their strength into one supreme unitary wholeness. The chaff would be weened out, a great divine cleansing where the fallen, the weak, the misguided separated from the divinely chosen: the making, the coming of a divine race and most likely Verhat as it's undisputed leader in this cosmic revelation. Naturally Jaffir would rule over this kingdom

"The splendour ours to behold, or whom the gods deem worthy to embrace. Even the stars are in agreement. A great alignment is slowly being assembled. Yes," he said looking straight ahead, "no one can deny that the gods will be as one. Our redemption."

What worried Amos was the calmness with which Vehrat declaimed all this. He was no fanatic like some hermits in the desert or some devotional priest who shut himself off from the world to seek divine guidance. Then more often than not becoming unhinged. To Vehrat they were the blessed, overflowing with spiritual power even if the vessel was flawed. Worse was that both the black and white priests were not denying Vehrat's strange prognostication. He had a way of convincing those around him of the righteousness of his vision claiming merely to be the gods messengers, not even their apostle.

The walk down the hill seemed to take forever in Verhat's presence. Time slowing not dissimilar when under the influence of the sacred mushroom.

"Status will mean nothing Nada. The Exalted will be chosen by the combined strength of the gods. From the obscure to the most wealthy, united in a new cosmic harmony. Only those who have felt this cosmic unity can understand this."

Amos was well aware of what Verhat was going on about. But it came from within not without.

They arrived at the oddly shaped almost round thing. Small flat reflecting surfaces, tiny holes below, small protrusions on top. A discernable hum emanating from within. It was alive. Verhat drew out his dagger and prodded it. The clunk sounded metallic but softer. Tiny honeycomb patterns were engraved on it. Not everywhere but nearly over the small flat surface that formed it into the odd shaped ball.

"Maybe the king should see this." Verhat thought for he wanted to study this at his sumptuous accommodation at the palace.

"If the gods had wished this they would have placed it there." Nada replied.

"Yes of course." Verhat hastened to agree. He was annoyed. This odd looking ball was so close to the temple! Were the gods mocking him? Denying his dream? The moving stars were aligning and when that occurred they not only would know where the gods dwelt but the gods would pour their divine libation onto this world. Maybe it was the eye of a god. To protect his temple and keep its strange mystery from the profane. Or a gateway to other realms. He kept his thoughts to himself. Those other realms had powerful beings not unlike himself. Glittering cities of magical proportions, strange devices of which this could be one. One thing was sure. This was no desert mirage. The eye of a god. Which one? Hm. The coming unitary god?. Sending strange signs. Powerful with extraordinary magics. He had to make sure that he was on the right path. Otherwise they would remain in this situation for all eternity. He had no wish to remain in this primitive state.

Nada was worried. If the gods were aligning themselves with this unknown hidden god what then? Maybe they would all be called? Was that the vision? All one with the gods on this sacred planet and its life giving Sun, the power of Nurdess. Then she got a fright. What if she were left behind? Again the desolation of just herself and one dead earth. The anxiety passed quickly for in her dream she had felt at ease, not lost, not left behind, not denied but whole, complete, transcendent. The gods were surely puzzling.

"The eye of Bahlir." Nada mused. "I wonder what it thinks of you Verhat."

"It will see me as I am." He was surefooted.

"And your dark secrets." Amos could not help himself for Verhat was a master of the occult arts.

"Dark to the unenlightened Amos. The fear of the blind, the trembling of the deaf, the apprehension of the ignorant, the jealousy of the arrogant who think only they are blessed by the gods. When instead they were short changed due to their flawed soul. It is of no matter." He said assured of his own powers. "Even unto my enemies." He sneered.

"Yes quite the success. So why the priests? Not as erudite as yourself." Nada remarked calmly hiding, just, her cynicism. More like flies to a piece of shit.

"Drawing out the poison." He answered easily walking around the humming object.

"Careful that it's vapours do not unhinge you." Nada said with relish.

"When the cleansing comes they will be seen too." Studying the strange object. "You think the gods favour the dismal sniping of yapping mongrels. Deceived by their own deception." Having circumnavigated the odd shaped artefact. "I am only the instrument by which the divine plan unfolds. And even were I to ascend to my rightful place amongst the stars, others will follow the divine plan. No one can pre-configure my demise." Stopping in front of Nadar. "You see I am meant to be."

Verhat certain of his powers. His determined presence his shrouded mind, his careless indifference regarding his opponents and there were many, who put it to the king that Verhat was using demonic spells, crafting spirit essences to confuse and delude those he came into contact with. To no avail. Jaffir was impressed with Verhat. The man could save souls, cure the insane, create fortuitous situations whereby Jaffir profited both in power and wealth. Soothe his worries with charms, have women fall in love with him through spells, Jaffir had it all. Even the priests could not compete. And as long as he stayed out of Nohrat's way Verhat was the second most powerful person in the kingdom. Amos also heard from his father how unassuming Verhat was at court. Nearly invisible. He knew the rumours in the market, the attitudes of the merchant families, even that of the troops, giving sage advice to all who sought him out, often profiting from his preternatural knowledge.

"Well blessed Urus, Empress of the Sky, ruler of Bahlir's realm of the all seeing stars, what do you see?" Verhat asked the object.

The hum continued. No reaction.

"See all there is in my soul, reveal then to all the vision granted me." He challenged it. 'Or keep my vision from those not aligned to the force I harbour within me.' He thought, his mind ablaze in the knowledge that he was not chosen but had chosen himself. To be the First among their race. Create the conditions necessary for the Coming Age with himself at the apex.

Silence. A slight breeze, splashing in the lake. Cautious animals in the distance, the calm night sky above. The thunderstorm subdued into recumbency.

"There. Bahlir is silent. " 'I feel all is well.' He thought determined to fulfil his destiny. The gods could do as they wished. He was in control not they.

Orbital: Prima

Displacement of the spatial domain over Mars. Scouting DVs fed back to their controllers the moment the `Explorer I' inserted itself riding the collapsing PW. Kroena running the DVs forward reconnaissance saw the sleek white spaceship above the light brown planet. As the remote viewers locked on, holding the inserted field Kroena was jubilant. They were not simply getting the effect but also the cause. These DVs, were inside the articulated resonance, getting the numbers, the location, the method of application within their data sets of equations transforming energy into real time matter. They were reading the methodology of the Reganian insertion techniques. Kroena downloaded the data into a separate file. This was simply too good to miss.

"We have contact. Thanks to Regum." She linked up with her superior Elentra. She came over straight away.

"What you got?" standing legs akimbo, arms folded her auburn hair glowing under the overhead strip lights. Her face pale almost gaunt. The orbital had just returned to normal after that spike that had hit them. The last routers adjusted, the nodal intersections connected, the system brought back on line.

Elentra looked at the Reganians out there. She checked the status of the alien field and found no aberrations. Though Kroena didn't know it Elentra had been aware of the first test run on Regum regarding their PW insertion field. Then waited patiently for Regum to make their next move. Vigilance paid off. This insertion field was exactly the same as that of their initial run. Except on a larger scale. Denser codes due to the extra energy, the massive wave itself collapsing according to their design.

"If they can do it," Elentra watching the codes stream down the screen and into safe files, "then so can we. So let's see how good you are. Group three. Disengage your back up and seek the source." The team leader Khral of group three acknowledged the order and had his DVs scout immediate space to locate the source of Regum's PWF.

"Acknowledged Kroena." Came the instant reply. "Refocussing and searching."

"Good luck." Though luck played its part it was determination that reaped results. "So they initiated contact." Kroena said to Elentra. Her second in command. Risea had just arrived as well. "So far the sweep of their space found nothing. The field is being generated elsewhere." Which Elentra knew but was keeping to herself. They had to find this for themselves. By deduction. It might not always be this easy. "Distant, light years away." Khral said as he worked the console. "Ah Regum's space not so vacant. A self contained bubble further out, along the spiral arm." Khral had it. Along with a strange ghostlike presence momentarily glowing dimly. Perhaps some after effect she assumed until further verification came in.

"Rerun the current sequence back to..." looking at the counter, " two nine one to two nine five."

Khral reran the sequence.

What had that misty flaring gossamer thread been? Radiation leaking out from these inserted PWF? Maybe.

"Log that and separate it from the rest, new file."

"Done."

"Study it later. This is really good." Elentra allowing herself a smile.

Khral had forgotten to disengage from the rerun Elentra had asked for.

She noted a constant reconfiguration. Separate from what was over that planet. Unrelated. A chameleon cover camouflaging its origin. Trying to capture an ethereal phenomena. The Reganian's were smart. Running two sequences at once. The ship remained in view. So were these strands of coruscating energy. There seemed to be no source. With its shifting spatial coordinates it made tracing impossible.

The ship was shielded. All they got was it's mass, it's content immutable from probing DVs. Kroena not happy but there was nothing to be done. At least they had a fix on the alien planet, the ship, the crew.

As for the lambent wisps of remnant matter, Kroena shrugged. Let the computer analyse it. Could be anything. Space was strangeness ever since the alien field had appeared. Could be some wash back like a wave receding into the ocean leaving detritus behind.

"Khral, when you and your DVs got time study that sequence I just asked you to store. When you have time. This takes precedence."

"Understood Kroena."

Kroena's second thought was whether to inform Lord Qatus or wait. How he would take this development would be interesting. With their resonant signatures the ship was manned not a mere probe. To give herself extra time she consulted with Elentra.

"Assimilate more data. Might get our DV assault teams to dive in and crash them. Tempted?" Kroena smiled.

Elentra noted. Good. Kroena solid, an excellent second-in-command.

"It's real time, active. Successful physical insertion." Risea looking at Elentra who was looking at the gossamer strands of pale lilac webbing.

"The DVs have the ship. Their team sent down some probes. No other activity. All under control. So I thought I'd follow up your secondary instructions."

"Just don't lose sight of the primary objective."

"Of course not Elentra. I've got some DVs scouting for this source. Barely noticeable. Bits of data, incomplete. In tatters." Without going into the details of the implications. Not their concern. Regum had mastered the tyranny of distance. The universe was theirs now as well. What they had done using their DVs Regum, no surprise, achieved physically.

"OK. Store it. Let the computers analyse it. Might have been blown during the insertion. Curious." Elentra more talking to herself.

"Look Risea. Three resonance levels. Three. One is the base-line though they are all intertwined. Then there is the boosted resonance field throwing it's mantle around the inner shifting fields and the enhanced fluctuations giving the real appearance of being there and somewhere else simultaneously."

"Advanced." Risea noted. "Getting closer to the inserts."

"Very."

"What now?"

"We hang in there. We don't want to alert them just yet meaning that we're onto them. Depends on Qatus." Kroena explained looking at Elentra who nodded slightly. "Plus we have to find out if this camouflage is sentient generated as well. Until then it would be foolish for us to reveal ourselves."

"Of course." Elentra agreed with her matter of fact attitude. The three women thought alike, their resonance's synchronous. The perfect team, even if Khral the fourth member was a man..

"They must feel pretty certain doing this."

"And don't seem to care either. Still we got eyes on the planet."

"Ride in on the DVs resonant waves."

"You got it Risea."

"Insertion next?"

"Anyone in mind?"

"Several Kroena."

"One will do for the moment. Test the field, the inhabitants. As you can see we're starting to upload their race's resonance fields. Sentient leakage." viewing the other screens linked to the DVs "Create a composite so that whoever we choose will fit in down there. So who have you got in mind?"

"A bit ahead of ourselves." Kroena suggested politely.

"Not doing anything just yet. Just planning ahead. You watch, the DL will want some action down there. So who would you choose?"

"One with a particular, extremely dense resonance. Very stable, unfazed."

"Yes. The right profile."

Risea having listened, approached a console and called up her choice. A brown skinned black haired mature man. The figures confirmed Risea's information. Stable, secure, mentally tight, focussed, unperturbed, relaxed.

"Kohr's profile. What do you think?" Elentra asked. She did not have to ask, she ran the DV section. That included forward targeting.

"Computer's choice."

"Alright Risea. Tell him to start immersing himself in the planet's resonance field. Then when he's familiar enough to feel comfortable with the field he can go, remote. The DVs covering his insertion. Distract them a little."

Risea typed in the order. Hovering in space Kohr received the order to focus on the planet. He started remote imaging from the data he received from the orbital acknowledging Risea's order.

"Right we got that done. This could be easy for us Risea."

"Yes, they could have used remote devices. In and out before we even knew it. Instead, this."

"Well they must feel secure given their approach."

"All we have to make sure there is no feed back. Otherwise they'll know we know."

"Time for an update Risea. Kroena you're in charge. Don't let Kohr get too excited. He's a remote observer for the time being."

"Understood."

The two women left the control centre and walked into the shielded secure room. Just a desk and several chairs. Risea waited until Elentra was seated then sat herself opposite her.

"No need to go into the background. We're both familiar with the overall situation."

Risea nodded. "The information within the alien field. The psycho's..."

"Correct. Your assault targeting group feeds info directly to my domain. No one else. Except Lord Qatus. And even then," she allowed herself a crooked smile, "it is sanitized. No need to belabour him with unnecessary details."

Risea returned the smile. She understood. Information was power and Elentra along with Kroena wished to remain where she was. So did Risea. They had an unspoken bond between the three of them.

"For some time now your DVs have some of these sentients under our influence. Remotely. Not that they know it. Well they do sense something other and think it's their god's talking to them. Give them a glimpse of the bigger picture, tailored to their mind set. Now conversion is not on the agenda as such. This is important Risea. No matter what the relevant DLs or even the pontiff may wish it would not be in the mission's interest to go barging in with our cosmic view. Let them come around slowly."

"Agreed."

"Now to the Reganian's. Ever since their initial successful test it was only a matter of time."

"You mean you knew?"

"Hey I'm not the top pinhead here for nothing. At least once the success was theirs we knew they'd follow it up. So what is their real intent? We can't get to them just yet. Are they exploring? Curiosity for its own sake? Yes. That much is obvious. So, will they go down? Perhaps. They managed to get this far so that is a real possibility. If they go down as scouts with no intent to unduly influence them then we leave them alone. No need for us to reveal ourselves. Let the dogs run."

Risea guessed this was Kroena's approach. The DLs would want instant and total domination. Come in full on. Blow their brains away, overwhelm them. Instant transformation. And leave a mess. Elentra, Risea and Kroena wanted more. Find out about the race below, then act. Not come barging in with the DVs as sledgehammers.

"Contingencies."

"Precisely. Who knows what they know. If we dominate we wipe too much out."

"Not forgetting how they'll react to the Reganian's if they go down."

"Right on the button Risea. There is something else to consider."

"Isn't there always."

"Not according to the Divines, the Exalted, the Domimax and the rest."

"Don't tell me. I don't want to know." For Risea did not like their insistence of always pushing the same religious theme. Delete the alien field, subsume their consciousness. Replace it with their divine vision.

"As the Reganians seem so secure having achieved this we can safely assume this is not an end in itself."

"Aha."

"Regum has broken out. Naturally we are scanning their planet. But given this technological master move you can see the implications."

"Oh yes Elentra. They could insert anything."

"That is bad enough. But there is a subtle angle to this as well." She teased letting Risea wait a little. "Remote programmes. Pure data, information."

"Now that I did not think of."

"You would have sooner or later Risea."

"I'm beginning to understand. Information is everything. The official attitude by our exalted superiors," she mocked slightly, "is sort of self defeating. You have to know what you're up against."

"Glad you agree. There is something else."

"Why am I not surprised."

"Now that they have been successful they can target Prima. Right through our resonant barrier. We have been shielding ourselves from their psychic probing AI's for just about for ever. We are the same race. They know us as we know them. In other words they can insert their own operatives onto our planet and we would be hard put trying to uncover them. Inserting ships is one thing, inserting configured agents something else again."

"Well we'll have to alert those DVs who are with planetary security."

"Correct. Who knows what we will discover in the process." Another sneaky smile from Elentra.

Risea waited. She had her own idea but let her do the thinking.

"By re-focussing on our home planet we also focus on our own. That includes the DLs. Soft scan's only. And that data Risea stays with us. You got that?"

"Elentra. I'm with you. Fantastic. We'll be the data-lords."

"Something like that. Not to be revealed of course."

"Naturally, you have my word."

"Glad to know. Not that I doubted you."

"Thank you for your confidence."

"Hey, it works both ways now. We're in this together."

"Together it is then."

"So you wanna go down and give them the good news or shall I?"

"Given what their take will be on this...I'm assuming you'd prefer me to see the DLs."

"Let's hope it remains with Qatus. Who knows what he might get up to. But if the other two know, then, well, no one will be in total control. Except us. So I'm gonna give as little as possible."

"Great Elentra. You going?"

"Hm. Maybe you or Kroena. Doesn't have to be me."

"If Kroena doesn't want to I'll volunteer, with pleasure." Her eyes twinkling.

"Right, you can catch the next shuttle down."

It took another day for Risea to get an appointment with Lord Qatus. He suggested they meet at his asylum. With constant visitors her presence would not be noted. As one belonging to the order of the Domimax she had clearance to be almost anywhere. Her sensitive mental state might be borderline Volatile but that would not be a problem where they were to meet. Her resonance would barely be noted by the containment fields. She was well within the parameters.

Qatus sent his own plane from the space port. The cordon of security in place was nothing like she remembered. Did they know what she was relaying? Or had she been away so long she'd forgotten just how paranoid ground control was. Or was there something else going on down here. All she did discover was an incident, of some staff going rogue, reverting to unstable volatile status. The alien field was blamed. Pity for the fallen. It happened even to the best.

The VAV lifted off blowing a cloud of dust around it, heading out to Qatus's asylum. Risea felt out of place. Before, when studying as a prospective candidate to serve on the orbital either with SpaceKorps or the heroic DVs, an abnormal psychological state was not so disturbing to her inner balance. If the unwashed masses in the outlands knew, or the elite families to which Risea could make no claim, that the front line was manned by stable volatiles there'd be probably a riot given the pretexts of the priests laying down the law. Certainly disquiet. Not that the SVs were on the forefront

themselves. Rather than being a V was not the inner disgrace which the priests made out. The Families would probably splutter into their cocktails their consternation that the impure Vs had any use at all. Being saved by them from the alien threat seemed counterintuitive to their strict adherence to the spiritual come social pecking order in which they found themselves somewhat marginalised.

The desert passed rapidly below. In the distance the dim misty outline of the rich green forest surrounding the holy city. Whilst the lesser DLs asylums were in the provinces then by rights only the pontiff's was at the centre. Qatus managed to have his domain set at the edge of the suburban fringe. Given his aloof disdain for the outlands the suggestion he ought to minister to the fallen in his domain he dismissed with disdain. As Outer Guardian he reasoned it was his duty to be at the centre as often as possible. Gharbel the highest of them all did not even bother with his assigned duties. He had a surrogate spiritual advisor to fulfil his duties which the pontiff accepted. It released Gharbel from the tedium of looking after the Fallen so that he could concentrate on the more important political aspects regarding the other DLs who all wanted more access to the holy city. To them the provinces, their domains, were the pits.

The reason Risea was only too glad to get out. Up in near space the pecking order was less obvious. They all worked together irrespective of their resonant states. Since it took a specially focussed person to make the grade an unspoken camaraderie meshed them into a community of their own. Even the division between themselves and SpaceKorps who secured the orbital was somewhat underlined.

They were flying over the thick wooded forest below. Then the sprawling suburbs of the elite and their servants. All vetted so as to be of the appropriate resonance; simply pure snobbery. By surrounding themselves with their own kind they were far more isolated mentally than the community spirit in the outlands where everybody was more or less equal. The feeling of being a V Risea never wore on her mental sleeve but kept her mind open to those she worked with. Dismissing the suffocating rigid social stratification of Prima's society. She took individuals as they came, one reason why she gelled so well with Kroena and Elentra.

The pilot was approaching Qatus's asylum the LZ set in spacious gardens. She doubted it was for the benefit of the inmates to create a bucolic setting. More for the DLs and their staff so that they could pretend to be in touch with nature which in the outland's was often a struggle keeping wild animals at bay from preying on their flock of sheep or cattle, fighting summer forest fires, suffering the hordes of flies, dispersing flocks

of birds that fed off their fields of wheat or barley, keeping incessant nature at bay. Not to mention hailstorms, floods, frost.

She saw the asylum, it's administrative block, the dormitory for the staff and the patient's quarters all dispersed among verdurous gardens. They landed smoothly at the front of the admin block. Happy to stretch her legs, her report in her head, no notes for the information was too important to leave any trace of Regum's astounding move. By now she had accepted their scientific and technical triumph, almost in awe at their audacity and their nerve to not so much challenge Prima but ignore them without the least concern of how they would react. Obviously the DVs were of limited use. They had neither foreseen this momentous event, nor been able to obviate the astonishing move for them to be completely dominant in space. Knowing the Reganians their WebSpace probably had expanded as well. It seemed there was no stopping them. That should please his lordship.

As she walked up the broad stairs she sensed the inner repressed turmoil of the patients. Hyped or docile through drugs. This heightened activity, sometimes coming to the fore amongst the DVs now vibrated at a level of the mentally distraught. She had been away too long to notice just how potent their minds were. If only they were focussed. Up there they were more adjusted, having been stabilised by moving through the ranks of the various domains. Until constant enough to focus on their holy mission. Risea realised, being too busy with her duties, that she barely contended with the spiritual side of their divine objectives. She had not prayed since first coming onto the orbital. She had never been in communion with the divine, never felt it, never connected with the Divine Consciousness which was probably a plus, leaving her to concentrate on her function as second in command to Kroena and the forward assault DVs. At least their section was making progress in holding some classified individuals on that distant planet in their thrall.

An aide, a young priest in his black gown was waiting for her in the foyer. Doctors passed her, nurses with their aberrant charges, support staff going about their duties, the gardeners, policing security details ever watchful of not just the patients but even visitors such as herself. At least she was not given a visitors badge. She was too high in rank to be classified with those who wished to be with their fallen ones.

He gave her a momentary smile, the same age as her, mid thirties. She wondered, unless he wanted to move up in the Ecclesiastical Orders why anyone would be a minister to the masses. They accepted their lot irrespective of the priests who constantly reminded them of their sacred duty to the social order of the planet. Well at

least he was starting the slow climb out of the sludge. Serving Qatus was a coup in itself. She wondered what he had to accomplish to get even this far.

They walked down blank corridors, out through the back into an inner courtyard and into Qatus's own retreat, a small bungalow set well away from the bustle of the asylum. Onto the veranda surrounding the tiny but opulent house. He knocked on the front door. A servant in the garb of one of the many spiritual orders, in mauve answered the door and the priest left her in his care. Down a corridor and out the back where Qatus kept his study.

He was reading some reports. Bookshelves to one side, forbidden knowledge for the masses. Dealing in their ancient folklore deemed tainted by the old gods, tomes of history classified, restricted. Not that Prima had any history. The planet had been as it was for centuries, eternal in its present, aligned to the will of the Cosmic Consciousness.

He looked up, clad in his magnificent royal magenta gold crested robes, a ring with a glowing ruby glowing in the light coming in from behind the open windows, all set in a pleasant garden. To her right a decanter of an exquisite liqueur, a bubbling coffee pot on a sideboard, two reclining chairs around a fire place now empty, paintings of mountain streams and wooded hills under white towering banks of white glowing clouds. All very earthy as if Qatus had to remind himself what the planet looked like living in the city.

He welcomed her, rose from his desk after having removed the papers he was studying depositing them in a drawer and magisterially walked over to one of the reclining chairs and offered her a seat.

Social niceties over she reported what the Reganian's had achieved. She gave an analysis of the technical feat, though no one on Prima would have a clue just how they had moved a whole space ship and its crew through space just like that. Implications were broached and an update on the situation on Mars itself through what the DVs continually uncovered. Qatus remained silent, absorbed, attentive, staring into the empty grate, now and then rubbing his jowls. A sign of the good life no doubt. Occasionally looking at her with his coal black eyes. Risea was used to that look. She was familiar when the DVs were in their 'state'. It revealed a potent soul, a strong determined will, a sense of inner supremacy. Being focused on her report the look was more of interest than a probing attempt to get into her head. Her resonance was in place letting his reflect off hers. No one ever got inside her head. Not yet.

She was done and waited.

"So, they have mastered space." He repeated. She said nothing about that. He seemed to await further information. She broached the possibility of how they could insert possible agents of influence onto Prima itself.

"The containment fields would pick them up."

"Not if they faked their RS Lord Qatus."

He considered that wondering how they managed to keep their move so secret. The priests and their agents on the planet, their scouts in their WebWorld not even the DVs had foreseen this. Disturbing.

"What about the system's used, their computers."

"Probably isolated." Understanding his orientation. Meddle with it once it was located. Prima had this belief that somehow psychic minds could actually influence the processing end of computers, scramble their memory. From what she knew of computers there was no chance. Computers were too basic, they were machines nothing more. Of course manipulating the operators was something else entirely yet the DVs had not infiltrated whatever base the Reganians used. He would have to ask for that himself.

Qatus was thinking of how to shut down their control centre. Something had to be done. The Reganian's would be on the alert for Prima's reaction. Then again being so sure of themselves, given their success, Prima might not be able to do anything.

He thanked Risea, asked if she wanted some refreshment. It was a way of engaging her. Risea was not inclined for chit chat and thanked him for his consideration. He accepted her declination and had his butler escort her back to the VAV he had made available for her.

When she was gone he placed a secure call through to Lord Pentham. By rights, given the uniqueness of the event he ought to inform Gharbel as well. But Gharbel was the Inner Guardian. Not until the Reganian's penetrated their space would he inform Gharbel. He smiled at that.

When the VAV returned Qatus flew off to Pentham's domicile. His estate too was at the edge of the city but at it's opposite end. He with his pilot flew around the city for unless heading for the pontifical palace no air traffic was allowed to broach the sanctum of sanctums. Pentham. Good natured considered a lightweight amongst the Domain Lords. A bit like himself. Barely focussing on his domain without ever losing control of what was going on. Pentham, usually indifferent to the gravity of the situation regarding the state of the universe, pliable and suggestive to political influence Qatus knew he was playing his own game. Telling whoever he was with what they wanted to

hear without giving anything away of what he thought or considered. As such he was a wealth of information, mostly gossip. His indifference useful in gaining insights about minor indiscretions, or the state of palatial politics. Pentham let the others do the talking who sought favours or influence from him. Not that he delivered.

The two of them were sitting on his back patio overlooking the forest stretching away from the suburbs behind them. The sky cloudy, a chill in the breeze. Autumn in the air. Pentham, his demeanour always correct, looking every bit the landed gentry tempted him with one of his excellent wines. Qatus rarely refusing declined, wishing to keep a clear head. Pentham said nothing and had his servant bring some coffee. Qatus was considering how to formulate a response to Regum's move. The bar had been raised considerably. An understatement, it had been moved beyond the limits of space itself.

Qatus laid out the bare statement of facts. Pentham listened, neither surprised or even taken aback. Well he was the technical advisor dealing with Regum's WebWorld. Probably familiar with its strange scenarios. Even if only as cyber-fantasies. The fact they had successfully inserted a space ship at that distant planet got his attention. Delighted which confused Qatus momentarily. Anyone else would have been concerned, surprised or even appalled. He found Pentham's attitude a little disconcerting. It was a way with Pentham. He had the knack of keeping others off balance. Pentham was beaming. Anyone else responding like this would make them suspect. He would have to wait what Pentham really thought.

"Science." He radiated with unsuppressed pleasure.

"A worry." Qatus tried to remind him of the gravity of the situation.

"It will be, for them."

What was he thinking?

"All we have to find out is how they did it. The DVs seemed to have been circumvented."

"Is that the reason for your levity?" for the DVs had been obviated. The implications of this intelligence failure alone...Qatus reminded himself he would have to go over this, foreseeing possible discomfiting consequences. The DVs were a sacred institution. With some success on Mars. The planet finally had a name, and names contained the essence, the spirit of the place.

"They played their trump card. It's all in the open now Qatus."

"That much is true. But that is not what concerns me."

"Oh?" Pentham asked. Fishing for information.

"They can be anywhere now, at any time, in any space. Masters of the physical universe."

"Physical universe. Correct assumption. Or put another way, on the outside. We are masters of the real domains, the inner reality that processes the outer data. We are the masters of inner space."

"Of course. But they are enhanced now, the DVs never had a fix on their team."

"Even so. Physical enhancements are limited relative to the system in use."

"Lord Pentham," he waited as the butler rolled in a trolley of coffee, milk, sugar and a plate of delicious biscuits. When he had retreated Qatus continued: "They already create false realities in the Web. They could insert false realities into space. Like the ship. We have barely scratched the surfaces within the Web. There is no reason why they cannot do this in the real world."

"So what."

"So what? Do you realise...yes I think you do." And probably did as well.

"A minor blip. Consider. We have that distant planet under our sway. Controlling the Reganians just now would be presumptuous. So they are there. They may even fall, once the DVs have an image, under our sway."

"You think it's that simple. That nothing much has changed."

"Technology, no matter how dazzling is still technology. Gadgetry. Impressive yes. Maybe mind boggling but always delimited by the mind which created it. Remember they are of a lesser resonance. We'll get on top of this." Certain.

"Well given you're the technical expert..."

"What would I do?" as he poured a cup for himself, adding sugar and milk and handing it to Qatus. Then he served himself. He took a sip, tasting it, was satisfied and answered: "If we can penetrate their control centre then it's just a matter of reconfiguring their thoughts. Or we could come in as supplicants."

"Supplicants to Regum?" Qatus was surprised. What did he mean?

"Get in on the ground floor to use a metaphor. Join their team. It's worked on the orbital. I mean they came to us because we willed it. They might have expanded their extent in how they use space but as I said...So if we join them they will fall under our domain, our resonance."

"Interesting." If not disturbing. Getting into their science was the very opposite of their spiritual direction. It would contaminate those who worked with them. It looked as if Regum was drawing them in, first through their WebWorld and now this.

"We get their secrets and then we'll have the best of both worlds. Theirs and ours. Actually both ours. It's not even a challenge, it's a gift." Pentham radiant.

"Not a trap?"

"How? What can they do, to us? Certainly not convert us Qatus." Thinking the idea hilarious.

"I am told they have enhanced capabilities now."

"And we have ours."

"You think we can influence their scientists?"

"We've been doing this since day one."

"True but these people on this project will be secure Pentham."

He took another sip.

"They might be isolates, they might be enhanced, but they still got a brain we can focus on."

"Yes." Qatus considered. Pentham's perspective helped resolve his concerns.

"What about the Pontiff?"

"I never bother him with technical details. Just results Qatus."

"Up to you of course." He tasted the coffee, it was rich, aromatic, delicious.

"And you." Pentham hinted. "After all there is no threat to this planet, correct?"

"Not yet."

"Not ever."

"You do seem certain. Why is that?"

"I just am."

"Were you aware of their progress?" it was a possibility.

"Well we knew of the initial test run. The DVs sensed the field insertion."

"Reality insertion Pentham." Qatus reminded him. "It's a frightening concept. Tell me, what is to stop them inserting their reality into ours? Making the Web the reality, locking us in..." or he considered, "...or out?"

"Have you any idea how much energy that takes?"

"A lot."

"More than a lot. You should acquaint yourself with their science." He added glibly. Qatus let that pass.

"We get our feeds."

"Well then..."

"Are you saying their, err, bubble realities could never encompass, say, a planet?"

"Even their generating capabilities cannot achieve that. If they could we would not be on the real Regum. They would have encloaked their planet as a primary objective to keep us out."

"Or entrap us. It might already be in place."

"No Qatus. You know that yourself. We know the situation on the ground." He smiled. "Let them do their research for us. Remember this is an extension not a progression."

"You are right there." And took another sip of Pentham's excellent brew.

"There is nothing we don't know." He said assured.

"True."

"Remember the DVs are also searching the future, the possible future." Pentham underlined. "Now if there was a dangerous scenario you think they would not have alerted us? Say Prima being locked out of real reality, squeezed into insignificance. Yes? No?" at ease.

"To move along, if their computers became an extension of their minds? What if they created a scenario that made us only appear supreme whilst the opposite was the case."

"Now you're talking." Interested in the thought experiment.

"This does not bother you."

"Not as such. No. The universe is a big place, even bigger now. It just cannot be done on such a large scale."

"You seem pretty certain."

"I agree they could try and fool us. But even we know the Web is a construct, not a real reality. We have the big picture in our heads. Our resonance secures that for us. The mind is the dominant factor, not an artificial thinking machine. Sure they could create false realities but it has to begin somewhere. And that's where our DVs come in. You see what I'm getting at?"

"No surprises."

"Except for their insertion Pentham."

"An extension as I said. Not a development."

"So they cannot overwhelm us."

"Or underwhelm us." Pentham smiled.

"No chance?"

"None."

"I think I will have a glass of your excellent liqueur then."

"A pleasure to be your host. I thought you would never ask."

Risea looked down below. The luscious forests, the silver reflecting waters of the rivers, lakes gleaming in the sunlight, fluffy clouds. She forgot how rich the planet looked having been in space so long, seeing it all with pristine eyes. The plane started its descent as they tore through the sky over the desert heading back to the space port. They hit some minor turbulence.

She thought the debrief had gone well. She had stuck to facts, not speculation. The clouds were higher as they began their approach descent. The plane shuddered momentarily the pilot conversing with air traffic.

Regum dominating space. It fascinated her. Unconcerned with any spirituality the Reganians always surprised them, surprised her. Unpunished for their apostasy, their blasphemies, their unbelief. Were they really crowding out with their WebSpace the divine within this universe? Did the Great Mind extend into the other universe? The Martians believed in the equivalent of Prima's own remote past. Memories of their gods. At least they were correctly aligned. It would be interesting to see, if these Reganian's did make contact. If it would have any effect on their belief system, their spirituality. The ultimate test case. She should have broached this with Lord Qatus. Well it was up to the higher orders to deal with that conundrum.

Her ears popped. Space was so reassuring, eternal, soothing. Her mind always expanded when she saw the vast pure blackness reaching further than the stars and now coupled with an even larger universe around them. How far did that go? How far infinity? The ultimate puzzle. How small the old gods were compared to what they knew now. Not that the masses had any clue.

The plane wobbled a bit as the pilot adjusted the final descent. Then they were over the base landing the VAV skilfully. She got out and made her way to the gantries of the launch towers, her shuttle refuelled and waiting. Taking supplies up to the orbital and a few replacement DVs, new recruits. They were all strapped in, the astronauts waiting for her arrival. Final checks completed they were ready to go. She strapped in behind the cockpit, getting a great view. Then booster ignition, a tense moment as the towers released their metallic grip and the shuttle shuddered with latent power slowly lifting off, accelerating leaving a huge vapour trail behind them in their wake. It felt good, leaving the cares of the planet behind her. At home in space. They passed through the clouds and slowly the bright blue sky changed into pink, lilac, purple the stars appearing, eternally present, reassuring. She was returning to her realm.

Mena

Ung came to the conclusion Mena was a unique Natural. Without using her psychic abilities to further her own aim apart from being in space. It was too early to tell which group she would be placed with, if any. Some were exceptional and used judiciously for target specific assignments. What Mena perceived out there was most unusual. Non-specific yet latent. Was she attracted or attracting this thinly spread field, a viscous film spread throughout space. Ung's Brain was cautious holding back from probing it further. Mena could do that for her and run the risk of being aligned with something not really understood. Unless it was an aspect of the alien field. For the moment Ung let it ride. Let the Domimax deal with it. The Domimax she thought. Present unseen in that no one knew who they really were. A secret conclave or more an executive branch responsible for the Dominus who watched and guided the DVs. They could well be a programme inserted in specific individuals or a branch of the Ecclesiastics or the Divines. No one knew and no one asked. They were accepted as factually real in the convoluted and interspersed Primaian Orders.

Mena entered the first of the two airlocks. Ung with her. Fast scanned for aberrant false memories, the great fear of being alienly subverted. They were both in the clear. The initial download complete the inner locks irised open. In the change room they got out of their space suits feeling the freedom of unencumbered movement. The downloaded data went through the security filters. Once inside the orbital short fast bursts of data transfer went to systems control as they progressed through the second air lock which read their resonant state prior leaving and upon returning, matching the two patterns and searching for non-aligned outside interferences. Ever watchful of the alien incursion.

The initial scan over they left the change-room and were logged back in. Mena watched Ung. Her deep black eyes expressionless as was her face. Mena felt a little light headed. The memory of the event now somewhat vague, undefinable, resisting rationalisation.

"Time for your debrief Mena. How did it go?" Ung asked at last.

"Fine. Great. I think, I don't know, I sensed something." Excited having experienced what...? Ung felt the tangible exudence of Mena's resonance. An event did happen to Mena out there. Ung stopped herself from focussing upon whatever Mena experienced. She wanted her Brain to remain mute.

Ung returned a quick smile as she lead Mena to the debrief room. Through corridors, technicians rewiring conduits, small tools laying around them. Relining the com-channels, the data flows and sensor devices reading not just the inhabitants states of mind but also the condition of the orbital at all points throughout. Ung's Brain went into chameleon mode, blending into her mind's configuration so that no deep scanning sensors ever latched onto her enhanced state. She would be taken for a Reganian infiltrator which at worst would have her being removed and sent back to Regum. Even though her legend made sure she had never been there as far as the Primaian's were concerned.

"You can have a meal after Mena." Niatu said having joined the two women in the debrief room. She too had been aligned with Mena remotely but put her experience down to the superimposed field. At least Mena was sensitive enough to be cognizant in that regard. She would make a good 'watcher', knowing inherently the difference between the actual and the superimposed. Nearly eighty percent of the initiated DVs could not disentangle the real state of space from what was loaded into it.

Dross was waiting for them. The room as always was bare, except for a few chairs and an empty table. With a secure terminal and com-link. Dross asked them all to download their session. They attached their fibre optic links to the ready ports embedded in the table. The computer, it's screen blank, the data not processed, just uploaded and searched for aberrations.

Mena was relaxed. The sensation receded, drained out during the upload. Her destiny to be at one with the Divine Mind back in her thoughts. Even though she had come across this infusion she too was convinced it to be the alien insertion. A niggling conceptualisation told her that it's origins were closer, immanent. Like being in a house and aware of other rooms even though they could not be seen. There and not there.

For a moment she thought of Ung so different from her. The feeling of a completely different mind guiding her vanished as quickly as it had surfaced.

Three consecutive bleeps. The upload done they retracted their sleeves connections. A screen came on the table split in three. Dross studied it for a moment, then looked up.

"Well at least it didn't get into any of you. Niatu, Ung you may leave. Write up your reports and forward them as per usual." The two women rose and left.

"You know we are surrounded by enemies." Dross began. Mena was a little surprised at that opening remark. She nodded in agreement.

"In a way it is destined. Our purity makes it so." Dross explained. "As such we harbour no resentment towards them. Their resonance is mis-aligned, flawed if you will."

Was he referring to Regum or the alien field? Were they connected?

"They want domination Mena and will use any means to achieve their purpose."

"Their purpose?" she asked puzzled at this oblique references.

"To deny us, to evict us from inner space, neutralise us at best."

"Like a struggle?"

"Yes. Which includes you."

"Me?" surprised. She was not here to do battle but to align spirituality.

"All of us Mena." He said patiently.

"I just want to be."

"I know that Mena, but that is not how they think. Every seeker is another addition to our resonance. Your strengthen through your devotions. What I'm trying to make you aware of is that you may be targeted if they choose to do so."

"Me targeted?" she was stunned they would go this far. She assumed he was talking about the Reganians.

"The problem we face Mena is that the alien field is somewhat similar to that of Regum's WebWorld. Now your results indicate you have sensed the field. Without any negative impact on your overall resonance. You are indeed a Natural." Very pleased. She could tell. "They target the innocent so that the enemy thinks itself righteous. Your inner strength will prevail. This spiritual potency you carry within you will see to it that you will triumph, I am certain of that much."

"Thank you Dross."

"The longer you are with us the stronger your spirit will become. It may also attract those who would wish to deny your spiritual destiny." Dross paused. "What I'm saying is you might be specifically targeted, even as a DV if you choose to become one." He dangled in front of her. She would make a great backup. One step at a time. As she did not react he continued: "Simply as a devotee is enough to attract their wrath. You may experience abnormal psychological states. If that ever occurs you must tell Niatu or Ung or even me. I am always available, you know that."

Was he hinting at what occurred out there? What could she say? It was too vague and anyway she was not interested. She wanted to be in confluence with the Divine Mind, nothing else mattered.

"I am here to unite with the Great Mind, creator of everything. It is what I live for Dross. With our divine power, what are they? What can they do? What does it matter? They are but tiny meddling jealous minds. Because we have the true vision, not they."

"Well spoken Mena." He beamed. "That's the spirit."

"I made up my mind long before coming here."

"So you told father Lennox."

"Yes I did. Now that you told me of this, I feel it my duty to continue on my chosen path. To strengthen our resonance so it may irradiate the whole universe."

"Very noble Mena." He was impressed with this determined young woman. Her being so shy, withdrawn he had been concerned the challenge they all faced might crush her a little. The opposite occurred instead. He was relieved.

"I will pursue the righteous path as long as it takes."

"I intend to recommend you to my superiors. Who knows what benefits may flow from this." Dross saw a future in Mena. Apart as a DV backup she would make an excellent instructor as well. A pure example to those seeking their redemption and hopefully overcome the burden they collectively faced. "It may even reach the pontiff." He purred.

Mena sat there stunned at the faith Dross had in her. She had been with her doubts ever since she could remember. Maybe she was destined for great things. But would not let that distract her from her primary objective. If good things came of this, then it was due to the Great Mind and she would accept whatever was divinely chosen for her. She was blushing, her face warm, her body quivering with excitement.

"Oh Dross, I am so happy."

"That is good Mena. Now the path is not easy. Often we are our own enemy. The natural mind is used to distractions, it seeks them out. You will struggle with this but I have confidence in you. Just don't expect an instant revelation. Not that this has not occurred. It might happen to you tomorrow or in ten years, you understand?"

She nodded. "I want the Cosmic Consciousness to cleanse our universe." She was determined.

"Riding us of a bad dream."

A bad dream. Remembering the sensation out there. Very apt. A false veil. To either overcome or ignore. Focusing on what she was really after. She would succeed.

"Dreams are illusions."

"Correct Mena. Study them well but be mistress of your soul."

"With all my energy I will dispel whatever darkness, whatever foul incantations, whatever delusive temptations come my way."

"Mena you are truly gifted. You are also stronger than you think." Dross delighted with her attitude. "You might be the cleansing glory, dissipating the darkness. Enhanced by the divine in the cosmos. Born to curtail the incursion, deny it's existence and thus obliterate it's presence for it is but a powerful illusion. Mena the illusion appears real, and may overwhelm you. So always remember your inner state of grace. It will overcome all obstacles." He waxed lyrically.

"I'm glad you have faith in me."

"Only because the faith is in you. Well," Dross relaxed and voided the screen on the table, "if there is anything else?"

"No Dross. You have made me feel better."

He smiled engagingly. If Mena really was so powerfully attuned she might be the first of many of a new generation. The Divine Mind was creating some very potent souls. All was well in the universe.

In the canteen she was on her own. Niatu and Ung had disappeared. She felt so good she wanted to see them, to tell them how she felt and ask them how they felt. After all they were ahead of her. Even though they were so matter-of-fact in their demeanour, almost spiritually not there. Maybe it was the DV training, being mentally not spiritually focussed. It could be they tuned in through the inner control of their resonance. Ung oozed inner calmness whilst Niatu's patience, watching her with benevolent interest was reassuring, having her interest at heart.

She finished her salad and fruit juice and returned to her quarters. Sent a message home saying all was well, she was happy. She considered her somewhat churning emotional state but thought it best to keep that to herself. With a happy sigh she got ready to sleep in her tube.

It adjusted to her biorhythms, her quarters airless, the tube her life support. Feeling positive she offered a mental prayer to the Great Mind to guide her to its presence.

She could not make out the shapes at first. She only noticed them amongst a tapestry of abstractions with varied colours. Detaching themselves, moving about stirred from recumbent slumber. The realm she was in made no sense. Nothing like her dreams

at all. Sporadic images of different worlds, similar, familiar, behind the facade something inimical. Different. She tried to turn and see where she really was. It took forever but finally the abstract shapes were all around her, some detaching like leaves from a tree, moving about, her presence having brought them to life. Grotesque, misshapen, twisted, distorted they moved with ease in no particular direction. A spectacle of freaks. They had their own intensity about them whilst restricted in their movements.

She was feeding them energy! They were leeching her soul. How could this be? What was this strange place the shape of an orb, each screen, screen? a tableau in itself. Strange barely explained this realm. Contained and vast, each abstract image a portal into another world, another reality.

The detached shapes started to be aware of her presence. No this cannot be. She was trapped! But where was this place? She remembered Dross saying a bad dream. This was too real, too complete, too powerful. Well she had gotten in somehow so there must be an out. Must there? The confinement too real. Think Mena, think. Of what? The universe. This was just some realm which you have entered. The orb was closing in on her. She saw movement in every abstract, crazy interlocking image, strange cut-out screens and a powerful presence behind them. Within them? Within this orb? She concentrated on the universe, imagining the glorious galaxy, the glowing bright burning stars, the cool vastness of black space.

The image collapsed outside of her then receded. The glorious glowing galaxy in front of her. The same place the vision in space had come from. Something awful was in the galaxy, something malignant that twisted life into demented shapes reflecting their equally twisted spiritual souls, a madhouse.

She woke within her sleeping tube. She had seen the enemy. Maybe not the enemy but something not belonging to this universe. Yet there it was, gestating deformed dreams, nightmare beings, eviscerated life with a craving for her soul or that of anybody else enticed into its twisted realm, its deformed presence all too real. An evil strangeness. Life conformed to a divine plan. That had not been divine. It could not be a spiritual repository but an ugly artifice reflecting the mischievous soul of its creator.

Before this frightful memory would recede she connected her sleeve's optic fibre and patched it to a virtual displayed portal on the perspex covering, using its HUD menu, then voice-transfer to relate her disturbing dream. When done she scrolled back and re-read her statement. She sent the deposition to Ung, Niatu and Dross. Satisfied, feeling relieved she disconnected herself. The HUD glowing menu disappeared and she was

cocooned once more in welcoming darkness devoid of latent presences, nightmare scenarios or bad dreams. She fell into welcome calming sleep, the disturbing images slowly disintegrating, memory falling apart, becoming less intense then dissipated like a wisp of an idea that found no attachment in her brain.

Carias

For the next few days Carias was on tenterhooks. With the headband in her possession she could finally get back into WebWorld. Procrastinating. Savouring the anticipation. Later.

Fehna did not always seek her out. Though withdrawn Carias saw her sometimes chatting with the gardeners. Now that Carias knew their primary function to keep an eye on the inmates, even guests she became extra cautious. Since she was voluntarily admitted, and still had not seen one doctor take the slightest interest in her it occurred to her she might be remotely observed, not just by the gardeners but via hidden cameras or soft scanning devices which had to include her room. But with no gadgets to locate them the task was hopeless. So instead she adjusted her mind to the fact she was under observation. Sitting as was becoming a habit now at her window's table, she presumed to being observed. 'They' as Fehna called them were paranoid about WebWorld. That amused her. Here she was in an asylum because of her adventures in there, and there 'they' were outside freaking out. Alternative realities, not advisable to pursue. One reality to fit all. Well it did not fit hers. What was this reality anyway? A social construct. Big deal. One lousy construct for all the planet's inhabitants.

She made her decision to go in after dinner. During the meal she kept her anticipation and vibrant excitement as much as possible in check. Fehna wanted to sit next to her. She was of two minds about her. She welcomed Fehna's flighty distraction and got bored just as soon with her incessant vacuous meanderings. Probably craving some communion repulsing the advances of the others. Jong was schizoid interesting, impossible, self absorbed, worse than Fehna. Drus cool, aloof, full of potential but showed a distinct distaste to even relate to anything or anybody.

Destined to be alone. So be it. The Web thus became ever more intrinsic for her to maintain some sort of inner equilibrium. Seeking the Divine Mind was no answer, literally. It was all silence on the other side, the only response that of her consciousness.

Time to go in. It was the middle of the night. All was quiet within the compound, the grounds empty, patrolled by security guards who moved ostentatiously in two's across the barely lit grounds. The trees massive black shapes.

She put on the headband and felt it's comforting warmth. Her brain reacting immediately, recognising familiarity.

And there was the grungy alley she remembered as the portal into one of her subdomains she considered her turf. Refuse blown by a breeze into small piles on corners. The old factory run down, desolation created by intent. To make the area look as unappealing as possible. Grime streaked down cracked grey concrete walls, windows painted over, chipped, thin fracture lines running crazily over them, dented metal conduits, clamped thick wiring and the entry point a thick rusted steel door, paint peeling off showing water stains. Home. She felt the tiny resistance of the headband's optic strands extending into the base of her neck. Locked in, locked on. Reality locked out.

Web reality always boosted her perception. It also increased her inserted isolation underlining her cyber-persona. Above a wan moon, pale, washed out. She checked her gear. Even the pores were visible with her visual zoom capabilities. Her skin deathly pale in the moon's weak light. Her smart gloves and composite woven, blended, moulded body armour all in place. No weapons. She was not some warrior here to blast away at configured enemies or real ones, even if they were moronic Primaians. No. She was a scout absorbed in her own cyber-realm. Ideally she was after the Source that made the Web what it was knowing full well she had no chance in even penetrating it's most basic outer sentinel embedded barriers.

So she invented her persona as part of SpaceKorps. In real time they were neutral, non-aligned so others would barely bother with her. They were too busy being hero's in their own drama. Carias had other ideas. Making contact with like minded unaffiliated personas. The problem was they, like her, avoided contact moving through this brilliant world on their own, by themselves without help or persona back-ups.

Self isolates engaged in their own trip.

When she did sense a presence she usually held back. She still considered herself a novice and it was very possible to be blown out of this world. Primaian's were hunted just for fun. Reganian's rightly considered them intruders for the DLs ran their protégées here, which gave the cyber-warriors a lot of fun. And being blasted lost energy-credits. In

fact being blasted gained the attacker more power. She made sure she kept hers at max.

There was in this world energy out-points, camouflaged. Crack the code and one could recharge. It was stealing and that Carias enjoyed though she never completely siphoned them dry. That would set off major alerts with whomever it belonged to. And they could be there in a flash. She preferred slow leakage. That way she could study the environment not just surrounding her but the cyber-construct of its owner. Carias had her own outage points which the Reganian's must have inserted to extend one's life. Or to locate dumb Primaians new to this world. Easy to fit into their predetermined parameters. Too nosey, too smug, too pugnacious. These were the faces of the Primaian inserts who lumbered clumsily around WebWorld. Asking stupid questions or blathering on about their vomitory verbose exculpation of the Grand Design and how they would bring it down. To join their crusade. But when cornered or indulged the actual vision envisaged lacked detail, substance, embellishment or coherence, never mind an alternative reality except vague bland assurances that got them instantly obliterated which set off a train of vengeance hit squads. Relished by gamers. Primaian's were suckers, there for the taking.

Carias's energy points had as yet not been discovered. Who would think a lavatory was supercharged. So far most considered it corny realism. Just for fun. And even if one pretended to use it, slow leakage siphoning programmes recharged the bogpoint when actually used. She made sure there was toilet paper. Detail was important. So anyone pretending to relieve themselves were depositing more energy. So far no one had ever used them in this section. Nor had an enterprising soul gone into the waste management business. Accept her.

Not much shit around. Still it created a cover to traverse all the cyber realms within. She added realism. No one paid her dumpster's much attention. Carias had created sewerage farms, innocent enough. She grew exotic plants purely to see them manifest amazing fractal patterns. Purely decorative on the outside but energy extracting within. However they were also for sale and anyone acquiring one was tagged by the plant, becoming her eyes and ears. Eventually though they discovered the ruse and only newbies and the odd Primaian fell for them.

With her headband she had outside back up energy as long as the batteries lasted. The Web though chock full of energy if you knew where to look. She used as little as possible within, unless running across some Primaian flat brained dithering piece of decaying dementia. It saved the batteries. Those who like her were charged up sometimes crackled with pixelated energy, giving off an aura of hyper charged power.

That attracted Mashers. Boneheads who grunted a lot. Carnage for the pleasure of sheer violence. Retarded evolutionary. Reborn rejects. Luckily she had only seen the chaos they left behind in their blind rage. Often blindsided, reality removed from beneath their perceptions. Turned into self destroying meat grinders, feeding off their own violence in quantum Goedel loops until they turned into piles of trashed cyber junk. Now if the Gamers would only take it a step further and apply it to the conniving converts, the misbegotten marauding priests offering their spiritual wasteland, their *prison* as some sort of answer to a reality they denied: cyber reality. Get used to it. It's real, it packs a punch in the head. A blast that lasts.

She pretended, apart from her body armour and smart gloves to be techno-poor. If she crackled she let it sparkle around her head. After all she was after the *ultimate* here. Not sure what it was, how it was configured, whether spread throughout data realms, contained, confined or secreted in some cyber dump pretending to be something else. Sometimes she was just a wandering soul minding her own business. A drifter. That pretence had it's own shortcomings. Less realms available less players to interact along with their subdomains. Even here there was some snob value. Unless at a purely disintegrating psycho level, literally tearing a domain down to get access she was often not let in. The opposite to a Masher that just wanted to destroy going full on Mental opened domains as it scared the shit out of the more adjusted who were the social glue holding the Web together.

Her psychosis was all her own. Dark, brooding, radiating pure malice, a threatening obsession so tightly wound up it was ready to unravel, right down to the submolecular level. And that spelt doom to the gamer's persona for her DNA was too corrosive, too toxic to neutralise. If deflected the alien dementedness which insinuated itself into the data domain, being one with it like a chameleon virus. Eating it up and spitting out the pieces that didn't enhance her mentally disturbed state of unbeing. Still the plus was that she knew where the more advanced-guarded realms were and at some future time she would be able to configure herself to gain admittance. So her current techno poor bum was so low status the camouflage attracted a zero response. So far. Within she was just short of going psycho. A great feeling being on the edge of madness, playing with insanity's follies. Maybe even trip up the odd Primaian goon.

Her energy status was high as she checked herself with an antique watch which did not tell the time but her level. Ung must have gotten some new sort of cells embedded into the headband. She had never been this charged up before. Possibly nano-generators in the headband. The difference between black market gear and the

real thing from which others were cloned. Ghosting possible. Splitting oneself up so one could be in several places at once. But that took processing power and energy. Carias knew that that level was of a very high persona something she held back, even stayed away from. She wanted to keep low for now. Away even from WebGuardians who dived in if the Primaian's were getting too cheeky.

She entered through the creaking steel door. Her realism delighted her. She spent some energy on the scene in not oiling the hinges. Otherwise if someone else used this portal she might not hear it. The sound localized but really transmitted to her wherever she was. But only to her not the Web.

She was in a disused factory, several stories high, the zigzag roof glowing dim under the moon's pale light. Dormant overhead cranes, disused rusting machinery, old world technology. No one about. No one ever having tampered with her construct either. She had gotten the plans from old historic files prior the nano-revolution. Historic trash, museum pieces as curios, forgotten remnants of the past. Of possible interest to Primaian's but even those astute enough to be techno-savvy saw nothing useful in her wrecked realm. Loaded with access programmes below the surface, underground. In the cavernous basement were obsolete computers, the size of small houses that aligned the rolling mill's rolls to be in synch when processing white hot coils of steel. Now abandoned, defunct, technologically superseded. The place was useful to others only if you wanted to run a steel mill which was neither exiting or sexy.

She moved along the rusted decrepit rolling mill, its tall take-up and receiving towers before the finished products were rolled up at the other end were deserted. She had thought of adding nesting birds to give it more of an abandoned flavour but thought total lifelessness more perfect. The furnaces were black empty holes, broken pipes, some half falling off as she came out of the factory under the night sky. Night in the Web had its own latent energy since it was inserted into the overall construct, a hardened shell against any overt military attack. Warfare another game started courtesy of Prima. Anything to disorient, waylay, disturb the peace in WebWorld. So they played out their ancient primitive murderous remnant instincts until satiated, fulfilled though the Weblords as she thought of them usually disintegrated the upstart Primaians if they became too pesky. No cybersense.

She had even discovered that space travel existed in this meta-vast realm. Just a matter of enough energy credits. One could rent attack cruisers, scouting craft, orbitals, it was all there to be used. The idea was to explore space as a scientist or tourist, not as

the deliverer of mayhem. Primaians were really here as spoilers and spies. The games meant nothing to them unless used for their own disturbing monomaniacal obsession.

The path she took now familiar. Ung had laid it out for her so that she could navigate this multi-dimensional maze more easily. Even now Carias remained on the surface. There was enough there to keep her interested, intrigued and satisfied with her progress. The platforms and templates all in place in her headband. The odd guide light winking within the context of the visual construct to lead her where her head directed her to go.

Ung had another domain. A small town on a beautiful headland, its main industry a recording studio. Here virtual music could be downloaded into the real world, paid with energy credits. Along with visual streaming the energy credits were there for Carias to use. Ung the other partner. Targeted by Primaian spoilers. Some pretended to be musicians but were really hostiles intent on wrecking the studios. Ung created protection using inbuilt scanners. Their brains suffering a massive cyber-fry up. Still they came, and ended up burnt out husks. Music was a sore point with Prima. It distorted their resonance they claimed, twisted the mind into false image realities, rather than seeing music as enriching one's inner dimensionalities. Imagination soared with the music. Movies were even worse, total false realities, abhorred, recreating the overwhelming imagery of the insane.

The abandoned steel mill was now the backdrop to the small coastal village in front of her. The art-deco recording studio had a few interested persona's hanging about. She walked past them to a small bank next door where the proceeds from the studio were deposited. It had even attracted bank robbers, probably Primaian's who were the most violent crims here. Of course the primary vault was a trap and using containment fields draining the would be crims of their energy thus increasing the energy credit in the real hidden vault. She walked into the vault in the basement, then through a secret door into her and Ung's office. Then through another hidden entrance a portal. One had to clamber on top of the desk and it lowered one through the floor into the real vault. The place had enough cyber-bullion to super-charge her for many visits. The recording studio was doing well.

Next to the vault was the automated security system, another ambush if an intruder even got this far. Carias went to the lavatory another portal. The toilet paper was the console which lit up recognising Carias's persona. She was off into space and searched for an available launch window. The Reganians were big on space travel. As such WebWorld was also WebSpace. There both for fun and educational purposes.

Vetting was necessary to screen out Prima's hostiles. She decided to approach one of the many space ports in cyber-mode, from within. Charged up she walked back through the outer bank and into the sunny street. Night might be enshrouding her abandoned steel mill but here daylight painted a picture perfect scenario.

Some heads turned her way then sensed her negative attitude given the gear, the armour she was wearing. With outrageous haircuts, brilliant pinks, electric blues, vibrant lime greens, sparkling face jewellery, glowing tattoos, the usual indie muso's, what the record company specialised in. Some muttered at her attitude not realising she was co-director of the place they sought out.

She hailed a yellow cab deposited her credits and told the dummy driver, probably some enterprising individual to make some credits to take her to the space port she had accessed in the toilet announcing the wish to rent a small operable light-speed cruiser. Relative time travel. Carias knew enough now that time was of no consequence as far as the past went whilst the future was configured to the whim of the user. No doubt stored in Regum's real-time memory banks as possible alternative scenarios.

The cabbie asked her if she wanted to be driven there or just jump. She paid the extra to jump and was deposited at the gate. Her manufactured pass got her past security, robots pretending to be personas. In front of her the large launch towers of massive rockets going up to supply virtual space stations, all to enhance the experience of cyber-realism. Used to train astronauts. She walked over to admin and the assignment – despatch officer. In an immaculate office, a middle aged woman checked her credentials, asked for the requisite energy or real credits. Carias super-charged paid energy credits. It was more expensive than real credit but she reasoned it helped strengthen their shields from Prima's cyber-attacks. The woman smiled graciously. Carias was helping keeping WebWorld and WebSpace secure.

"On a mission or just exploring?" she asked deferentially.

"Exploring."

"Destination, sector."

"The so-called alien world in that other universe." She wanted to know why Prima was so obsessed with these other sentients.

"I'm going to have to scan you. Security, you understand."

"Primaian spoilers."

"Exactly young woman."

Carias felt a warm itch in her head. The office was loaded with scanners.

"Good. No viruses, hidden threats, secreted programmes. You're clear. Space-time coordinates, or real time?"

"Real time, their future, say five years from now. Including space." Carias smiled.

"You expecting trouble?" the woman asked seeing Caria's protection.

"Only from Primaians." she answered outright.

"Ain't that the truth."

"Are they out there, any of them?"

"Not anymore. We ban them. Unless they're the likes of you."

"How can you tell?" Carias not too surprised.

"Character recognition programmes. Nothing that can be nailed down. It's intuitive. Your constrained resonance."

"Ah."

"Type of vessel."

"Research, the best, please."

The woman entered the data onto a light-pad

"Nature of research."

"Stars, the galaxy, the planet, supernovas, dust clouds, asteroids, exotic particles, suns..."

"Total spectrum."

"I want it all."

"No surprise. Prima tells you nothing."

"Secure from Prima's probing."

"That will be extra sending you in in stealth mode."

"Done." And she handed her her e-credit card, swiped, returned.

"You know that your stealth mode will be logged. Ultra secure of course. Your kind won't be able to crack it. They haven't got the means if you want to know. They're not even cognisant of our real capabilities."

"I am relieved. No way I want this to get out."

"You realise of course once you leave this domain even your headband won't have any memory left of your trip. Only your real memories." What she did not tell Carias was that during the cyber-scan, the real processors on Regum had searched their data bases regarding the real Carias. Then scanned Prima from the orbital, piggy backing their containment fields to re-read the real Carias. In an asylum, a positive-neutral user of their WebWorld. Then to the dispatcher via hyper-link giving the clearance for Carias to be off on her journey into the future. According to probability configurations. The

moment she launched the uploading programme would shadow her journey. Saved them using their own operatives.

"Straight insertion or launch sequence?"

"How about time compressed, super fast, for the buzz."

"Done. Now you will be assigned a pilot given the nature of your request."

"A minder."

"Check. Whilst the future is not off limits, it might reveal something sensitive which we would not want Prima to discover."

"Understood. Totally with you there." Carias agreed.

"Let's see whose available, as a persona. Any particular type?"

"Nah, you choose."

"The person will be nameless, unless they want to reveal their ID. Right then...'" and she tapped in her commands. Next to them a young woman appeared in classical jump-suit mode. Glowing light-pad computers on her arms, wired at the neck, direct feed into her head from her headband.

"Pleased to meet you Carias."

"Likewise."

"Looking into the future hey?"

"Too right."

"Your own?"

"Nah, this alien planet's. See who wins that one given the propaganda we're being fed."

"Hm. Good choice."

"Yep. I just hope it ain't them."

"You mean Prima?"

"Yes. For the alien planet's sake."

The astronaut nodded.

"Right you two." The dispatcher said. "Stand in this green circle and you'll be whisked into the cockpit. Ship's been programmed so you should be there in minutes." She smiled. "Have fun ladies."

They stood in the glowing green circle and found themselves in the cockpit, Carias in the co-pilot's seat. Strapped in. No detail of realism overlooked.

"My name is Jorna by the way." As she busied herself with final pre-flight checks, for the realism.

After Carias and Jorna checked out, Jorna's sensors fed a link into a sub-master programme The future. Name specific tags self-activated back at Regum's central cores. Running empty, letting Jorna fill in the future along with Caria's headspace. Getting a psyche profile. Letting the system plan probable future states. Narrowing the potentialities down to actualities the closer one came to the present.

Carias, linked into WebWorld and now WebSpace waited patiently as Jorna went through the motions of the launch sequence. She had no idea that even with the magic of computers certain instructions still had to be made preparatory for the system to configure the realm she wanted to explore. Especially as they were tagged. Her head itched a little which she put down to the intensity of the cyber-reality, its solidness, its reality.

"OK. Ready." Jorna said to Carias whilst continuing the last checks making sure the ship was on-line with Regum's master programme. Then she added: "Given the ramped up speed I hope you got an empty stomach."

Carias laughed. "That intense?"

"You bet. You'll think you're suffocating as well, as if the air was being sucked out of you. You did ask for a light-ship. I also assume this isn't your first time in the Web." For systems checks confirmed Carias's previous entries. She was considered benign, her involvement with the recording studio confirmed that. Amendable to their culture as opposed to the morbid attitude of Primaian spoilers.

"Hang on to your head then or stomach. Taxing to the runway now." She said to the control tower.

"Clear to go." Came the dispatchers reply.

The ship rolled slowly forward from the apron and onto the runway. Guide lights strobed forwards both in the centre and along its edges, the whine of the fusion generators powering up the hydrogen boosters, the ship shuddering slightly as Jorna held the dampeners in check.

Then they were off. The speed was phenomenal as they blasted up at a steep ascent angle. Carias's brain translated the impression all very realistically as she grasped the armrests hanging on for dear life. Straight through the atmosphere and into space, the spiral arm flashing past them, elongated, stretches, streaks, brilliant white light, approaching light speed. Then for one moment everything went white as they were at the speed of light, then still accelerating they were immersed in utter darkness. At faster than light the normal interchange of the universe's information mechanism relying on

entropy was surpassed. They were in a quantum state and glowing data-fields, soft lilac, eerie greens, translucent blues and milky whites cutting through quantum entanglement.

Carias wondered if this was the physical essence of the Divine Mind. Jorna watched the HUD there more for Carias's enjoyment. A dark sombre purple haze surrounded them. The ships systems read it all then took a sample reading for this entangled quantum state, not noticed by Regum's astrophysicists.

Back on Regum the analysts were surprised at the discovery of this new phase state spread across space. With just a few degrees above absolute zero it posed no threat but was there just the same. Configured as some sort of base state with no detectable point of origin. It's location hovering in their universe as a quantum state, exponentially expanding at a remarkable rate. A mystery. Well the universe was the ultimate puzzle. A new phenomena.

Jorna was aware of the mysterious haze overlying or underlying space itself. Then as they continued to accelerate they outran it and it vanished. Back into black.

"We're so fast now no informational content can reach us Carias."

She nodded grasping the idea though not really understanding just how it all worked. The Reganian's thought the universe was information rich. Prima compulsively driven to conclude the existence of the all knowing Cosmic Consciousness. Maybe the two were the same. Just different perspectives.

Then fuzzy red glowing areas appeared.

"That is light travelling backwards. The faster we move the slower relative time is. Every minute years are flashing by in the universe. In a way this is time travel at it's most basic."

Basic Carias thought. That meant they had other means as well. Remarkable. Prima was so constrained. No wonder she felt alienated. And sad. So many possibilities denied to them all because of their persistence in their mono directed attitude of one answer and one answer only. The sadness flooded through her, she felt like crying. But she pulled herself together to enjoy the wonder around her. The emotional wave passed.

"OK approaching your destination. The ship's calculated how far ahead we are, oops, I hope you don't mind but we overshoot your immediate future by a factor of ten."

Ten did not seem much to Carias. Except it was an exponential ten. They were getting decades by the counter.

She slowed the ship down. The light travelling away from them blue shifted, slowly turned white, became points again, stars and in front two massive galaxies spread out in

beautiful shining splendour as the ship headed towards the one on their left. A jewelled spread of stars, travelling at sub-light speed.

The first stars whisked by like street lamps. They were now in an empty pocket of space. The computer's navigational visuals portrayed a planetary system. Past two huge blue liquid gas planets, one large orange swirling monster, then a beautiful golden white ice crusted with disk like rings. The ship moved up over a band of rubble towards a pink-light brown planet with two polar ice caps.

"There you are. The alien planet."

The ship came to an abrupt stop. Jorna engaged multi-spectrum scans. Thin carbon dioxide rich atmosphere with some trace elements. Not enough to sustain life. A planet that might have had some life aeons ago. Might have. Maybe microbes at best or lichen but certainly nothing more complex.

Carias saw the wonder of another world. There were huge mountains given the long shadows they threw, deep dry river valleys, fault lines, sandstorms.

Jorna let Carias take in the view. Then she noticed three other inner planets. One pearly blue and white, it too had ice caps. Further in a white planet with thick cloud cover, acid rain, deadly atmosphere, further in a smaller planet baked by its proximity to the sun.

"Want to check out the other planet? Looks more interesting."

"In a moment Jorna. This is the alien planet Prima has been going on about?"

"Must be."

"Anyone down there?"

"Ship says no. No EM signatures, no apparent technology. Unless they are in the stone age. We'll do a sweep."

The ship dived down skimming over the top of its thin atmosphere. No clouds. Just valleys, mountains and deserts. No rivers, no forests, no roads, no rail lines, no canals, no lakes, nothing. Dry, barren and dead.

"I don't understand."

"What is that Carias?"

"Well we are told it is peopled. Their inimical mind set flooding our universe with their alienness. Supposedly evil, mucking up our universe."

"Well we are light years ahead of ourselves." Jorna did not say this was only one possible future scenario. Regum had insisted on a 'worse-case scenario' and this was it. No life. An icy shudder went through her.

Carias, like all Primaian's had no idea about the real universe, only what they were told. Jorna knew that their astronomers were isolated from the rest of their race, their information curtailed, secreted, buried. Maybe below the inhabitants knowing their planet was dying for whatever reason emigrated. It was a possibility. Yet there was no sign of habitats, travelling space ships, probing satellites. She slowed the ship down looking for ancient ruins, some signs of previous settlements. Nothing. Since water was precious to life she headed for one of the polar ice caps. Maybe they were there. It was frozen carbon dioxide. Some ecological disaster had overtaken the planet. Unless, in this future state, there had never been life there in the first place. It was possible.

"Well since we're here might as well check out the other planet. Unless you want to see more."

"No." Carias was perplexed. "Maybe they got their planets wrong."

Jorna understood immediately. It just might be that. The two ice capped planets, given the huge distance were almost next to each other. She typed in on her glowing light-pad the next set of coordinates. The ship accelerated away from Mars racing through space and parked over the vibrant blue, green, white clouded huge ice capped world below. It looked like an ice age. Maybe that's what caused the other planets demise. Loss of heat. But that would not explain the thin atmosphere. It was a smaller planet though compared to this blue jewel. Had the atmosphere dissipated during it's creation. Had that ecosystem begun to run down before it could be biologically built up? It could not be discounted.

They were over the colourful mosaic below. Even with the ice caps covering nearly a third of the planet if not a quarter there were still huge oceans below. The atmosphere was more balanced, oxygen rich, plus trace elements of nitrogen indicating at least plant life. Sure enough the green patches below designated forests, vast areas of them. This planet had to have life. Whether it was advanced remained to be seen. Again no EM activity.

"Let's have a closer look then."

Carias nodded. More beautiful then Prima. Similar but richer from the patches of forests, grasslands, towering white capped mountains, rivers, thunderstorms, volcanic activity, their smoke plumes visible even from up here. A living planet. With all this turbulence it looked peaceful, nature going about her business.

The ship dived down through thick fluffy white clouds as they headed for the night side. Complete darkness.

"If there are lights then there is civilisation Carias."

"Ah, good point Jorna."

"Hm, nothing. So let's see what daylight reveals."

They were skimming over the surface, over an ocean looking for maritime activity. Nothing but ruffled waters, winds creating heaving waves. Volcanic islands spewing out molten lava and thick sulphurous billowing clouds spreading thin grey ash into the upper atmosphere.

Then Jorna saw it. Ruins. Charred, burnt rubble. Twisted girders. The remnants of a technological city. The centre glassy. Holy shit. Atomic warfare. Maybe Prima was right, maybe they were homicidal. Given the light-distance, about two hundred years it would take that long to get to their universe. They were two hundred years too late to have witnessed the cataclysm of some catastrophic war. Why would anyone do this? Destroy their own world? Below deserted townships, crumbling to dust and ruin as nature reasserted herself. At least the biosphere was in order. Radiation levels were low. On every continent it was the same. Blasted cities, molten rubble, rusting ships in mangled harbours, twisted cranes, wrecked debris. The forests had reclaimed what might have been farms for tiny dotted hamlets were untouched by the awful calamity they had visited upon themselves. If they had done this to themselves. They might have been blasted by an extra-terrestrial warlike race. If so what was the reason to obliterate a whole civilisation? Jorna glad Regum was getting all this.

Carias said nothing. Awestruck by the fascination of the horror that had occurred centuries ago. Jorna flew towards the edge of the upper northern ice cap. Huge screes and monumental boulders as the ice expanded shoving mountains out of the way. Streams of melted ice becoming rivers. Hamlets! Life! Wisps of smoke! Survivors! Hope.

Jorna reminded herself this was virtual. No point making contact. They saw enclosures of cattle, horses, sheep or goats, yellow fields indicating agriculture, a nascent civilisation. Could this have been the planet Prima was obsessed with? Having mistaken one for the other? Very likely. It would be important to let them continue to focus on the possibly wrong planet. Let Regum decide how to deal with this discovery.

Jorna checked Carias's credit status. They were approaching her time limit.

"Time to head back Carias."

"Oh? So soon?" she was lost in thought. Surely these peaceful people, no matter what had occurred could not have any evil intent. They were too basic for that. Unless their ancestors had been homicidal maniacs. Maybe the Ecclesiastics and Divines had been right all the time. But whatever had occurred was over. Gone, blasted out of existence. It was all too sad. She felt herself getting emotional again.

"I hope all this is going your way." Carias sighed.

Jorna merely nodded saying nothing. Her passenger might be compassionate but she was still Primaian.

"One last circumnavigation." More for data collection than Caria's joy ride. They flew over the various undulating landscapes. Broad steppes teeming with herds, thick forests densely packed trees, the towering ice caps, wisps of clouds streaming down, roaring water falls blue tinted chunks of ice cascading down into boulder strewn valleys, the rubble of the scree, over glittering sun lit oceans and back through the cloud cover into space. As the ship's speed increased the light stretched then flared at light speed and vanished as they travelled faster than light. Through the strange purple haze leaving the galaxies behind. Through the blackness of intervening space, the red, white and blue light shift of their spiral armed galaxy, welcoming them home to their universe.

Regum appeared, now familiar having seen the blue white pearl of that distant planet, almost like home. Almost. Jorna seemed perturbed, or the programme was faltering due to some disturbance. Carias looked at Jorna. She was mute, fixed into frozen pixellated immobility, yet the space craft seemed functional. Something going wrong. Well she was no programme.

"Jorna."

No reply. The image breaking up, the details going askew. It was as if the whole control centre was running crazy. Glimpses of dead cities, not the ones on the distant planet. Carias dropped the term alien from her vocabulary. A blasted civilisation. The images around her now, for the ship was blended, meshed, then unmeshed and remeshed into the overall view of Regum. Glimpses of ruined skyscrapers, abandoned, forlorn, deserted. Rubbish strewn streets, abandoned trams, halted monorails, burnt out wreckage of crashed planes, charred mangled grotesquely twisted bodies strewn about, smaller buildings burnt out. A momentary scene of the spaceport, the burnt out hull of a chemically powered rocket that must have lifted off then crashed for some reason. Remnant charred blackened ground and the cowed presence of SpaceKorps looking guards. Yet no insignia, just their black body suits guarding the base. Then the complete picture frozen into a crazy tapestry of truncated abstractions barely recognisable amongst the surround-imagery of her insertion.

Had the whole system crashed or just hers? Her headband's AI component unable to log in to anything! Or conversely Carias logged out. Had 'they' gotten to her? Fehna's obsession. Bastards, wrecking her joy ride. She thought of her dad, of being found out. Someone had wrecked not just her link, but trashed the whole scenario.

She remembered what Jorna had said about relative time travel. Or had that knowledge been somehow transferred? No matter. The faster the speed the slower the time or was that faster? Or both? Oh yes, her time slowed, outside time sped up. So this was a possible future of a possible future. Her head reeled. Science was not taught to the average Primaian, even if she belonged to the tight knit group of Families harking back to the old days.

Had they duplicated this in Reganian WebSpace? It was one possibility. So how had they wrecked the complete Web? They, the Primaian's didn't have the know-how to run anything accept basic data files. Crashing them would take an amazing leap of acquired knowledge. She could not see Regum wrecking its own future unless the DVs had gotten them to do it for them. Herself not included even though she was in. It did not make sense unless WebSpace was separate from WebWorld.

She thought of reversing her trajectory, going backwards to get out. Could her headband override the ship's system for it was still there with the immobile Jorna. The outside flashing crazy colours, disjointed bits and pieces of decaying data files. She searched the consoles spread. Let's try reverse then. She punched the button. Sure enough. Back went the ship. How strange. The fragmented pictures uncollapsed and they were above Regum again, the planet whole. Stop. They stopped. Jorna animated once more except she was talking backwards. It sounded weird. In the distance Prima at the opposite of its orbit around their sun. She certainly was not going in that direction.

"Ship. Search for any other inhabited planet." Thinking that just maybe a third force was playing, or a proxy of Prima extending their dark design. "Scan the other spiral arms." When nothing showed along theirs, Carias congratulated herself when another pink-yellow planet appeared. She reminded herself she was in the future but had no idea how far. She searched the console tracking sets of numbers. They were in the millions. At least there was a plus sign in front of it.

"Zoom in please." She always talked to programmes politely considering herself a guest in their system. The Reganian's had as many different attitudes as their users. Some non-challant, some aggressive, some awed like her happy to just be there.

The planet's disk expanded. Wow. It looked a bit like the dead world she had seen. Cloud cover, some dark tinted vegetation along rims of lakes, a vast ocean and a city! Towering skyscrapers, several space ports. Had the Reganian's abandoned their world and successfully emigrated to this new world? She hoped so. A rocket blasted off, it's white ball of light unmistakable like a tiny sun at its exhausts billowing bright white clouds of condensation. A liveable atmosphere then.

Maybe they knew what happened back on Regum.

"Ship, can you access a public domain data base?"

The ship remained mute.

"Let me."

"Jorna, you're back." Carias was pleased.

"Back?" she looked puzzled. "Where are we?"

"I don't know. But look another planet on the next spiral arm."

"How'd you get here?" she looked intrigued and a little suspicious of Carias having taken over.

"Short story. I asked the ship to look for another planet. And there it is."

"We're supposed to be landing. I hope your credit's good."

"Must be. There is something else..." and Carias told her of the crashed programme.

Jorna remained silent. Having considered her predicament she said: "So if I go back I get deleted."

"Yes. I stopped the ship the moment you froze up. Then it all fell apart around us as I said."

"I have to find out what went wrong."

"They destroyed everything Jorna."

"So as long as I remain in space I'm fine."

"As long as you remain before the time of the disaster you will be fine."

"Of course. Thank you Carias."

"Pleasure. I hate Primaian's. Planet's nice though." She smirked.

"Ye-e-e-s." Jorna understanding Carias's distinction. "What are you going to do?"

"Well I can exit right here. Bit abrupt but it shouldn't have any effect apart from freeing up computational space for you."

"You're right there."

"I have to get this information out."

"I'm thinking the same thing Carias."

"You know I can't believe this."

"Neither can I but we must."

"No." Carias shook her head, "I meant here I am talking to a programme in virtual reality."

"There is a user behind me. I'm not autonomous. Many are but Primaian's get assigned a user, not just a persona. It's supposed to be a secret of course but well you

saved my programme, and alerted my user. So whatever Prima did in this one future will at least be on file. So the data was wiped at the End of the Programme Carias." As Jorna accessed a light screen. Red numbers. Carias guessed worse was to follow. The orbital over Prima linked onto Caria's cyber-presence, traced the link to the Reganian user, crashed and wiped the data. The lights went out.

Carias was back in her room. The whole event a future nightmare. She was stunned. She hoped the user on Regum remembered the dark future.

At 'Human Resources' the on duty surveillance agent secured the data from Carias's headband, clamped-down the file with encryption, then deposited it in a lock-down cyber vault. Now even he could not access it.

Delira's cyber-presence was alerted to the presence of a ship, two persona's, real-time users. She was overseeing the construction of their new virtual world of Novus. The actual planet at the tip of the closest spiral arm, a freak really with a breathable atmosphere, mostly desert probably due to some solar cycle of it's sun and devoid of any inhabitants, it was the perfect place for Regum to experiment. The cover: factory ships to build the infrastructure, a super multi-nodal processor used nano bots to build the infrastructure, living quarters and office blocks, support factories, maintenance hubs. Bio-engineering transformed the pristine landscape with thousands of seedlings to reafforest the desert. When done conventional methods would take over. The idea that Novus was not a show piece. If anything it was retro-designed. It would be a place for tourists, gamblers and high flyers. A spaceport and heavy industry guaranteed a manufacturing base. And most importantly, a-political.

Delira's task was to map Prima's anticipated interaction, for Regum was going to declare it an open planet. Given the political stand-off's and Prima's entrenched view that they were for ever right in all things, having a neutral political zone might get their more moderate elements on side.

The sudden appearance of a light-ship having gone off course in WebSpace now took her attention. The two crew members, Carias and the Jorna persona. Yet something was at odds there. The ship's programme had frozen when attempting their re-entry into Regum's spatial environment. The whole scenario collapsed, had been messed with, hacked and trashed. They then had reversed out and come here. They or their ship not the cause. The incident was flagged. She would wait and see what they wanted here.

Novus was no secret even if Prima was in the dark about Regum's expansion and colonisation of their new planet. Or if they knew they did not care. Moments later the light ship retraced its time line. Sure enough Regum's relative future was there as the two of them headed back to the Regum of their cyber-space-time continuum. Most unusual. The processors mute. The run sequence simply ended and that was that. Carias was unceremoniously dumped whilst Jorna was wrapped within a probing data sphere utterly shut off and out from the rest of the Web. Obviously a glitch that ought not have to developed. Delira checked their programme, future state scenarios going hundreds of years in the future. Blank. Not even white noise or any other. Just nothingness. The programme's limits had probably been reached. But this close? No Primaian presence noted. So the cause could be internal not external. Part of her brief, as was anybody patrolling WebWorld and WebSpace was to keep tabs on Prima's inserted spoilers. Activity was at a minimum. It let off steam, venting their frustrations and Primaians were loaded with these, to let loose in the Web. It revealed more about them than they realised and did minimum damage in the system itself. It was self-reconfiguring anyway so whatever they did was usually undone. This time the system went frantic then re-establishing prior norms. No actual damage. The Primaians simply had neither resources or know-how to cause this chaos. Systems control even gave them some leeway so that their pathological traits when raging were mapped with ease. Religion certainly spawned some very unusual psychological behavioural patterns. Delira was learning fast. They were usually impressive types filled with an overriding ideologically bent, blind-siding most of their rational parts of their brains. It was all collected and collated, the files mounting up to give Regum a psychological profile of their cyber-wreckers. Classic ego-driven domination of the environment and those populated within it, be it in cyber or real space.

She looked once more at the future mess, isolating the pixellated mayhem, storing it in a general dump of pretended useless information. She rechecked Caria's persona. Highly intelligent for a Primaian, a Natural. She'd been in plenty of times with some enhanced capabilities. Obviously Carias more mentally balanced than the rest of her kind. Neither did she engage the spoilers which gamers delighted in bringing down. The Primaian's had no chance in the Web. They were sitting ducks. They tried to subvert other personas with some luck but one could simply pretend to be floored and reboot so that the attempted sabotage was of no consequence. Nor had Carias sought out information banks, data-spheres, even if it was in the public domain. Nor following architectural foundation streams, create viruses or camouflaged any active hostile

malware. In there to enjoy herself. If only the rest of her race could appreciate the inner beauty of the Web, use it for what it was, relaxation, fun or learning.

Hyper- technology was the future, the present which to Prima was considered some sort of invasion of pure space. Real space was anything but pure. It might be pure in the cyber realm but in reality it was awash with energy. From long to short EM waves, add to that mix all the possible PWs. Space loaded. No wonder most of the universe was filtered out of their heads. Only a vastly superior EAI, like QCs and in the Web VQCs could see the whole picture. Naming it something mystical changed nothing.

The end of her shift was approaching. Things were progressing regarding Novus, the place would be open within a few weeks. It would be months yet before the first real émigrés began to make the real time journey there. But at least they could familiarise themselves in WebSpace, Primaian's included. The casino beckoned. The idea was to get them onboard, not isolate them. Inclusion dispelling unfamiliarity. Each adjusting to the other.

Kythus walked in just as Delira bailed out, removing her helmet, her eyes adjusting to the normal lighting of the control room. He was double her age, the first character lines forming around his dark yes. His skin smooth, mild mannered, hard headed. He sometimes went into the Web to destroy spoilers blowing them into pixellated dust. He took no prisoners.

"Anything?"

"They hit a no-go zone." Calling up Carias's journey. Whilst Delira was with master control Jorna was in the basement as an active operative. She had already downloaded her report and signed off. Kythus watched the holographic replay.

"Ah."

"Just exploring. Went to have a look-see at Mars and Earth. Future state light years ahead of themselves. Earth's cities wrecked, blasted. Probable atomic warfare. Mars dead and when they came back even further ahead of themselves the programme gave out. So they just bailed out. Oh yes, they had a quick look at Novus as well."

"So the disaster scenario's bear out."

"One possibility Kythus." She said matter of fact.

"Earth will have many wars but they always bounce back. Remarkable race. A combination of Primaian psychic abilities and our technological mind set. And you said Mars was dead? Their eco-system was always fragile, balancing just above the threshold of immanent collapse. Just a slight change in solar activity enough for it to run down."

"Earth in an ice age."

"That would explain it then." Watching their journey. "So what did they do on Novus?" as the planet appeared with the lightship hovering over it.

"Absolute nothing. Just had a look as you can see. How's the dissemination going regarding that?"

"Slowly. The Primaian's momentarily unconcerned."

The view changed to the end run of their return, the images breaking up and collapsing. Momentary glimpses of dead skyscrapers, the wreckage of crashed planes, abandoned trams, litter, burnt out buildings.

"This is our future?" he pulled a face.

"I don't think the Web's been configured this far. I've routed it into the dump."

"Yes, the probabilities expand exponentially over time. I guess we'll get around to exploring the future if we get extra computational power. But not in the immediate future." Kythus was aware their resources were being channelled into the distant Solar Station. The QC and cloned dummy, to confuse Prima which one was what, as the real one was self assembling in far space was running a constant potential threat analysis regarding Prima's reactions and intent. If they discovered it. No one gave Regum any thought. The Solar Station was a priority one project. The cyber-clone an engineering exercise for students. No one here had an inkling of its real functions. Everyone assumed it was to explore space. In a way that was true. The difference was in how. That would remain the dominant secret.

"DVs?"

"Nothing. They're busy with Mars. Some entangled with Earth. They got their resonances mixed up focussing on two planets. You'd think they were smarter than that."

"Over focussed with their success."

"Too right there. Plus targeting us, and themselves, they certainly got their heads full."

"How aware of our mission there?"

"Well, with Carias's future scenario over Mars devoid of anything it might lull them into the idea that Mars won't be a threat to them. As for our remote inserts we're still downloading, sequencing their mind sets. Looking good."

"At the moment." Delira replied cautiously.

"At the moment." Kythus concurred. He opened a light console and called up Carias's downloaded data. Her brain scan showed lit up patches. Balanced. No overriding emotional responses. A rare Primaian.

"Well keep an eye out for her. This wrecked Earth. Make sure the Primaian's stumble across it if they ever get that far. Let them think they are dominant."

"Good idea. It'll boost their sense of importance."

"Precisely. A future where they gain the upper hand. Better not disabuse them of that illusion."

"Kythus, any chance it could be real?"

"Could be. One in a million." He replied unconcerned. "Can't see how though. Unless it's some cosmic catastrophe like a supernova going off in near space, irradiating the planet. But that wouldn't trigger an ice age. Could be cyclical. None projected in the immediate future, but well..."

"I meant the dead end."

"Oh that. We can future scan to make sure if it were to occur we can secure the mainframes, the data bases. The orbitals are protected so they'll be fine."

The hologram was stuck at the moment of fracture.

Prima's cultural attaché on Regum sent out an alert. They had the identity of the user who had been with Carias: Jorna. These people were so naïve. So sure of themselves that they thought by having everything in the open data realm as cyber constructs they were thus secure. The attaché was of course not appraised of what Prima's Ecclesiastics had in mind when he received his orders sent flash encrypted.

He assembled a team of extreme volatiles. There were a few around in their open society. Psychopaths had their uses.

Four masked women, they seemed far better focussed and secretive than their male counterparts, appeared at the user's apartment and blew her away. Then they burnt the computers using portable blow torches knowing there would be downloaded files regarding the trip which was deposited in the user's system. Those on sensitive missions as isolates who later would transfer whatever they gathered physically. Not this one. Parts of her brain an abstract pattern splattered on the wall of her private unit.

Upon returning to the cultural attaché to report they shot him as well. The plan, whatever it was, for they didn't know themselves had to be kept secret. The resultant political fall-out would help obscure further the reason for the attaché's cold blooded murder. The Reganian's would be in a spot. Then they accessed the domain and deleted the assassination planet wide claiming cyber pollution of psycho-pathological content loaded with malware, psychotronic boosted invasive viral infections. Creating the perfect psychopaths. Smart hackers would finally arrive as the hit squad taking out

Kythus, destroying all files regarding the end run. They then launched their aggressive data hungry nano bots to delete everything regarding Regum's end-run. One possible future the Primaian did not wish to reveal. Curious. Murdering a cyber construct. For what the hit squad did not know was that the real Kythus was secure in a research laboratory deep underneath the City. Delira his counterpart had her double, her second gestalt in a cyber station, testing it's virtual computers by going into the Web to check its guts. Have its logic gates tested via virtual realities. Delira was informed of Kythus's cyber death. He would transform, persona as yet undecided. Underground in a separate cell her cyber personality in space started a run sequence to trace the hit squad. It looked Primaian. Others would take over whilst securing her cyber and real presence.

Once outside Kythos's building, attuned to get past the indifferent inner security, a token presence she saw four young black clad, sexy looking women walk in and out. With no idea that this group was walking into a cyber diversion. Thus security's indifference. Gamers. What the women did not know was four priests assigned to them followed them as they dispersed after Jorna's deletion, following their orders. Each one on their way home executed. The priests then informed the police of their action. Given their diplomatic status and having rid Regum of four psychopaths they were merely expelled, the whole sorry saga quickly brushed under the carpet. Diplomatically dealt with. The culprits of this most embarrassing violence removed extra-judicially back to Prima, all loose ends quickly tied up. The job for the police done. Why these misguided gamers wanted to murder Kythos's secondary persona, unless sending a message remained a mystery. More so as Prima then had the Gamers assassinated and the culprits enveloped in diplomatic immunity. As they had done Reganian society a favour, getting rid of four misguided souls the Reganians did not probe too deeply into the affair. Four deranged young women deleted. Kythos's private domains wiped. But not the deeper contents regarding his official duties. His secret life. The murdered cultural attaché, the authorities reasoned had gone rogue. Officially. Unofficially investigations were stonewalled by Primaian delegates. The Reganians gave up.

However, it became a cause celebre for a while for these murders were sensational. Not that many worried. Prima's presence was tolerated, just. Why the cultural attaché was shot by four very unbalanced minds just showed how dangerous they were. Their demise, his demise caused no embarrassing questions. Rather it was received by the public with relief. Prima might tread more cautiously when dealing with Reganian's, aware of their cultural sensitivity. One did not murder murderers. Prima's embassy staff were chastised and they accepted the admonition to go through proper channels next

time. The psychopaths should have been helped. Just goes to show, when under the influence of their religious mind-set the cold blooded viciousness displayed by the priests a potent reminder just what atrocities were executed in the name of their belief system.

.

Prima

Lord Pentham smiled graciously at Lady Lehra, dressed in a suave minimalist subtle design of her one piece flowing couture. Muted soft grey, it covered in one graceful sweep her lithe body. On her sandalled feet flashed studded jewels, sparkling with her matching diamond necklace. Her rich auburn hair flowed in waves to pale shoulders. Her sensuous lips parted as she looked admiringly at Lord Pentham who took her proffered delicate hand and kissed it as if she were the pontiff herself.

"You are as radiant as ever. Your humble admirer is pleased to be graced by your magnanimous company." He purred with a twinkle in his eyes. She responded radiantly exuding her familiar warmth at the compliment. Pentham was in love with her, a love that would never be satisfied. Lehra was too smart to get involved with any of her suitors. Something volatiles might indulge in. She preferred secret assignations.

They were standing in her delightful garden. Bushes displayed their blossoming flowers, cool tall trees afforded welcoming shade. A vine covered latticed patio was set for her other guests. Cushioned seats around a low table where delicious bon mots, exotic fruits, chilled wines in glistening silver coolers were awaiting their pleasure, bottles of cordials alongside sparkling in the sun.

Pentham saw Jor, well groomed as always in a white two piece and his podgy ruddy faced friend Gorf, an unfortunate name who exuded his usual bon homie as they discreetly avoided eye contact whilst Pentham and Lehra exchanged pleasantries. A retainer hovered inconspicuously in the background having seen to the wants of her guests whom she dismissed now they were all here. They made great spies, listening to the conversations, informing Lady Lehra later as to who said what to whom. But not today. Not this afternoon.

"Where have you been you gavalant?" she teased Pentham who had not seen Lehra for a while. She took his arm into hers, snuggling up to him, her soft perfume just noticeable, reminiscent of spring's blossoming fragrance. Jor was his usual distant self feigning boredom, making a show of an effort to bother to deign himself, like a time

stressed executive to tear himself away from his busy schedule to make his presence available to her like some reluctant sacrifice. Gorf of course was anybody's, naïve, pleasant, vacant. The young idle rich basking in the shadows of their elders. Pentham knew of course she used them to drain information out of them. Jor by what he did not say and Gorf through his volubility especially when relaxed and drinking.

Lehra's intimacy with Lord Pentham would not go unnoticed, her intention. It would spread through the elite's idle time servers which amused Pentham. Lehra was a good friend and they got along extremely well. Their resonance's clicked. Lehra of course was too discreet to ever engage Pentham in any real or meaningful conversation knowing full well the best way to get any information was by being patient. He was her highest catch and as such treated him with coy reverence. Everybody of course in these rarefied and highly stratified circles wanted to know what Telafus was thinking, planning, engaged in. Since Gharbel and Qatus remained more outside these chattering circles only created a greater interest in Pentham who was one of the three most powerful domain lords on the planet.

Jor chaffing at the bit for having to live in the shadow of his esteemed father, a diplomat of high standing who had no intention of letting his wastrel son near any of his tight circle of acquaintances. So Jor pretended to be more important and more connected than he really was. Gorf was the opposite, an extension of his families entrepreneurial activities was good for information regarding Regum's commercial activities. These two families barely deigned to recognize Lehra's standing amongst the Families. Her husband had passed away years ago and everybody considered that her doing. Nothing of course was said to her face but behind her back, of which she was aware. Dark mutterings regarding her wealthy status, how she had acquired that wealth as she was now one of the largest landholders on Prima. Mainly in the outlands which lowered the social elite's esteem of her but her wealth was phenomenal and that could not be denied.

Lehra had no problem with not just keeping up appearances but being almost exaltedly so amongst them. Her string of male friends and lovers caused tongues to wag which amused Pentham. It had its shock value. Probably her very intention all along. Loose lips and all that. She accepted the gossip with amused grace as the two of them, giving the impression of secret intimacies approached in one fluid movement of relaxed grace the languidly seated Jor and his eager friend Gorf who looked almost longingly at the two of them.

"You have met Jor?" she asked Pentham as she studied Jor with repressed resignation. Jor's family saw themselves as some powerful presence, kept their standing by initiating and orchestrating whispering campaigns to lord it over their equals. They leaked information like a sieve, most of it half cocked, off track, misinformed. It really revealed their impotence beyond their immediate social circles. Through Lady Lehra Pentham could filter out the gossip, reveal their frustrations. Jor was the weakling, sullen, resentful for he really had no place at all even in his family. An appendage at best who was barely tolerated. His vapid demeanour did not help him yet for Lehra he was a conduit into the isolated world of some families. She hoped he would vent his spleen, making sure the wine kept on flowing.

Pentham neither cared nor bothered with Jor. The pontiff's palatial courtiers put it about that Pentham was barely favoured by His Grace which suited him fine. So Lady Lehra even being seen with Pentham whose star was supposedly waning, by letting him grace her presence in her own sanctum, and she had several, would throw the gossip mongers into a tizz. Others of course hinted she would go down with him and were waiting for a sign from above for that to occur. Lehra knew better. She as well as Pentham barely deigned to acknowledge the rumour mill, since the hangers on only just held their own in Prima's hothouse of power hungry families.

Even so Lehra was still a wealth of information. Except for her jaunts into space. No one knew of that. When she vanished everybody assumed she was distracting herself with a new lover. So far the cover held. Then when she returned she made a grand entrance in her saloon, a coffee shop where the lower artists, raconteurs, those with literary aspirations and off beat musicians congregated. Some of the family's younger offspring mingled there, getting a taste of the street, a whiff of the gutter, an inkling of dark things gestating in the sewers below.

Pentham never visited her saloon at the edge of the holy city where during the day, the idle rich, the pretentious thinkers and the bored heretics preened themselves in the open. Night was reserved for the creative, creatures of their own fermenting imaginations, dabbling in forbidden lore, strange drugs, exotic potions, the dark arts. Or so it was rumoured. For Pentham her saloon revealed the attitude's of the families, their resonant state and their solidity or lack of, politically. The authorities allowed its existence. The disgruntled let off steam, the spies amongst them kept Pentham informed just as Qatus and Gharbel were through the use of renegades trawling the street.

A young woman appeared who to Pentham's astute mind did not fit the standard. She must have been inside the house as she stopped in her tracks seeing Lehra

with Pentham. Short cropped hair, obviously a spacer which instantly intrigued him. They were a rarity on the planet. Only those with special clearance were allowed under the 'law of return'. They were almost a chosen race in themselves. She had to have a tight resonance, uncontaminated by the alien influx to be allowed down. Jor was staring at her with that snide look when he felt outdone by a more intelligent presence. It was probably the reason he kept Gorf with him, someone he could lord it over.

Lady Lehra introduced Ratze.

"I have heard good things about you Lord Pentham." She said easily. He was relieved at her pleasant straight forwardness. Her smile seemed cheeky as if the setting amused her as well. He kissed her outstretched hand. Jor made a pretence of being bored. Ratze a nobody.

Pentham murmured his delight at meeting her. She had lively grey eyes. If she was a spacer, who else sported short hair, then she had to be smart as well. A nice change. If she was with the DVs she would have psychic capabilities. Yet his mind felt nothing. She was being her natural self. He welcomed that. But he would remain just a little on his guard.

A houseboy appeared and waited behind them ready to serve. Lehra dismissed him saying that the staff could have a rest. They would serve themselves.

Lehra motioned them to be seated. Pentham sat next to her, Ratze on his other side facing Jor and Gorf. Lehra poured Pentham some white wine then passed the bottle to Ratze who refilled her glass and returned it to the silver ice bucket.

"I think you know Jor." Lehra playing the good hostess. Jor extremely well groomed pretended to be suitably impressed at Lord Pentham's presence. He moved with a show of languid interruption as if in deep thought only to be distracted. It did not work with Pentham who studied him like some unusual and distasteful specimen.

"Your lordship." Was all he said

"Thinking were we?" Pentham laughed lightly. Jor returned a blank look knowing full well the hidden barb intended his way.

"I'm Gorf" his ruddy face flushed a warm ambience.

"Pleased to meet you young man." Pentham said more softly.

"No the pleasure is all mine sir." Gorf replied solicitously.

Jor was not pleased, his posture tight. Jor's pretentious demeanour did not wash yet Lehra would not have invited him merely for his company. Obviously his family or their circle were of interest to her.

Gorf's eyes were a little hazy from the wine, amendable as Jor withdrew back into himself. Ratze simply enjoyed herself letting the men establish their pecking order. She was here to learn, acquaint herself with the social milieu for future reference. She had waltzed into Lehra's saloon a while back and slowly by engaging in witty if brainless conversation leisurely attract the attention of Lehra who liked her no nonsense approach, once she allowed herself to open up a little. So here she was.

Lehra nibbled on a piece of fruit.

"So what do you make of Caria's incarceration?" Jor blurted bluntly. "Some families are cracking up." Whilst not asking anybody Pentham knew the question was directed at him. Pentham was not about to reveal his work to this stropky puppy.

"No one is perfect." He said dismissively. It was an event in itself, rare but not completely unusual.

"Sad really." Lehra diffusing Jor's acidic comment. Probing into other people's realms. Ratze interested, Pentham could tell. Well she was off-world and probably missed some real social interaction.

"Cracking up?" Ratze asked.

"Yes cracking up." Jor eyeballed her as if she were dense.

"I heard that..." Gorf began but Jor cut him off and finished with "...she regressed."

"You know her then." Ratze challenged, intrigued how Primaian's dealt with their fallen.

"Know of her." as if that decided it.

"It's your assumption." Lehra said decidedly. Pentham wondered if that was why he had been invited. When families fall the planet's resonance is under threat from within. Caria's a difficult case. The gossip alone saw to it. For that alone Pentham staid out of it.

"And don't believe," Lehra continued, "what her mother has put about. All we know is Carias is there voluntarily. A retreat, a rest. Youth can exhaust itself Jor." She looked at him.

"Well then if the word 'regressed' is offensive, how about 'contaminated'. Same thing. The whole family should be quarantined." Jor expostulated. Gorf helped himself to some bon mots, Ratze followed suit.

"Sounds like Lord Dhekan Jor." Gorf said lightly. "And he should know, he deals with them. So should he be isolated as well?" Jor looked hard at him as if some act of betrayal occurred with that declamation.

"The day will come when the scum will be cleaned out Gorf." Jor replied pointedly. "Sympathisers are next. For the simple reason of cross contamination. We need to purify ourselves."

'Don't we just.' Pentham thought cynically. Jor's kind he was familiar with. More of a nuisance, urged on by the priests. He felt Ratze's presence. Was she reading Jor? Hope so, see what she came up with.

"The resonance Jor self rectifies." Pentham said pleasantly meaning Carias's case was of no major consequence. "The scum you refer to is there by divine will. The system needs diversity which, to remind you, strengthens not the other way round."

"We are heading for another calamity." Jor would not back off. "Thanks to the heresies." Changing tack. "If the elite are infected then the poison is already within us. There will have to be a reckoning."

"You could also be infected." Ratze said evenly.

Jor stared at her.

"Me? Ha! You yourself expose yourself for the greater good. We appreciate that of course..."

"So we would know firsthand how this distortion manifests. Clinically speaking your emotional outburst seems volatile Jor. Maybe an intense scan to make sure you are stable..." Ratze trailed off, not caring what Jor thought helping herself to some more wine. Very tasty.

Lehra must be after something Pentham thought. Jor really was a nobody, one among many. Yet if that is what his generation thought, excluding themselves from the accusation then an ill wind was indeed blowing through them all. Maybe these outbursts were signs of infection Pentham thought.

Jor tore his gaze away from Ratze, drained his glass then petulantly held it out to be refilled. Lehra did the honours. She was used to the company of drinkers.

"Jor," Lehra said as she poured, "we are at peace with ourselves. The divine reality is as is and we are grateful to be in a state of grace. The heretics of course are not, and funnily enough you are not either. As such where is the difference then? The clinical symptoms appear no different." Lehra said reasonably.

Jor was struggling with his wine driven demon, creating inner havoc Ratze realised delightedly. Drunks could be interesting even if boring.

"Blinded. That's how the great deception starts." Jor was breathing quickly his eyes blazing, the fever of the fanatic. "Through indifference, accepting the unacceptable. That's how the heretics and unbelievers will destroy us."

"Why would they do that?" Ratze asked.

"Why? Why?" Jor worked himself up. "Why does any heretic, apostate or atheist want to destroy anything. Because they are unstable, reverting to true form. They want to regress our supreme evolution. They want to usurp the divine mind. Maybe they want to be the divine mind."

Jor was certainly affected. It was always said a drunk reveals himself Pentham thought. He was certainly borderline, but amongst the families it was brushed aside, indulged even. Except for Carias. If everybody who was borderline was removed then there would not be many family members left if Jor was a typical case. Luckily Pentham hoped he was not.

"The divine mind knows all, creates all right Jor?" Ratze asked reasonably.

"What?" he looked at Ratze suspiciously then took a generous drink. Gorf made himself a plate of savouries. Lehra was enjoying the show as was Pentham. If this was a reflection of the microcosm then they were in trouble.

Jor sat down the glass with exaggerated care. "So?"

"So the fallen, the volatiles, the mentally ill are all part of the design."

Pentham smiled a little. Nice one. The School of Absolute Thought. Everything that is, is. Simple, direct, irreproachable if uncomfortable with mystics, the priesthood, the Ecclesiastics, or the Divines Pentham's mind perambulated. Jor seemed stumped.

"It's a test." Gorf said with his mouth full.

"See? Even Gorf can figure that out." Jor said pleased with his friend's lifeline. Gorf frowned. His happy expression remained in place but something passed through his mind. Jorf's dismissal of Gorf by that statement stuck, his civilised expression remained for the sake of the company. Jor of course was oblivious to anything but himself. The rest were his audience there for his amusement. If they could not see what was going on around them, within them then it was up to him and others to set things straight, for the good of the planet

"So," Ratze said at last, since nobody was going to challenge Jor, "that heretics were created for the sole purpose of you reforming them? Isn't that rather a waste of time? Or worse a sign of imperfection within the perfect?" she asked without rancour.

"Oh it's much worse than that." Not even considering Ratze's reasoning. "The cracks in space are already there, the alien poison destroying our souls which you think is nothing, excepting everything, anything to keep the peace. Do nothing, it is the divine will. Well it is not the divine will but an evil intelligence that is confounding us all."

"I think the confusion is a matter of perspective Jor."

"That is right..." Having forgotten her name. "The only standard acceptable is that of the divine mind. Anything less is false. If you knew what I know in my heart, what is festering in my soul thanks to the fallen..." he broke off dramatically, truly suffering. They were all surprised at his emotional turn.

"What do you know then?" Lehra chipped in.

"The disturbances came by degrees to fool us all. Infecting us slowly. I am at least wrestling with that. I refuse to let it take me over. The divine will is my saviour, my bedrock, my strength and my victory. The great battle has begun. We must arise as one. Remove the fallen so we can be supreme, to do his will as intended since the beginning of time right unto eternity. You should know." He looked at Ratze.

When she said nothing Jor continued: "The divine mind has lost confidence in us. That is why there are doubters, the degenerates who are drawn into the Web and the rest. We are being abandoned for we have sinned in our hearts, our minds. And we will all go down if we continue in this manner. That is what is plaguing me, for I have seen the truth."

"You're obsessed." Was all Ratze said.

"I am not. Yes maybe I am. Obsessed to reclaim the universe from the enemy. For if we do not lift ourselves to the great mind then we are doomed for I have seen the final revelation and the terrible future it harbours..." he trailed off exhausted.

They were all a little stunned. What had begun as a pleasant afternoon had turned into mental mayhem. Pentham took careful note of Jor's mental state. Disturbing if he was not the only one. Lehra paid attention because if that was what the young thought then if they grew up and assumed positions of influence a dark religious age awaited them. Ratze focussed on Jor because here was a study of a psycho-pathological state of mind. If Jor's kind was the future...her mind recoiled at the thought. These fanatics had to be isolated before they could weave their way into the power structure.

"Want to know who these aliens are? Hey?" Jor seemed to have resurfaced out of his alcoholic daze. They humoured him and waited.

"We. Us. We created them." Jor was certain of that.

"What?" Ratze said for all of them. Her Brain staying out of this. It was too close to the truth. If she agreed it might blow her cover.

"Didn't know that did you? And if the DVs know, they're not saying. Any who know are BrainDrained so that we don't know of our own terrible future." When no one replied he continued even forgetting his wine. "They know our future. And knowing our

past are manipulating it, through the Reganians, through their insidious web to create us in their horrific image." Jor was rambling but to Ratze within those convulsions a glimpse of another reality, gestating behind the scenes. Her Brain certain.

"Those that do not comply are preyed upon by soul vampires. They are engineering Prima's downfall by any means available in the cosmos and they are winning. We have more fallen every day. Like Carias it has now seeped into the ancient revered families. It has risen right to the top. So we have to exterminate them, cut out the cancer so they cannot grow and mutate, cannot physically escape by going into space to plan their evil deed." He breathed heavily. "There. Satisfied? Now who is insane?"

"Why doesn't the great cosmic mind stop them?" Ratze was puzzled as she always was when dealing with religious logic.

"Because, they are beyond space and time, beyond our universe. They created their own evil universe and it is all around us now. Filled with their insipid intelligence. And if we even have the slightest intercourse with them, short of wiping them out then we are lost, forever."

"That would mean the great mind is impotent Jor."

"So," Gorf began, having finished his platter, "this dark future is drawing on our souls right now. Our heretic thoughts are like nourishment to them so that we are creating our future malformations in a sinister resonance that will eventually destroy us as we are, using Regum and that other planet as their power?"

"At least you seem to understand Gorf." Jor said relieved.

"I don't understand Jor. Because if they destroy us they'll destroy the very base they are using to be their future selves."

"Not physically, oh boy. Why are you so...it's...mentally present, its, spiritually empowered by us and it feeds off us psychically."

Ratze sighed. This could go on for ever. Alcohol did that. She knew enough for the moment. Lehra and Pentham had exchanged looks which could only mean they wanted to be alone, later. As for Gorf he had seen his friend in a new light. His real resonance had come through. Their friendship she sensed was about to disengage.

Jor's crazy talk though was interesting if a little beyond the credible. Yet a future Primaian race that had grown out of their old religious mind set could, if mastering time somehow influence their relative past to lead and guide them into a mentally disturbed, religiously burdened future, totally unlike Regum. With their future capabilities technologically on one planet and natural psychic abilities on the other, then AI systems could develop if these two aspects were to be united. It could really supercharge

Regum into a great future. Whilst Prima remained fixated with this monomania Regum had the chance to break out of all the alternatives they were facing. It was an interesting possibility.

Ratze knew enough for the moment. Jor's mind had splashed out as liberally as spilt wine. Her Brain was satisfied. Primaian's were through their religion becoming more Volatile. That meant social dysfunctionality. The best place to ride out the rising brainstorms was up there.

She rose and said her goodbyes. She made the quick rounds, saying Pentham could remain seated as could Lehra, acknowledged Gorf who seemed a little disappointed that she was leaving so soon, nodded at Jor and made her own way out.

Prima could be disintegrating mentally. The only problem was that the mad, the insane were unpredictable. She hoped those up there were not so susceptible to those fervent believers who would turn over their whole social structure to achieve ends that were nothing but hallucinations within in a convoluted evolutionary challenged mind.

Mars

Verhat dismissed his two companions for good reason. Not letting them notice his interest in the ancient temple at the other side of the lake. Folklore claimed it held hoary secrets going back to distant mythology, predating all the gods. The priests claiming it was no longer a sacred fane. Devoid of gods. The shaman's reckoned it was a cavernous emptiness hungering for souls. Once a place of worship when nomads still roamed this part of the land. Then the seasons changed turning the area into a semi-desert. Abandoned by gods and priests alike. Now of no particular interest to anybody. A shell, a remnant, a husk. The nomads moved on, further out. The temple hewn into the mountain, really an ornate cave left Verhat intrigued. The gods, for Verhat was one of those rare individuals who whilst not denying the forces the gods were, be they the wind or lightning, were the result of an active imagination. But he was curious about this nameless god's past at the abandoned temple. Not that anybody took an interest. The philosophers were more concerned with people than with sacred objects. The priests concerned with the condition of the people's spiritual state whilst commendable missed a salient point which intrigued him: how it all began, how they came to be, how it all continued. Whatever the ancestors believed had been subsumed by the priesthood.

Verhat was well aware how the later priests had rewritten the sacred laws thus obviating and occluding whatever had been present here. Even if it appeared to be devoid of sacred power. Verhat did not think so. This temple contained not just the planet's power itself but something more. Not so much animated by the gods but by some mighty force predating the gods. A potent primeval essence that even bound the gods unto it. It nurtured them, sustained their energy. In the secret laws, for the priests never found everything pertaining to their hoary past it was written the ancestors never had had a god or any gods in themselves, just the belief in an unknowable force, a presence that was everywhere, diffused in everything. An invisible godlike cosmic force. Worshipped in this ancient temple. No written laws, no sacred votive offerings, a nothing, a persuasive absence. The opposite to everything that existed. Keeping the universe in

balance. With the gods, the priests in the ascendant this equilibrium was being destroyed. The harmony unhinged. Souls desecrated, the gods turning into abominations as were the priests and their progenitors. The ancients had worshipped in silence whatever it was they believed animated everything in the universe. Whatever they had known was lost for as later generations accepted the new beliefs they forgot the old, the original attempts to commune with what they considered more than merely divine. Verhat wanted to know what that was. Nobody else cared much. What did not exist could not be. It was logical. It was simplicity itself. One could not worship nothing.

He rode around the black lake under the brilliant canopy of stars, being drawn towards this distant remnant, a vestige of a past no longer pertinent to the present. He dismounted patting his horse which snorted, shook its mane and simply stood there. Horses were such strange beings. When left to themselves they went into a vacant trance. He sometimes wondered if they communed with higher entities or were lulled into complacency in just being. Given their tiny brains maybe not much was going on there. Like some men or dogs who when nothing caught their attention simply went to sleep. Horses seemed to do that standing up. Animals.

Under the black sky the lights of the heavens tiny yet so close he observed the two chiselled black columns designating the portal. Verhat considered back then their ancestors had roamed the planet until the climate changed and everything became drier. The other side abandoned. Fearful myths relating to the calamitous catastrophe which overwhelmed their glittering cities. Now abandoned. Ruined catafalques entombing the ancestors who had strayed, who had discovered something beyond all reason, beyond the gods, beyond the universe. It had all started here.

Now he was in front of it. He walked steadily through the chiselled gate, black monolithic rocks testament to their craftsmanship, entering the familiar interior. Semi columns lined the walls, the darkness an essence in itself. Here Verhat had his dreams, here he felt in touch with something knowable yet unknowable. A nothingness which was something. He had felt this surge of power, of latent energy. He had seen golden letters which could not be deciphered, glowing glyphs, seemingly alive on the raised dark slab. Sometimes strange mutations appeared in dark glowing sculpted forms, beings with the heads of strange animals. Some large round, others radiating a golden aura, or green, blue, the colours of the rainbow. Sky gods he reasoned but nothing like what the priests envisaged.

In the centre of this hall a raised altar of obsidian blackness. The slab with the images. There he would lay himself down to sleep and commune with whatever it was

that still resonated weakly. The past continuous. With an invisible guide, never revealing itself except for the strange attendants around it. Nor did Verhat seek with obsequiousness the face of this presence. It was more than a god or maybe the god of gods. Wrapping as a circumference around the planet a shroud imbued with its subtle energy. He was onto something. Others held the place in fear claiming it was an evil daemon from a distant past better left to decay. The myth of The Destroyer of Life draining the living spirit from its supplicant so it could live. Granting false visions to entrap the unsuspecting. Instead Verhat felt its infusion. He was being filled with its enigmatic presence, not drained.

He clambered on top of the raised altar and made himself as comfortable as he could having taken off his cloak to cover him and his vest half rolled into a pillow. He laid himself down to sleep and hoped to be granted a vision. It took a while, his thinking brain calming itself then slowly sleep embraced him. His mind still alert. Asleep and awake at the same time. Not unpleasant, intriguing for the rampant images always returned.

He saw a dull glowing purple sun amongst millions of stars. An intelligence connected to it. Within this translucent orb many souls, maybe millions, wriggling within their confines, in motion. Each in their own world. Maybe this was the place where the soul went when one passed on. The keeper of the dead. It made sense.

He even heard their voices but since there were so many it was like the babble of the marketplace. Incessant jabbering. Some content, others railed against their fate. The land of the passed-on. It was wise to familiarise oneself with one's future state. Maybe there was a choice. He wondered what Kahl would make of this. The priests were afraid of this place and that was enough for the others to avoid this doom blasted gate to a realm bigger than their world or that of their gods.

Each soul preoccupied with itself. The pulsing frenetic activity intriguing. As was the master of this realm who never revealed himself. Present yet invisible. He understood why the temple was black. Black attracted warmth, white repelled. So did this temple. Yet the black priests avoided this ancient fane. Were they afraid of their future state? Their souls were to return to the stars, looking differently from within. Maybe not all returned to the glittering realm above. Were these then sinners who had let their soul be corrupted? Some were insane, ranting and railing, caught in their own demented mental web, some exultant and exuberant, others relaxed, a few happy to have found this distant domain.

All a part of the great orb and behind it a huge black sun. He had not seen that before. It was much bigger than the hazy orb with its countless minor colourful separate

bubbles. A black sun so large it seemed impossible. Yet there it was. Silent, powerful, steady. Black light. Fascinating.

Obviously his time was not due to pass on. Verhat in his middle years. The enormous black sun intrigued him. More than just the darkness of space. So was the mind within the purple domain. Many realms. A dark master in control who would not reveal himself. No wonder the predecessors had given up. What use was a god who would neither reveal itself or be of any use as their current gods were? But irrevocably endowed with a dark intelligence. Could it be a pure mind as the philosophers claimed? Maybe.

For a moment Verhat connected. Everything within the colourful vibrant mini worlds was attached to every future. All contained within that purple orb. What was to be, what had been, what is!

Now some of Kahl's enigmatic statements made sense. The only one he knew who was interested, without the philosophical meanderings of convoluted logic to shoot like an arrow straight forward to answers that went beyond the obvious. To fathom the basic state of their gods.

Black and white. Two seemingly opposites yet one in the majestyrium. Verhat had found the invisible god. He was not about to reveal what he knew. That that place was both past, present and future. He was sorely tempted to find his own future yet knew once in there he would have to await the pleasure of the being to be released back into his universe. If his future soul was there then it did not matter. But what if it was not? Then he would have to wait until he passed on. Plenty of time. Was this the coming future? The priests were silent there, the gods not much help. At least he was ready. He would bring up the concept with Kahl. With him one could have a decent conversation. The priests merely recited their liturgies again and again. This was something entirely different.

'A remarkable place.' Verhat thought. The spell broken. He felt stiff, uncomfortable. Outside the first light was dawning. He rolled off the dark slab, stretched, put on his vest and his cloak.

Outside the grey sky. To the west the last remaining light of Bahlir shining steadily. A slight breeze icy cold moved through him even with his thick cloak. His horse had wandered off. There were other hoof marks. Nomads still worshiping here? Had they glimpsed the distant god with his entourage of living beings? Was his secret no longer one? Had Amos and Nada followed him? Maybe seeing him asleep, and wide awake

within the portal open to see him commune with this unknown god? Or had Khal come out here? He was travelling with him.

Verhat hated unanswerable questions. They more often than not led to complications. Yet his mind felt both strange and serene. Sure there was a fathomable potency in that vision. That black sun alone testified to this gods potent domain. He caught up with his horse which seemed to welcome him back, ready for a jaunt. Up over the rise they ambled near Amos's camp. It really was Nada's. What she saw in him defied logic. Well love was like that. She would tire of him eventually and seek a more worthy companion.

The camp bustling with activity. Water drawn from the oasis's well, food prepared, horses shod, though not breaking camp. Nada was waiting for her father. At the edge his tents. Colourfully patched, smoke curling from the largest, his. One of his servants took his horse as Verhat entered through a half open flap. Kahl was taking some tea. He looked up and was about to rise but Verhat sat down next to him on several cushions, squatting.

A servant entered and waited. He dismissed him saying they were not to be disturbed for a while. He left.

"Kahl, you're knowledgeable." For he was. One of the few who understood. Sure the gods moved amongst them but now that he had discovered this other god something latent stirred within him. The possible dawning of a new life. Still he was cautious. Kahl was like him, self contained, keeping his wisdom to himself. No disputation with priests or philosophers, more like subtle interrogations. Kahl Verhat thought was after something and like him did not reveal his intent either. They were very alike.

Kahl waited. A man of independent means, a little older than him yet wealthy enough not to be in anybodies debt.

"You have been to the ancient temple cave." It was a guess. The place was a curio in itself. Rumours abounded that it still attracted the ghosts of disturbed souls who died a violent or sudden death, not ready yet spiritually to join their chosen god's realm. Haunting the place. Neither had noticed any. The idea occurred to Verhat that since he thought along different lines, trod his own destined path, indifferent to folklore, gossip, superstitious fears then neither would that reality have any validity to his perception. In a way the philosophers were right, the mind perceived according to its own inner makeup. Believers saw things in the invisible realm. To Verhat reality was what mattered. Sure he had dreams, the connection was there but it belonged to dreams and dreams were not the same as the waking state. There the real was exactly that. And yet the vision, the

connection he had been granted did not perturb him as such. He had never seen a living god except in his dreams. And now he had seen something far more potent than he could ever have imagined. If Kahl knew anything now was the time.

Kahl studied Verhat then nodded.

"And?"

"And what my friend."

Verhat did not like being called 'friend'. It meant obligations and he had no wish to be obligated to anybody. Rather the reverse. But he needed to know. Kahl had travelled to the furthest ends of the kingdom and perhaps beyond. The other side of the planet might have been the cradle of their fallen world back then when the climate had been more lush. Then the fire belching volcanoes vomiting forth too many catastrophes upon them. It was rumoured that there were still the ancient ones, the hyperborean aborigines worshipping their equally ancient gods. The names might have changed but the power was still the same. There had been no contact for generations. They believed in the eternal presence, like the nomads. They claimed to be keepers of the planet which was all well and good. With no need to build cities, use the knowledge of numbers...why was he thinking all this now? No one had seen them for aeons.

"Was anything revealed to you." More a statement than a question.

"Tea?" Kahl asked. "Yes." As he stared into the central hearth's fire. A small round stone enclosure where the wood crackled with the warmth of lambar's fire. Kahl poured some tea into Verhat's clay cup. He drank it feeling a little rejuvenated. He knew what his companion was alluding to.

"That place." Kahl said at last. "Ancient memories cling to it. Whoever had chosen the sacred mountain for its location had been aware of the latent power of that massive range. The gateway to eternity."

"Yes, I've had that feeling as well."

"You have?" Kahl alert.

"Well it is said that the mountains are the border, beyond that sacred ground, sacred space. Those who venture beyond never return."

"Like the ancient ones."

"Keepers of the divine maintaining the link."

"So it is believed." As usual Kahl never committed himself personally. Like Verhat. Sure the gods were real. But there was something other behind or around the gods. It was that which he sought to discover. The power itself. Of which the gods were but a

manifestation. Maybe what he had seen in his sleep was the answer. The next step in his quest.

Kahl's stringent use of words was what seem to draw him to this stranger. A new breed, a new mind, a new way of seeing things was stirring in both of them. They astute and attuned souls.

Kahl had claimed to have left the ancient ones behind. This force pregenital, the bedrock of a future belief. As long as it existed so would the planet, the stars. If the power vanished then it was all over. The gods would claim their devotees souls and their world would pass away. Both had found something completely different to what the holy writings claimed was the realm of the gods. Another god was self creating its realm and Verhat had seen it.

Had Kahl?

"You make no claim to divine knowledge, even whilst having forged a link."

Meaning the void beyond the universe

"The past is not without its secrets."

Typical Kahl.

"So what secrets did you discover." Verhat hated having to draw Kahl out.

"Secrets." He said laconically and left it at that.

"A secret is a strange concept. Like infinity. There and not there. A secret can only be a secret if it is a secret. If more than one person knows of it it cannot be a secret and yet it can be if these two people keep it to themselves. Infinity on the other hand is real yet unreachable. A secret is reachable." Verhat hinted.

Kahl looked at him evenly.

"Well?" Verhat prompted.

"It is a gateway. And by your rather esoteric conversation I can assume you have communed." Yet he did not say or ask with what or whom.

"Yes." This was going nowhere. Verhat drained his cup feeling better.

"Let's stop this circumnutation Kahl. You know as I do that there is more to that temple than just old tales."

"As in new tales?" Kahl half smiled.

"Revelations."

The ground shook. The animals outside panicked. The rumble ominous. The tent swayed as an invisible wave moved beneath them. In the distance cracking sounds of boulders splitting, then the sonorous vibrations of an earthquake. Rena the earth goddess making herself known. Outside the yabbering of protective prayers seeking imprecations

to be spared and not swallowed up by the cleaved earth just yet. Kahl though alert was not panicking. Neither was Verhat. They were safe here. They both rose, a little shakily and went outside to see where Rena had revealed herself.

A part of the distant mountain was covered in boulders cascading down the mountainside. The power of Rena could be awesome. Billowing clouds of dust spread down, out and upwards in rich soft textured browns as the first rays of the sun edged over the horizon. The distant rumble continued resonating across the land, within their bodies.

The avalanche of rocks had buried the temple. A divine sign. The ancient secret was not meant for any of them. Rena had enclosed her sacred fane. The inner gateway not for mere mortals. Verhat did not feel cheated. He had been granted the vision, maybe even Kahl who had avoided his probing question. Allowed a glimpse of some future god. Had Rena acted on its behalf or had the gods decided she was to do this? Shut the gate to this distant realm deep in space with its huge black sun, larger than any other?

The avalanche was over. Smaller rocks still tumbled down the mountainside. A clean break showed a light brown and soft grey cleaven section where that part of the mountain had sheered off. The animals were calm again, the others stopped their prostrations now that they knew they were safe. The camp all excitement. Rena's reminder of her power and more importantly the sealing of the temple. It was a sign.

Kahl and Nada's eyes locked for she had come out of her main tent. Nada's eyes loaded with secret knowledge. Amos was standing next to her of course watching like some hunter intent on his prey. Taking in the larger picture not just the avalanche itself. Linked with Rena's intent. The goddess had acted, divine intervention. The temple might still be there but the entrance blocked by a small mountain of rubble. This was no fluke, no capricious act. Verhat could have been buried in that yet he was here, not there. It's secret was now hidden. Was this coming god then from the past, to be closed off or from the future to be denied access to not just himself but whoever felt drawn to its mysteries?

Verhat went back inside the tent, Kahl followed.

"A divine sign Kahl." He sat down on the colourful embroidered cushions. The fire crackled, sparks moving upward before going out. Verhat remembered the falling stars. Had they been a sign in itself? They had vanished close by. Maybe near the camp. They eyes of Bahlir guiding Rena?

Verhat rose again motioning for Kahl to remain where he was. He called over a servant and asked him to see if the eye was still there. The man obeyed and hurried off. Verhat resumed his seat.

"Kahl, tell me what did you see in that temple?" A direct question was always considered rude but he had circled around that and been answered with obliqueness. This was too important to stand on ceremony.

"I wish I could explain that myself. A vast distant presence, a feeling of immensity." Kahl had been there but he had not even thought of lying on that black altar. Something held him back. It had seemed dangerous. Maybe not dangerous but inimical. Too heady. That was it. A colossal potency and he had held back. Now he wished he had not. He had sat there in silent prayer. After a while he had felt what he just admitted to Verhat. It was obvious now that Verhat had gotten further than he had. He would have to draw out Verhat who, having referred to the nature of secrets was in possession of one. Kahl allowing the direct question. Not rude amongst friends. Just the uncultured, offensive to good taste and manners.

Verhat considered Kahl. The man could be dissembling. The description always vague. All gods had that immanence about them. Yet he admitted to some god's presence. It could be Rena for all Verhat knew. Maybe he was the only one who knew! Now what to do with this intelligence? For the moment nothing.

Kahl was waiting for Verhat to reply.

A realm with many beings, maybe many worlds was all Verhat came up with.

A discreet rustling, the servant had returned. Verhat turned to him.

"The eye of Bahlir has rolled into the lake."

"Thank you, that is all."

The servant bowed and left.

"Ah yes I had forgotten about that. So many signs. Portents." Kahl said.

"Indeed. Rather fortuitous don't you think?"

Kahl considered this. He was at a loss. This planet's resonance was unlike the alien presence he had come to seek, his only reason for being here. The DVs were maintaining their wraithlike presence distant from his other inner self. A remote possession. He walking with a ghostlike ancestor, a substantial one at that. Kohr. There and not there, here and not here. This eye of Bahlir had to be a powerful magician's heretical eye. At least it lay under the water of the lake. Was the Divine Mind, the coming god acting now? Had to be. This was more than luck. The sign was miraculous indeed. He felt fortified. Now for Verhat to inform him what had transpired at the buried temple. Kahl felt potent. More

than a mere spiritual surge. This was deeper, broader, wider, going beyond the stars, beyond the gods themselves. He felt immortal. Revealing a new world, powerful beings in touch with the ultimate. The promise of eternity beckoned.

"A new beginning, the first signs Verhat."

"Yes I have that impression as well." Wondering if he really should confide in Kahl. As Rena had buried the temple maybe that too was a sign that he should keep this secret to himself. It would depend what Jaffir and his advisors thought. By rights a messenger should be despatched to the king but he thought it best if he were to bring the tidings. Auguries but of what? A god curtailed or secreted so it could continue, gestating out there in deep space? To thwart or throw a cloak around it so it could do its will? Would it, could it influence others through its dreams? He would have to be alert to that. Would there be signs? Portents? Visions? Were the priests attuned or not? Or the sun goddesses? Or was this god to usurp them all? Well at least he was ready. Would it enter spiritually gifted souls to do its bidding?

"So does this new beginning imply a new god as well?" Verhat asked.

Kahl was momentarily taken aback even though he knew this question would arise eventually. No wonder his mind was attuned with Verhat, in resonance. Verhat was not like the others whose minds were more or less open to his psychic suggestabilities. Not Verhat's. An extremely strong presence of mind. He wondered if Verhat was another 'traveller', one sent by these distant star dwellers. Then there was the enemy: Regum. If they could land a god's eye here why not a person? Guiding certain minds here. The secret guides guiding the priests, both black and white. Their creatures, doing their will, preparing the way for them to accept with divine grace the supreme deity. The heretics had no chance. Worshiping their own delusions.

"The realm of the gods is real." Kahl ventured sounding trite. "And I have pondered the divine energy they use. Bear with me. The energy is being used by the gods. I sometimes think that that energy is god-like in itself."

"An interesting concept Kahl." As he thought back on his vision. Could it be that a master god was behind their gods? Yesterday that thought would never have occurred to him. Now it did. Kahl was astute to say the least.

"It is a possibility."

"Yes. A supreme power animating the gods." Verhat's mind ahead of his own consciousness. It might just be so. In that case he would need to study this cosmic presence. Momentarily cut off. At least he had its memory. Maybe enough to maintain the link. Verhat wanted to break the hold of the priests, in fact he wanted to usurp them

and be the supreme spiritual head here. Except that the king's spiritual head was in the road.

"The power of the gods is what matters." Kahl said at last. "Self sustaining, self creating, self being. Everything around us their manifestation. We live within but cannot see it as we cannot see the air around us or feel it like the wind. So too this power is everywhere and around us. We are its projection, we live in its dreams, portals to its presence, in its reality Verhat."

"You think this too?" Verhat relaxed. He was convinced of a universal power but he had never envisaged a new god. His view was more occult. The power was everything, the gods a chimera made real through the devotions of its believers, feeding them right unto their last breath. All distractions. The priests kept the confusion alive. He was going beyond the veil. Let the dreaming sleepers think what they liked, he at least knew the great secret. Pure energy way beyond the gods. Trouble was that vision in that temple seemed to confirm Kahl's view of a god behind all gods. What if that too was another dream realm, another visage? Verhat would keep his options open. Let the others delude themselves with their charades. He would draw upon the power direct and become his own god!

"The supreme god, the ultimate mind, true eternity. It is our limitations that create the gods. Manifestations of power. By being with the gods, the mind, the soul is in contact with the living power."

"Only one?" testing.

"All from and within the Great Architect of the Universe Verhat."

So, Verhat thought, there is a grand design. The universe is testament to that. Which I shall tap. A god by definition is self limiting, just as is life. The mysterious effluvium that is life is greater than any god. Or rather, one can become as great. The last few hours had been very profitable indeed. He was not about to offend or contradict Kahl. Let him believe what he wants. The priests might consider him a heretic. Kahl his scout. If Kahl's dangerous concept was accepted fine, if not then at least he knew how to proceed, in secret. His revelation was meant to be. Otherwise it would not have occurred. Had his view been blasphemous he would have been buried in that avalanche, but he had not. Obviously he had been spared. It was enough to fortify his resolve. He felt great yet pretended to Kahl to be thoughtful, not quite convinced. Interested yes but no more than that.

"So why bother with the gods?"

"Ah they are creations of our limited minds, our blinded souls."

"Don't let the priests hear you say that." Verhat half smiled.

"Oh I am not about to challenge accepted belief systems. The revelations will come even without me. I am but one tiny soul. What could I do?" Kahl said innocently.

"Join the philosophers?" Verhat quipped.

"It is enough to know." Was all Kahl said.

He was thinking of the presence of the DVs who would only communicate with him during his sleep. Going into a trance state during his wakefulness would only attract attention.

He was there as forward intelligence checking on Prima's overall progress. Society at some future date fracturing. With the philosophical schools located in distant hamlets enough suspicion was aroused concerning their ungodlike enquiries into the world, the whole universe around them. Led by Ephan the Silent, a joke really for all the talking he did. Worse maintaining the gods to be a figment of their imagination. Simple answers to complex questions. Priests were on their way to re-establish order. They would be arriving any day now at the camp. Dissention was good. It would drive those who resented having their gods being questioned to seek answers. His progenitors were ready to provide enlightenment.

Verhat was amendable, or appeared so. He had no following yet was accepted at court as a magus in his own right. The power that seemed to enliven him interested Kahleff of course who wanted to become ever more powerful hoping to learn of Verhat how to use one's will to rule over one's subjects. In a way Kahl was preparing the king in his own way so when the great revelation came all would be in place.

That a calamity would strike, the wrath of the supreme deity to warn the people worshipping false divinities was unfortunate but necessary. They would come around when the holy spirit infused them. They would consider themselves chosen. It had worked on Prima after its Calamity and the Ecclesiastics saw no reason why it would not work here as well. But there were enemies. Except they just did not know the role assigned to them as such. Nada was one of them. If she could not be brought around then divine intervention would see to her being either contained or disposed of. The only problem was her influence. One of the richest merchant families in the kingdom. Maybe by bringing down the mighty would be deemed a sign of divine wrath. A sign for the downtrodden that they would be exalted whilst the rich who oppressed them would receive holy justice. Kahl looked forward to the day of reckoning.

The military under Norhat were busy keeping an eye on the nomads so they were away from the capital, the centre. Once with their aims achieved the soldiers would fall

in line. They were pledged to the kingdom not the king. He only ruled by their gods grace and once the gods fell so would Kahleff, unless he accepted the new order. All the priests knew was that a new age was coming. The divine splendour irradiate them with the glory of supreme power. There was no opposition to that. Things were going according to plan.

Nada disturbed him. There was something deep within her eyes that seemed illimitable, without end. Not like the others. Different. Maybe an avatar but similar in a way to Verhat. Another unique individual, not like the rest at all. Harbours her own destiny. Perhaps not even in resonance with what was being planned. If she could not be turned it would be enough to convince the other merchants to accept the divine will. Well the priests were on their way ready to follow his orders. The material rewards promised them was enough to have them on side. To actually convince them of their righteous path would have been an insult to their divine status amongst the people. Action spoke for itself, words could follow. The priests were good at that.

Nada returned to her tent after the avalanche was over. Amos had run out more to see that the horses or sheep did not break loose out of their makeshift corral. When she had locked eyes with Kahl she was struck by something unholy, something tainted, impregnated with a darkness that froze her soul. Not fear but danger. She had thought Verhat was the one to watch. Kahl merely one of those like minded types who were masters of their own destiny. They were probably the eyes and ears of Jaffir keeping an eye on not just the unruly nomads but also the morale of the troops or even Ephan's influence on his students, as well as the gossip of the marketplace, maybe even herself and by extension her father.

Verhat was only interested in himself. Did Kahl have designs on him? Using him to get to the king. Well he would learn nothing from her. She regretted the way she looked at him just now. A little defiant perhaps but it was rude to stare. She had let him see into her soul and show him that he was no match for her. She didn't know where the power had come from. Maybe that was Rena's doing. Well she hoped he would keep his distance. After all he, like Verhat and his servants were guests in her camp. The stance Kahl had taken had given him away. He was possessed by something deeper and mysterious than just the influence of some god. There was an unholiness about him. She shuddered. Ice cold and determined. To do what? That man was dangerous in the extreme sense of the word. She would have to tell her father. Of his brutish servants, all brawn and muscle. Word had it he had some influence with both the black and white

priests. White. Why this differentiation? The whites were preaching submission to the gods, the blacks active engagement. Both parties in agreement regarding their bifurcation. Dividing the populace between them. The meek went with the whites, the assertive types with the blacks. Something was being fomented and she was certain Kahl if not Verhat were behind this. The days of benign indifference as to how one approached the gods receding. Their fervour disturbed her. For the moment the only one profiting from this new insistence was Eghan's philosophical school. People were seeking answers to questions the priests could not assuage with their platitudes and self importance of having the keys to the gods kingdom. Maybe this was a change for the better.

She entered the tent concerned about the foulness that was Kahl. It hovered in her memory like liquid air impregnated with a cloying decay. A living death with its preternatural force infesting any living being falling into its orbit. A living putrescence. She would bide her time hoping to unmask him for what he was, a foulness in rotting flesh.

A rider approached the camp heading straight for Nada's tent. One of her father's messengers. The horse was sweating having been ridden hard but not too hard. The servants got busy washing it down, letting it drink and giving it its well deserved rest.

"My lady." He bowed to her having been shown in. He handed from his travelling pouch a roll of parchment with her father's seal and waited. Amos was of no consequence to him. She broke the first seal and the message read that she was to read it's content's later, the second envelope alone. But before nightfall. No return answer required.

She offered him some tea asking if he had eaten. He said he had provisions and was to return with her reservoir of gold coins. He was one of the trusted which she recognised by the star ruby he wore on his left hand. Their sign to receive as well as being trusted.

She asked him to be seated. He smiled and said after sitting for hours in the saddle standing was a relief. She returned the smile. Amos excused himself and left the tent. The messenger barely looked at him.

"So what news?"

"The priests are on their way. They will most likely stop off here..."

"Probably making a show." Meaning letting Eghan know of their presence, a reminder of their assumed supremacy to look after the town's souls.

"Anything regarding Norhat?"

"Not to interfere."

"A missionary expedition then."

"Most likely. Last night, when I stopped over they were excited by three falling stars."

"Yes." But she did not expand on the eye that had fallen close to the lake. Where the other two were was anybody's guess. Had they known of the portent or was it just luck?

"They saw it as a sign of divine favour my lady."

"For them no doubt."

He wanted to agree with that but remained in his place. City bred. Out in the desert Nada was less insistent on ceremony. Without encouraging familiarity. Certain standards had to remain. "Please continue."

He shifted uncomfortably.

"Your impressions man, of the priests."

"Oh, yes, of course, as you wish. Rather quiet. Not their usual vocal selves. Holding back I thought. Under orders perhaps. Secretive. They even had look outs at their camp."

"They have auxiliaries?"

"A few. Armed."

"Armed. Maybe they have a full pouch of gold with them. To dispense amongst the people. Certainly not the king's money. Interesting."

He agreed merely by the expression of his open warm brown eyes.

"How long till they get here?"

"They said they would break camp this morning. If they continue through the night they should arrive tomorrow. There are about a dozen."

"That many. Well well well." Then she sighed. "Well I'd better get the servants to prepare a repast for them. Slaughter a sheep or two. You will stay?"

"No my lady. I am to return to your father."

"For the best. We don't want them to think I am loaded."

"Security."

"And smart using you. No one will suspect you to be carrying such an amount." She went over to the chest, took a key from her inside pocket and opened the requisite solid drawer then took out a pouch of gold coins. She handed it to him. By rights they should have both counted it and signed a receipt. But she knew him by sight, he had often been in her father's presence. He was more than just a messenger. Maybe an advisor. Keeping to his cover as a messenger well in place.

"Since my father has his trust in you, here it is."

He secreted it in one of his inside pockets. She saw for a moment his vicious looking daggers that shone wickedly from the hearth's fire.

"Any message my lady?"

"I shall keep the priests under observation. Make sure their camp is opposite Verhat's. If they want to commune they will have to pass my camp or go around it. Either way I shall know if they wish to parley. And I shall post a full complement of guards the moment they arrive. How many auxiliaries?"

"Eight that I saw."

"Well that could mean sixteen then. Four ahead and four behind as well. That's what I would do."

He acknowledged that then hesitated. He was thirsty.

"You may speak freely."

"Another cup of tea please."

"But of course."

"One thing I forgot to mention regarding the priests. Whilst sharing an evening meal with them they mentioned the coming of signs."

"This is before or after the falling stars?"

"Before my lady." As she handed him a fresh cup of tea. "I tried to draw them out, being naturally inquisitive. But all they said was signs were coming. When I asked which god would favour us with pre-ordained knowledge they grew silent, odd, saying the gods were hiding but they would make their presence known just the same."

"Well you know these priests. Talking in riddles to which they are only privy to. Did they say what these portents meant?"

"That was the weird part. Some mentioned an end of days, others of a new beginning, others of a coming spiritual cleansing where the chosen shall shine in beatific splendour and some of a new godlike quality in the heavens."

"Confusing as always." She smirked. He tried not to react to that.

"And some of a new kingdom, a new spiritual divinity to be revealed."

"That should impress Jaffir if not Kahleff." She said amused. "Did they say when this was to happen?" as if they really knew.

"Soon. We were all to prepare ourselves for the coming moment. Cleanse our souls and accept the divine decree."

"And if we don't?"

"Suffering. Spiritual banishment."

"Did they now?" what an arrogant assumption.

"And those that accept?"

"Eternal bliss, immense joy, everlasting life, saved from the perdition awaiting those who refuse to accept the divine judgement."

"Is that all." She smiled wryly. They were becoming intolerable. He kept a steady face. Not surprised at Nada's view. Dealing with people on all levels he found the merchant class far less inclined to take the priests at face value. They believed the gods to be more capricious extensions of their own selves rather than overweening powers holding their lives in thrall. That was for the masses who sought redemption for their imagined sins, acts of omission or careless thoughts regarding the divine state they considered themselves in. The soldiers even more sanguine probably because they acted and saw that results were achieved through clear minded stratagems. He was equivocal. The gods were there and that was that. He doubted they listened to his prayers but it did not hurt to seek supplication now and then. Lady Nada probably prayed to lambar for she never let the fire in the hearth go out.

"Before you go, tell me do you believe in our ancestors gods," she thought she had chosen those words well, "or the babblings." She tried not to look too displeased, "of these converted", now that was inspirational, "priests?"

He seemed to grow in stature: "Priests who claim divinity I find suspect. Especially when they claim divine favour for themselves, my lady."

"So do I."

"Of course. The priests, I mean these priests, from what I know, it's as if there is something in the wind."

"I feel it too." She encouraged him.

"We are all equal. If these priests are going to cause dissention it will affect the markets. We have to be prepared for all contingencies. Not just for our material well being, but our souls as well. I certainly am not going to change my allegiance on the say-so of these priests. If we can find out, and I mean not just me or you but your family, your contacts, your observations to see if there is some hidden sage, holy man, magus," he was thinking of Verhat or Kahl even if there was something clandestine about those two, "behind this movement then I think our king or his advisors ought to be informed. So I keep my ears to the wind Lady Nada. As instructed." He added quietly.

"Shrewd. As always. That is good. Yes there are machinations at work. When you have rested, take a fresh horse unless it's your own and continue your return journey."

"Thank you." He bowed finished his tea. She gave him a blessing on behalf of all the gods.

After he left Amos returned. He was civilised enough not to ask any questions.

"Want to check out the landslide?" was all she asked.

"What? Why?"

"See if the temple is really buried. But first I must call Nisa."

She went outside the tent and called for her. Moments later an older woman, weather beaten face with remarkably smooth skin, lively eyes, a lucky charm around her neck of a semi-precious stone, the eye of Bahlir appeared.

"Nisa I am going to check out the landslide. See if Rena really buried that temple. As you know the eye of Bahlir, and I see you are wearing her invocative charm, has graced this patch with her all seeing all knowing intelligence. The stars miss nothing, they see all. And she wants to keep an eye on us. The gods act for a reason often unfathomable to us. As she has graced us with her presence I too am curious. But for a different reason. A group of priests are coming this way. They might arrive tomorrow which means scouts might appear any moment. Do not trust them. Have them make their camp opposite to Verhat's, and away from our animals. Naturally we shall have to offer them our hospitality. Two sheep will have to be slaughtered. Choose some older ones. And have a full contingent of guards on watch day and night. Give the visitors plenty of wine. We need to know what they are up to."

"Yes Nada, it will be as you wish."

"Wish Nisa. I wish they would by-pass us but guests cannot be refused succour in the desert. No one is to enter my tent."

Nisa merely nodded. As second in command she knew her duties.

"Call Joch, he will accompany us. And please keep the fire going."

Nisa bowed slightly and left.

"Right my love. Let's get some rations together."

She went to one corner and rummaged around her provisions. In her travelling pouch she stuffed nuts, dried fruits, smoked goats meat. Amos went outside and saw to the chaff bags for their horses. He took some bladders of water in case they ventured beyond the lake.

"I am going to take some slices of mushrooms. Not much, just a little to perk the brain, open the soul." She said to Amos when he returned saying they were ready to go.

"Want some?"

"No Nada, Joch and I will keep our heads in place. You obviously want to commune with the goddess."

"Oh I nearly forgot. Can you quickly go outside and tell Nisa to send a patrol out. No make that two. One to check out the pass. My father is coming this way from Orst. Bandits have been known..."

"I'm sure he's taking the necessary precautions."

"Still, and one to keep an eye on these priests. It will be interesting to know if Kahleff or Jaffir sent them officially or if it is their idea. The pennants should make that plain, if they are flying them."

Amos nodded and left the tent to inform Nisa. Nada was ready, riding boots, an extra layer of undergarments in case they were out during the night, a travelling jacket lined with sheep skin and a woollen cap. Autumn was coming and the weather could change any moment. Last night's thunderstorm had cleared the air for now. Amos returned and said he was ready, Joch waiting outside. Nada quickly retrieved from her pouch a mixture of dried herbs, sprinkled them onto the fire, they sparked, Nada saying a silent prayer to Iambar, letting her know she was thinking of her. Swallowed the slivers of mushrooms washed down with water. Then she turned and along with Joch and Amos rode out of the camp.

Joch observed fresh tracks heading away. Nada said that would have been Verhat's. The slivers of mushrooms were beginning to have their effect. The desert more vibrant as if Rena was present. Soft auras of lilac imbued the mountain range, crimson radiating from their massive jagged walls, an aura of purple over them. In the bright sky the odd flashing light as if she caught Bahlir watching them.

First they headed to where the eye of Bahlir had landed. It had rolled into the lake after the earth tremor. Nada could see through the water visible under the placid lake. She dismounted, waded knee deep in, having taken off her boots and socks, rolled up her riding pants and found the strange object with its flat lower surface, silver coated, golden inserts, strange geometry, some dark cover honeycombed and rather light for its size. She walked back out and placed it where it had originally fallen. She then offered a quick salutation to Bahlir, dried herself with her vest.

Done they continued. Her soul was pulsing. With every breath the landscape seemed to breathe with her. She felt wonderfully alive, expectant. She was used to it. Always at the edge of creation, of something sublime about to happen, filling her soul with awe. The slight breeze caressed her it was that sensual. She was being embraced by the gods.

Instead of taking the short way around the lake to their right Nada chose left. The waterfall from the mountain feeding the lake sparkled on the morning light. It's soft roar refreshing. She wondered if Verhat or Kahl could be in league with the priests. But why were they coming here? Why not make their own camp? Why with her? Unless it had to do with the eye. Now that she was gone they might try and commune with Bahlir, invoking their dark designs.

They rode on in silence, enjoying the day, the outing. It was good to be alone, away from the daily activities. The landscape self illuminating. The colours clearer, sharper, the sky closer reaching down to her, the mountains filled with residual power. The odd fish splashed in the water. High above an eagle rode the thermals, the air god Oebell's creature watching them.

After some hours of riding they let the horses drink. They had dismounted, Joach walked off further away from them squatting near the lake and relieved himself. The water vibrant with energy, the life giving essence of Adur. Some of the rocks glowing. She saw patterns on them, the secret writing of Rena. Then as if somebody was watching them, though in the silence they were the only one's here Nada's attention focussed towards the north, along the mountain range which stretched as far as the horizon. A strange hill amongst spread out small crevices stretching out like fingers into the desert. The hill brighter, washed clean by last night's storm. Her vision telescoped out. A cairn. Someone buried out there. A perfect place, under the sky and stars. With no trees around cremation was not possible and the hard earth might have made burial too difficult. Rocks there were a plenty. Her vision receded.

"See that cairn further up? Let's check that out."

They remounted and made their way slowly onward.

"Maybe we should not get too close and disturb the corpse." Joach said.

"Its spirit is long gone." Nada replied softly. He was mollified. Clouds scurried across the sun, the temperature dropped momentarily.

"You know that some sages claim that persons who were close to the gods have the gods residing in their graves." Amos suggested,

"There are those who pray with the dead. Some seek an answer to their troubles, others wish to see the future. Who knows what we will be blessed with." Nada's mind was doing the talking. She a mere vessel of its intelligence.

A while later they did see ancient tracks definitely not recent. Ah the open desert, the unlimited freedom to expand one's soul into it. It was invigorating. The ground rippled with energy, the rocks quivered momentarily the sky above pulsed. Divine.

Then she freaked. The vision, how long ago? A lifetime. This place without life, their lives. Abandoned. The gods gone, a universe devoid of life struck her as all too real. She looked around her, Joch a little ahead, Amos enjoying the scenery, looking about him, relaxed. The ice cold grip of fear remained but less potent. Maybe the priests would undo them all. Or she sighed, feeling tragic, this was to be when the last of their race had passed onto the stars. The realm of the gods who had withdrawn their favour or their need to remain here. Maybe they had moved on to another world! Was their planet dying? It had too much energy. She felt it resonate within her, connected to the living earth. Not dead yet.

Nada tried to open her head. Maybe she should have eaten more slivers. She had not brought any. For a moment she thought night was around her. Starless black, a shroud blocking everything out. Souls within this nighted realm. She was inside some dark space. It was a trap! She recalled where she really was, the encompassing blackness receded, turned into a tiny black orb that vanished as quickly as it had come. The effulgent colours of the desert returned. Maybe she had entered into her own dark realm. Maybe it lingered within her, not out there. The confusion of thoughts, voices or beings passed. Unless it was the realm of some unknown alien god, drawing up souls to feed its black domain. A vision of the priest's sinister realm? Had she seen what they had in store for them? Now that it was over she felt strengthened with preternatural insights. She thanked Urus the sky goddess for this chilling glimpse of that constricted enclosure, cut off from everything. Unless it was a realm where those who had an empty soul were destined to go when their time had come to be collected, and set aside from the gods empyrium. Too many answers. The gods would guide her. Either way an insight had been granted to her. A revelation.

They left the lake behind them. As usual in the desert distances could be deceptive. The cairn was still ahead of them, seemingly no closer. She looked about. Amos and Joach were there, serene, content. So they had not noticed her momentarily slip into this strange god's dimension.

By midday they reached the cairn. A breeze had sprung up keeping the temperature down. No flies so the body must have decomposed ages ago. They dismounted glad to stretch their legs and relieve the pressure on their rear end.

The cairn was too small for a fully grown adult. Maybe a child's. Who would be so far out, so far distant from the trade route to Orst. Unless some holy sage had gone into the desert to find solace. But that could not be it either. Unless he or she had had a companion to bury them then left. Yet there were no ruins, no remnant habitation.

"Let's see what's inside this." Nada said at last as Joach and Amon looked about. Desert on all sides, dried gullies, some trickling with water from the mountains. No oasis here. Just vastness to the ends of the earth. Total silence except for the breeze and the snorting of their horses which were munching in their chaff bags.

"Maybe we should first say a prayer to Rena if we are to disturb this." Joach suggested. They all said a prayer to their chosen god. Amon invoked Urus for the sky was just as dominant here as Rena the earth goddess below. Joach prayed to Oebell god of the moving air, the messenger of the gods who knew all thoughts.

Then they set to work. Amon thought Nada a little crazy. Well she had imbibed the sacred mushroom so who knows what odd powers moved her to do this. There was no skeleton, no ragged shroud, just a box with a golden clasp so that it would not rust. They looked at it in puzzlement. Nada was the first to touch it. No signs of any of the gods displeasure. Nada felt her excitement mount. The breeze dropped as if Oebell lost interest in them. The rocky expanse still impregnated with Rena's presence. A good sign.

The clasp was just a clasp. No lock. The hinges gold as well. She pulled it out of the remaining rocks. It was remarkably light, of a grey dull metal. She squatted down and opened it. Inside was a grey pouch of a strange material. Neither metal nor cloth, like cloth, warm to the touch. A thin impregnated line ran along one side of it. Nada felt her fingers along it trying to pick it open. No result. She saw two slightly protruding edges and pulled them apart. It opened to revealed a book in a see through pouch which she opened.

The cover had a disc on it. Light brown, mottled darker colours, darker green patches, white on top and bottom. Dark green lines criss crossed the light brown circle. Nada struck that the colours were similar to those around her. This was their planet! This is what it must look like from the sky. A message from either Urus or Bahlir! She looked at the book in awe.

"The gods had chosen someone to bury this in a cairn." Amos said at last when they had gotten over their surprise. Joach was fascinated.

"I prayed for guidance..." is all he said.

"And guided we were." Nada replied.

"You were chosen, so by rights you should open it." Amos said reverently.

She did. The pages were soft but not paper. Again it felt warm when touched as she fingered the pages. Half the page had a picture and writing underneath. The writing was not unfamiliar but many of the words were. But the pictures were strange. They made no sense.

Large buildings with golden lights in tight geometric patterns, many of them reaching to the skies. Beneath she could barely hold the letters in place due to the effect of the mushrooms.

"You read it Amos. My mind is too taken." And handed the book to him.

They squatted on the ground around this fascinating discovery looking at the soft textured yet tough pages. Strange objects in the sky, both frightening in their massiveness, yet gleaming white amongst the stars. Apparently these huge glittering buildings their new home. Odd elongated objects spewing fire and smoke. Their means of travel to a new world. Somewhere. Ah, tiny pearls of different colours around a sun. Their planet, like the cover, pink and the other mostly blue, white with clouds and green. Others were yellow, one azure and orange, two blue and two tiny outer ones dark. So they were amongst ten others. Yet only two had life. But where was the realm of the gods? Had they withdrawn? Were these other beings who looked similar to them on subsequent pages, dressed in strange slim lines then the gods themselves?

Further on the stark reality. Their planet was dying. Dying? Nada looked around her. Empty yes but along the rivers life flourished. To the east orchards laden with succulent fruit, vegetable gardens, fields of wheat, forests to the north for wood, lakes teeming with fish. It made no sense. The frightening memory of desolation resurfaced in Nada's mind. Maybe their future was limited. But only if the gods withdrew their life giving essence. Was this to be? Were these new priests involved? Why would they destroy this paradise? Nada felt how precious not just life was but the planet that fostered them. Then came the crunch towards the last pages. War. Beware of those who claim divine power. They saw their achievements, these beings almost like themselves having chosen the wrong path. Was this some divine punishment? Their due for turning their back, denying the supreme deity? There. A warlike priesthood insisting on the true meaning of the universe. To regain their fallen souls. Their evil machines making them think they had strength and knowledge of the god and of the preceding ancient gods. Claiming to be the advance guard more potent than the supreme deity. Thinking themselves not just equal but beyond the holy domain of all creation. And then vanished.

Many of their race had gone with them, free, willingly to make a new life. So were they visitors? Coming here! The reason their planet was doomed was due to the cycles of their star. Further out from the central sun so they received less warmth. As the star went cooler their home under an ice age. Yet Mars, the name of their planet had less water, less plants, a precarious balance, broken. The sun then, not the gods. Maybe. With less of everything the air would thin out as well. Something to do with gravity, their air leaking

away. But they would return one day and save them as they had saved their ancestors. Before the war. Before the pulverized cities on the other side.

This their last message as their cities erupted in flames, huge billowing thunderous clouds rising into the sky obliterating all, turning all into ash. The pictures were horrific. Here or there? She couldn't tell. The angry god had put the usurpers in their place. The dark path of knowledge bred pride, overweeningly so, denying the master and creator of the universe total compliance, or complete devotion to do his will. Only through its power could the soul be saved, otherwise damnation. Was that the dark image Nada had seen? Where the fallen, the proud were destined when passing on? To remain behind on a dead planet. The vanquished cities the evidence of esurient minds denying the divine truth unto their race. A race that was annihilated. The hidden myth of their ancestors. So they had been real. As were their dream machines.

Their once great cities. Millenia ago until the priests arose. Powerless at first to stop these star travelling heretics and apostates and worse. Unbelievers. Corrupting their race they had herded their ancestors to this side of the planet then invoked the supreme god to do his justice. There were images of fire from the sky obliterating their haughty edifices. Then they, the priests with weapons spitting fire and destruction scoured the planet and annihilated everything of their past, making sure all their knowledge wiped off the face of the planet. With the supreme wrath hidden and their ancient gods resurrected, they were ready spiritually to accept on bended knees the divine favour of this mighty victorious war god. There was only one choice, accept or suffer by being denied eternal life after passing on. So the black realm was real! Nada stared in disbelief at this insane god who would enthrall its believers to act in such a heinous murderous act against one's fellow beings and everything they had created. The death of the dream machines.

Resonating unto the present.

So the rumours were true then about the priests. They were preparing the way for this jealous wrathful insane god to enslave or destroy them. As it had destroyed the wonderful cities and its strange things. There was a further message: the priests claimed the machines would one day destroy those who had created them. It was for that reason alone that all machines, whatever they were, had to be shattered and their enslaved servants with them. This could not be allowed to happen anywhere in the universe. The master god would send his chosen to make sure this did not happen on any planet in the universe where living beings built their homes. The soul imperilled by the delusion of machine power which thought itself supreme when the only supremacy was this powerful singular god. His chosen acolytes would see his will done.

They sat there stunned. Appalled at the destruction. Lives lost to save them from the evil machines, the very one's that had transported their ancestors to that world. Only to have their cities turned into charnel houses. Their brilliantly illuminated past obliterated.

Nada thought of the eye of Bahlir. Maybe it was one of those machines! She looked over the soft textured pages. Only the priests, and they looked so familiar, the same cowl, the same long flowing robes said these machines would one day take a life of their own, created by forbidden knowledge to destroy the lives of those who had created them. So they were like gods, but did not claim that sacred privilege. Yet the priests used the machines to destroy their own kind. Horrible. Then claimed this to be divine justice. Duplicity. The fate befallen on their ancestors.

"What are we going to do?" Nada asked at last.

"We could bury it again." Amon replied after collecting his thoughts. His head reeling from the atrocious revelation, committed on both planets.

"Or hide it somewhere else." Joach suggested.

"Who can we trust?" Nada asked.

"Ourselves." Amon replied. "Are we agreed that the new priests are our enemies? If only by denying our gods."

"Yes." Nada was adamant. "Because of that. The king must be told."

"What if he has accepted the priests? He gives them free reign."

"Yes but they as yet haven't mentioned this monstrous god."

"No, that is true Nada. There is Ephan." Joach replied.

"A good idea. He would make it public. But let us wait." Nada considered. "Let us swear by all the gods that this remains our secret." She looked at Amon and Joach. They swore to their secret.

"Good. If say I were to gallop off to Orst that would arouse suspicion. Let us return passing the buried temple. Of obvious interest, especially since the avalanche. After all not everyday something like this occurs."

"What about the eye, this machine? Maybe the machines are what we think of as gods. Or the gods are the machines. But why would they want to destroy those who created them? It makes no sense." Joach reasoned.

"Truly perplexing. The gods will enlighten us." Nada said.

"Be interesting what the priests make of Bahlir's eye." Amon mused.

"Oh yes. See how they react. So shall we journey to the avalanche then?"

"Yes, let's." Amon swung easily onto his horse.

They secured the box in Nada's saddle bag, rebuilt the cairn and sauntered off, skirting the mountain side of the lake. Hours later, Nada's head still brimming but now with apocalyptic visions. She was glad she'd eaten some of the mushroom for the images were both close and remote. Coping with this disturbing intelligence. They rode in silence, each of them troubled by these revelations. Except` they' had sent a sign, the machine eye. That could not be denied. Maybe` they' were acting on behalf of the ancient gods, returning after centuries, having risen from the ashes of their blasted past. Usurped the divinely maddened priests and their monster of a god. She hoped so.

As they got closer to the boulder strewn base of the mountain Nada sensed a change in the air. She thought of Oebell. The sagacity of the divine still heavy. The gods literally en-lightened one, not burdening the supplicant. And as god of the air, true, sometimes the air was laden with mystery like before a thunderstorm. Or Adur the water god infusing his presence to form a natural union to fructify Rena, the sign of promise of good things to come. This was different. Had the old gods been disturbed from their eternal sleep? Those enigmatic beings who had created the universe, the stars, the sun, the two tiny moons watching over them. Then when they had created the paradise on this planet, and perhaps the other planet as well they had withdrawn to give leeway to their offspring. The gods worshiped, who kept creation going, made sure all was well in their paradise. Gods, imbued with the secrets of the universe would not feel like a burden upon the soul. No something other was present around them. The sensation was unmistakable. Unless, unless...

"Can you feel something in the air?" she asked riding slowly around some of the rubble strewn across the plain.

As Joach did not answer Amor said: "No, why?"

"I have this feeling...really strange...something in the air. And no it is not Oebell, it's like an invisible mist hovering around us, sort of clammy as when the air is sticky with Adur's moisture. A probing essence." She concluded. The remains of the mushrooms were still noticeable if less potent. Her mind was less open now, less conducive to the magnificence that imbued the mountain, the rocks, the water, the wind, the sky, the clouds, themselves, her soul to its own inner resonance.

Then the thought struck her. It could be Verhat. He was an occultist claiming to use the power of the gods to attain perfect knowledge. Maybe he was searching, seeking what was in the buried temple. Then there was Kahl who claimed Urus herself, empress of the sky, of the majestyrium. The two were definitely in league, but aiming for what? Power? Perhaps. If there was a unitary god...Nada was perplexed now she had

read in this outlandish book, this ancient testament to evil times. Times of wrath that had destroyed worlds, destroyed their pre-decessors who had used the knowledge of the divine to create a fabulous culture. All destroyed. Maybe the wrathful deity, if it existed, was searching out those who would harbour a resentment against its dark demented vision. For Nada as sure as the stars circled the nightly heaven to make sure that at least Kahleff would be told of this divine blasphemy. A counterfeit god who dared to presume total control.

She was growing tired. That sometimes happened with mushrooms but it would pass. A transition stage when some elemental god was attracted to the uplifted soul leaving vivid impressions of their visitation. She fought against sleep worried that she might then be possessed by something that did not feel wholesome. Like a pestilent wind carrying its diseased spawn, spreading illness amongst the people, striking down the holy, the powerful and the meek alike.

"Amos."

"Yes my love?"

"Joach."

"Yes Nada?"

"Someone has to bring this book to the attention of Kahleff, if not the king."

"The king Nada," Joach answered, often a courier for Castari, relaying messages verbally they were that sensitive, "seems not displeased with the priests. Kahleff would be more suitable given its frightening contents."

"I agree Nada." Amos added. "Maybe even Norhat."

"Norhat? He's the military chief."

"Yes but look at what happened to that other world. What happened in our ancient history. A war amongst the stars."

It made sense. Maybe they should make copies. This was dangerous intelligence.

"And neither of you sense something...now?"

They both replied in the negative.

"You are more attuned right now than us." Amos said at last after he considered Nada's question. "This is good. You are our spiritual look-out." He smiled at her encouragingly. She returned the gesture.

"I think it's Verhat probing. Or his companion Kahl. I tell you they are up to something. They know more than they let on."

"Not surprised." Amos answered.

"You know what?" she just thought of it. Thanking Oebell for her inspiration. "They are letting the priests prepare the way. Then when they have control over the people they will step in and become some divine head with Kahl as second in command."

"You think they want to usurp our gods?"

"Oh no. Just control the people through the priests. Become a force unto themselves."

"I'm sure Kahleff and Jaffir are aware of Verhat." Amos assured her.

"I hope so."

Towards afternoon they arrived at the rubble from the avalanche. It was so large there was no way unless it was all removed to get back in. A minor mountain in front of it. They climbed over it to see if there were any fissures, or cracks large enough to slip through amongst the huge boulders that had settled in front of the temple. It would take an army to remove all this. The temple was well and truly sealed up.

They decided to return to their camp.

"I guess we had to find out if any one had visited this place." Nada said .

"Good point. But if Rena closed off the temple, maybe it harboured something evil within it." Amos said.

"Like the mad god?" Joach asked.

"Maybe this murderous god created a gate towards its demented realm and Rena made sure this fissure in the heavens remained shut." Nada replied.

"So it could be. Well at least it is sealed. The old gods of creation are in their realm. Rena has acted. It is enough." Amos satisfied. Nada was not so sure. Just because the temple itself was buried did not mean it was dead. Maybe what she felt exuded from there, escaped and was either searching for a new place of power or seek out like minded souls to resurrect itself through living beings. If the gods could enter their souls then so could this dangerous divinity.

They saw Castari's men manning the extended camp coming over the last rise. Excited at the arrival of her father Nada failed to notice that the eye of Bahlir was no longer laying where she had deposited it after retrieving it from the lake. Pennants were flying, the guards fully armed with long attack lances, their hooks gleaming in the afternoon sun, shields at their side, two swords each. She saluted them as they entered the camp, the size of a small settlement now. The priests had not yet arrived. Castari's people had finished setting up their tents. She smelt the roasting lamb cooking in an earthen oven. The crackling wood embers wafting

tendrils of aromatic smoke as the entourage relaxed around, drinking from wine skins, enjoying their rest from the long ride. At the other end Verahts encampment, nearly deserted. Quiet.

Two of her servants approached once they were in camp. They dismounted, took their gear to their quarters. Joach and Amos went leaving Nada to see her father. She could tell which was his tent, the largest. With six fully equipped guards surrounding it.

They smiled at her as she passed graciously acknowledged. She almost ran but that would have been unbecoming of one of her station.

She hoped Amos would hide the book. Bring that up later. But first the welcome greeting. Going through the flap she ran over and embraced him. Castari had risen, a man of considerable girth, though not flabby, his face brimming with joy at seeing his only daughter. His bald head reflected the light of the overhead oil lamps.

They greeted each other, holding themselves slightly apart, looking into each others eyes, glad to be reunited. It was then she saw Verhat and Kahl having risen slowly to show due respect. The book would definitely have to wait.

Kahl asked to be excused, permission was granted. bowing slightly, dressed in black as always, like Verhat, two ravens, two of a kind. They must have tried to remotely read her mind. She was sure of it.

They seated themselves amongst the many cushions strewn over the carpeted hard ground. He too had lit the fire for lambar. Castari as host offered more wine to Verhat who was reluctant to accept yet dared not refuse. Nada nodded and found a spare clay cup. Less chance of spillage.

Nada now in close company felt the remnant mushroom sparking her mind. The wine would level it out. It was time for conversation, for happiness, not introspection. Verhat vibrating a little. Strange invisible eddies swirled about him, like wisps of smoke, shimmering. He was exuding energy. Had he taken some mushrooms as well? Or did he prepare his own concoction?

When Castari had finished with the market gossip at Orst, having spoken with Norhat himself, even taken time to visit Efhan regarding supplies for his school Castari fell silent. He was only sipping his wine, as was Verhat. The two of them eyeing each other, neither wishing to relent in front of the other.

"One of my scouts saw Verhat and Kahl trying to make off with what the camp tells me you call the eye of Bahlir Nada. As Verhat is a guest he can make no claim to this divine object. It is now in my protection. So as not to offend the goddess I have safely put it away and covered it with a prayer shawl. So that our profanities will not offend

her." He was about to say or thieves steal it but that would have been a gross insult. "Never mind. It shall be presented to the king. I have sent a messenger to the palace. Since we are returning to the city anyway it depends on the king's wishes as to what to do with the sacred eye." Castari explained pleasantly watching Verhat. Nada preferred the eye remained here.

Verhat's body was shifting within itself, animated by some power. But then he did claim occult knowledge without ever revealing exactly what that knowledge was, or to what it pertained. Just saying it resided in the realm of Urus and Bahlir. The air liquefied around him.

"Our guest," Castari continued, "thinks the object an abomination. It is not like the other sacred stones that fall from the sky. He does not even think it is the eye of Bahlir, but one that harbours evil intent."

Verhat to Nada's surprise did not take umbrage that Castari thought his idea preposterous. It suited him that his explanation would suit his needs. He had the priests on side. They were his mouthpiece getting the people ready, the whole kingdom hopefully to accept his new spiritual vision. He was merely this new god's messenger. Nada kept her peace.

"It is a warning Castari." Was all Verhat said.

"So you keep in saying. Unless we cleanse our souls, accept this new divine grace administered by these priests, we will be as doomed as were our ancestors."

Nada was surprised that her father knew of their ancient history. She had just discovered it. Had it always been known to those like Verhat who had never revealed it to the people?

"Ancestors father?" Nada played her own game now.

"Yes Nada. A long time ago, in the distant past way before the coming of our gods there had been another world. The people then had been godless, blind. Whether by intent and design or through ignorance no one knows. They were destroyed. Then came the revelations and here we are."

"Destroyed?"

"The ruins are on the other side of the planet."

"Really? Interesting. So we are the survivors."

"Indeed."

"Why were they destroyed?" time to find out.

"Dark artifices Nada." Verhat answered. "Abominable creations that turned on their creators. The artifices had to be destroyed. These things were running the kingdom.

Drastic measures were then taken. To end that spawned excrescence and those who so willingly served it. And now it has come back. That thing," he said with a sneer, "is one of those artifices. The Fallen One's are returning."

"But if they were destroyed...?"

Verhat smiled with preternatural pretence. He took a sip of wine. "Ah Nada," and looking at Castari as if they shared a secret, "they used their extravagant artifices to escape from our world to another one. Now they are returning to reclaim this holy, this divine paradise for themselves. To be sure, it is an eye but not of Bahlir Nada. It is they eye of the godless."

'So,' Nada thought, 'they were not completely destroyed. Yet their cities looked so beautiful, their glowing gem encrusted buildings, their flying houses, in the sky, in the night, between planets, out there in space. As to whether they were godless remained unproven. Yes there had been a war and maybe these things had a life of their own. But if they destroyed their creators how could they continue to live? Something was not right here. The book said nothing of religion, or gods, just an enemy. A war amongst themselves.' She thought.

"And this knowledge has been granted to you Verhat?" Nada acting appropriately surprised.

"Through the divine essence which permeates all, including the gods."

"So are we doomed then?" she drained half the cup. The wine delicious, refreshing, making her feel more her sociable as the mushroom wore off.

"Not unless we cleanse our souls. A great revelation is in the heavens. We can save ourselves by opening our hearts, our minds, our divine essence to its coming power. That is what the priests say..."

"And you believe them rather than seek divine guidance through our gods?"

"The gods are but a manifestation of the cosmic power Nada."

"The gods are the second generation of the original gods Verhat."

"They too are a manifestation of the ultimate power of the universe."

It sounded so simple. She could see how it could turn people towards the priests and thus to Verhat. She was not comfortable with this new vision. There simply was too much diversity around, obvious to all that one power could not do it all. It was simply too much. A king needed his servants to till the land, grow the fruits of the earth, water the gardens. No there was something wrong with Verhat's vision.

"Do you believe this father?"

Castari looked serious. "There are the gods, yes. Now Verhat tells us there is a controlling cosmic power. There is Efhan who claims it's all in our minds. Until proven otherwise I'm sticking with the gods Nada."

"What about this artifice." Looking at her father in a new light.

"Maybe it is from another world."

"A godless world." Verhat insisted.

"No one knows that. Even the existence of that other world." Nada countered.

"It is written in the ancient texts. Only Kahleff knows. Not even the king. Not everything anyway. That is one of the conditions of being the spiritual head of our world. The dark and dangerous secret history of our planet. The king is told as much as is necessary to rule. But Kahleff has to make sure the balance is kept. Now that has all changed with this artifice. It must be destroyed." Verhat declaimed. Pretending to know revelations no one else did.

"Maybe it should be shown to Kahleff Verhat. If he knows of this secret history..." Nada probed.

"Once it has been dissected like a doctor dissects a corpse. However as long as even one remnant remains, it is said they can recreate themselves from any of its parts."

"You seem to know a lot Verhat."

"I have studied the secrets of the heavens, of the night sky, of the stars Nada." Verhat said with certainty.

"Who else knows of this?" Nada was thinking furiously. She had no wish to aid Verhat in becoming stronger than he already was. That feeling she had near the ancient temple had to be him or Kahl searching her mind, trying to probe into her soul, as if they sensed she knew more than she herself let on. Yet they could not know of the book she had found at the cairn.

"You mean the artifice?"

"Yes Verhat."

"The whole camp."

"Are you going to swear all to secrecy?"

"A possibility. No it is better for them to believe it is the eye of Bahlir. Only you, Castari, Kahl and myself know that this is not so."

Their lives were in danger if she did not agree to Verhat's manipulations.

"How can I be sure this is the truth you speak?" and wished she had phrased it differently for he replied: "I do."

"Granted by Urus or Bahlir?"

"As I said, by the power of the gods themselves, by the supreme power of the universe."

"Then why has it not revealed itself to us, to the goddesses of the solar temple?"

"It has, to the priests, both black and white."

"But would not the people themselves be aware of this...?"

"They are immersed in the minor realms of the gods."

"Our dreams do not reveal this ultimate power you claim exists."

"Our spiritual vision is limited Nada. The priests will open our minds, our hearts, our souls. Then we will be ready to accept this divine revelation."

"And what of our gods? You think they will stand idly by to be replaced by what your priests say?"

"Nada." He said patiently, "there will be signs. One has already occurred."

"One swallow does not make spring."

"Oh yes it does. But you cannot deny the existence of this artefact."

That was true.

"Then I will wait for the true signs Verhat."

"As you wish." He conceded.

"Tell me Verhat." Castari cut in. "At Efhan's school they have invented a tube with lenses that makes the distant come closer. It is an artefact. It cannot be evil. It is pure magic. Is that the same thing?"

"It is a sign that these things are entering our minds from afar. The warlocks of that other planet are influencing our minds, getting us to do their will." Slightly misquoting what Kahl had explained of divine beings who were guiding their destiny since they claimed to have direct knowledge of the Cosmic Mind. Their ancient history spoke the truth. The priests would guide them all towards the ultimate of divine revelations.

"So it is like a progeny?" Nada asked. A tube where the distant came closer. Efhan's school was remarkable indeed. Not just philosophising but creating as well. How could a simple magical object like that be evil? Verhat was twisted.

"It is Nada. An alien influence. Why would this thing be made now? It is a sign no doubt about it."

She looked towards her father. The obliging host, a half smile on his ruddy face, an expression of good natured humour putting his guest at ease. Plentiful libations of wine to loosen tongues and set the visitor at ease. Castari diplomatic as always.

He was well aware that the priests were gaining in dominance, preaching of the divine realm to come. Social change was always inherent with risks. In fact what these

proselytes were putting about was revolutionary. Their society had been growing in numbers which reaped profits. If the masses accepted this supposedly new divine orientation, focussing inwards then the need for many of his goods might not sell as well. Not just his but all the traders. The merchants were not as organised as were the priests. They kept their intelligence close to their chests for fear of revealing an advantage to their competitors. Castari was already calculating his position. Wine and grain, meat and cattle, horses for the military and the noble families, wood for spears, bows and arrows, metals for knives and swords. All diminished if Verhart got his way. Verhart behind the push to make the priests dominant. His informants were watching surreptitiously their growing base of adherents.

Thus this mission of the priests at Orst was disturbing. Normally the priests were singular, preaching in the marketplace the new kingdom of the soul. It struck a resonant chord with the dissatisfied, the troubled, since all were deemed equal. If people were meant to be equal the gods would have made them so. That some were destined to be the hewers of wood, or shepherds, labourers was the gods way of ordering society. All that was to be overridden. Jaffir waiting to see what sort of an impression the priests really made on the people. He intuited that the priests wanted to rule spiritually over them. Only they had the keys to the kingdom. Only they could guide the searching and seeking soul to unite with the divine around them. If they gained more than a foothold they would be a powerful force. So far Jaffir did nothing probably because Kahleff believed the priests were releasing an inner pressure, creating a satisfaction rather than a perturbation of their spiritual needs to long for something else entirely, something their gods were indifferent to. Or so it appeared.

Nada realized she too had a mission to fulfil. Not that she was sure exactly what. She felt an immanence around her. Verhart of course answered with mere husks for words, never revealing the true content of his mind. Then there was Kahl. An outsider, a nomad who had made his way to the city like Verhart. Were they sent by the nomads to cause dissention? Norhat keeping a wary eye on them. There was a restlessness in the spiritual ether, that strange combination of all the elemental gods not unlike what Verhart reckoned as the ultimate cosmic power. The shamans of the nomads had as many gods as they could think of. Subservient to the gods according to them, lesser elementals they posed no threat to the divine order or the social structure. Sure there were rumours even amongst the aristocratic families who had their personal seers, foretelling the future. Whether these gifted individuals would side with the priests was as yet an unknown. Luckily the priests eyed them with barely suppressed suspicion.

Change was in the air Castari concluded having followed Nada's exchange with Verhat. She was not usually so intent. He had certainly underestimated her. She was truly becoming an adult, with her own thoughts and was pleased to note she was certainly not impressed with Verhat.

Then there was the armed escort of the priest's caravan. What did they need soldiers of fortune for? Essentially rejects of the army they were at best thugs or thieves. The trouble makers were being harnessed. Since when though did divines have need of armed protection. Unless they had some hidden intent. Castari's spies replied with rumours. That they were escorts. True some banditry did exist. Caravans were sometimes plundered, not completely just some fodder for their horses, some jewellery to barter with and never any loss of life. Mere marauders. Engaging in cattle theft, stealing horses and like all nomads quarrelsome.

That there was a restlessness was beyond dispute. Add the unknown quantity of the priests, it bore an ill wind. Whilst the gods did nothing. They watched with serene indifference the machinations of men. If only they gave a sign as to which way this strange spiritual manifestation's true intent was. Unless, he sighed, as Verhat fenced with Nada's probing mind, they were, like so many in the kingdom waiting for all these perturbations to resolve themselves.

Normally he would agree. But this eye of Bahlir, the evil sign Verhat made out spelt trouble. He sensed it deep in his gut frightening him with intuitive horror. Not the object itself, but what Verhat claimed it to be. The return of an alien death, dooming them in cataclysmic catastrophe. This secret history Verhat alluded to about to awaken and replay its coming doom annoyed him.

For as long as anybody could remember all was well in this paradise of theirs. Monumental changes for the worse were written not just in the heavens, though there was no indication of any conflict amongst the gods. Only the priests could allay the coming catastrophe. He wondered if they had not arranged it all. To be rid of Verhat or Kahl or both would be indeed a divine sign that the gods were not pleased. But when? Kahleff merely watched, either impotent or sure in his foreknowledge that maybe this would resolve itself.

What happened next was so unexpected it had to be a sign from the gods.

"The gods have thrown a veil over their intentions." Verhat said. Castari sensed Nada's rising anger. She was certainly agitated, her voice tighter, her body tense which she controlled admirably given the way Verhat's assuming superior mien lorded it over

her like he was some supreme intelligencer. How different to Eghan. He doubted if Verhat knew what humble meant.

"Yet they cannot deny that they exist by the sufferance of the divine power. They would have you believe they are mighty but it is all illusion. The priests will strip them of that trick and reveal to all equally the real truth. Those who resist will fall. Not because the divine will has that intent but by the darkness of their own misguided souls, their overweening pride, their arrogant assurance..."

A white heat consumed Nada. The mordant ramblings of Verhat was more than intolerable. A ferocious hatred of Verhat fired her determination, seething with wrathful intent. Nada felt lambar, the god of fire flaring inside of her. For Verhat had by implication insulted the gods, those who believed in them, those who denied the assumed supreme divine wisdom of the priests.

As the fire filled her with divine wrath, after all Verhat had gone on about how the cosmic will would act against those who denied its existence she felt like a roaring fire, pent up energy about to explode like a volcano.

Without really knowing what she was about to do she pretended to tip over. Her left hand moving rapidly to her knife. It looked as if the wine had gotten to her as she rolled onto the floor. But instead of lying there she rolled around driven by an inner strength she had not felt in ages. As she completed the rotation her left hand shot up with her knife moving up swiftly and pinioning his chin through his mouth. Verhat was completely caught by surprise. If he struck back she would rip his jaw open and that momentary hesitation was to cost him dearly. With her free right hand she struck her two fingers onto his eyes. The soft squelching orbs turned to mush as Verhat was blinded, but with the knife firmly entrenched he could not scream from the excruciating pain exploding in his head.

Nada's violent attack went against all the notions of desert hospitality. Nor was she done yet. Verhat's left arm struck at Nada's head but she handled the painful blow as stars and pain flashed in her head, absorbed somewhat by the wine and the last remnants of the mushroom that isolated the excruciating agony. Twisting herself upward for Verhat had half risen trying to get the blade out of his chin and mouth, blood pouring down Nada's left arm she wrenched the knife out and slit the jugular at his throat in one fell sweep. With delicious joy she felt the blade sink deep into soft flesh. For a moment Verhat flailed about like some cataleptic dummy, then he fell forward headfirst into the circle of the fire. Sparks crackled upwards, the smell of singing flesh satisfying to Nada's heightened senses.

It happened so quickly Castari automatically had held onto his cup of wine not wishing to have it spilt. She quickly pulled the carcass out of the fire. Awful blisters and charred peeling skin certified to his death.

"The will of lambar has been done." Nada intoned darkly. Her inner fire receded, she felt immensely satisfied. Retrieved her knife and wiped it on Verhat's cloak.

Castari stared at her now that the deed had sunk in. He saw the venom in Nada's huge black eyes, the fire reflecting like tiny fires within her.

She looked at the blood on her left arm and went to a pitcher of water and washed it off.

The blood from Verhat's torn neck flowed copiously onto the carpet.

"We can bury him here or dump him somewhere. Maybe ride out to the pass and drop him in some canyon, make it look like he was attacked by bandits' father."

"Do you...we are...I am...you..."

"Yes father. Verhat was going to usurp Kahleff through the priests. The priests were going to negate our gods. They are the harbingers of doom."

"We are murderers, outcasts Nada."

"No we have begun to save the kingdom. Think. Priests with soldiers, does that look peaceful? It is a statement. They are on the move and we must stop them. I will present my case to Kahleff and the king. There is something else." She walked over to her saddle bag and retrieved the book. She deposited it in front of him.

Barely overcoming the shock, shocked into sobriety he stared at the strange object. Then in trance opened it and began to peruse the pictures and read the text.

While he was engrossed in the revelation of their distant past Nada called over Joach whom she trusted. She asked him to bring two spades. Inside the tent he stared in disbelief at Verhat's prostrate body. Then merely looked at Nada as if saying 'so be it'. He was certainly not going to lose any sleep over Verhat's demise.

Hours later Verhat was buried in a mound of dirt inside the tent. The only evidence of Nada's deed. Let the jackals devour his carcass later. She then knelt in front of the fire and thanked lambar for having given her the determination to rid the kingdom of the usurper. Joach looked at Castari who, though shaken had regained his senses. But Nada was not done yet.

"We have to finish off the priests and Kahl."

"This is going too far." Castar whispered.

"It will make an end of it father. Others will be inspired by my deed. The priests will have to tread warily. I will reveal all to the king and Kahleff. If need be father I will join the

nomads so that there is no dishonour. I am glad I have done this. Should have been done a long time ago. We need to secure the camp. Allow the priests in, then finish them off. We have more men than them and surprise on our side. Their overweening pride makes them think they are invincible. So much for this cosmic force protecting Verhat." She spat out the words.

She told Joach to assemble their guards and tell them of their plan. She revealed she had finished off Verhat and made sure they knew of not just his treason but that of the priests. She sweetened the deal by promising them gold. Some women would distract the priests with generous platters of food and wine. Then when they were satiated they would strike at the guards having been feasted like lords. The idea was that they would seem in awe of them, a little frightened perhaps at their divine status making sure they were suitably submissive. The assembled guards nodded. The fire of revenge glowing in their souls. To replace the gods was an affront to everything they held sacred.

Well into the night, when the feasting was done and the serious bout of drinking well under way Nada's guards struck. First some inebriated women engaged the outer guards in conversation whilst her men snuck up and quickly slit their throats. They never had time to raise the alarm. The priests were in Kahl's tent. He had made enquiries as to Verhat's presence and was told he had gone to examine the eye of Bahlir and was seeking divine guidance, meaning he was not to be disturbed. Kahl pulled a face but accepted the lie.

Then it was time to move onto the remaining guards stationed around the priests and Kahl's tents. The same ruse was used. The women acted voluptuously, some encouraged by their success used their own knives to despatch the surprised soldiers. Well they weren't real soldiers but scum who could not handle the discipline Norhat required of professional soldiers. Bones splintered, teeth and jaws broken, heads cracked, necks sliced, groans emitted from dying men. It sounded like sexual ecstasy. The wine befuddled priests had no idea of the carnage outside.

Nada saw the dead all about her. The women and some men had also brought platters of freshly baked lamb and wine to Kahl's tent and entertained them whilst the murderous carnage was being executed outside.

Nada and Joach went through the camp, past the smaller fires and made sure all the mercenaries had met their fate. They heard the gallop of a horse or two. So some had escaped. Joach looked questioningly at Nada.

Castari had remained in his tent. His daughter was possessed by lambar. Feeling calm, having read their planet's history. He was confused. It made sense so why was it a secret? Unless dark forces were at work to deny them the truth, or protect them from this alien evil? If it was so surely it is better to see the enemy. One thing he was certain of: the message of the priests was a monstrous lie. They would be well served to be rid of them. Maybe once this got out the priests would retreat and see the error of their ways. He sighed. Did it have to be like this? Sometimes dreadful deeds had to be done for the greater good to allay an even worse fate.

Then he heard the moans and lamentations of the priests. He rose reluctantly and looked about him. The stars shone above, the air still, expectant of portents. The gods calm, reposing in their divine state. It all looked so normal. Dark shapes were moving about amongst the fires, their servants stripping the fallen of their wealth, taking rings, going through their pouches searching for coins. Taking their knives. Even his guards were busy stripping the dead.

The sound of the fear stricken priests. Some were on the ground kneeling in prayer, others shouted curses at the affront, the breaking of the sacred laws of succour in the desert.

"It would be wise," Nada speaking with determination, resolute in expression "for you to accept that the gods have acted. Your blasphemy has been noted. But we are not murderers just for the sake of it. Your very act in coming armed is an affront to all that is divine and sacred. It is you that came with evil intent. The thugs in your employ reveal the darkness of your hearts, the violence you harbour through your demented vision. If you persist in poisoning the minds of the people a similar fate will befall you. The gods will be avenged. You have a choice, repent and live or take the consequences."

A babble of voices rose around her. Angry declamations, horrified fear stricken prayers, desperate supplications, whimpering terror, mind numbed horror for they were done. They knew it.

"If you persist..." Kahl came out at last and surveyed the massacre as one of extreme bad taste. He merely looked about and accepted the fact that he and Verhat had been bested. They had come here to make an example of Castari, aiming at the heart of the merchant class, intent on weakening them or converting them, possibly holding him in their thrall. Offering him a subordinate place in their new holy order. Instead they had walked into a trap. Verhat had thought a show of strength would be enough to intimidate Castari to accept that changes were in place and irreversible, or so his informants told him.

But Castari had gained a snippet of information here, a loose phrase there, an unguarded declamation from the priests who certainly did not hide their intent to bring everyone down below their level. His heart lightened at the indisputable logic. He could even accuse Kahl of thieving intent. He felt better. And Nada had rid them all of the scum the priests or Kahl or Verhat had hired. He not only felt better, he felt relieved.

He heard Nada give a speech. She was rallying the camp to assuage any guilt they might have felt in this treacherous act. She spoke of the evil intent of Verhat, eyeing Kahl who acted as if this did not concern him. She spoke of the false god the priests, venom in her voice, who would destroy by poisonous words not just all that was just and divine, but twist their very souls into this unholy communion with a presence that had never revealed itself and therefore could not exist. As such the priests were disseminating blasphemous lies to sow inner seeds of unrealisable goals and flare the fires of discontent. For the priests intended to unleash a Cleansing, and those who refused to be baptised by this insane wrathful non existent deity would fall, become slaves, worse prisoners in their horrific twisted religious tomb. She thanked lambar for guiding her, thanked Bahlir for the protection offered during the righteous removal of the danger the priests brought with them, then prayed to Urus, queen of the universe.

One priest cracked and with a demented howl threw himself at Nada. But Nada was quicker and threw her knife right at him. It pierced his left eye and he fell to the ground with a sickening thump.

"You have a choice." She said as she retrieved her knife and wiped it on the garb of the dead priest. "Repent or die." To those still alive.

They mumbled amongst themselves. Dissention broke out, some starting to argue, others declaiming divine vengeance, others still praying for guidance.

"I am not giving you all night. Reform, ask humble forgiveness from the gods of your choice or die. This is your last warning. lambar has spoken."

"They submit." Was all Kahl said. The priests stopped jabbering amongst themselves, most confused as to what to do. Since they had been bested, Verhat had disappeared no doubt murdered as well, they had to accept the reality that their divine cosmic god allowed this to happen. It was a sign. Their god had not acted whilst the gods of the people had. The evidence was obvious. Reluctantly they all mumbled 'we submit'.

"To the gods not to me." Nada reminded them.

"To the gods." They cried some piteously, some resentfully, some fervently, some desperate to save themselves. It was enough. By tomorrow the nightmare would be a bad dream.

"And you Kahl?" Nada challenged.

"As you said, the gods have spoken." He replied evenly.

"Yes but do you submit?"

"I never denied the gods."

"Your friend Verhat has met his fate." Nada said. Whisperings amongst the defeated priests.

"Really. That is unfortunate." For Kahl was now Verhat's inheritor. He would bide his time, withdraw and await portents. This was a setback, it was not the end.

"Remember," Nada's voice rose, "the priests told you lies. Deliberately fermented by Verhat and those he held in his thrall. This power he claims usurping the gods would have been a nightmare, one from which once accepted there is no escape. It destroyed our ancient world, it destroyed another world and it would have destroyed us. I through lambar could not let this paradise of ours be consumed so that the dark nightmare might live." She said alluding to what she had read in the book. Murmurs of surprise.

To Kahl the hidden subtleties of Verhat's occluded spectral inhabited chimeras now made sense! The mystery of their ancient race's enslavement to the artifices. The dark esurient power by Verhat's magical arts had revealed their ancestors glorious cities brought down, destroyed. Heavenly fires of divine wrath seeking retribution against a godless civilisation who in their pride had created the seeds of their own destruction by creating monstrous inventions that would not just devour them but all life in the universe. Only the Divine Power according to Verhat which he could barely grasp in his soul could stop the coming abomination. The eye of Bahlir was a presentiment.

For now he would accept Nada's reality. Deep in his soul he knew this was not over.

Orbital:Prima

Khral's mind felt drained. As a specific target oriented DV linked to his counterpart on Mars he was aware just as much as Kahl's sensory inputs, his resonance, his very being which he focussed upon. When Verhat's psychic envelope collapsed Khral knew the worst had occurred. With no hostility directed at his target he could only watch, totally surprised at Nada's murderous assault. He the fascinated observer with steely determination not to react, not to influence Kahl at this delicate moment.

When the mission began the similar name for his chosen individual, a highly alert Natural whose psychic abilities made him open to their suggestion was deemed as predestined. Considered more than just luck as well as divinely ordained. The psychic linkage extremely stable. Khral could not be with him constantly nor was it intended he should be. The pretence of individual freedom, giving Kahl room to be himself was pertinent to hide their ruse.

So that events did not overtake the overall intent of the DVs controlling key figures on Mars Khral disengaged once he knew that Kahl was not in any immanent danger. He was tempted to turn on his full psychic powers rather than just be the guiding observer. To let his link think the god was guiding him.

He shut himself off, relieving the inner tension now he was disengaged.

"Risea" the com-link relaying his words to his controller.

She was there a few minutes later having been in conference with Kroena regarding Regum's ship over the desert planet. Kroena was running a group of DVs to ascertain how Regum managed this feat. So far the ship was in place but orders through Elentra came to stay back regarding the ship's crew. When Khral called, Risea's primary duty made it imperative she find out what he wanted.

"Yes Khral?" quickly looking at the monitors.

Kahl informed her that his target was in a heightened state of alert, but not panicking. Since Khral had invaded his mind Kahl felt invincible, thinking he had been chosen by the god to follow Verhat's rising star. Verhat was a potent Natural. His claim to

occult power was not an illusion. Verhat instinctively thought that the universe was filled with the Divine Mind. Other DVs cautiously constructing an image of pure power. They made sure Kahl attached himself to Verhat now dead.

"Kahl is secure?" Risea asked.

"For the moment. This Nada woman simply went bezerk and murdered him."

"Holy shit. And the back up DVs," she glanced at the bank of monitors again, "sensed nothing?"

"It happened too quickly Risea."

"Too quickly in the normal sense. But if the catastrophe was to be, surely they would have detected dark perturbations in the field, tiny vortices or simply a single vortex." She expanded. These people were even further advanced mentally than she thought. It would create difficulties in maintaining their influence which now looked precarious. The DVs had lesser minds under control. Not good considering what this Nada woman had just done.

"Just goes to show their individuality can override determined events." Khral was learning about psychic fields. Mars was more an open set of possibilities. They had a long way to go.

"Well at least there is no overall shift in the total field resonance. Loosing Verhat might not be the end of it. Even if Kahl is taken out, and let's make sure he is not, you can always find another suitable candidate. He is still aligned?"

"Yes Risea." Khral turned to her on his swivel chair. "Would me being in space strengthen the link?"

"No, working as an Isolate keeps you from having to deal with their psychic projections and the assault DVs insertions."

He nodded. having been briefed, chosen from a group of Lord Acht's cream of Stable Volatiles.

"Let's see what effect Verhat's demise is doing to Kahl. See if he is next."

Khral concentrated once more. It was always much harder to re-establish a link just after breaking it than maintaining it. It took nearly half an hour to reconnect. What he saw, what came across almost destabilised the connection.

The dead bodies of the guards were strewn everywhere. The corpses ransacked by the murderers. Then relief as the priests huddled in a frightened confused mass. They were safe. That was something. For now.

'What is going on? Is this Regum's doing?' Risea thought. But the field concerning the inserted ship showed nothing more than a steady state. So Nada acted

independently. Their control looked shaky. She left Khral to continue monitoring and guiding Kahl and made her way back to Kroena.

When she met her in her control centre, for she too was watching the monitors a questioning look was directed at her. Risea explained what had transpired on the planet.

"At least we know whom to contain."

"Nada." Risea replied.

Internal monitors came on line, on hold.

"Ah the technicians have finally finished reinstalling the connections and all the rest of it. The systems are clean. The infection deleted, voided."

"Yes, that was a close call. You know Kroena, things are shifting in all directions."

Kroena waited for Risea to continue.

"First the orbital nearly got compromised, taken over. A one off. I assume the system's now on full alert so that it can shut down in case an infection is about to occur. I would have thought that was the case but I guess the attempt was far more dangerous than we considered."

"As we found out." Kroena remarked dryly.

"Then Regum pulls their stunt."

"Sure did."

"Which the DVs did not foresee. I mean the perturbations should have been there."

"The perturbations were there, but there is this underlying haze, a non localised interference pattern that has nothing to do with Regum."

"Maybe it has Kroena. You did say it's non-localised."

"Elentra is not ruling it out. We are searching for the source of course." And for the moment kept to herself Mena's strange experience. That young woman was onto something even if she did not know exactly what. Risea was smart. She too felt things were shifting. Kroena though was far more hard headed like Elentra and Risea. They were three of the same mould. Not so easily influenced. Not DV material either. Just observers into system analysis, thinking like the machines, more attuned to Reganian logic which the Ecclesiastics accepted with bad grace. Being spiritually aligned was all well and good but it could catch one unaware, and the DVs were being caught out more and more. Risea was right, paradigms were shifting. And not in their favour.

"Something is going on that we are not told about."

"We're here Risea to watch and observe and act on those observations."

"True. Yet the DVs...I don't know, it is as if they are misdirected."

"You are questioning the overall plan?"

"No Kroena, just their application."

"The Es, the Domimax know what they are doing."

"I'm sure they do. So why are the DVs missing so much? They are supposedly aligned with the Great Architect, filled with it's divine knowledge, infused with it's cosmic power and yet it's like they are watching a sideshow. Whilst things are going on that have future repercussions we are not aware of. They are not aware of." Risea corrected herself.

"It will all pan out." Kroena assured her. Except she was not that certain. Risea had a point. Still it served no purpose to speculate without knowing the facts. Yet facts were being missed, events occurred that should have been foreseen. It seemed Regum was getting ahead of them. She took solace in the supposition that their machine minds, correctly called Artificial, had no real Intelligence. They would have to be conscious to claim that designation. Just more proof regarding Regum's blindness thinking their clever tricks could outsmart them. So long as they denied the existence of the All Knowing Mind they would never catch up. There was no point reiterating all this. They all knew it anyway.

"I'm surprised the Reganians have not gone down." Risea suggested.

Kroena was aware of the strange time-dilation affecting the ship. They were essentially on hold, not involved. Yet their presence did involve them. Perplexing yes, but not threatening. Firmly in control. Furthermore the data collected from Carias's little jaunt into cyberspace gave her hope. That Regum's programme did not reach very far into the future which was one explanation for the sudden wall she hit. Regum's artificial future would come to an end. If that was the case they didn't really have much to worry about. Her projections regarding Mars still held, with or without Verhat. If this Nada was one extremely unstable natural volatile Kroena had to make sure that if not Kahl then someone else would have to be converted to their cause to keep an eye on her. If she continued to prove dangerous, then she too would have to be terminated. Put it down to divine retribution.

"I appreciate your concerns Risea. From where we currently stand it does appear that we are out of synchronicity. Always remember, we have the bigger picture in mind. Let us not get too distracted by unrelated flare ups. Verhat was not one of us. He might have come around in the end, his orientation was promising. But what if he had gone the other way? Nada might have done us a favour. So in that sense by concentrating on Kahl we have chosen the right target."

Risea saw it made sense. She just hoped they would not miss the trees for the forest. A conflagration could wipe out the forest if they ignored the brush fires that were flaring around them. She liked the imagery and made sure she remembered it. For the moment all they could do was observe, guide, calculate possible scenario's and hope the DVs managed to anticipate future states to prepare the right conditions so that their will would be done.

Mars

The next morning Nada organised details to bury the dead. Her men, Castari's soldiers, hung over, worked slowly using their spears to break up the earth and dig shallow graves. Whilst they were busy Nada returned to her father's tent. Amos was helping the men as well. Castari appeared withdrawn which Nada put down to the night's carnage.

"How many are dead?" he asked subdued. He had barely slept. Nada's explanation or rationalisation made sense. Understood Nada was no longer the daughter he knew. No longer his girl. Maybe because her mother had died so many years ago Nada had slowly developed her own personality which turned out to be totally unexpected. If she could organise last night's blow, he had to admit, it made her formidable back up. He would have tried to reason with Verhat or Kahl or the priests. Nada though was right. Why would priests need an armed escort? Were they expecting trouble or intent on causing it?

"Only the thugs, twelve in all. We can assume the rear guard would have scampered back to the palace, telling all sorts of lies."

"We will have to defend ourselves."

"We just have. And we have rid ourselves of some very unsavoury characters. They wanted a cleansing and we obliged." She smiled. "The king might thank us. Now father, what did you make of the book?"

"Oh yes, that."

Nada was a little disappointed at the way he answered her question. Merely of minor importance.

"You know Nada," not even interested, "Jea is assembling the nomads at Orst. The autumn feast, celebrating the harvest. One of the reasons Norhat is there as every year. It is no coincidence the priests were on their way there. Are you going to let them go or are they coming with us?" Castari felt he was losing control to Nada. Maybe it was meant to be. The gods moved in mysterious ways.

"They can go father. If you think it right." She added.

"I am worried what will happen Nada." He seemed deflated not his usual ebullient self.

"I will take full responsibility. Now the book."

"Oh that. It happened so long ago. It could be all mythology Nada. Dreams, future visions."

"Future visions?" that was a surprise. She had not thought of that.

"Maybe it is to be. Maybe it is on another planet. Who can tell?"

"Kahl?"

"Well certainly not Verhat."

Nada laughed at that. "I just hope I haven't ruined your business."

"That remains to be seen. My love for you is undiminished. In a way I blame myself for being gone too often. I thought that if you had a companion, like Amos you would be happy. Are you happy?"

"Yes father. I still think they meant to rob us, or worse."

"Yes I shall accept that. Anything else would be disastrous. We have enough wealth to get by. I just hope there is no judgement against you."

"Not with that book."

"You mean to use that in your defence?" surprised.

"As a last resort. I intend to keep it with us father. First we have to find out what is in the wind."

"Most definitely. The gods will guide us. Just make sure the camp is well guarded. This may not go unavenged."

"Yes father."

"Now that we have spoken I feel better. I think I shall go to sleep now. Tomorrow we can leave."

"Sleep will do you good. Maybe a god will pity your troubled soul and soothe you with their divine balm."

"Thank you for the kind thoughts Nada."

The commotion of the camp was rising like an audible wave. Nada left her father in his tent. After last night's speech when they had saved themselves from the overtly evil intent of being robbed if not murdered, Nada had strengthened and reinforced the bond that united them as a group. Castari paid well, made no demands in following his chosen gods. Letting them practice their magical rites. One such shaman amongst Castari's entourage was Jamos. His skin dark brown, weathered, creased, brown

animated eyes, long black hair he had fought like one possessed, taking down two of the priest's thugs.

Nada went over to him as he was squatting with some men around one of the camp fires. He was about to rise but she motioned him to remain seated. There was admiration in his eyes for her decisive act to rid them of the scum. He would have taken down the priests themselves and at first was a little resentful that this was not to be.

'Let them know of our god's and your spirits displeasure.' Nada pointed out prior their move against them. 'They will remember this holy retribution for the poison they spread amongst the people. They are under the king's protection as we all are. The priests are deluded but that is for Kahleff to sort out. If they prove Adamite in their refusal to acknowledge the gods then it is up to both the king and his spiritual advisor to take appropriate steps.' And so they were spared.

The dead buried it was time to rest. Maybe even pray to one's god of choice to accept their rotten souls. It was out of their hands now. They had acted and that was that. Jamos understood her reasoning.

For the moment the conflict over now that the fire of the gods receded from the bosom of their souls. Cleansed of the foulness of the deluded miscreant servants. For the priests no help from their nameless god. Clinging in their glowering resentment to their dark belief. No one was under the illusion that they would with vicious intent and inflict by force, by the sword, by fire if need be the need to protect their honour, their prestige and maybe avenge themselves. So much for their invisible god. Luckily in the camp there were many amongst Castari's guards and servants who were seers. Quite a few recruited from the nomads who by shamanistic means and the infusion of the sacred mushroom aligned themselves to their god's own forces which sustained their lives as that of all living beings. The eagle that soared high in the sky could be a god's scout, the stealthy jaguar of the eastern jungle some god's eyes on the ground, the caressing wind a holy visitation. To loose this rich tapestry, subtly interwoven with their souls, interconnected with their minds to some pretentious overweening usurper was a blasphemy in itself. So far the priests were tolerated. The king, who really did not hold much sway in the distant lands was accepted as ruling over his domain. The nomads claimed all other lands as theirs. The priests had no right to spread their foul lies amongst these independent clans and tribes.

Jamos agreed. A servant ran up and informed them Kahl was not in his tent. A quick count of the horses and sure enough he had made his escape. One of the men asked if they should go after him. Nada shook her head.

"He was in Verhat's thrall. At best he can weave some lie. Who will miss the scum we got rid of? Not the king. Kahleff would not even bother to waste his time unless Kahl insinuates some divine transgression. As the priests are alive no affront was caused. Once we are in the city my father's first duty will be to report to the palace. From there it is in the hands of Jaffir."

"That is so." Jamos replied. "My visions now make sense. I had been troubled by restless ghosts, foreordaining trouble. Last night I slept peacefully." He smiled, his missing teeth giving him a crooked smile. Nada felt enlivened by his presence. They were lucky to have one such as him amongst them.

"Tonight we will all continue to feast. There is much meat left over, fresh fruit and plenty of wine now that there are less of them. As for the priests they are not to be denied their share. We may not like them but by extending our hospitality towards them they will have no reason to gripe about their treatment."

"Bread and water." One of the men mumbled.

"Yes, well you have a point. But by extending our curtesy they will be in our debt. Then they will have no case at all. We have not harmed them, we let them live by the divine guidance of the gods. Then they will see our benevolence extended to them. Though hatred does have its uses." Nada continued as she squatted amongst them. A few others had wondered over to listen in.

"Hatred clouds the soul, hammers the mind even if it fires the soul." She said sagely. "But now that the force is spent we must have our wits about us. The priests no doubt will be praying to their strange god. It would seem wise for us to know the secrets festering in their misbegotten hearts."

"I think I understand Nada." Jamos agreed. "If we force the issue with them they may resort to subterfuge. By letting them know their lives are in no danger they will relax and who knows what secrets may escape their riven souls."

"Indeed Jamos. Well the gods certainly showed their mettle." She laughed.

"That is true Nada. But this is not the end."

"I have no illusions there either. They may act with more circumspection though. This is not the first time that they have come amongst you?" Nada asked.

"There was the odd proselyte. Maybe one or two might have taken to their simplistic reasoning but in general our people know what is true and what is false." Gammon replied.

"Your spiritual strength is well known. Even the sacred priestesses of the solar temple say the occasional prayer for your people."

"And we likewise. Our bonds are strong. United in the visible and invisible worlds we both share." Jaman was pleased.

"Tell me, was anything incriminating found on the thugs?"

"No Nada."

"Maybe we should search the priests."

"A good idea. Now?" Jamos asked.

"We wait while they feast. Let them think we have no further interest in them. The trouble with the priests is that there is never a real leader amongst them. This levelling they practice is ingenious. Remove one and it makes no difference to them. A many headed poisonous snake."

Jamos liked the allusion.

"Well I leave you at your leisure. Organise a search of their tent tonight then. Say five men, armed of course. And the camp remains on full alert. Unfortunate for those who's turn it is to perform that duty but with Kahl gone who knows what outrageous lies he may spread about us."

Jamos nodded.

During the feasting five servants walked brazenly into the tent of the priests who had with some cautious reluctance accepted the invitation to share in the common meal. As guests they could not refuse. The servants found two priests caught preparing for a journey. They were stuffing their bags as they entered and immediately unsheathed their knives. Startled the priests looked horror stricken at the intruders. They were told their lives were not in danger if they emptied their bags and that of their brethren.

With a show of reluctance they did so. One of the servants called for Jamos and Nada so they could see for themselves what the priests had carried with them. Many small prayer books. Nada kept a copy for herself, saying with honeyed words that she wished to understand their message. One of them actually believed her and said 'May the spirit of the universe enlighten you.' She wanted to scoff but gave him a disarming smile instead. Nothing unusual was found. No secret compartments, hidden slivers where secret messages could be hidden.

"Search them." Nada said.

With one smooth rapid motion two servants each held the two priests. They were duly searched and sure enough, in the folds of one black cowl a stitched in cavity that contained a message. With her knife she delicately, for she had not yet imbibed enough wine to affect her concentration undid the sown in compartment and extricated a

parchment. It was in code. A prayer which seemed innocent enough but one did not secrete a simple prayer. The parchment was exceedingly thin. Upon closer inspection she saw it was not parchment at all but paper. Paper was rare indeed. Only the king's workshop and that of Ephan's school knew how to boil and process the wood to create this valuable paper. She inserted the tip of the knife's tip and took her time prying the thicker sheets around it apart. Slowly it came away. Three faces. She recognised them and was glad Jamos was there. The face of Jea, the head of the nomadic tribes chosen by council, Fehz spokesman of the council and Ephan, the teacher of the philosophical school at Orst.

"Either they were to be contacted, turned, or assassinated." Nada guessed and handed the drawings to Jamos.

"I am disappointed." He pouted.

"Oh?"

"I am not amongst them." He joked.

"Keep on searching the tent." Nada said to the servants. "Every cushion, every garment." It took some time but they found three daggers hidden in the dirty laundry. They were tiny knives which made Nada wonder.

"Look for a pouch of herbs or a paste."

Jamos looked at her.

"An expert assassin could use these but I think they were meant merely to prick the skin. That means some poison was to be used against these three."

One of the priests struggled to get free but he was safely pinioned.

With Jamos and Nada absent from the feast both Castari and Amos appeared to make sure all was well. When they were informed regarding the duplicity of the priests Castari looked disappointed, Amos barely containing his displeasure. Jamos looked evilly upon them. The servants determined their prisoners would not get loose.

"Let us talk outside." Nada said. The noise of the revelry was rising, the wine flowing. The priests amongst them, dispersed so as not to form a group along with the women and servants all enjoying their sumptuous repast.

"This must get the king's attention." Nada said.

"Or my people." Jamos added.

"Both then. Your people of course will believe what you have seen Jamos. So I suggest we despatch an escort to the king with these two priests who were making their escape. Though how they were going to get past the guards..."

"The poisoned knives."

"Yes Jamos. A desperate ruse."

"Filthy carrion. We could rid ourselves..."

"No. The others might not have known Jamos."

He shrugged. "I could go with them. It will give weight to the evidence. Or I will make my way back to Orst with your permission."

"Of course. And do warn Ephan as well. I know you have your suspicions of him given his philosophy..."

"Yes. But at least he only has students who come to him. He does not go out amongst the people to preach his...knowledge."

"He did invent the seeing tube." Amos said who had stood back..

"He did that. It will come in useful. Should Norhat be informed?" Jamos asked.

"Most definitely. All priests will be suspect now." Nada said with relish. "We finally have them."

"A sad day." Castari said crestfallen. "What is becoming of us that this is happening."

"An evil is amongst us. Not that whispered by Verhat or Kahl, but by the priestly scum. They are traitors to the gods and assassins as well. By focussing on us I am thinking, was it their intention to cause dissent between our two peoples? Pit ourselves against each other." Jamon suggested.

The fifth servant came out holding some clothes.

"Look what I found."

"What?" Amon asked.

He pushed the bundle almost into Nada's face.

"Normal clothing." Amon stating the obvious.

"Don't you see?" Jamon said. "After the deed they were going to change clothes, or vice versa. A disguise. Two normal travellers arrive, do their evil deed or have others do it for them, then change their garb. Either way it seals their fate." Jamon said with satisfaction. "You have plenty of proof that the priests are not just a holy order as they pretend. They are cowards, murderers, usurpers, apostates, liars, manipulators of the people, disturbing not just the peace of one's soul but disturbing the peace of the realm. Traitors all." Jamon spat.

Castari sighed. "This is so." He shook his head.

"Look on the bright side father. With the priests discredited, so are their plans. The so called coming kingdom just so much smoke in the wind. Their decrepit social order exposed for the sham that it always was. Their equality one of the spiritual slave, goods

and houses destined for the priests coffers who with humble pretence would have taken all the wealth for their own evil designs. I never trusted their smooth words of every one being equally exalted."

"Neither did I. Even in the spirit world there are various levels, as is mirrored amongst us." Jamon added. "Maybe all the priests should be searched."

"Well let them drink their fill first." Nada smiled.

"Why not put a sleeping draft in their wine. Easily done."

"You have such medicine Jamos?"

"No, but there are wise women here who know their herbs."

"Excellent. But would it not..."

"You have spiced wine have you not?"

"Yes, we will use that." Nada said then turned to her father.

He had collected himself. Sadness turning to righteous anger. That his camp had been so misused, that the charity offered to their guests insulted and their gods profaned. It was enough.

"Our people are with us. You gave a good speech last night Nada. I will get some fine men to ride to the king, right now. Follow tomorrow. And if any of the priests cause trouble, kill them." Castari ordered.

Jamon was relieved. Castari had recovered. He had never seen the other side of this merchant. His ruthlessness and assiduity in furthering his wealth tempered by the gods.

"Now should we tell the others?" Amon asked.

"It might cause a massacre." Castari replied.

"So what? They are all in league."

"I have a better plan. Once they are suitably drunk tie each of them up and when well trussed, give them some water on the journey back." Castari ordered.

"Yes father. You may as well take the book."

"Oh yes. Kahleff will be most interested."

Nada looked at the sky. Pitch black, overcast. Even Uris and Bahlir were ashamed at what they had seen here Nada thought. She looked at her father lovingly who burdened at the betrayal in his camp, suffering the grief of having been misused, if not threatened with the loss of not just his but other lives as well, if not merely robbed had recovered sufficiently to bear the burden of his sadness. She walked over and hugged him, both standing still in each others embrace. They felt their hearts beat in unison.

Kahl's spiritual loyalty was on a cusp. About to address Jaffir in the public courtyard, ceremonial guards stock still, rich woven tapestries along the walls, the sun reflecting off the amulets and rings of the king Kahl addressed Jaffir by calling him lord, protector of all the races, the promulgator of the life giving earth, slayer of enemies and added for good measure subjugator of chaos. Then launched straight into his supplication and reason for the audience: "Portends Jaffir, disturbing signs everywhere." Tempted to look accusingly at Castari seated behind him.

Jaffir sat upon his golden throne, his robes glittering with jewels representing the stars and souls of the eternally living departed in his open public courtyard where the people could approach their ruler. Massive stone columns more for effect than necessity led the eye to the blue sky above. Jaffir was dressed in his ceremonial robes, having been advised by Kahleff that Kahl's humble message was one dealing with divine matters. The sun nearing its zenith shone upon them all. Jaffir's light woollen coat embellished with light blue swirling dragons, signifying the wind god Oebell, brown trousers the solid tree trunks firmly rooted in the earth white sheepskin boots, the purity of Rena's ever giving of life and instead of the golden circlet signifying the journey of the sun wore the more mystical skull cap half black at the rear revealing the infinity of space dotted with diamonds of Urus's starry realm. The front light blue with its golden orb the ever present sun shining within Jaffir since that orb was the supreme guardian sustaining all life.

At the edge of the inner courtyard the ceremonial palace guards present, chosen from the many tribes thus uniting the people by this significant gesture. Their golden tipped spears glinting. On the walls murals of rich harvests with sheaves of wheat, fishermen on the coast with their bulging catch of fish, toiling carpenters, stone masons building temples, the valiant soldiers maintaining the peace throughout the kingdom all emblazoned in rich vibrancy along the courtyards inner walls. Opposite the realm of the sky goddess Urus in her empyrean splendour, Bahlir in a sea of stars, Nurdass the golden goddess of the Sun, Oebell like wispy smoke moving amongst them, Adur god of water in gently flowing streams and lambar god of fire maintained in the hearths of many homes. The kingdom both spiritually and realistically portrayed and united within this one of many halls of Jaffir's palace.

Kahl spoke solemnly, his voice filled with emotive evocation, which Castari saw as an act or one actually taken by perhaps Oebell though for one who claimed a singular unitary god the dichotomy seemed rather false. Kahl recited the usual tribulations of the

farmer. How the rains were lessening, how the earth was parched, suffering due to the evil within the land without mentioning just who or what that evil was. The failure of crops withering under a blasting sun, the restlessness of the tribes, unproven Castari thought. Then on to the hunger of the people, undefined as far as Castari was concerned for Kahl left that open whether it was an unassuaged spiritual hunger or merely a growling stomach.

Kahl spoke of the boldness of bandits, the weakening of the social and religious bonds to which Castari scoffed inwardly thinking of the almost heretical messages of the priests who were absent from this royal audience. Only Kahleff was present standing on the left of Jaffir indicating his spiritual capacity, by rights reserved for a military commander to balance the innate energies of the king. Today it concerned spiritual matters. Since an incident had occurred in the desert Jaffir saw fit to hear his subjects declamation in the public audience hall considering it a minor infraction. The public had been cleared. It would not do well to familiarise the people with the conflicts occupying his more exalted subjects. The semblance of unity was primary.

Jaffir of course had heard through Kahleff Kahl's accusation of bloody murder. With Verhat removed Kahleff hinted this was the will of the gods. From his military spies even Kahleff knew of the priests sponging off the people. So when Kahl had come with accusations against Castari's camp, saying Nada was possessed by some invisible evil Kahleff listened dutifully, made all the right noises but was inwardly delighted Nada had acted with determination. The Eye of Bahlir intrigued him given its unique shape. He was aware of the secret history. Castari had given Kahleff the book Nada found inside the cairn in the desert.

Kahleff questioned Kahl who basically confirmed the accepted mythology of the evil machine destroying their ancient cities. Castari by contrast was totally ignorant and could offer no comprehensive explanation of what he thought this possible false eye indicated. Nada's deposition was deflatingly prosaic. A civil war had erupted between the religious sects who had formed a cabal and using the abominable machines destroyed those who wanted to re-create their world surrounded by magical devices that would serve them. Running their cities, the land. The people freed from eternal toil. Maybe even the priests would become irrelevant for the bourn the ancient gods imposed on the people to toil unto their passing would be lifted. Their power base threatened the priests acted, wove their lies around the whole strange development to blast them back into their previous primitive state.

Kahleff asked if the gods themselves would be usurped. Castari remembered how she had scoffed at that. The gods were far more potent than these tiny devices. She had alluded to the fact of how vast the universe was and how tiny these things by comparison. It was pure egoism for the priests to see them as an affront for all they stood for.

Kahleff surmised this return of the artefact posed no threat. If anything it might save them. The gods would remain, but the priest's message of total submission to this non-existent all-encompassing divine presence were mere ramblings of distorted minds.

It always came back to the priests. They might keep the rabble in control yet their insistence that the gods, even their ancient progenitors were themselves projections of this unitary supremacy was relentlessly driven home. Interesting as a concept but it did not match the reality of the world, the cosmos, even how the soul interacted with the rich diversity of reality. All Kahl had left, now that Verhat was removed was to recite the usual lamentations. Given that Nada had disposed of his mentor, what this boiled down to was revenge. Lives had been lost and it was up to Jaffir to see if justice needed to be done or if justice had actually been done.

Kahleff's at Jaffir's urging considered reply was the gods had acted. There was nothing more to be said or done. Extend the courtesy to Kahl of venting his spleen and watch him carefully. There could be followers of Verhat amongst the priests. The outer distinction of black or white was irrelevant. The whites preached acceptance of the coming social order where all were equal, the blacks dealt with their souls cleansing.

Jaffir had his own intelligence. Many in the bazaar resented this levelling the priests proclaimed in the new holy kingdom. What they meant was toiling in the fields, husbanding of animals, luxury goods a distraction. A society of peasants, kept ignorant, the closing of Ephan's school, the unnecessary supplications of the gods lifted, pure simplicity of life the goal. Seek not answers but pray for redemption. No more, no less. With the priests supreme.

Jaffir had waited for signs and when Kahl's excited breathless accusation of foul murder was revealed he sighed, inwardly. The gods had moved Nada and Castari's servants to rid them of this meddling self-important bunch of troublemakers.

Yet crops were failing, summers were getting cooler, less rain nourished the earth. That could not be ignored. Jaffir put that down to the presence of the priests and their unholy declamations. Yet he balked at removing them to some distant location where they could do untold harm in strengthening their belief. They had to be kept under observation. But that exposed the people to their dangerous vision.

A cool breeze wafted through the assembly. Jaffir listened whilst all these thoughts coursed through him. Kahl was calling on divine guidance to see Verhat's loss of life for what it was: murder. Kahl spoke of an evil possessing the instigators blaming the false eye thus moving the accusation from wilful murder to one of malignant possession. The judgement should be divine. If an example was not made who knew who else would be possessed. The eye had to be destroyed as well.

Rena had during the earthquake moved it into the lake to drown but Nada had taken it out. If that was not a sign of being possessed...he let the words hang in the air, the unspoken accusation obvious. Then drawing breath added the priests would have cleansed this befouled place thus actually helping their gods. Was not the sinister temple buried? Only for Nada to do the will of the evil eye's intelligence. He went on alluding to duplicitous beings, demonic manifestations inherent in the thing threatening the stability of the kingdom. Kahl had said all there was to say. It was now in the realm of the gods.

Jaffir was aware through Kahleff that the people were plagued by discordant dreams. Subtle changes manifest, revealed within their troubled souls. It was natural for people to complain when they never had had it so good. Certainly the crop failures drove up the price but there was no danger of starvation. It was a matter of less abundance. Jaffir was more concerned about the rantings of the priests. They were the likely source of the people's spiritual affliction. Jaffir did not feel this contamination himself. But then his soul was resolute, strong, supreme. With Kahlef's guidance it would remain so. Nor was Kahleff perturbed about malignant spirits let loose. No signs of impending chaos in the skies. Jaffir wondered just how deluded the priests or Kahl actually were.

It was now up to Jaffir to summon Castari. He had sat there in barely suppressed silence. Kahl's ramblings, the hint of some alien evil possessing Nada was ridiculous. Even implying his servants were deviating from their god's intention outrageous. It was obvious Kahl was the mouthpiece of the priests, who seemed to have vanished when Castari entered the city. Word travelled quickly. The priests who had been with Castari were on second thoughts let go. Let Norhat deal with them.

Jaffir motioned for Castari to come closer. As a sign of his position a servant brought a low stool. Kahl had had to stand, Castari was allowed to be seated. He was tempted to look at Kahl's reaction but kept his gaze firmly on his ruler. He even avoided eye contact with Kahleff.

The first words that came out of Jaffir's mouth were unexpected. Instead of asking him how he would plead his case Jaffir said instead: "You move amongst the

people Castari, tell me, are they disturbed by strange dreams. In your camp where this eye fell, were there any aberrations?"

"No my lord. No strange dreams in the camp. We have a shaman, Jamos and he said nothing. As for the people, well," he allowed himself a hint of a smile, "there will always be some dissatisfaction. It is the will of the gods. Some they trick due to hubris, some to lower pride, others they reward for no other reason except by their whim, some they afflict with disease if perhaps to remind them that they are the givers of life. But in general, everything is as it has always been. I do know this years crops have been less, but I think the gods have been extremely bountiful to us. No one will starve my lord."

"So Kahleff advises me Castari." Jaffir said at last. The merchants were more level headed and less prone to see the gods in every move, every act, than simpler folk in the villages. The same went for Norhat and his military advisers. It was the priests who preached constant surveillance as if the gods were spies, making sure every moment was immersed in holy devotion. Fundamental fools, obsessive, instilling a spiritual fear where none existed.

"The bandits you disposed of. You are not guilty of murder. It was the gods who decided this. You did well to inform me why the priest would carry in secret the faces of Jea, Fehz and Ehir. To make contact, to rob or to murder? We shall never know." Jaffir was not about to reveal what he thought of the priests and what he intended to do about them, or Kahl for that matter.

"Come closer merchant." Jaffir ordered.

Castari rose humbly and approached deferentially the golden throne. Kahleff remained by the king's side.

Jaffir whispered: "Keep me informed about the priests. Many of my office holders are told what they want to hear. It is merchants such as yourself who trade in intelligence. I know your seal and some of your secret signs." Jaffir's eyes sparkled triumphantly. Castari hid his shock that his secret coding in parts was now in the king's mind. "Rest assured this will not come to your competitors' attention. My intelligence service as you now know is extremely well geared. Don't even try to find out who is in my employ. They are well trained in the art of subterfuge. Revealing their presence would jeopardise them. And I must know of course that the messages I will receive from you are warranted as genuine."

Castari merely nodded.

"Now stand in front of me to finish this."

Castari walked backwards, bowed and waited.

"I king of the realm, guided by the gods declare Castari, his daughter Nada, their servants are innocent of both the demise of Verhat and the priests minions who came to the camp with evil intent. They are absolved, unless the gods deem otherwise of any crime. You are free to leave us Castari."

Castari bowed, thanked the king and without even looking at Kahl made his way out of the hall. As he left the inner courtyard he heard Jaffir exclaim that until further notice Kahl was to be placed under house arrest. Nothing was mentioned about the priests.

Kahl's initial reaction was one of fear for his life. He was confused as the palace guards surrounded him. The menace obvious their expression neutral. The fall from grace, the kings displeasure would be common knowledge in the streets before the sun was down. Then confusion set in. How had it come to this? He tried to think back. His life akin to a potent dream.

"Step forward Kahl." With the guards around him he moved with leaden feet. His body felt emaciated, gutted. Almost trembling, nervous with apprehension of having attracted the kings displeasure he waited for fate to fell him. What had he done? Verhat! It came back to him. But that was after, after the transformation of his soul, when his inner essence had expanded, when he had been fulfilled with preternatural wisdom, how the universe...

"You have been found wanting in the devotion to the gods." Kahl stood there humbly if only due to the shock of the curtailment of his freedom. This accusation was standard when no real evidence could be produced to one accused. He had come to the king willingly, informing him of the bloody deeds at Castari's camp.

"You did come freely to the royal throne," Jaffir spoke in the third person, as lawmaker and supreme judge, "but you have been misguided. You shall be examined and for that reason alone I am willing, for the moment, to spare your life. Enough blood has been shed. We will decide once we know the truth of your soul how you can redeem yourself."

Was he to be forcibly questioned? He was too numb to think this through. One moment he was a free citizen, a man of some social standing and now this.

"Your association with Verhat, a viper amongst us whose overweening pride saw himself above all," which meant Jaffir and his enigmatic spiritual head Kahleff as immutable. Silent, powerful, the kings intelligencer. What had Verhat done? Whatever, he was paying for it. Now that Verhat was dead he was on his own. Then images of three

dark figures floated like manipulative ghosts in his memory. His mind suddenly clouded. They were making their presence felt. To give succour or gloat over his fallen state? Were they planning some outrage, plotting some evil deed, sowing dissension amongst the people through the priests? He was confused. It was as if he were living more than one life and did not know which one was more real.

"Until we know more as to what actually transpired you shall be removed to your confinement. Given your status, you will for now be accommodated in one of the apartments in the palace. Cooperate and you shall be treated well. Otherwise if you are lucky and the gods deem it as such you may end up in the dungeon, if your soul's fallen state deserves it. Prove yourself stubborn and your life can easily be aborted. Take him to the secure eastern wing guards." Kahl felt himself removed from this whole scene. As if someone else was listening and he would wake from this sudden change. His real self elsewhere. He could not even recall what his real status was. Was he married? Did he have a family? Was he engaged in any business? Did he belong to an association with which he shared their wealth? His past wiped out. He could not even recall with any certainty just who he really was. The only memory he did have was of inner fulfilment, a sense of the infinite, then nothing.

The guards marched him out of the open courtyard.

In his room, his cell Kahl sat dejected. He should be glad of the king's tender mercy. It could have been much worse. There was a bed, a desk and two plain chairs, a view over the bustling city below. He could see the tiny figures moving in the bazaar, colourful tarpaulins providing shade, the hodge-podge buildings with their uneven roofs, some flat, some at angles to add an extra storey, wisps of smoke rising from chimneys as people cooked or warmed their houses, in the distance the market gardens, the sun reflecting off irrigation channels, then the soft pink desert and further the mountains.

He noticed a pitcher of weak wine, paper, quill and ink. He knew what he wrote would be shown to the king. A confession? Expected. Rationalize his actions? But what had he done? Nothing. Except the strangeness he was suffused with. Of something stupendous, awesome, inspiring, momentous quivering at the edge of creation itself. A sign of the power of the cosmos as Verhat had hinted at. Was that it? For in that indeterminate vision there were no gods, just this presence, both close and yet so far, immanent, almost graspable. The soul flaring up, energized, the mind excited, filled with innumerable potentialities of the future, of a present undergoing subtle changes. Were

the priests attuned to this as well as they preached their message of the coming kingdom. Whose kingdom? Not Jaffir's. Maybe that was it? He did seek power in this world or the transient invisible world of the gods. The gods. It always come back to them. Chimeras. He was shocked at the heresy but only momentarily. He was infused with some of their ichor. Destined for great things yet brought low, for now.

He decided to drink the weak wine. There was nothing to be done. Later when the large pitcher was nearly empty he started to write. Automatic, the thoughts and words pouring out of him. He barely knew what he was putting to paper, then fell asleep. During the night he woke and crawled in a haze into his bed.

The next morning the pages he had written were gone.

Jaffir listened to the supplications of his subjects. The usual trivial inconveniences of their lives. The merchants accusing each other of underhanded methods, the cost of maintaining the military when the kingdom was at peace, bandits preying on their caravans, their fearsome shamans jinxing their fortunes. Others complained of bewitchment, of unnatural bad luck for which the priests were blamed. The priests. They held the riff raff in place. Thieving pickpockets were less now as they fed them and gave them shelter in their dormitories, setting them to work mending clothes, sweeping the streets, removing rubbish.

Preaching their strange religion. They did not deny the gods but spoke of a new dawn. Jaffir could not fault them. But he wondered if they were gathering the people around them. They spoke of an equality of everyone's soul which might be true. Kahleff knew more of this whilst Jaffir prayed to Nurdass the sun goddess. Her holy precinct within the palatial grounds. She was the ultimate goddess of life and death. For each morning she reminded them all of her power. It could easily be withdrawn spreading eternal night over the world. Then what? Urus might look down upon the nighted planet yet she could not make the crops grow. Bahlir might see but that was about all. But it was Nurdass who returned in the morning to brighten their lives once more.

After passing judgement on Kahl, containing him which Kahleff thought appropriate Jaffir decided to have an audience with his astute sage and intelligencer in his chambers. It made for a change. Kahleff lived simply yet comfortably.

In his quarters, several rooms, in Kahlef's study Jaffir relaxed. An astrolabe, glinting, it's metal bands engraven with the signs of the skies, the stars which fascinated them both. Many celestial orbs in the great empyrium that surrounded them, the realm of the gods.

The two most powerful men in the kingdom sat on comfortable cushioned chairs overlooking the city below. The murmur of the market place comforting as people went about their business. Kahleff offered the king some of his excellent wine donated by grateful merchants. Jaffir considered his business with his people finished for the day. He wanted to know what Kahleff thought not just regarding Kahl and the bloody deed done at Castari's camp, but the state of the kingdom itself.

They were about to start when a discreet knock interrupted them. Kahleff rose puzzled, for he had dismissed his servants. Prevent gossip. A messenger handed him a sealed container, bowed and left. Kahleff handed the copper object to Jaffir and a small hammer with which to break the soldered seal.

On the larger table, covered with astronomical charts, scrolls, parchment written in the old language the two men moved from the window where they had enjoyed the view. The hammer broke the outer enclosure. It contained a second smaller copper tube. Nohrat. He broke the second seal.

Kahleff withdrew to the window table not wishing to pry into the king's secret messages. It was an intermediate report. Information that the priests were meeting in specific houses at Orst. All detailed. It was well that the king had ordered Nohrat to Orst, the main trading post of the northern nomads. On his tour of inspection to check on the tribes it was the priests that now attracted Nohrat and Jaffir's attention. By default Kahleff as well.

The report went on to state the tribes unusual restlessness. Their shamans a little excited, their spirit guides full of puzzling portents. Their sacred domain under some cosmic influence according to Nohrat's informants. It always was. The priests had their converts everywhere. Each group spying on the other.

More disturbing the body of a murdered teacher had been found at Eghan's school. Eghan had the blessing of Jaffir for they had invented some time back the water wheel from which many benefits flowed. Flour could be ground without treadmills or the use of beasts of burden rotating the grindstones. Water scooped from mountain streams. Eghan's school also taught metallurgy, casting better swords of steel, their furnaces blazing day and night fuelled by a black rock that gave off more heat than precious wood that had to be transported over vast distances from the receding forests. They studied herbs and medicine. The man was an inspiring genius. And now one of his teachers had been murdered. Was it an individual act or was this part of a greater plot? Were the priests hostile to the school? Had the teacher transgressed regarding the holy gods? Was this divine retribution or a momentary act of blind rage?

Jaffir mentioned the murder to Kahleff.

"There is always a brawl in the taverns at Orst Jaffir." In private conversation with the king Kahleff allowed to call Jaffir by his name.

"Yes. The nomads do get pretty wild. Maybe a priest Kahleff."

"I agree. Yet the intelligence Kahl offered is disturbing. Using their own guards does not augur well. Had they designs on Castari's wealth? Were they plotting?" Kahleff brought up.

"The peace of the kingdom imperilled."

"Nohrat is an excellent commander king."

"He has my fullest confidence. Yet to murder a teacher..."

Kahleff waited for the king to collect his thoughts. "...that school is invaluable to the benefit of the kingdom. It could be a random act. We shall see Kahleff."

"Divine justice or human folly."

"Indeed. It is said some at the school believe the gods a hallucination just like the shaman spirit world. That it is us who have created them."

Kahleff avoided the philosophical. He was more concerned with the signs he was seeing everywhere. A disturbance amongst the people. The obvious choice were the priests. They hedged about the nature of the gods making them appear of lesser importance, hinting at some unseen power behind them, behind the gods of creation who resided somewhere deep in their own recessed realms. Were they causing the changes? Kahleff himself felt this perturbation but could not get any closer to its source. Changes. And now foul bloody murder.

The priests uncovered unbelievers. Outed them. Fearing for their lives they quickly recanted. To deny the gods unthinkable. Was it all connected? Kahleff did not bother Jaffir with these minutiae. Overall things were in good shape. There would always be conflict. Even the gods were at odds now and then. Storms that caused havoc and destroyed crops, tempests that sank fishing boats, earthquakes levelling villages, lightning that killed cattle, floods or droughts parching the land. Still the gods never really abandoned them. So had this murder been some divine disturbance Kahleff thought. The poor of course blamed the rich for their misfortune, blamed them for not being devoted enough to the gods, or worse using the gods for their own gain. The priests manipulating events. Their pesky insistence of this universal power there for all in equal measure. Then the thought subsided. If everything was equal then there would be nothing to distinguish the sky from the earth, the sun from the distant stars...no that could not be the answer no matter how ingenious the priests presented their case.

He was watching the king write his commands for Norhat. Jaffir called the guards outside, then rose with the order holding the two copper vessels, informing Kahleff he would return. He would personally go to the workshops so his tradesmen would seal the containers in his presence then despatch a courier to Orst.

Kahleff had some precious moments to himself. There was an alien essence amongst the stars that he could not nail down. Once an apprentice shaman himself, nearly five decades ago he had risen with Eghan through the royal system of tutelage. Of having assigned individual teachers chosen by the king's agents searching the land for prospective candidates to serve in the school. Of course being chosen was guarantee one would actually serve the king in whatever capacity the then old king saw fit. Troah in his dotage had been rather aberrant in the last years of his reign, appointing his royal servants more on their personality than their capabilities. Somehow Kahlef's reticence, for then he was not so sure of himself had pleased Troah in not badgering the old king with his insights or preening in verbose obtuseness in his knowledge of the divine state of the gods. It had pleased Troah that Kahleff merely performed his duties, wrote his reports which were assiduously studied.

Then the priests appeared. These creatures were focussed. They spoke much yet revealed little. Unlike the shamans they were extremely vague about the gods themselves as if merely repeating what the people knew, what the people wanted to hear as opposed to what the gods actually had in mind. Kahleff knew his limitations though he felt the divine both within and around him. Now having some time to himself he focussed on Kahl, an enigma if ever there was one.

All because of Verhat. Another arrival out of nowhere. Supremely serene, definitely attuned to the realm of night, praying to Urus and Bahlir he had hinted that the stars themselves, the many souls of the departed called into the realm at the great passing of life to the eternal beyond, harboured signs a calamitous future. He hinted, like the shamans that hidden knowledge could be revealed. The priests gravitated towards him as if he were some spiritual loadstone. For a while Kahleff was under the impression Verhat was after his station at court. If not directly challenging him he certainly made his presence known by unremittingly avoiding the palace. Verhat pretending disdain to be entangled in the politics swirling around Jaffir once he had been anointed by the priestly caste on behalf of all the gods. Verhat was building his powerbase outside of the spiritual hierarchy. There were hints he was in league with certain individuals who gave themselves totally to specific gods, even assuming their names instead of their own.

Having shed the husk of their born ancestry to be at one, infused by the gods, becoming Verhat's mouthpiece.

Kahleff could never identify them. Perhaps a new breed of the celestial ordained had been created. He had thought Kahl one of them. Well the king had him now. Kahleff was going to do a little soul searching whilst Jaffir was gone.

He made himself comfortable. Unlike these new priests he did not kneel as a sign of humble submission. Not that the priests were humble, they only acted so making the people think they too were being revered. The shamans of course lay on the graves of their teachers and spiritual masters to invoke their divine essence to facilitate crossing over into the ephemeral realm which was interwoven into reality itself. One step away from the gods.

Kahl. Nothing much was known about him. A solidary figure who had gravitated to Verhat. A vague image behind Verhat. With Verhat gone it would be interesting to see how Kahl would react. Time to search his soul.

Kahleff closed his eyes and slowly emptied his mind of all the thoughts flitting through his brain. He sensed confusion, that was natural. The priests did acknowledge him as a man of spiritual wisdom yet Kahl unlike Verhat said very little, hinting merely at some cosmic power energising the gods themselves. It was pure magic, both claiming if not pretending to be one level deeper than that of the shamans.

Kahl accepting this turn of events. Nor was he reaching out to any gods for divine guidance, seeking spirits to help him out of his curtailed situation. Brooding was more like it. A sense of desolation at having been abandoned but not without hope. Interesting. Kahl to all appearances innocent of any evil intent. Yet by being in Verhat's orbit he was suspect for Verhat had not been altogether trusted by Jaffir. Guilt by association. This cosmic power Kahl aligned to intrigued Kahleff. Were the gods within a tapestry of interwoven power? Was that the ancient resonance of the elder gods? Kahl believed, was certain almost that they too were linked to this universal web. Kahleff had always thought the gods were drawing on their own power, being gods in the ultimate shaman sense but what if Verhat and Kahl were right? What if this mysterious brotherhood merely pretended to be avatars were drawing on the gods power for some dark design?

Kahlef's mind was so restless the link to Kahl was tenuous even though he was now fast asleep, the perfect time to gauge the condition of his soul.

Jaffir returned, the guards calling out the king's approach. Kahleff opened his eyes. Remarkably calm after having searched Kahl's mind.

He rose but Jaffir indicated he should remain seated. This was a private audience.

"What do you make of Kahl? What do you make of the incident at Castari's camp. Is he guilty of homicide?" Jaffir sat opposite and poured himself some wine. He offered some to Kahleff who declined. Normally that would have been an affront. Jaffir respected his advisor knowing that keeping one's wits about one was extremely important.

"To the best of my knowledge, Verhat was probably planning something. Working by degrees. Whether the priests were an extension of Verhat or whether it was mutual attraction we shall never know."

"I asked about Kahl and Castari." Jaffir reminded him.

"I was coming to that my king. In short, the priests and Verhat would have come to some sort of understanding. Then their obscure message would have gained a foothold amongst the people. Kahl by the way is of lesser importance. Attracted as a kindred soul. Possibly a second in command had it come to that. Castari thus removed the formation of a new power base Jaffir."

"Nipping it in the bud."

"Precisely. I am puzzled at the use of an armed escort. Why?"

"Indeed Kahleff. And?"

"A show of strength. A challenge to Norhat. Who knows to what evil they might have gotten up to? But a show of strength it was. A statement almost that they, meaning the priests were a force unto themselves."

"Castari did us and Norhat a favour."

"Definitely."

"Kahl."

"I have a strange feeling about him. Not unlike Verhat but less so. Or maybe using some dark unseen force Verhat knew of to prepare the way."

"You mean spiritually."

"It looks like the demarcations are getting blurred. The priests are active amongst the people. Their message vague by intent. Make the people think the gods are wanting. Hinting at a deeper mystery. Sowing seeds of doubt. If not dangerous then troubling at least for the peace of the kingdom Jaffir."

"Serious accusations. But nothing said directly against the gods."

"They would not dare."

"They had better not."

"There is something else."

"There would be." Jaffir drank some wine. He was listening.

"This is only a supposition, a feeling, a guess. There are rumours of another group of individuals who are assuming the mantle of the gods. Divine avatars completely devoted to a god."

"So?"

"Ah, not in the usual sense of humble devotion Jaffir. I feel it within, and without. Drawing upon dark essences and using their power not unlike the shamans."

"They are priests?"

"No. This is completely separate. Using shamanistic techniques whilst focussing on the gods. Affecting their own inner transformation to become more Jaffir. After cosmic power."

"To do what." He drained the silver goblet.

"Yes."

"Yes what Kahleff."

"Your statement I noticed was not a question. Gaining power. There is so much going on and yet on the surface everything appears normal."

"Implying that these individuals are planning to what?"

"The priests are not totally lying when they are saying there are changes in the cosmos, a time of revelation, a change of spiritual circumstances, a new age."

"This will affect me how?"

"I have thought deeply on this. Taken to its conclusion it could well be that the priests, their leaders, hidden as of yet will be the true rulers of the people. The position of the king becoming merely ceremonial."

"That is treason Kahleff."

"It is Jaffir."

"And Kahl?"

"He could be connected. Then again he might have been attracted to Verhat purely for his own spiritual edification."

"But you don't think so."

"Kahl is too serene. Whilst you were gone I tried to assuage his soul. He is troubled..."

"As he should be."

"Yet serene at the same time. I think he believes that this change in the cosmos somehow protects him from the vastitudes of life."

"Like the priests."

"But without moving into Verhat's shoes. Merely an observer, one who is imbued with inner certainty that he is divinely protected."

"It didn't help Verhat." Jaffir scoffed, then smiled helping himself to more wine.

"Indeed, the gods certainly abandoned him."

"Or called him."

"Or re-called him, neutralised him. But that is speculation on my part Jaffir. I don't think you would get much out of Kahl. He would ramble on about whatever he believed without giving anything away. And if he is an observer, watching developments it might be just that."

"If he is an observer, for whom is he observing?"

"At a guess this strange enigmatic brotherhood. If they are arranging the positioning of the priests then it would be best to see if Kahl is connected or not."

"All I have to do is ask."

"True Jaffir. What if you were to let him go."

"Now that I have him why would I want to do that?"

"See if he does lead us..."

"I was rather thinking the opposite Kahleff. See who would miss him."

"You mean take note of those who might plead in his favour. Or present a petition? Or move their plans forward?"

"Ah Kahleff I have chosen well in you. You, unlike your predecessor can think both in this world as well as the other, the divine realm of the gods."

Kahleff remained suitably reserved.

"My intuition," Jaffir continued, "is to keep him indefinitely. You know how it works. Keep him isolated, for weeks if need be and soon he will be eager to talk to anybody. Then a simple question can reveal much."

"That is indeed true. Torture never worked unless one knew the party was guilty. But Kahl appears, and I mean appears Jaffir, innocent."

"As the law stands he is that. Yet as you said, there are signs of dissention brewing if the priests continue unhampered. They do not openly defy the gods. I know they do not say this. Their silence though implies as much."

"I tend to agree."

"I am tempted to let Kahl make his excuses."

"You should, if I may suggest..." Jaffir nodded his royal ascent, "...go through the motions of an interview. With one of your legal servants. It would give him the impression

that he is of supreme importance. That would make him cautious at least. If on the other hand a legal servant merely questioned him he would know that this is a preliminary interview. Actually I don't think Kahl knows much at all. Yet if we, you Jaffir, wish to find out for whom he is observing then letting him free would be easier. See where he would lead us. Of course he might not do anything. Having had such a close escape might have taught him a lesson. Withdraw back into his own life."

"Yet something tells me you don't think so."

"No Jaffir."

Jaffir laughed. "You know Kahleff, I might just let him go. That way he might think he is of no importance at all."

"Now that is something else. Why not? Kept in an apartment, no duress and then with no explanation let go. That somebody had interceded on his behalf. Embolden him in that there was nothing of which he could be accused of. That then, if he is in league with others may let them think, if my hunch is right that they are stronger than they really are."

"You have a point there Kahleff. Let us detain him for some days. The wine by the way he drank, weak though it was, was drugged. Not much. He did write a confession you know."

Kahleff was discreet enough not to ask what its contents were.

"He rambled on about Verhat's occult belief and if he, meaning Kahl, had caused offence against the gods, or due to being misguided. Attracted by the force of Verhat's personality. As to the priests that was Verhat's idea. He himself did not hold them in high esteem and the use of an escort a mistake. What do you make of that?" Jaffir seemed pleased.

"Definitely a cover, an excuse. Embellished with half truths. He might even be convinced by his own thoughts. So if he is let go, it would be interesting where the bird will fly. Go in hiding? Seek solace amongst friends? Think himself under powerful protection? Decide to act decisively? Or do nothing and wash his hands of this sorry affair."

"As usual you have covered my concerns admirably Kahleff."

"I am always pleased to serve, my king."

"We shall wait several days. However if he continues to write, claiming to be innocent then, well, he will remain as long as he pours out his heart and soul."

Kahleff nodded.

"What do Jea, Fehz and Efhir have in common Kahl?" Jaffir and Kahleff had gone to Kahl's quarters and woken him. Got him when least expected, in the middle of the night.

Kahl, in his undergarments was confused. Honoured by the king's attention he bowed, his mind groggy from sleep, and the effect of the mildly drugged wine. Pliable.

"Efhir is the master of his philosophical school. Fehz is the practical philosopher. As for Jea, I have no idea. A teacher perhaps?"

"Their likeness was discovered on a spy at Castari's camp. Verhat could have been involved, or you."

"My lord I know not of this."

"You were closest to Verhat."

"Only physically." Trying to clear the sleep out of his head. He felt sluggish. Maybe the king's advisor, in his black robe standing there like a solid citadel, was muddling his thoughts. He was the king's repository of occult knowledge similar to that of Verhat's. The similarities of character unmistakeable. Inwardly he sighed. There was no point dissembling. They had him at their tender mercy. Jaffir was no tyrant but if displeased the outcome could be anything but pleasant if he suspected even a hint of secret designs be it spiritually or political jockeying.

His whole life had been turned around. He could barely remember his past. Vague images at best, nothing concrete in place. The transformation, so sudden yet so impregnated into the depths of his soul did expand his comprehension, broadened his outlook, inflating his inner self making him aware of the vast untapped realm within him, empowering, enlightening as destiny's wings touched him directly. Fated for great things to come. Instead he was a prisoner at the palace. If he did not cooperate he shuddered at the alternative.

"Come now, do not try my patience."

"What can I say? Verhat spoke of a mighty power." He had wanted to say occult yet refrained from revealing even that. He felt he, like Verhat was onto something big, something so obvious that it defied analysis for it was all around them like the air they breathed. It infused reality, permeated both matter and spirit, animated the universe. The gods mere projections of a convoluted imagery within the mind. Substrata of their sleeping personality that only revealed itself in dreams, under the influence of mind expanding drugs, or to the 'chosen'. Part of their make up, interwoven into the very essence of one's soul. Kahl felt 'chosen'. Now in the presence of the king and his advisor

he was small. Shrunk into a tiny ball deep inside his mind, the power withdrawing under the patient searching gaze of Kahleff.

Outside deathly quiet. Only the occasional clink of the guards accoutrements, muffled snatches of conversation, the odd bellow of a cow or the snorting of a horse absorbed by the mantle of night.

"So these three mean nothing to you."

"No sire. I sometimes wonder what has befallen me."

"You associated with persons whose intent is dubious at best." Jaffir warned Kahl, and hinted that he wished to know more.

Jaffir sat, Kahleff remained standing. The king's presence filling the room. Kahl was shivering but the king kept him standing.

"The priests are a mystery to me."

"I find that hard to believe. You travelled with them."

"No my lord. I caught up with them a days ride from Castari's camp."

"What were you doing there?"

"I was to meet with Verhat at Orst. He had summoned me."

"So you were at his call?"

"Yes. So it appears."

"Appears?"

"It's like I was drawn to him, as if fate decreed it as such."

"By fate you mean a god, or gods?"

"More vague than that. Like a force possessed me."

"So Verhat was a wizard, a warlock?"

"I hope not my king."

"You were his confidant." The threat hung in the room enclosing him. The king the gatekeeper.

"Not in the usual sense. He hinted at things to come, events setting themselves in motion, changes written in the stars."

"Urus or Bahlir?"

"Verhat only ever mentioned the stars, the mysterium of space..." And held back from revealing how he felt the universe impregnated with pure power, adulterated by smaller minds.

"So he denied the gods."

"I don't know..."

"Did he ever give thanks to their blessings?"

Kahl suddenly saw Verhat in a new light. The king's supposition was right. Verhat prayed to no god. Neither did Kahl. In another life, so distant, so other, he had believed. Now certain Verhat had been right and paid with his life.

"Not in my presence." He answered honestly.

"And what god or gods do you pray to?"

"Urus." The memory was vague but in that other life, separated by a dark fog truncating and shutting out his past, this remnant memory remained.

"What was the reason for your visit to Orst?"

"Verhat wished me to attend him there."

"For what reason?"

Kahleff seemed to bore into his mind. He felt transfixed, his mind immobile, his many thoughts rampant confusion now subdued, suppressed unable to help him focus and articulate his words.

"I have no idea."

"So you are saying you dropped everything, without knowing as to why or what and like some minor disciple follow the orders of your master? You, a fully grown man in his prime?"

"It felt natural my king."

"There was nothing natural about Verhat Kahl. We know," Jaffir guessed, "that Verhat was in league with the priests."

Kahl pondered that. He did receive the odd priest at his home. His home. Where was his own home? He had one, everyone had a home. That memory was vague, less than transparent, lost in the mists of time.

"That could well be."

"You are not certain?" Jaffir said in disbelief.

"There were some. They all look the same in that garb of theirs."

"I ask again, who is Jea?"

"No idea my lord. Maybe we were to meet him at Orst."

"And the purpose was not revealed to you?"

"No my lord." He was speaking the truth.

"We have ways of jolting your memory."

"My lord I speak the truth. What little I know. It's all like a dream in which I move. Even now I feel a sense of otherness I cannot explain."

"You are enthralled?"

"That would be the best way of putting it, my lord."

"Even with Verhat's demise?"

"Yes."

"And you cannot ascertain it's source?"

"No. I have visions of other presences. Not the gods. Beings. Like us."

"Other wizards?"

"Must be."

"And their location?"

"Somewhere. All I see is darkness."

"Enshrouded?"

"Possibly." He felt lost. Why had he been chosen? He wished to be free yet the infusion of potential power residing in his soul was too fascinating. To be chosen for the uniqueness of his inner essence, the promise of great power too enticing to abandon. To acquire it's fountainhead, to drink of it's latent potential. To be one with the universe itself more than tempting. He was fated for great things. Even this setback was more a passing encumbrance. He would survive this.

Then a flicker of remembering. "My king I think Verhat was using the priests to seek out heresies. There are those at Orst, possibly Efhan's school who are using the gods for their own designs." The words poured out. He had no idea where they had come from.

"Tell me Kahl, how can one use a god for one's design? That is an impossibility. The gods are not just above us, their intelligence is supreme, we are mere minor reflections, beings with a lesser endowed spirituality. You mean the gods had chosen perhaps Jea, Fehz and Efhan for their design."

"I am sure Verhat wanted to discover this for himself my lord."

"To use the gods..." Jaffir pondered. Then turning to Kahleff: "Is that possible?"

"It would take a mind much greater than that of a god. I am not aware of such individuals who would dare to assume such a role. It would not only go against the very nature of the gods but the whole hierarchy of their great empyrium." Kahleff explained.

"What if these minds combined as one?" Jaffir surprised at his own brilliance.

"That is a possibility. If that were to occur..." Kahleff held himself in check. He was not about to reveal his knowledge in front of Kahl. The king yes but not his subjects. Jaffir sensed Kahlef's reticence, understanding that even the unspoken implications harboured a new development. Maybe these three were involved. Then again maybe they were there to thwart Verhat's or the priests designs. Another thought struck Jaffir. What if the priests all combined their minds onto one, assembling in tandem their spiritual

power? They could then force their will, usurp the gods as such. Through this investment of power do their secret will and possess the people. It made sense. It was so clear. He had to find out more. By rights he should send Kahleff to Orst to investigate. But that would only alert the priests if indeed they were planning this coup. He had a better idea. With this murder there was good reason to activate his and Norhat's spies. He had learned enough. It was time to sleep on it. He rose from the chair, looked about the room, found it to his satisfaction then with Kahleff in his wake left Kahl.

Along darkened corridors, oil lamps sending a small pool of warm light into night, two guards at long intervals making sure their guest remained where he was.

Kahleff walked just a little behind Jaffir out of respect. Jaffir was one of the least pretentious kings in ages. Little pomp, even less ceremony, it bored them both. He let the priests and priestesses officiate at the many public temples dispersed throughout the city, forming the centrepiece at market squares. Some small shrines set in parks devoted to the gods of the earth, simple square designs, temples in inner courtyards open to the sky to allow the elements the gods presented free leeway to move amongst their devotees.

The priests had none of that. They moved like the breeze amongst the people, like flotsam in a swollen river, another eddy within the populace.

"Tell me, what of this eye of Bahlir near the lake? The priests claim it a sign, a coming evil, a return of the ancestors."

Kahleff had read the books in the secret library beneath a small disused temple of Urus in the old city. Known to no one except Kahleff. At Ephan's school his library had a secret cache. Edited versions of their past. The real library was in the old temple near the lake which according to Castari was now sealed under a mountain of rocks following Rena's earthquake. A sign that its knowledge was to remain sealed from prying eyes. Kahleff had not been there for nearly a decade. The visions of the tomb where the ancient archimage Saurus was buried, the last of the wizard kings who when nearing their end withdrew from public life to re-unite their soul with the mystic essences of the universe. Before the gods revealed themselves millennia ago. The eye of Bahlir had seen that the temple had to be sealed so that the predictions of the future would not come to pass: the return of their distant ancestors who had nearly brought about their end, in league with a strange race from the stars. A godless race who had taken the Chosen and left the rest behind. Their glittering cities, aglow with strange lights and weird artifices holding the people in its thrall, strange wizardry indeed. Now the priests put it about the bad days were to return. That this eye was one of those threatening objects, mimicking the gods powers yet not of them.

Kahleff dearly wished to inform Jaffir of the truth. Kings though were manipulative by nature, they had to be to be supreme rulers. In a way kings were realists and the danger of being tempted to use these alien artifices for their own ends too dangerous in their hands. The real knowledge behind their manifestation had to remain hidden from profane minds. Denying the gods powers would deny their life giving essence. The planet nearly died back then. It had never fully recovered the Great Calamity. But slowly nature healed it over the centuries until this current paradise was restored. If the ancient ones were indeed coming back it could well harbour their unholy intent to reclaim the planet as theirs. Kahleff sometimes wondered if the priests had something to do with that. Acting as a combined force like a lodestone to attract the star travelling race. In a way it was only a matter of time now that Jaffir would pose the ultimate question regarding their fate, their future, their destiny.

They made their way out of the guests quarters, down the watch tower's stairs, guards keeping a lookout as they had always done. For in olden times the nomads had raided the wealth of the city. Now with a standing army that threat was no longer pending. The nomads were getting wealthy through trade. Breeding swift or strong horses, herding sheep, dealing in precious stones dug out or mined in the distant mountains. Some even sending their sons to serve in the army, others actually studying the craft of metallurgy, the art of stonemasonry so they could build their solid forts in the ever shifting alliances between the many tribes. So far no rumours reached Kahlef's ears that they were concerned with any object that fell from the sky. It was just as well that the priests had not laid their greedy hands on it. Who knows what twisted logic they would use for their own benefit. Maybe they had known it was to fall there.

They made their way through an inner courtyard. More guards, barely illuminated by the torches in their wall clasps. Jaffir did not demand instant answers. He too was aware, if rather dimly of their ancient history. So he let Kahleff formulate his thoughts as they walked in silence back to their respective apartments.

"They are guessing. As in all things they make things up as events necessitate." Kahleff said at last meaning the priests.

"All things to all men."

"Precisely. They will say anything to ingratiate themselves. To the people they espouse a commonality which goes against everything we hold dear. To the wealthy they promise wealth, to those who have power, even more. They would use this eye to insert the idea that due to the sin of some, always couched in vagueness to unsettle their souls so that they can infuse their hazy generalities masquerading as profound insights. It

is best to keep a watch on them. I don't think the eye means anything other than what it is. Bahlir burying the temple. The deed done they eye has finished its job. Bahlir is satisfied and that my king is that. Whatever the priests impugn is deceit."

"Lies you mean."

"Indeed Jaffir."

"So it is no portent of doom."

"I think not. The skies are serene, the stars in their place. No strangers have appeared amongst us..."

"Except the priests."

"Except the priests."

"What do you think should be done about them?"

They were at the northern tower and slowly climbed the circular stairs winding it's way up to their rooms. Kahlef's right next to one of the kings many chambers.

"Keep them under observation. One wrong move, one treacherous word is enough to round them up and expel them Jaffir."

They reached the fourth level and made their way along the barely lit corridor. Guards acknowledged their presence.

"Oh?" not that Jaffir had not thought of various alternatives.

"Move them into the desert. Build a monastery. Then those who are taken by their message will have to make the trek. That costs. Out of reach to most. It would reveal who is with them. This coming new age is a ruse for them to acquire power unto themselves. In a way it is spiritual treason Jaffir."

"They are too clever to come out with that."

"As expected. But they are sowing seeds of dissention amongst the people. Make them feel empowered."

"Do not the gods do this?" Jaffir asked rhetorically.

"Well they claim this cosmic force that unites us all equally also empowers."

They had stopped in front of Kahlef's door.

"Not much to go on. Some shamans think that as well Kahleff."

"I know. There is some truth to it. All living things have that divine spark within them. But they don't turn that into a message, a reformulation of the social order. The priests want to level us all below them of course. In a way we are all similar but the gods decree our station in life. Some they uplift, others they lay low, others still they leave in peace and so forth."

"So I should continue to gather intelligence from them."

"Let them think they are secure. But always have the army ready to act against them at a moment's notice." Jaffir nodded. It was exactly so. The orders were already in place. Sending Norhat to Orst, removing him from the city gave the priests the impression that Jaffir had other concerns and the priests were not included.

"You as always Kahleff give me good advice. Until tomorrow then."

"As you command."

"Oh yes. I shall release Kahl. Either he knows little if anything or conversely he pretends to be ignorant. We shall see where this rabbit runs."

"Yes, it could reveal something about the priests who had gravitated around Verhat. Whether that was his doing or theirs we shall never know. So it would be interesting how they react to Kahl should he make his way amongst them."

Jaffir nodded and bade him good night

Kahleff bowed. Jaffir made his way to his royal chamber. Merla, one of his chosen priestess serving Nurdass had warmed up his bed. A little sleepy she woke and gave him a sweet smile.

Three revellers left 'The Open Hearth' tavern whilst it was most boisterous. With everyone getting merry inside, they made their way a little unsteadily into the cool night. The stars resplendend above, a canopy of lights, the souls of the departed and those to be born residing in perpetual splendour of a life well lived, born in this paradise. Outside were tethered horses and camels squatting whilst their owners imbibed the excellent draft beer, the landlords decent wines and his own potent pottage, an elixir from his own recipe. The fare was good solid food, the best Orst provided. There were a few other more seedy establishment. For though the nomads and more sedate inhabitants living in Orst considered each other more or less equals when it came to socialising they self stratified into various taverns. Some attracted shady characters at 'The Perfect Brew' which was anything but. Except it was cheap, the beer almost sour, the wine more like vinegar and the spirits gut burning. 'The King's Arms' attracted merchants and their representatives, heads of clans making deals, planning minor plots. Alliances shifted continually amongst the tribes, sometimes within days. The students of Ephan's school and some of their teachers frequented 'The Old Boot' a less pretentious establishment which had decent fare but attracted strangers who most knew were the eyes and ears if not just Nohrat's men who frequented 'The Golden Arms' but also those of the king. The priests drank in all of them. The three men keeping to themselves knew that to meet at the 'Hearth' attracted the least attention to themselves. Or so they thought.

The breeze mild, the air crisp. Once clear of the tavern district, where women were to be found a-plenty, for a price, now either with their temporary lovers or some of the soldiers, they made their way to a house on the western outskirts.

Following them were two ragged figures, looking like farmers. Priests in mufti. Getting rid of Eghan was out of the question. But there were, the spy smiled deliciously at the thought, weaker links. The leader nodded at his companion who went to the other taverns and certain individuals left casually to make their way out. They knew how to keep their distance strung out far enough not to attract any attention. The women of the night were no where to be seen. Just the odd revellers going about at their leisure. Barely registering these farmers slowly making their way home. Except home was not their intent. The three men who had left the 'Hearth' were.

In the tavern these furtives had bitched about the priests, not too loudly, just mildly despairingly for nobody really liked their proselysing ways when sober though some were good natured once in their cups. The priests to them were the dregs of society, those with no prospects, the incompetent.

The furnaces glowed eerily throwing shadows from their roaring fires into the night. The blacksmiths working around the clock crafting weapons for the kings army, even the carpenters were busy hammering together chariots, bows, arrows tipped with hard steel. Guarded by the military. The foot patrols had done their rounds. All was well. They were now keeping an eye in the taverns, less attentive than they should be.

The three sojourners of the night left blissfully unaware of all that went on around them. Jea, thin lank, nervous, his mind always racing ahead of the conversation was not quiet. Rallying against the uselessness of philosophising for it's own sake. Eghan happy to counter that proposition. Fehz, solid, corpulent good natured, his ruddy face beaming, flushed from drink was happy for the two of them to engage in their wine fuelled discourse. Eghan wrapped his cowl around him not wishing to be recognised in the street.

The death of Verhat had excited the whole town. The priests remained unusually quiet whilst pretending that the wizard probably deserved it. Planning some dark deed and having been found out, paid with his life. It pushed into the background the other murder of one of the teachers from the school. Rumours were rife, from a love tryst gone wrong to high treason.

. All this the three of them discussed in the tavern along with most of the other happy drinkers. One farmer, sipping his ale, whilst acting with heartiness at those around him kept an ear peeled to the three boon companions. Now having sent for more men they followed them down the main road.

Arriving at Jea's house. It was a humble cottage of sun dried clay bricks, not like the wealthy merchants whose two storey houses, part warehouse part living quarters, with a courtyard for their stable and garage of drays and carts built their houses from kiln fired bricks. A testament of their wealth displaying a reassuring solidness not just of their success in business but having the surplus to make a statement regarding their standing in the community.

The three entered Jea's house.

The others remained well back.

Making themselves comfortable in the innermost chamber, where on a pedestal resided Nurdass the sun goddess covered in a thin coating of gold now glowing under the overhead oil lamps Jea lit. All three of them were bachelors.

Jea was a trader who speculated in the grain market. With ever recurring lesser yields he was growing richer by the year. Fehz dealt in horses and camels and Efhan as head of his school survived on fee paying students, most coming from elite families as far away as the king's city. They were all doing well, respected members of the community. They gave generously to the temple, the priests and priestesses offering votive prayers for the safety of their souls.

The three of them offered silent invocations to Nurdass as a sign of respect to their host. Jea went to the clay pitcher immersed in a vessel of water to keep the golden amber wine cool. They accepted their goblets of clay for Jea was not one to flaunt his wealth. In the old days before the king decided to send Norhat and his troops to this outpost the display of wealth had been a target to be plundered almost on a yearly basis. Jea's unpretentious dwelling escaping notice. Even now he preferred to spend his money on simple yet well woven quality cloaks, cowls, robes, soft woollen scarves and always the best wines. To a visitor Jea was an excellent host. As they had eaten at the 'Hearth' they were satisfied with just the wine.

Once settled on divans of embroidered tapestry they got down to business.

"The priests are a curse." Fehz said. A mask of concentration in the soft light his pleasant expression hiding his true inner feelings. He had no enemies for his joviality was infectious. It hid his sometimes excited rage which could burst like a volcano. Jea was the opposite. Suspicious, cynical, a little bitter at the stupidity of those who believed the priest's vacant message of divine redemption agreed. Efhan, the eldest amongst them was for ever cautious to the despair of his two fellow companions.

"I bet they were behind the murder of Nagor." Jea spat.

"Until Nohrat has finished his investigation we cannot be certain." Eghan as ever the voice of reason.

"Yet the gods let this outrage occur." Jea stated dissatisfied that an innocent life was so cruelly extinguished. "There are provocateurs amongst us."

"Amongst the kingdom Jea." Fehz added.

Jea grunted and took a generous swig of wine, smacking his lips. "This is a good vintage."

"I'm surprised you don't deal in wine." Eghan sidetracked. They needed to do something. Eghan thought his school a bastion against superstitious ignorance enlightening the next generation. He believed in the gods but more as mental abstractions than concrete reality. More representative forces of nature. The death of Verhat and Nagar were portents indeed. Eghan had been in secret communion with Verhat if only to ascertain what this dark sage knew. At least Kahl was still alive though held at the king's pleasure. He had excellent informers. He was wondering if Nagor's foul end was meant as a message to him. If that proved to be so Eghan was ready to reveal what he knew of the priests preaching. He was wily enough to twist their words into heresy if need be. Nagor's demise had to be avenged.

"Oh, I have my cellar. If I am ever short of lucre I can sell the odd dozen." Jea replied. "But back to the priests. We have to expose them, to bring them down."

"That would attract the attention of the king."

"The king, the king." Jea said distracted, "Always the king."

"He makes sure they do not overstep the mark." Eghan said softly. "I think he is gathering intelligence about them Jea."

"Maybe. But I think it is arrogant of them to claim we are all in need of cleansing, to redeem ourselves as if we were sinners."

"Jea is right." Fehz said savouring the delicious wine. "There has to be more to this than just their distorted ranting. They are harbingers of doom."

Eghan was slightly surprised. He expected that from Jea. For Fehz to be so adamant was a sign that emotions ran deep. Nor were his two companions the only ones who were thinking like this.

"If I had my way I would expel them all. Let them build a monastery in the desert so those who are deluded by their pretentious crap can go and wallow in their pathetic attempt at being imbued by...what? Which gods do they claim inspires them? They do not say. They dissemble, waffle, worse than your philosophies Eghan. No disrespect. You and your teachers do not claim to replace the gods but neither do the priests proclaim

their power. If they have their way, and believe me that is what they want, then when the gods have been usurped by their heinous design then the calamities that befall us make the old raids seem a mere trifle. The skies will fall in on us. Why should the gods offer their protection if we do not acknowledge their divine splendour?" Jea looked challengingly at them. He drained his goblet and refilled it.

"I am sure the gods in their wisdom know what is going on Jea. They will see divine justice is done. Have they not removed Verhat and the priests thugs?"

"Well that is true. But there still remains the unavenged death of Nagor."

"The gods will act at the right moment. Maybe Verhat was behind the murder so that justice has already been done."

"Yes, well, maybe you are right Ephan. But I do not think this is the end."

"More like a beginning." Fehz said darkly. "These priests are poison. They infect everything around them, like a plague. They want to weaken our souls so that at some precise moment they can infuse their lies into the desperate seeking spiritual blessings. All this talk of equality is just a ruse. There is no such thing. Otherwise we would all be equal. The gods allot our stations in life. Otherwise it would not be as it is. That is obvious. Any fool can see that. Even the gods have their ranks. Co-equals but still not level with each other. This talk of some supreme divine essence...bah. I'm sick of all this nonsense and our endless talks. We must act. Do something. Uncover their lair. Find out what evil forces they are drawing upon to spread this spiritual pestilence amongst us."

"I agree." Jea looked for support to Fehz. He had never seen him make such a long declamation. "It's like they are from another realm. Where did they come from, who is their leader, what guides them? Verhat? Now that he is gone it made not the slightest difference." Then with alcoholic logic continued: "Well it has, the priests more furtive, but that could be because Castari's people disposed of their escort. Still they made their way here just the same. And why are they gathering here?"

"To get at Ephan's school." Fehz replied.

"You know this?" Jea asked.

"Why else?"

"A show of strength regarding Norhat perhaps." Ephan considered.

"Norhat?" Jea not believing it for one moment.

"That they are some ultimate power which even Norhat cannot counter."

"A challenge then? Sounds like treason." Jea smiled. "I am looking forward to that."

"What disturbs me is the converts." Fehz lead them back to their whole reason of meeting. "We must counter that. You Ephan must counter that."

"I try my best for my students to see reason."

"There is nothing reasonable about this carrion." Jea spat. As if cleansing his mouth drinking some more wine.

"Slowly by degrees they are turning many away from the gods. It can only spell disaster. Audacious as well. They want everyone in their thrall, using sheer numbers. I tell you they are planning a revolution, from below. Tomorrow, " Fehz said "I am going to Norhat and tell him what I think. You two can come with me if you want or not. But I have had enough of this masquerade."

"Without any proof, without any suspects what will you say Fehz?"

"That's not the point. They are all equally guilty." He smirked. "Yes equally so, since that is what they preach." He rose. "I am done talking. It was enjoyable at the tavern but this is getting us nowhere. And if I see them I've a good mind to slip something cold and hard between their ribs. I've had enough of them."

"Fehz!." Ephan was shocked.

"Well somebody has to show them they are not wanted. Reason certainly is not working. It is as if they are from another world. Anyway I'm off."

"I'll see you to the door then." Jea rose.

As he opened the front door a fist slammed into it keeping it open. A flash of steel and Fehz too surprised and relaxed by the wine merely groaned and slumped in front of Jez. He quickly sobered up but the three ruffians barged in and slit his throat. As Jez lay dying on the porch he heard the neighing of a horse.

Ephan heard the commotion and knew something was wrong. He wished he was armed and quickly grabbed the pitcher of wine. He was thinking of burglars when three men, their cowls hiding their face stopped, only their sinister smile showing broken teeth left a hideous impression. He heard the dragging of something heavy in the front hallway. They had him quickly surrounded. The one behind knocked Ephan out stone cold. Then they ransacked the house, taking the gold Jez kept in a strong box, quickly opened with tough blades that pried open the basic clasped lock. They tore down the tapestries on the walls, gathered some clothes, poured the oil from the lamps over it and lit the bundle. Ephan they dragged into the small courtyard, gave him a kick to make sure he was still unconscious.

The deed had been done so fast the sleeping neighbours barely stirred in their warm beds. Then the three murderers got onto the ready horses and trotted serenely into

the night. The other two accomplices had removed their garb, threw it onto the beginnings of the small conflagration. Then as priests they walked calmly out shutting the door behind them.

The flames flickered for a while then went out. The tapestry had smothered the fire, it's weave too tight to burn even soaked in patches of oil. All it did was give off an acrid stench.

Later neighbours woke by the smell of the smouldering fire, giving off volumous smoke, alerted, raced to Jea's house and found the two slain men in the hallway. Some raced to the taverns looking for soldiers who were soon at the scene of the carnage. They saw the wrecked rear room, the disarray of the bedroom and rightly guessed in their estimation it was a burglary gone horribly wrong. They found a third body out the back still out. Once they rolled him over they saw it was Efhan. A splash of cold wine over his face brought him around. He groaned then vomited forth the contents of his stomach. The soldiers grimaced, realising he was suffering from a very broken skull.

Waiting for him to regain his composure they queried him. He could not tell them much. They slowly lifted him off the ground. Efhan dry retched then passed out. Trying to revive him they found they had a third corpse on their hands.

Kahl, having imbibed more of the slightly drugged wine slept peacefully through the night. In the morning the guards announced brusquely reading from a royal command written and sealed by Jaffir that he was banned from the city. He had until sundown to leave the precincts. They waited as he signed the order then left him to gather his belongings. There was nothing to gather. A part of his brain seemed at odds with itself. He could not remember whether he had a house, whether he even lived in the city. Did he have a wife and children? His past vanished, never had been. Immersed in the present. Totally so. Feeling oddly complete, satisfied in this condition. Another part of his mind deeper, profound, containing as yet untapped resources of which he was only dimly aware of as he looked around the room. There was nothing that was his except the clothes he wore, and his travelling cloak. All in black. Like Verhat.

Verhat was dead and he was not. A sign from the gods. The gods. Minor players. More like irritants to the feeling of immense vastness he sensed harbouring within him. He was destined for something great but could not get any clarity as to exactly what.

Where was he to go? Orst was all he could think of. There was the coast of course but then what. All around the city the semi-desert. Orst was the only other major settlement. Somehow his future lay there.

He searched through his travelling coat's inner pockets. Felt the solidness of gold, silver, copper coins. Where that money had come from was as much a mystery as his non-existent past. He knew who he was and that was about it. He also understood that he and Verhat were cut from the same cloth. Whereas Verhat exuded power his was much more latent. Inactive but there just the same. Then there were these priests. A sign unto themselves. A projection like migrating birds having travelled from distant lands. He drawn to them, or they to him. But not of them. Barely registering their divine message. Meant for others, not for his kind. His kind. If he just knew that it might explain a lot.

So Orst it would be. To facilitate the journey he would need a decent horse. If he acquired one in the city the news would get out. Luckily there were relay stations along the king's way. He would get one there. The palace spies, the king's men, or Nohrat's, even the priest's would take just that little longer to make that intelligence known to Jaffir. And the king had treated him well. It could have been much worse. Maybe he did know nothing. Maybe he was nothing, he certainly felt like it now.

He walked out of the room, the guards merely watching him making his way down the corridor, through one courtyard now busy with servants cooking, looking after the stables, blacksmiths at their bellows, carpenters banging away, servants scurrying about. Through an archway into a larger courtyard with more stables where the guards were stationed then through the massive gate of the palatial fortress.

He was not inspected where drays and carts were waiting to be let in bringing supplies from the surrounding market gardens. Fodder for the horses, kegs of beer, barrels of wine, food and implements not manufactured within the compound. People everywhere going about their business.

The day was cool as he walked down the main thoroughfare. Past bustling market stalls in front of the towering palatial spread he was leaving behind. Into the dense bazaar, where spices, copper pots, knives, cloth, scarves, clothing, jewellery, taverns all jostled next to each other. He deftly stepped around animal droppings, avoided more carts pulled by donkeys, past merchant houses three stories high, tenements and assorted living quarters. It was all so familiar. Except he no longer belonged. The juxtaposition strange. He must have lived here at some time yet nothing came back to remind him of anything. His abode if he had one he could not recall. Maybe he was not a citizen here after all. He shook his head. Some street urchins begged for some coppers and he shooed them away. Ahead a group of priests. He wanted to avoid them and pulled his cape over his head. Not wanting to be seen with

them. They passed him without a second glance. Relief. Did they know of him and pretended not to do so as not to alert the king? No matter.

The street gave way to suburban houses. Further out they became larger, set in their own grounds, surrounded by high walls. Trees mushrooming in golden amber and red tinted leaves as autumn approached. The sun warm, cheerful. For a moment he wanted to give thanks to Nurdass but the moment passed. A memory of the gods. Irrelevant. The houses petered out and the market gardens began. To his right the river with its banks of trees, glittering water coursing slowly past the city onwards towards the distant ocean.

There were less people about. Mostly farmers going to the city or returning, a huge four wheeled cart drawn by four oxen piled high with bales. A rich merchant with his sturdy escort of solid young men and their lances, stout fighting spears, metal shards embedded at the top. Nasty.

Then the open road. It would be several hours until he reached the first relay post. Kahl thought about everything and nothing. Just a traveller on the road. He had no idea what he was going to do, no intention, no plans. Destiny would guide him. Fate protect him, the force shroud him. That had not helped Verhat. Verhat. Another mystery. He walked at an easy pace. There was no hurry.

Hours later he arrived at the first staging post. There were several stables, one reserved for the military, one for the king and three others for travellers. A dozen thatched mud huts, their backyards growing vegetables, near the river fruit trees. A small village, with three taverns. Lunch time the place deserted. Boisterous voices from the taverns, laughter, shouting, merriment. He was tempted to go into one of them, drink the day away and sleep off the beer and wine then continue tomorrow. Tempting yes but something drove him on.

As he was deciding which stable to approach astute observers saw him before he saw them. Young lads seemed to know he was looking for a horse and made him offers. In the end he had three around him, all underbidding each other for his custom. They enjoyed the challenge, probably knew each other well. He decided on the middle bid. The other two ribbed each other and their successful companion leered at them leading him to his establishment.

Kahl did not know much about horses accept to make sure they were well shod. The young lad took him to the rear of the free standing mud brick house. The smell of dung and hay surprisingly refreshing recalling memories. And familiarity. The lad let him

take his time at the front of the stables. Kahl really had no idea about animals at all. They had four legs, a head and a rear end that was forever dropping dollops. A stolid tanned tower of a man, strong biceps, full bushy beard came out sizing Kahl's rather slender frame up. Even in his brown gear the owner he presumed was stained in mud. Bits of straw and hay were strewn across the hard ground, hoof imprints everywhere. He heard the grunting of pigs, the clucking of chickens, the crow of a rooster, the distant bellowing of cows, crows squawking overhead, serene bucolic bliss. It was another world. Or rather the world passed through this tiny patch of civilisation. Laughter from one of the taverns.

He felt like staying, forgetting it all. Being at peace. Peace. Why was he not at peace with himself. What was driving him, what was so incessant he had to do? Nothing. Not quite a blank, less then that yet more. Destined for something, but what? Should he get drunk, drink with the locals purely for the diversion. The idea was sorely tempting. These people, from what he had seen in the street and there hadn't been many were courteous enough. At least they didn't gawk. Gawk. He must have travelled in another life. That is how he felt. Something changed him, removed his past and dumped him in the present.

It could not have been Verhat, he was dead now. The shamans claimed the dead never left as long as one thought of them. So stop thinking about Verhat!

The massive owner stood next to him as Kahl stared into the dark of the open stable, looking absently at a filly. He assumed it was a she for the horse was slightly smaller, or younger. The coat shiny, well brushed, the stable relatively clean. A horse was a horse.

"On loan or purchase sir?" the burly man said at last. His son, or apprentice stood a little back, interested, taking Kahl in. In his unsoiled clothes, a little dusty from the walk, his knee high walking boots coated with fine soil about the only dirt on him.

"Yes, I'm thinking that myself." Ideally the further out from the city the lower the price. He wondered if he had enough on him for an outright purchase. It would be less complicated. Loaning a horse meant a contract of some kind, a stable that worked with the seller meaning a trail that could be followed. But it was cheaper. He had no idea what he was going to do once he got to Orst. An image of mountains in the desert, a fallen rock face, the dumped rubble strewn across the plain and a light brown scar where that part had collapsed. The image passed.

"How much for her?"

The owner was impressed. Kahl had guessed right.

"Buying sir?"

"Sorry, well depends. Buy." Kahl said vaguely. It was best not to be too eager. That only drove up the price. Then there was the first offer, always marked up.

"Four hundred."

Kahl did not feel for his inside pocket to check how much he had on him. He really didn't know but felt that could be covered. He remembered a small pile of gold coins, worth a hundred, silver fifty, assorted coppers less. He must have around two thousand on him. Where had that wealth come from? No idea.

"Four hundred." He said laconically. Then smiled. "Good try."

The giant looked at him, his eyes radiant with pleasure, hoping for a good sale.

"Two." Came his disinterested reply. "Buying."

"Two sir and I would be making a loss."

He might be right. But two was better than nothing Kahl mused.

"Two twenty."

"Sir, even that barely covers the cost of stabling her. She has been recently shod. Then there is the saddle to consider, the stirrups, a chaff bag, water bags on top unless..." you wish to go elsewhere he implied. Smart man. Obviously business was not bad. Probably had a share in the inn next door. taking travellers as well. "I can throw in victuals, dried goats meat and fruit, a pottage that would last for several days, including the pot." sweetening the deal. It was not much but he was not accepting Kahl's offer nor did Kahl expect him to accept his either.

"Two fifty."

"For that you might get a donkey."

Kahl laughed. "I hadn't considered that." Kahl was in no hurry. Whatever was transpiring at Orst would keep. Another blank. He was getting used to coming up with blanks. Had Verhat put some block in his mind? Been hypnotised so that some innocent word or phrase locked out what he knew. Maybe he should consult a shaman when he got to Orst.

"Three eighty. That includes the lot."

"Two eighty."

"Sir knows the market. To tell the truth it would still be a loss sir. That price is bulk, wholesale as sir knows."

Well at least I know something Kahl thought. The man looked at him without any expression. Not neutral but sure of his ground.

"Three twenty then."

"Three sixty."

They were getting somewhere. The young lad came back and offered the filly an apple. She sniffed it then chomped at it. Then wanted more.

"I could go further out and get a better bargain."

"Sir might get a better bargain but would he get a better horse?"

He was right there. Some memory jolted him. Quality did go down further out. Here, close enough to the city there was more on offer. The market more healthy.

"Three fifty."

"Sixty."

"Ah what is ten for a horse such as this? Three sixty it is then. Including the victuals."

"Enough for a day for you maybe two."

"Make it three eighty then to cover me to Orst."

"Done." And he held out his huge hands. Kahl almost hesitated to shake it fearing his hand would be squashed into a pulp. But the grip was not excessive.

"Go get the contract." He said to the young lad. He scurried off inside the rear of the house. "Would you like a light beer to close our agreement?"

"Once I start I would not stop. In fact I feel like staying the night anyway."

"That too can be arranged. The inn 'The Lazy Nag', I know a rather unusual name, a bit of a joke is as good as the others. Have to be otherwise we would have no customers at all. Some fine gentlemen and ladies have graced the establishment. My good wife is an excellent cook, the fare as any that can be found in the city sir."

"How much for the night?"

"Well someone such as your good self would not rough it in a dormitory. Could have some unsavoury characters, a good room plus meals can be had for thirty"

"I was going to suggest twenty."

"That is for the room only. Fresh linen, good straw pallet, a window for fresh air, pitcher of wine with the room. Not the best wine of course, but not the worst either. Even a privy attached."

"A privy. Now that is class."

The owner laughed, even Kahl amused at his little jest.

"And water?"

"Of course. The inn has it's own well. Good water too. The other inns fetch theirs from the river. And charge five coppers for a small bucket."

"Well then, I don't want to call you 'my good man' for I see you are master of your own establishment."

His pride swelled a little at the compliment. " `Artus'."

The young man returned with a portable board, ink well and quill and thick paper.

"Oh yes, five coppers for the contract."

"Fine." The lad offered the board. Khal looked at the simple deed of sale. The horseshoes were good for one week and could be replaced at any stable.

"Oh I forgot, if sir wants spare horseshoes they are fifteen for the highest grade down to five. Of course the good shoes last much longer. Pure good hard quenched steel. No tin."

"Your honesty serves you well."

Artus kept his demeanour.

"I suppose you would dearly love to charge a night for the stabling."

"Normally I would. But as sir..." but Kahl kept his identity to himself then thought he would be remembered anyway, then thought why should he be remembered? Oh yes, residing at the king's pleasure and decided that if the king's agents were on the lookout to make sure he was leaving the city he might as well let it be known.

"Kahl."

"An unusual name if I may say so,"

"I had unusual parents. They had ideas about me and thought with a name like that it might help me along the way." Having no idea what he was talking about.

"Not many name their children with the old names. A noble family perhaps?"

"My family is no longer..."

"I'm sorry. My apologies."

Kahl had no idea about his family. Total blank, again.

"No matter. The gods deem what is best."

"That is the truth. Now Kahl shall I take you to your room?"

"Please."

The room was everything Artus said it was. Airy, fresh linen, woollen blankets, fairly clean. The manager watching, solid, more brawn than fat, but bulging a little at his midriff treated Kahl with circumspection. The privy set next to his abode, pitcher of water, the wine would be served at a moments notice. Kahl said that he would take his leisure downstairs so that the pitcher could be filled after he had taken his repast. The landlord nodded then rattled off the menu. Hare or beef stew, a rich vegetable soup, generous platter of cheese, apples, oranges, cherries, strawberries, tea and three choices of good beer. A rich dark ale, strong, a medium lager, though Kahl knew that only in the

mountains and colder climes was true lager brewed in winter, and a light draught beer for health. There was arak for something stronger and his own herb liqueur, for good health. Kahl thanked him and paid in advance. The manager bowed and left.

There was a bolt on the door. A somewhat rickety chair and small table at the window overlooking the western part of the village. Steep rooves so that the snow did not weigh too heavily, a village at peace. He felt comfortable, at home. He could stay here for ever. The calmness soothing his troubled soul. Now why was that? What did he know that seemed to plague him? Or rather not plague him. Damn. It was as if his mind was locked, as if he was barred from his own memories. Did they not define who he was? Praying to the gods was of no use. They did what pleased them, it was up to him, anybody really to make sense of their impenetrable ways. What he needed was a soothsayer, or a wise woman, usually herbalists and druggists that could make a concoction to access the void recesses in his mind. Or better still a shaman. They could get into the inner realm one carried with oneself. Seek out the hidden mysteries of the soul, that entity that defined one's life. Maybe there was one such person, any would do in the village.

He heard the boisterousness from the tavern below. A part of him wanted to stay up here and be left in peace. For the bucolic scene outside, the bright sky, the slight breeze rich with manure of the stables of the village, in the distance grazing cows, the patchwork of small plots of land, some already fallow, further out the harvest bundled ready to be sold to the merchants from the city.

No, this brooding was not helping. He would enjoy the company below, be they farmers, itinerant travellers such as himself, maybe a trader, soldiers always good for information, as was anybody who travelled really. There were of course as in any tavern, marks, shady characters who would easily pick your pocket or those engaging individuals who would make for merry company as long as you picked up the tab. He sorted through his money. Taking one silver coin which would more than cover a days feasting and drinking plus some coppers of course, the common mans lucre. On the door was a key. Big for a large lock. Ah, Artus had certainly shown him to the right inn. He could thus leave his travelling coat, worth at least thirty, safely here. He transferred his wealth, for he really did have two thousand on him, less the cost of hiring the filly, spread around his cloak, his vest, his trousers. Fifteen gold coins, eight silver coins and the rest in copper coins. He separated his money into his little purse, as everybody else did, hide one's real amount. Kahl wore no rings of any kind. Not the ostentatious kind. No pendants or earrings, bracelets, expensive silver studded belt, just plain leather, nor

pretentious buckles on his boots. Plain simple gear. He was satisfied. He looked a man of means but not extravagantly rich to the eye of a sneaky stranger.

He made his way down the solid staircase, no creaks under his boots, through the dark foyer and into the public room. It took up most of the floor. The solid packed earth stained with spilled beer and wine of course, some scraps of food around the tables as it was just after lunch time. The kitchen next to the tavern itself adding a rich aroma of the stew the landlord had mentioned. His wife a buxom woman greeted him with a well practiced genuine welcome, not overly imposing and simultaneously searched among the long wooden tables, or smaller intimate ones, to see where he would like to take his rest.

It was common courtesy to announce one's presence with a cheery hello so all Kahl said was "Greetings, I wish you all well and a merry afternoon." Not too loud, or timid either. A group of six soldiers turned, sizing him up, working for the king and Norhat. Soldiers being soldiers, that is strangers were always glad of company. One for amusement, the other for information. Kahl nodded affably at them, seeing empty platters of their finished lunch, large clay beer mugs in front of them. Some farmers at other tables looked at him indifferently, they were used to travellers here which helped. In tiny isolated villages strangers were either inundated with good will just for the change or ignored, a sort of brooding indifference that they had no wish to be disturbed from their bosom company. Some were with their wives. Then the surprise of his life. A group of men and women who had been with Castari's camp. Now that was a revelation. They saw him of course, recognition on their faces though nothing overt to indicate hostility. One even had the temerity to lift his beer jug at him.

No point pretending, he waved lamely at them but decided to join the soldiers. He needed information given the vagueness within his mind, for he had no idea what exactly he was after. He hoped the beer would lighten his mind and get him to be himself, whoever he was.

He sat with the soldiers. They were a mixed group. In their leather outfits, not fully geared up they were no doubt on leave, or off duty. Every large town had a contingent but this small place, well the king and Norhat had their reasons why it should be watched. Probably for his kind. .

The hare stew arrived. Kahl tucked into it's flavoursome delight.

What Kahl did not know was that he was being followed by two men. Unbeknown they looked like merchants or traders. Plain garb, unnoticeable. They barely glanced at him having arrived whilst Kahl was negotiating with Artus.

So Kahl sat with the soldiers at the end of their long table. They plied him with questions. Kahl even mentioned, between mouthfuls that he had been with Castari's camp. They heard the news by now of how Nada had finished off the mysterious Verhat. Then recognition that Kahl was his travelling companion. After a few beers, a rich frothy brew for he had chosen the lager, he pointed out the group that had recognised him. They were duly invited to join them. They pulled their table over and talked of the minor battle that had occurred. Kahl hid nothing. He knew so little it did not matter. And was smart enough to agree that the thugs Castari's people disposed of rid the place of unsavoury cutthroats. As to what happened to the priests well they all thought they made their way to Orst.

The priests were derided. No one thought highly of them. Meddlers they were called. What was Verhat doing with these black crows? To the best of his ability he said they gravitated towards Verhat not the reverse. Verhat he suggested wanted to know more about them. 'Don't we all.' One soldier replied. What did Kahl know?

"Absolutely nothing. That is the truth, which I swear by Urus and Bahlir."

They were satisfied that he did not reject the gods as the priests implied, hedged even.

"An evil sign." Another older soldier said. He had the highest ranking amongst them, a captain, or their captain.

Kahl replied. "Came out of nowhere." Just like himself he thought.

"Nowhere. Now there is a concept." One of Castari's men said. Kahl saw that the four of them were with two women. Dressed like the men in riding vests, trousers, boots. Not unusual. The more domiciled women wore dresses but like the tribes pants were warmer for the outside life. He saw they had sheathed knives. Ready to look after themselves.

"What's this nowhere?" One of the younger soldiers laughed taking a healthy swig.

"Nowhere is when you're vacant," One of his companions laughed, "like your brain."

"Ha ha." He mocked. "At least I got one."

"Pity you don't use it." came the merry retort.

"Yes the priests. Trouble." Is all Kahl said, seeing where that would lead.

"No wonder the eye of Bahlir fell where it did." One of Castari's women said.

"Yes the eye. At least the gods are watching them."

"I wish they would rid us of them." One of the soldiers replied.

"I'll drink to that. They will be trouble, I can feel it."

"As long as it's not in your groin." His companion jested. Guffaws all around.

"So what do you think..." the captain looked at Kahl.

"Kahl."

A momentary silence. Not hostile. So they had heard of him. Well he had been obvious at the camp.

"You were with Verhat. Why was he disposed of? He must have deserved it for the king has taken no action against Castari." The captain said. Well informed even in this little outpost.

"Who knows?" Kahl answered honestly. "It's not that he exactly confided in me. I was gathering what I could..." He suggested.

Another moment of studied silence. The captain gave him a knowledgeable look implying he at least understood that Kahl was his own man. Castari's group thought the same. They all visibly relaxed a little.

"...not just about, as you said the 'mysterious Verhat' but also why the priests should find him of interest."

"You were a guest at the king's palace." The captain probed.

"Indeed that is so."

"So what do you think?" Kahl understood the question.

"The priests are up to something."

"The cleansing." One of the woman said distastefully.

"Yes and that."

"And that?" she looked enquiringly at him.

"There seems to be more to them than just this rubbish of salvation."

They nodded at that.

"It could be treason." Might as well sow some seeds. "I think they want to convert the people, hold them in their thrall. Probably one of the reasons why they are going to Orst. Learn from the shamans or convert them."

"Convert them to what?" one of the soldiers curious.

"You said it, 'what'." Kahl just as interested.

"I have heard that they prey on the weak, that is how they convert them. Not physically weak, mentally, spiritually." One of the soldiers suggested.

"Who else?" the captain concurred.

"Why would anybody want to abandon the gods, jeopardise this paradise." The other woman said. Puzzled as they all were.

"That's the nub of it. The king, blessed be his reign, is waiting for some sort of revelation."

"You mean a sign from the gods." One of his men asked.

"What else?"

"Maybe the gods are waiting to see what we do, how we deal with this scourge. The priests beg food from hard working people, as if that is what they are there for, as if they are owed a living. And what do they do? Preach this nonsense of a coming holy kingdom. We have all this, so what are they going on about?" the first woman asked them. Not convinced of their vague promise of this kingdom of theirs.

"I bet they are waiting for some sort of leader." The captain suggested. "It makes sense. First Verhat. Well he's gone. Obviously not you." He looked at Kahl. "Otherwise they'd be flocking to you. Since you were with Verhat you'd know more about what he was on about than anybody else."

They looked expectantly at him.

"Well from what I could gather, he believed in some sort of cosmic force of which the gods were a part. He wanted to align himself with that force, learn the secret of the gods powers. Even the ancient ones who he thought held the key. Masters of creation. That's what he was after."

"No shit." One of the soldiers said astounded. "How would one do that?"

"Well we'll never know with Verhat disposed of. Yet as said, the king had let that minor transgression pass. Of course Jaffir knows more than we ever will. Still it would have been interesting just the same." One of the men proposed.

"And what about you Kahl? Do you believe all this?" the captain asked good naturedly.

"The priests or Verhat? Well, the priests are spinning a yarn. Verhat's idea is enticing of course. But as to the 'how', meaning Verhat, well he just mentioned the 'what'. Now, the priests, they claim one just has to accept their message of redemption, admitting to one's sins, purify one's soul and that is that."

"That's bullshit." The soldier who said 'no shit' added. "Because," he took a good pull at his beer, then satisfied continued: "most of us would feel this so called kingdom of theirs. Anyway what's this sin crap? Just to make us feel guilty, that's all. Make us think we are worse than we are. Sin, what a lot of bull dung."

"It's subtler than that." Kahl heard himself say. "They claim we all are inherently flawed. Since we are not gods we are lesser beings. That is the flaw. And they claim they

have the knowledge to purify us, make us divine. That's their catch." Kahl surprised he had read the priests that well. It made sense, even if it was twisted all out of proportion.

"You have something there." The earthy soldier nodded. "Well," he smiled, "if it is as simple as that, then I can purify myself. Starting with drinking more beer. Enough of that and I'm cleansed, at the privy!" and they all laughed.

"Well we were going to ask what you are doing Kahl." The captain changed the conversation. "But given what you have said, we'll leave it at that." The captain turning to his men. Kahl was on a mission, and since it concerned the priests then it was best to let him go about his business as best as he could. The hint was taken.

For the rest of the passing afternoon they drank, talked, joked, leered at the odd woman, who in this village were used to the soldier's ways and sometimes pulled a face back at them which meant the jeerer got a ribbing from his mates. Castari's people dropped the subject as well.

It was then that a recent arrival announced the triple murder at Orst. That got the whole tavern excited. Ephan, Fehz and Jea. They all had heard of Ephan of course and were surprised. After all he was the philosopher in the kingdom. Some blamed the priests, others some psycho from the tribes who took affront at the gods being a figment of their minds, maybe the priests stirring up trouble or, hushed, the king himself. For if the gods according to Ephan were figments that really was sailing into dangerous waters. One teacher had already been disposed of. Ephan had not taken the hint. The excitement subsided.

The two `travellers' kept to themselves in the tavern, watching Kahl. They did note though that he was no heretic. When they picked up the snippet that Kahl was on a mission they became more circumspect. Maybe he was under the king's protection. But they puzzled, why watch him? His companion suggested to see what he would discover of the priests' real intentions and perchance to see who else had any designs upon him. With murder afoot they were under orders to make sure no harm came to him in case his companion had forgotten. His erstwhile companion complained that their brief was to watch him, find out who reacted positively or negatively to Kahl. Knowing that Kahl was off to Orst they made arrangements to hire some horses.

Back on the king's road he passed other caravans, now secured with extra able bodied men and women. But no priests. Not in the open.

He did not ride fast, just at a jaunty pace. Sleeping during the day off the beaten track, behind outcrops of rocks. Once a day he led his mare to the river, let her drink and would catch up with some sleep, the flies annoying. Riding at night under the glittering canopy of stars, wondering if there really were other souls, not the departed but real life, flesh and blood residing out there. Verhat had suggested myriad worlds, other civilisations, higher minds who had visited the planet in the misty past. Leaving caches of their wisdom, remnant left-overs which would reveal to the pure seeker their superior knowledge. Records of the past on the other side of the planet. No king ever launched an expedition to find the lost cities destroyed by a warlike race in some forgotten cosmic war. Denying their then future. Destroying their power. Power. Verhat's fixed idea. Yet for all that he was dead. It had to be fate decreed by the gods. Kahl spared. Destiny. With an uncanny presence within him, some guiding light that did not shine so much as resonate deep in his mind. The gods would decide the moment of revelation. The priests meant nothing. They were on about something far more prosaic.

Into the pass. Towering cliffs where armies once fought for possession of the strategic route. It would be so easy to ambush him. Those who did pass him merely nodded each going in opposite directions. Travelling at night had its advantages. He was barely noticed. The path wended its way through canyons, the river now a waterfall, collecting in deep pools as it poured down the ice capped mountains, the ground barren, hard, immutable. The odd eagle overhead searching for prey. Then down the other side through huge clefts. With the morning sun, a quick prayer of thanks to Nurdass then seeking shelter once more. A few days more and he would be at Orst.

The closer he came the more patrols he encountered. He had his 'release papers' from Jaffir, banished from his city but free to roam at his leisure. The soldiers merely grunted. Another outcast. Orst the logical place to start anew. As to what Kahl was going to do there escaped his searching mind. Make contact? With whom? For what purpose? He continued his journey. Then the first outlying farmsteads. Cattle country. Dogs barked as he passed closer settlements, huddled cottages or the sprawling tents of the nomadic tribes. Their people looked different. The eyes slightly slanted, looked cunning, studying him in silent appraisal.

The final night. At dawn the jumbled houses of Orst. Even from a days ride on the plain with another line of distant mountains towering into the sky, clouds hanging over them, hiding their peaks the white temple radiant in the morning sun. His last rest stop. One more ride in the night for he wanted to enter the town during the morning.

The gated entrance was manned by a squad of soldiers. Once more he showed them his 'release papers', his name noted on a register. Carts blocked the way as their goods were inspected, searching for secreted assassins going both in or out. Or undeclared contraband. He was finally waved through.

The bazaar offered rich woven carpets, tents, stables for horses, donkeys, camels, bullocks, sheepdogs, chickens, ducks, geese, rich shining silks, scarves, woollen cloth, jewellery, goldsmiths, silversmith's, copper workshops making kitchen utensils, knives of all shapes and sizes, blacksmiths, statues of the gods and goddesses, fruit, butchers, grain sellers all jostling for attention. In front the white edifice of the public temple and several taverns, eating houses, tea stalls, street vendors selling just about everything imaginable taking their wares to the outlying houses of the wealthier who hid behind high walls. Purveyors of wines, distillers of strong liquors, herbalists, druggists, servants on some errand, children playing tag, running amongst the adults, women in shawls, itinerant travellers such as himself, the odd garbed teacher, and soldiers everywhere. Four murders in one month. Unspeakable, outrageous which he picked up from snatches of conversation. Around the white columned temple, a raised edifice set in an open market square where more wares were displayed on the ground, the poorer sellers, not quite the merchant class, more enterprising farmers, their quality less than that of the shops and cheaper no doubt. Several inns spread along the market's perimeter.

Carriages passed him, curtains drawn as the more affluent went to their assignations. Some priests were about, now in small groups, silent, looking alien, inserted into the milieu but not of it. Seeing one thoroughfare to his right signs announced more stables. In the distance some long buildings. The famous school with its murdered head and that of his friends. Next to it smoke rising from the furnaces, flames sending a glow around them even in daylight. Now protected by more soldiers. Bordellos, the women dressed in tight fitting sarongs, rich reds, deep purples, smooth lilacs, light blues, some with glinting ankle jewellery, coloured hair, some green, some blue, dark red, bright blonde, swarthy black. Kahl was momentarily tempted but first to resell his horse, find accommodation and wait. For what? Search for hidden knowledge? Go to the school? Seek information on the murderers? Find out what had made Castari's people rid them of the priests hired mercenaries?

He found the cleanest looking stable after a while and sold his horse for half of what he had paid. Kahl had been in no mood to haggle too long. They reached their agreement, saddle and other accoutrements included. Now back on foot he felt relieved, more free and searched for a decent tavern. Five establishments later he

decided to rent a double room at the best kept inn 'The Golden Orb'. Used to prices at the king's city this place was relatively cheap. The rooms were clean, fresh linen as expected, airy with a tiny balcony overlooking the square and the temple. People moving up and down its steps. Two glowing bowls of fire to lamper, the front flanked with carven statues of marble: Adur holding a pitcher of water, Nurdass a halo of the sun around her head painted in gold, Rena slightly raised on a mound of earth, Bahlir with a headband of stars, twinkling with diamonds and Urus, arms outstretched with open hands indicating her realm, the whole empyrium. Soldiers everywhere. Nohrat was taking no chances. He assumed their quarters were at the edge of town, his headquarters easily defended rather than contained in the town itself. Even in his hotel soldiers were posted, peace maintained.

Smoke wafted up from the many houses. A shiver rippled through him though he could not detect any breeze. For a moment everything flickered, shuddering from an invisible earthquake. Even the shadows shook. Then gaps between the shaking imagery. A barren landscape. Orst just an image, a hallucination of his mind. Parched desolation, no remnants of life. Not death. More like *nothingness*. The gods having abandoned the world, their paradise.

Then the richness of the colours, the texture deep and solid returned, the ephemeral concrete. Kahl had grabbed the railing, his knuckles white. The very opposite of what Verhat had been on about! Instinctive, instant, graspable in his mind, the absence of life. A sign of the past as this place had been long before or the future? Some awesome act of utter desecration? An evil hiding within reality? Verhat did hint of unseen but knowable forces coursing like some tentacled probing essence finding cracks in this world to undo it, refashion it to it's energy draining intent! Who or what was behind this?

All was solid once more. Reassuring for the moment. Were there other gods they did not know of? But why waste this world? Surely the priests could not be right that they were flawed and thus creation flawed itself. Feeding back into the cauldron of life their spawning malignancy in need of redemption. Maybe a shaman or even the priests had reached into his mind. Sending this hallucination to soften him up for their message of impending doom.

He could not remember even conversing with the priests, ever. The past, the present and the future were getting jumbled in his brain. Somewhere below, close, a wail rose up. From the temple? Had someone else seen this frightful vision? Then the groan of a soul in torment followed by others. An invisible spectre haunting the people. The sounds

of agony followed like a rising tide washing over the multitude. Dogs started to bark, hundreds of them by the sound of their pitiful yapping. Birds rose into the sky, flying in all directions disoriented, not as a flock. Darting about with no particular direction.

Then the moment passed and they reassembled as one, flying out into the desert. Camels brayed, horses skittish barely held in check by their riders. Below a cat made eye contact with him, resentful, imbued with an essence barely containing its wrath. That moment too passed and the black sleek animal moved back out of sight. The bustling scene of moments before silenced, a veil thrown over the square. People disoriented not quite believing what had transpired. Having witnessed this weird premonition. Then all seemed normal. Seemed. The silence still hovering for a while. Slowly a murmur rose as people tried to explain to each other what they experienced. Many were moving to the temple to seek succour from the gods. Others packed up their wares and left. The soldiers attentive without seeing anything extraordinary. Some were praying to their gods with determined fervency, others sitting there wrapped in an inner silence trying to make sense of it all.

Kahl knew some power was immanent, manifested for long enough to make itself felt. Utterly alien. A threatening vision. Was this some priestly magic? Thinking the gods as some sort of interference to the true revelation awaiting them, distorting and clouding the soul. Where did all this come from? Kahl both disturbed, slightly anxious and now angry at who or whatever caused this disturbance. Maybe Verhat had been right. To access the true power of the universe. Obviate the coming calamity. He was perplexed. Both at what was coming out from within him and what he had seen without. Evil attracts evil, so evil must be rooted out. Were the priests then half right? Or was some sinister cosmic force manifesting itself, sending the first shockwaves of its coming advance. Written in the stars. Etched into time, warping their world.

There was only one thing for it. Seek out a temple priest or priestess.

Then the priests came. Appearing out of nowhere. In one's and two's, others in larger groups. Moving amongst the people, appearing magically having uncloaked their invisibility. They talked to whoever would listen, nodding, saying kind words. Kahl watched fascinated as they worked the public square like travelling showmen. The soldiers watched warily. Then whispers, quiet assurance or seeds of doubt? No not doubt. Far more pernicious. Messages. Sowing suspicion. Hinting at forbidden things practiced by whom? Sorcerers? Shamans? Priestesses? Teachers? Philosophers? Kahl heard it all. The insinuations, barely hinted at, the intent there. Stirring latent hatred, prodding at their

wracked souls after the visitation, implying dark designs against them. Then they left leaving the populace more disturbed then ever.

They were moving off to the left, slowly in small groups some of the people following. To the school, where else? With Ephan dead who was to hold that academy together? Maybe there were astute minds gifted enough to continue Ephan's mission to clarify the mind. To uncover the wayward logic of clouded souls, to see through convoluted logic for what it was. The priest's doubts had no foundation, no substance except the fevered imagination conjuring up demons where none existed. No wonder Ephan had been murdered. He was laying bare their insidious machinations. Showing the vacuousness of their self-styled holiness. Bringing to light the sham, the con, denying the truth through simplified logic the basis their riven minds. Yet who was behind them? Not Verhat. Certainly not himself. Had they tapped into this pure energy Verhat hinted at?

At last Kahl managed to orient himself. A focus. They thought like a group mind, that much was certain. Determined now he would uncover their dark secret, undo them, reveal the falseness of their spiritual certainty.

He walked up the temple steps, looked at the goddesses for reassurance though strangely devoid of life, their holy presence seemingly abandoned leaving only the shell of their memory behind. Through the large portal and into the first open inner courtyard. People were praying some ministered by the priestesses, others having lost their inner equilibrium. Seeking answers to a barely known question except 'what had happened?' 'Why?' 'What did it mean?'

He wandered through the disturbed multitude towards the inner chamber where the actual rites were practiced. The soldiers did not impede his progress. It was obvious Kahl would not be here if he was somehow connected with this fearful display. A temple servant asked what he wished. Kahl asked him if the head priest or priestess, for he knew there were several were available. He was told to wait, the servant vanishing into the dark entrance. Sibilant chanting re-establishing contact with the gods. Seeking their presence. Imploring their aid. Revealing the truth of the matter. Trying to understand.

The young man returned promptly but said he would have to wait. Would he care to enlighten him as to the nature of the interview? Kahl hinted that he might know something concerning the strange phenomena which had fallen over them all. Impressed the young lad vanished. After some time he returned and said a high priestess was ready to see him. Would he kindly follow. Kahl certainly said he would that. Into the inner chamber of the temple. Along open corridors three levels up where the priests and

priestesses resided. In the central courtyard the cauldron's fire burned brightly casting moving shadows of those who sought guidance within this inner sanctuary. The young man stopped at one of many doors. He knocked and was bidden to enter. He allowed Kahl through.

The room was a simple cell. A bed, a desk, quill and paper. A small upright wardrobe, a cupboard, a statue of Urus and Bahlir and a lit candle on the desk. A small window looking west, the way he had come. A view of the bazaar, the town's gate and the sinewy road stretching north towards the distant ice capped mountains.

A silhouette rose from the desk as Kahl's eyes adjusted to the room's darkness. A woman wrapped in several layers of white linen rose gracefully from her seat and welcomed him with a blessing by Urus. Go for the top goddess in times of trouble.

"Thank you for coming." She said. Her voice lilted pleasantly, of later age her skin remarkably smooth, a sign of a life spent indoors.

"I should be thanking you priestess."

"Call me Grena."

"Grena. I am Kahl."

"I know who you are Kahl."

"You do?" It could be for any number of reasons. The king's banishment from the city, the trouble at Castari's camp, Verhat's demise, his association or simply good intelligence from the guarded gate, maybe even the inn.

"Your reputation precedes you."

"I had no idea I had one." He said lightly. "In fact I don't even know much about myself."

"Please take a seat."

He looked about and saw a chair, of plain solid wood and sat. She flowed back to her window seat.

"My mind is so vacant."

"Ah, a vessel waiting to be filled."

"Well it was just now. No doubt you felt it too?"

"I sensed a psychic force move through me. Many minds as one. Distant. Very very far. But present just the same. I know you felt it too."

"The whole town did. And now the priests are working the crowd. Not good."

"They are merely tools. They are not the instigators."

"That is something. Orst seems to have its share of troubles."

"Yes. Sad really. All signs Kahl."

"Signs. Images. Manifestations...."

"Verhat."

"Yes Grena."

"You believed him."

"Not so much believe Grena, more like interested."

"It doesn't bother you that the gods are somewhat lowered?"

"Not at all. One man's perception does not change reality."

"That is true in itself. But one person's vision can influence thousands, a whole land, this planet."

"You are right of course. I was speaking more in the abstract. The universe is a large place. It is our impertinence that thinks our mind can override everything by merely exclaiming our subjective vision."

"It works."

"Yes, strange isn't it?"

"What is strange is what just occurred. Had not others felt it I would have come to the conclusion this is my hallucination. But sadly I am not alone."

"At least we are united now."

"Really?"

"Consider. All felt it, so we are all one. That will give us strength."

"Hope yet."

"Always. But please, tell me your reason for being here."

"Something led me here. I know not what. The gods no doubt have plans for me. That I can understand. I just wish they would enlighten me. That is my problem. In short, some sort of energy, like a cloak, or an invisible hidden eddy has come forth. Infecting us all. My problem is, is it the past or the future? It certainly cannot be the present."

"You do have a problem."

"Don't I know it."

"You are gifted with prescience."

"Nice to know. If my mind were not so vacant..."

"Most unusual."

"Tell me about it. Something or someone, maybe that is not the right way to explain it. A force is residing within. I know it sounds trite but that is the simplest way I can put it. Linked to something or someone. Am I being controlled?"

"If you were you would know. Your vacancy is to obliterate your past, your memories, your understanding of yourself."

"Why? I mean, I don't get it. Verhat had the mind and he was disposed of."

"Yes. The plan is unfolding."

"The plan? Whose?"

"When this psychic power moved through us as I just indicated I sensed many minds working as one. We are being targeted. You have been targeted."

"Why?"

"Why indeed? You may know something or, you are destined to do something and those behind you do not want this to happen."

"Can't the gods do anything?"

"Ah, the gods."

"What do you mean?"

"Destiny is larger than any mind, godlike or humble."

"Yet great minds have achieved great things. Am I to be thwarted? I don't even know what I am doing Grena."

"That is the control."

"Control. Like the priests?"

"They are but a symptom."

"Well that is something. Is that why Efhan was murdered?"

"Yes. Someone is acting against our interests. I don't mean the temple, I mean the whole planet, everybody on it. The signs are everywhere. Building up Kahl."

"Well we all felt it just now. I suppose it isn't going to get better."

"That depends on you."

"Me?"

"If you can vacate your mind, the idea that is residing within you will be revealed, as will your destiny. However the longer you remain in this state the weaker the original idea will be, or knowledge, whatever it may be."

"Can you unravel this?"

"We are outward directed Kahl. We commune with the gods when they see fit to be with us. You need to seek a shaman."

"And here I was thinking Efhan's school might have the answer."

"Oh they have answers alright. As many as the mind can think of. They are ahead of their times. Philosophical speculation has its uses. See through logic. Just because something appears to make sense does not make it so."

"That's good to know." Kahl quipped. "My apologies Grena."

"No, it is good you think like this."

Silence.

"You were drawn to Verhat because your minds were similar. His death was not the gods doing, but those on the ground. Some are being led by psychic forces who are united in their minds to accomplish their will."

"We are being manipulated?"

She nodded.

"And the gods allow this?"

"To see if we are worthy to survive. If we fall it will be by our own actions."

"Fall? Like the priests indicate?"

"They have garbled the message."

"You can say that again."

She smiled.

"It is not that we are flawed, but will be if we let this happen."

"Let what happen?"

"The psychic group mind."

"The what? Where are these minds? The priests in their secret conclaves?"

"They are a focus. You are a focus."

"I'm on their level?"

"Not quite. Otherwise you would be with them or one of them. As you are not you cannot be."

"Now that is logic." He smiled.

"We must fight this. Not by the sword but through our inner strength. But first the threat must be identified."

"Which you are close to."

"They are stronger than us."

"Who is they?"

"Other intelligences."

"Other, as in...?"

"All I know is that they are there."

"Where is there?"

"Good question. Either they exist in the future and want to make sure we follow their predetermined path or they are distant in the present with the same intent."

"They want to guide us you mean?"

"That is so."

"Like the gods?"

"The gods offer us the opportunity to choose our paths. These beings do not."

Kahl sighed. Somehow it made sense. The trouble was his vacant mind. So he knew something only a shaman could extricate. Inner directed. He would remember that. Like Verhat he too was outward directed.

"Why this interest by them in us?"

"Because we have our own intelligence."

"And they don't like it?"

"They want to align us with them."

"If you are so familiar, then obviously you know. If you can reveal this surely we could do something about it."

"It has only just come to me."

"Oh, you mean this vision?"

"Yes."

"So what are you going to do?"

"Spread the word. But the priests will resist. I can feel it. They are in their element, they are doing their will, preparing the way."

"For what?"

"To take over our minds of course. To follow their way."

"So how do we, or I stop them? I mean would we, you, me be believed?"

"The priests will say you are making this up to undermine their message. This kingdom to come of which they speak is the will of the group mind."

"Is that so bad? I mean maybe the kingdom is our future. A state of divine grace."

"A state of divine submission with no free will."

"Enslaved."

"Exactly."

"So we, you, anybody must get this out. To Jaffir for instance."

"Why do you think he lets the priests roam freely? Why the murderers have not been accounted for. Or those who got rid of Jez, Fehz and Efhan? Sure the troops are there to ensure the peace, the king's peace."

Kahl knew there was no point in posing the obvious question. Jaffir was under their influence. Short of a palace revolution there was little anybody could do. The priestesses yes. Unless Norhat was offered the kingdom.

"And Norhat?"

"He is military. He follows orders. In this new kingdom according to the priest they will have the role of keeping the people in line. Remember they preach equality. To be equal to their superiors. You think they will cut themselves out of that possibility?"

"The priests have it all worked out."

"Those behind them do."

"So we can only do our best to dissuade them."

"You don't think Eghan has not tried? That was the whole purpose of his philosophical classes. To get people to see through the magic of logic. What is logical is not necessarily real or the truth. The idea was to question by analogy the logic of the priests. And now he is dead. The school is in mourning of course. Many have left. They saw the murder not as murder but divine intervention. Whether the gods doing or this unitary force the priests hint at."

"Unitary force. Verhat claimed it was everywhere."

"The universe is it's own power, the gods it's projection. What the priests have done is twist it into a singular god overriding everything."

"One god for all gods? It does not make sense. If this singular god exists where is it? Why has no priest shown us this entity? Why have not the shamans alluded to it? Why is it hidden if it is real? I can see Verhat's logic in that the life force is perhaps everywhere, to believe it to be one being. Then why the gods? Surely they would not exist then? And if we are all equal then how come we are not? Even in nature not everything is at the same level. There are the hunters and the hunted, beast of prey and their prey. Same with our society. Not every person has the same gifts, talents..."

She held up a hand.

"Apologies for preaching. I have thought about this and my doubts remain."

"That is wise Kahl. You perceive the gradations in reality. Just as there are larger and smaller stars, so there are larger and smaller souls. A mouse is not a lion. I agree. However the priest's case is compelling."

"Logically."

"Logically." Grena repeated.

"Imputed by this group mind you speak of."

"Know of Kahl."

"Well at least we are aware of what we are dealing with."

"So it is. They must feel strong. Certain of their objective otherwise they would not have created this terrible vision."

"You mean if we do not obey the priests then our world is doomed?"

"That is the message."

"I am back to why Grena."

"Maybe our destiny is different. One they cannot allow for some reason. Maybe in the distant future we, through our psychic abilities will come into conflict with them and in that future we are victorious." Hope in her voice.

"Then," Kahl feeling his inner self asserting itself, "I finally know what I must do."

"That is something at least."

"Unlock my mind. Find this group mind. Destroy them before they rule us."

"And see our real future. The shamans will be invaluable there."

"The shamans. Not exactly easy. Only the folk out there know exactly who they are. They hide themselves. Could be a farmer in the field, a hewer of wood in the distant forests, a miller, nobody knows."

"The tribes, the clans keep their holy people out of sight. They do not reveal to us exactly who they are. Unless one makes psychic contact with them. Let's say you dream of one. Then you are lucky. Seeking that particular person out. It could be anybody, man or woman. They won't seek you. However if you are psychically attuned you might gain insights via that connection. One problem though. The group mind would also be aware for they are powerful psychics themselves. Who have blocked your mind. Quite a challenge Kahl."

"Worthy."

"Daunting. First to break the barrier..."

"Which they will sense. Doomed to a quick end. I would need to cover my intent."

"That is one way. Extremely hard, hiding something from yourself."

"Hm."

"I will do what I can. Maybe I can prepare the way. Search out a mind for you so that you can be unlocked, then to do to them what they do to us. Find out if they really want to take us over as a whole race. Not forgetting what our true destiny is."

"Wouldn't the gods know?"

"They should."

"Should? Not would?"

"Even if we were to disappear, you think that would make any difference to them? Their whole universe is their playground Kahl."

"You make it sound so, ahm, prosaic Grena."

"From their point of view it is. Maybe there are other races, other minds. Apart from this group mind I mean. Since the gods created the conditions for life to be born here, then the gods can do this anywhere, anytime they please. So if we fail in our duty to survive..."

"You don't think they would help us?"

"Oh help us they will. But will we help ourselves?"

"I don't understand."

"The gods show us the way. It is for us to act accordingly."

"So they would let us fail? Even when faced with an adversary far in advance of us? That would mean this group mind is stronger than them." Surprised at the logic behind that train of thought.

"The universe is stranger than it looks."

"And latent with dangerous minds as well. Maybe the gods do have limited power. No wonder Verhat was after the ultimate force. The one that gives life to the gods as well."

"Like what the priests are hinting at?" Grena tested Kahl.

"We're back to where we started. In a way you make it sound inevitable."

"I hope it is not. Just remember we, as individuals are masters of our own destiny."

"Grena, you have given me direction, you have given me hope. I can barely express words enough to thank you for your divine revelation. The gods have guided me through you." Khal went through his inner pockets and felt for a gold coin. A hundred was a minor fortune. What he had learnt just now was worth everything. Priceless. He retrieved the coin and put it on her desk. For Gena to actually take it would have been an insult, making her the supplicant.

She looked at it momentarily as if saying he had no need to be so generous.

"May the gods be with you Kahl."

"As they are with you." The interview over.

"I shall try and see what I can do. I am glad you came. Now we both have a focus. But always remember, this group mind, wherever they are, are."

"So if I sense them they are not a figment of the priests mind."

"Rather the reverse."

"Thank you again Grena. See what fate has in store for me. If I have any news I will get in touch with you. Do you reside here permanently?"

"Generally yes. But if the gods decide they have something else in store for me then of course I shall follow that path. But I would leave word with the temple administrators if I am called elsewhere."

"You know Grena," Kahl remaining standing, "I felt drawn to Orst. Maybe it was you."

"Maybe."

He sighed wanting to thank her once more. He felt great. He felt good. He felt potent, dangerous and focussed. Even the disturbing vision paled into insignificance. Neither had not as yet been deserted by the gods.

Outside the temple the square was now nearly deserted. Some traders were still squatting with their meagre wares. Small shrivelled apples, good for horses Kahl thought, oranges the size of mandarins, small sugar bananas, cheap trinkets, some rough woven scarves and shawls, a few dazed locals. The atmosphere subdued having lost its former vibrancy. At the edge, near one of the thoroughfares two men dressed in dark brown travelling coats were conversing, one gave him a passing glance.

Kahl needed to make a decision. Sure of Grena's advice, being sought out by a shaman was no easy thing to accomplish. It was a case of who needed whom the most. Instead four soldiers marched up to him.

"Kahl, please come with us." The squad leader suggested politely. Kahl shrugged his shoulders as they surrounded him. They were not drawing their side arms. Too many soldiers to contemplate flight.

"If these are your orders. You have some documentation?" meaning was he under arrest. Their leader gave him a look to say 'as if'. He was escorted at an unhurried pace away from the market place. In the distance he heard the clamour of voices and turned to look back. With the broad street a straight line to the east he saw a multitude of people near the school on the outskirts. A line of soldiers were keeping them back. Another cordon was thrown around the furnaces, spewing fire and black smoke into the air, a dark haze hanging in the air.

"What's going on down there?"

"The people think bad magic is in the air."

"And the school is responsible?"

"Some unsavoury types take refuge there, as in the temple."

"What do you think happened?" Kahl asked having to fall in step.

"Happened? A warning from Urus or Rena. The premonition...very unusual." determining the event did occur. He appeared untroubled. A good sign. The soldiers not panicked unlike many of the townsfolk. He noted some riders heading north out of Orst.

"The nomads are leaving." Kahl guessed.

"Probably spooked."

The two watchers followed at a distance. They could guess where Kahl was being taken to: the barracks.

Along the outer perimeter wall and guarded entrance, then past a second palisade and into the first compound. Kahl saw a hive of activity as men readied horses to ride out and keep the peace. Others returning. The guards on duty saluted. Kahl was signed in on a log sheet then across hard packed dirt to the fort within the compound. Surrounded by a much higher wall the upper section of the observation tower only visible. Another guard post, it's massive gate drawn high on chains that could be dropped at a moment's notice. Past patrolling guards as Kahl was escorted into the fort itself. His two shadows remained well back from the first outer gate. For them the problem was which gate he would leave by for the compound had four. If he was arrested then that was that. If he was spirited away it might take some time to ascertain where he would be taken to.

The clanging of blacksmiths, a small furnace to rework swords, knives, spear points and arrow heads, woodworkers making long and short bows, archers practicing to one side, others throwing knives at sandbags. On the ramparts lookouts stationed at close intervals. Norhat was taking no chances.

Arriving at the command centre of several stories before the tower rose high into the sky. Into the relative gloom. A sergeant signed Kahl in once more and the escort departed. There were several doors, some open, people busy with the minutiae of running the base. The smell of horse dung and damp hay from the stables hung in the air.

At an unmarked door the sergeant knocked then was called to enter. The sergeant opened it letting Kahl through. A bright office. Norhat in full battle gear, thick leather cover, riding boots, knives at his belt, his broadsword within easy reach, sheathed, a long bow and arrows at the ready. He was alone sitting behind a paper strewn desk.

Norhat in his fifties looked fit. Short cropped dull grey hair, a scar down his cheek, a cauliflower ear, and a broken nose slightly out of joint. He motioned for Kahl to be seated.

"You're creating quite an interest Kahl." The tone suggestive of some hidden agenda. Not that Kahl knew. He had no idea what he was doing himself. As such his conscience was clear. Or to be precise, his mind was vacant.

"My clothes no doubt. And having been a, err, guest at the kings pleasure."

"Yes, I am sure Jaffir has his reasons." Norhat aware that Kahl was being watched. By the kings intelligence service. Norhat of course ran one himself. The king did inform him of who his people were, meaning not to run over each others observers. They would only get in the way.

"Your reason for being here." It was a statement that demanded an answer. Kahl was tempted to say, after speaking with Grena that he was seeking a shaman. But that would suggest an occult intent. With Verhat having been a magus that might not be in his interest to reveal directly.

"Well I am banished from the city. I have the freedom to make a new start and Orst is the obvious choice. I had thought of meeting with Eghan, but..."

"Yes indeed. Why?"

"Why?" Kahl asked stupidly. "To seek answers."

"To what?"

"My mental condition."

"Your what?" Norhat was surprised. That he had not expected.

"My brain is a blank. I'm stuffed if I know what happened." Kahl answered directly. Norhat nearly laughed, hiding his smile looking at a sheet on his table. The king's report sent ahead by fast courier. He knew Jaffir had let Kahl go to see where he would run to. Eghan was not the highest priority. Now that he was dead. The priests watched, officially. So far Kahl had made no move to even consider them or seek shelter with them. But then, with his close shave at the palace Norhat did not expect Kahl to be so unjudicious as to run to them. If there was a connection. Unlike Verhat who though not exactly courting them had not rejected them either. Norhat's job was to make sure no cabal formed under his jurisdiction.

"I'm sure your memory will come back, if jogged." Norhat hinted.

Back to that again Kahl thought.

"It would be nice. Might get me some answers."

"So you know nothing."

"Not even whether I have a wife, children, what I did for a living."

The king of course was searching for answers as well. So far no one remembered Kahl, knew who he was, what he did. Except that he was with Verhat. Had he been alive

he might have been able to solve this mystery. Norhat wondered whether Verhat's removal was meant to silence Kahl. It was a double edged sword. Verhat had exuded power, might have become a force to be reckoned with so that his demise was both good and bad news. Maybe Kahl arranged it so that he could become the one destined to further his aims. Yet he claimed to know nothing. Norhat did not believe him.

"So it appears. You have covered, no, obliterated your past extremely well."

"Or someone for me."

"Oh? Who might that be then?"

"Yes. The question to which an answer would be enlightening."

"I can keep you here as long as it takes Kahl."

"I'm sure you can."

"You seem to take this rather lightly." Norhat's voice steely.

"What can I do? As I said, it's all a blank to me."

"Rather convenient. Maybe you were hypnotised, or under Verhat's influence or the priests."

"The priests. They mean nothing to me."

What Norhat expected Kahl to say.

"So you're not here to make contact with anybody."

Kahl thought of the conversation he had with Grena. But what was said between a high priestess and a supplicant remained sacred between them. Of course they were encouraged to reveal those with traitorous and now on the king's orders, heretical intent. To fight the priests or aide them? Norhat pondered that. He knew the priest's underlying message and wondered if Jaffir had some designs regarding this black cowed spawn.

If he kept Kahl locked up then it might be interesting who might miss him.

"No. I did speak with a priestess who suggested a shaman."

"Did she now?" at least he was not hiding that. He had been seen leaving the temple. "So you sought guidance?"

"It seemed the obvious choice."

"And not the priests."

"The priests the priests the priests." Kahl replied a little exasperated. "They hung around Verhat like pigeons. I don't know why he thought them of any value. Given Verhat's outlook I could not understand what he saw in them."

"Neither can I. They are after the people, sowing dissent. Verhat was involved with something, he was planning something." It was as good a guess as any.

"Yes. I see what you mean."

"So you had nothing to do with this vision?"

"You saw it too?"

"I did. Powerful magic."

"Maybe the shamans warning us."

"Maybe." Norhat had not thought that far. He was concerned with the priests. He suspected them behind the triple murder the other night and the assassination of the teacher. With the school being targeted indicated that at least Eghan had not been behind the priest's influence. Rather the converse. They saw his philosophy as a threat. He followed orders. But he did have to know how those who were suspect thought. Know your enemy. Think like your enemy and defeat your enemy by whatever means. And the enemy had struck, twice. The vision was something else entirely.

"There is one thing the priestess said. She claimed, as she too experienced the vision that there is this group mind, somewhere. She was vague about that."

"A group mind?" Norhat attentive. So a secret society. Making it's presence known. But through bloody murder?

"So she said. With me the target." The words came out before Kahl could stop himself. How had he known that? Then the thought vanished. All he remembered was...no...that was gone too.

"What makes you so special Kahl?"

"We're back to square one."

"Maybe other means are required to loosen your mind."

"What the priestess implied as well."

Norhat was puzzled. Under normal circumstances suspects such as Kahl would be defensive, disarmingly charming, evasive, dissemble, obfuscate, be ingratiating, suggestive of pertinent information, lies usually, or trembling with fear. Kahl was displaying none of these reactions. That in itself was new to Norhat. Kahl treating him on an equal basis. Unconcerned about his immediate fate, genuinely puzzled at his state, seeking answers not through the priests but a high priestess and volunteering the information.

Yet his being tied in with Verhat indicated some design in place. One neither he Kahleff or Jaffir could unearth. Maybe a shaman was the answer. He thought if any of his men or women had the talent. There were those more attuned to the gods resonance than others, sometimes taken by the gods in their embrace, talking strangely when possessed.

"Wait here." Norhat said as he rose, looking at his battle gear thinking Kahl might use that in some way. At the door he spoke to the sergeant to watch Kahl then got one

of the guards to search the base for any who communicated with the gods, even a shaman if they were lucky enough. The sergeant understood called some spare guards to watch Kahl and the two went out into the compound to find someone attuned to the gods.

They found to their dismay no one at the base who matched their criterion. But Norhat was not one to give up so easily. He could keep Kahl locked up until he got the answers Jaffir wanted. He knew his patrols were familiar with the tribes. Though not exactly welcomed as they rode far and wide to ensure the king's peace was kept understanding that as long as their women were not molested, their goods confiscated or harassed all was well. Maybe Norhat should send out some patrols and see if a shaman could be found that could get into Kahl's vacant mind. He believed the man for some reason simply because he was experienced enough to know when someone was hiding something. Kahl was not so much hiding something. Rather he admitted he too wanted to solve the problem puzzling him.

After talking to several soldiers, some did suggest this or that person but upon closer enquiry found that being spiritual was one thing, shamans were of a different mettle. So Norhat ordered two patrols to go out for a few days and seek a shaman in the Outlands. It might end in complete failure knowing how secretive they were when it came to strangers seeking them out. Still it was worth a try.

Norhat returned with his sergeant, the guards relieved.

"I can do one of two things. I mean I can do anything I like within reason Kahl. But you are a problem even if you aren't aware of it yourself. So here it is. I can keep you for as long as I like. Or I can let you return to your inn." And waited to see how he took it. Rather indifferently, more like amendable.

"If I let you return you will be under orders not to leave Orst. Do I make myself clear?"

"You have."

"I can even have you executed." He thought he better throw that in. "You might even be implicated in these murders."

"I hope not. I wasn't there. I didn't even know until I came here."

"Someone of your standing would not do the deed himself. Verhat might have been behind this and you an accomplice. You do understand?"

"Unfortunately yes."

"Good. Do I have your word then that you will remain in Orst?"

"You have."

"I am...I will be in touch." He nearly revealed his search for a shaman. That might make Kahl seek one out before he could get at his head.

"If you are approached by one who might unlock your vacancy," he was amused at the expression "then it is in your interest to inform me. I would like to be present at the sitting. If for some reason such a person is secretive I trust you will reveal whatever you know."

Kahl nodded.

"This is too important to be treated lightly. Especially given the power of the vision to effect us all. Sinister forces are present. Bigger than all of us. This might not be just about you. There has to be a reason why you are in the state you are. You follow me?" Norhat's cold grey eyes bored into him. The man meant what he said.

"It would be a relief."

"It might be much worse."

"Worse." Kahl said slowly. "How worse can it get?"

"You might know things you wish you did not."

Kahleff was conversant with the king's wishes in letting Kahl go hoping to ascertain how involved he was with the priests or the accomplices Verhat had been in league with. The courier he despatched informed Norhat to keep Kahl under observation. If Kahl was in league with whatever designs Verhat may have planned needed to be known. Since the disturbing vision so incisive yet, so vague, a warning by the gods no doubt showing the people what lay in store if they abandoned them for the beguiling promise of the priests.

He would seek the guidance of Nurdass. As high priestess she shed her earthly name becoming the vessel of the sun itself. Kahleff sent word that he wished to see her. A temple servant returned and informed him Nurdass was ready to receive him. He left his chamber and walked through the open space to the temple of the sun. Like all temples there was the unroofed public area where Nurdass's servants, dressed in white with golden strands interwoven gave spiritual succour to the seekers. Nurdass of course dealt only with the king, kindred servants of the other high priestesses from the temples who might seek or give advice during the day. Then with the setting of the sun Bahlir and Urus replaced her.

Now Kahleff wished to see her. His special position allowed him access to all the high priestesses at any time. What she had not expected was a visit by Grena. What Grena told her of the group mind was perplexing. She sought guidance finding none. So

when the message came that Kahleff was on his way she asked Grena to remain with her.

Nurdass was perplexed by Grena's intelligence and Kahl's need for answers, answers she now sought as well. Later tonight she would engage in her meditations to try and understand the premonitions all around her. The power of the sun's rays were lessening year by year. Whether Urus was claiming supreme power with the aid of Bahlir she could not ascertain. She too felt the cosmic shift. The presence of the priests confirmed her worst fears that the changes might be permanent. Kahlef's opinion was timely. He knew more than any other mortal. Unaligned so as to converse with them equally to advise the king on the true state of affairs. Putting events into context for the king, Norhat and herself at times. That Kahleff and Grena wanted to see her was opportune. Signs of some alignment at work. The sun goddess saw everything. Once she had sojourned below the horizon she dwelt in the land of night, allowing the queen of the universe her due to watch over this inhabited part of the world. For they lived on a planet, the sun never set. If one were fast enough one could remain with her for ever. Nurdass did not sleep as they had initially thought. The secret books of the past revealed worlds circling around her, satellites paying continual obeisance to her, for ever travelling magisterially around her.

She retreated with Grena to her private chambers. Not one for ostentation it was furnished in simple comfort. Padded chairs of plain solid wood, her special library of books, excerpts of the knowledge of their vanished predecessors before their cities had been razed, having either invoked dark forces way beyond their control or been victims of some mad race of beings who brought them down for some unknown reason. No one knew for sure. All ancient lore, suppositions mixed with fear felt superstitions. Now the priests were resurrecting these ancient fears.

Grena and Nurdass were taking tea, discussing the aberrant vision. The past, the hidden present or a glimpse of the future. It could be any of the three. One thing was certain, it was disturbing. More so for the group mind Grena sensed. Her antechamber, wood panelled once served Rena during the previous reign. The outer temple refurbished according to the sacred decrees pertaining to her station but her private chambers she kept as is. The only change, golden glowing tapestries showing the radiant sun bequeathing her warmth onto the world below. Scenes of farmers tilling the soil, vintners in their vineyards growing the grapes that gave joy to the soul, their city, the desert in bloom, the pink brown snow capped mountains, the starry mantle of Bahlir above. The open window looked over the temple compound, then the palatial precinct

squaring off the city stretching out beyond and finally the distant market gardens, the river, the mountains covered in snow laden clouds.

A knock as a temple servant was bid to enter announcing the arrival of Kahleff. Grena rose but Nurdass remained seated. He was in her domain after all. He smiled graciously, a little surprised at Grena whom he vaguely knew from Orst.

Having greeted the two women and bidden a seat he was offered tea which Grena poured for him from a large pot. Sugar and milk added Kahleff drank the refreshing beverage exchanging pleasantries. Nurdass informed him of the reason for Grena's presence. Listening to Nurdass he relaxed. There was good reason for her to be here then.

"Yes," Kahleff said at last, "the signs." Without venturing further.

"The priests." Nurdass said.

Kahleff agreed. "That is so. What you have revealed to us Grena is news indeed. Not welcome news. Intelligence might be a better word. Distant minds plotting against us. Using the priests as their method of creating a reality that is unholy whilst pretending to be the holiest of all."

"I have searched my soul on my journey here Kahleff," Grena continued, "and find nothing but restlessness. It is only when priests are near, when Kahl came to me that I sensed them. But I have gone no further. It is good that you came Kahleff for I need advice."

"I am honoured Grena. I will do all I can to the best of my abilities. It is both revealing and disturbing. At least we know the face of the enemy."

"You don't think it is the gods doing?" Grena asked

"It might be. Or it is the lost race."

"The past coming back to haunt us." Nurdass said.

"Or the future."

"Or that."

"Using the priests. Then there is Kahl."

"With a nimbus around him, one of which he was not aware. A pity Verhat is dead."

"That is tricky Grena, Nurdass. A danger as a conduit whilst alive. Maybe Kahl arranged it so he could take over."

"To foment restlessness."

"He may not know he is being used. It is said," Kahleff put his cup down on the small table in front of them, "that shamans can see into minds like the gods. Some even manipulate the minds of others. This group mind might be like them." Kahleff ventured.

"A frightening thought."

"Dangerous."

"Wicked." Nurdass added.

"Malicious." Kahleff concurred. "In this we seem united."

"It might explain my waning power. The stronger they grow the weaker I become."

"If that is so then they are extremely potent spirits."

"I fear the worst." Grena said calmly. "The group mind is not evil in itself. Rather focussed with relentless determination. Does the king know yet?"

"We have not discussed the vision. I await his majesty there. If he is not perturbed then there may not be anything to worry about. The vision could be a potent hallucination, to make us think all will be lost if we do not accept the message of the priests."

Nurdass set her cup down. "With their design upon us."

"The priests their mouthpiece."

"What fascinates me is how they do it."

"As I suggested. They may be shaman minds."

"The..." Nurdass was about to mention their ancient race but with Grena present, the decree that that knowledge was to remain hidden prevailed. "...thought of it makes me angry. We should combine our forces, unite the avatars as one and fight back. Either confront them directly, head to head or weaken the priests by any means at our disposal."

"I think Jaffir is waiting for a sign himself."

"I hope he is granted one soon."

"Kahl may be the key."

"If he is, then why cannot he remember anything?" Grena asked.

"That is a mystery."

"You have met him?" Nurdass enquired.

"I have. Maybe his vacancy was Verhat's doing. But then," Kahleff thought, "the bourn he is under would have dissipated at his passing. So it has to be something else. This group mind you speak of Grena. It means there are others in this universe. Were they created by the gods as well? This must be kept between us." He added.

"Would not the opposite be more in our favour Kahleff? Let the people know the priests are being used, may even be their creatures? Then with the truth out we can reclaim the land, the people, our future." Grena suggested.

Kahleff thought on this and of the king. Temporal rulers had the annoying habit of using any means to remain in power. He did not put it past Jaffir to use the priests if it secured his throne. The priests as such did not deny the gods, they merely spoke of a coming kingdom of the soul. Very clever. Unassailable. Brazen. Not even conspiratione for they were in the open. Nor treasonable since they merely preached of a vision to be. No suggestion of usurping priests or rulers. It was ingenious.

"What of the disturbances at Orst?" Nurdass asked.

"Oh yes, that. I'm sure Norhat will see justice done. Why do you ask?"

"It sends a message. Against the school."

"It has been said that Efhan taught the gods were of our making."

"So if we created them," Grena's mind racing, "means we are godlike."

"That is something I never considered." Kahleff answered quickly. "Do you feel like you are creating the true Nurdass?" he asked the priestess of the sun.

"I feel at one with her." came her easy reply.

"Maybe Efhan and his teachers are being manipulated as well. In opposition to the priests." Grena put forward.

"They came after."

"Yes true. Unless it is a game we are subjected to. Create strife."

"That cannot be discounted Grena."

"Norhat certainly has his hands full." Nurdass sighed.

"What of the other priestesses?"

"Nothing Kahleff. Or rather the discord is that of the people. The gods can advise, can show, maybe even compel us to act. It could be the strife shows we are losing our way. Our salvation through the priests."

"You know what you are saying?"

"That a passing is underway, yes."

"I would agree if not for the vision."

"I know Grena." Nurdass said to her. "If not for that and what you saw thanks to Kahl coming to you."

"Kahl. He seems to come up in this and yet one would think he would be a fountainhead of revelations." She said.

"Maybe when his mind is unlocked we will know the answers."

"Could you not do this?" Nurdass asked Kahleff.

"I could. But the king has not given the order. He wants to see what Kahl gets up to at Orst."

"Can't you probe him on the sly?" Nurdass looked at him. "Sort of keep an eye on him. In that way you would not be transgressing Jaffir's wishes."

"The thought did occur. It might be best if you tried. Unless the king has spoken to you..."

"Let the gods decide." Grena answered for them.

"The gods may be waiting for us to grasp the mettle. Prove our worth to them."

"I agree Nurdass. If I had my way I would advise the king to round them up. Put them in their own monastery somewhere in the desert. Then those who think their message is of any worth can make their way there. The gods allow them to be, moving freely, that must mean something. If for instance, even invoking divine guidance the perpetrators of the crimes committed at Orst are not found then that is a sign itself that it was meant to be. Not satisfactory for one with a conscience but who are we to judge if no judgement is called for?"

"I can see why the king has chosen you as his spiritual advisor Kahleff." Nurdass said graciously. "You see, you think, you ascertain all angles."

"That is my duty."

"So we do nothing." Grena disappointed.

"We act according to divine guidance."

"What if my guidance is to seek out this group mind?"

"It could be your undoing. Maybe that is what they want. To draw you in. If they exist." Kahleff added cautiously.

"You think I am mistaken?" more surprised than offended.

"Not mistaken as such Grena."

"We are not divine. We can share the gods divinity yes, yet we are not as complete. Thus our perception is not whole either. If this group mind," Nurdass had thought on this, "exists maybe our understanding there is limited. It might be one mind with many thoughts. It might be Urus or Bahlir. We try to comprehend the gods. As they are supreme compared to us mortals, we may easily misinterpret their designs. Whilst this world exists, our paradise, as long as that is not threatened, as long as we do not misuse what the gods have given us..." Kahleff listening to Nurdass thought of the ancient ones who may have put their paradise in danger and were obliterated for being too much like the gods, maybe even usurping them with secret knowledge which ended with their

destruction. For this history, these fated events had to have a reason. Maybe the priest were realigning their souls after all, to stop, as in the school's godless teachings their straying from the path. The vision a warning of what was to be if they did not return to the spiritual path to stay aligned with the cosmic forces that bestowed through the gods, their lives. His mind was clearer now. The threat less immanent.

"...if we misuse the gifts the gods bestowed on us we will loose this paradise. This group mind might be the collected wisdom of the passed on souls. You did say Grena that they were out there. We cannot allow the past to be resurrected, we cannot go down that path to destruction. I have no wish for that scenario to be revisited if only because the delusions of some who think they are more than gods or have no need of them. Did you uncover any hostility when you felt this group mind Grena?"

"No, just potency."

"There you have it. Until I am disproven I think the gods have brought to life the soul's wisdom of the passed on to guide us back to the way of the divine."

"Nurdass," Kahleff exhaled, relieved, "your words have soothed my soul."

"I am indebted to you Nurdass." Grena added humbly.

Nurdass took it with good grace. She was high priestess after all.

"Then all I have to do is watch the priests and make sure they do not stray either. Think themselves more than what they are."

"I think now I might know why Kahl's mind is so vacant and Verhat is dead." Then not waiting how they would react Grena continued: "Verhat may have thought himself better or higher than the gods. For that he was disposed of, the gods removing him by their means of animating the doer of the deed. Kahl may not be so ambitious. So to protect him and us from whatever secret designs he may have harboured the gods struck his mind numb. So that he could not put in place whatever heresies he hungered for. His mind a void for that alone. The death of Ephan and that teacher divine retribution. It all makes sense now."

"Grena your goddess has spoken." Nurdass was pleased.

"Yes, wise words indeed." Kahleff concurred. It all fell into place.

Nurdass agreed. "The gods are still with us. They have given us many signs. Repeatedly. It is up to us to follow their guidance."

"It will be good news to the king as well Nurdass, Grena. You are two very wise women. It is us who are creating the conflict. So we must unite ourselves as one, be as one, reconfirm our faith in the divine."

Grena felt easier knowing the group mind was not hostile, guiding those souls who were receptive to their guidance. Kahleff relieved that the priests in their own way were now in context. Nurdass uplifted that the gods had united them here. They were moving within the realm of the gods to see what they could not see. Peace would be restored. There was no threat except what their fevered imagination construed. All would be well.

"This land, the parched earth abandoned, the sky empty of the gods who gave us all life, who created this paradise for us to enjoy and give thanks to is being imperilled by corrupt souls." The black caped priest intoned with somnolent grace as he looked around the hundreds of tribal nomads. They were assembled in front of the school. Inamus had chosen this particular locale on the outskirts of Orst. There was plenty of room for an assembly which the teachers themselves used to hold, in public view their classes in the open air. Trees gave shade, the stream was nearby for parched throats. Behind the dormitory a small garden to supplement their needs. There was no doubt as to whom Inamus and the other brethren meant.

He stood there with them, not above them. He did not hector, he explained the reason for the dry seasons, their crops burnt under the relentless sun which though weaker still wreaked havoc amongst their need to feed their cattle, their horses and camels, ultimately themselves. Not that it signalled a famine. The assembled multitude were curious. Their shamans themselves hinted of changes in the realm of the spirit world subtly interwoven into the real world. Spirits that moved amongst them, some to enlighten, others to unburden their worries, giving obscure hints when dreaming or meditating. A cool breeze wafted among them.

Next to the school the bank of furnaces poured black smoke into the sky. Groups of soldiers watching warily with swords sheathed. They were there to protect these fire spewing constructions. Norhat had ordered the men and women serving the military to keep order but not to fight them should the rabble turn ugly. Unless they had designs on Orst. Other soldiers, learning that Inamus was rallying the crowd stood well back so as not to give a threatening impression. Just a sign of their presence and keep the peace.

"There is hunger amongst you because Rena, goddess of the earth cannot mature some of your crops. The gods are showing their disfavour. But the fault lies not with you. It is those who deny the gods, who work against them, who whisper in secret conclaves their dark vision and by stealth poison the minds of holy men and women. They want this calamity to teach all a lesson. To make you bow down in front of them, not the gods themselves. They are usurpers of all that is holy for they want the power for

themselves." It was as good a version as any other. By not naming any particular shamans, or priestess, clan leaders, tribal chiefs or even Jaffir and his shadow Kahleff, the seeds of distrust were sown to make them ready for the priest's message of the coming revelation.

There were murmurs of agreement.

"You humbly sacrifice to your chosen gods and guiding spirits your newborn calves. Many are born weakened thus reducing the effaciousness of the holy sacrifice. I know many are still born, an evil sign in itself. Even the waters from the mighty mountains lessen, most diverted to the city of Jaffir leaving you with a trickle. They live in splendour and wealth while you are wanting, seeing the precious waters pass you by."

There were a few priests among the crowd, mingling with them, being at one with them. Inamus spotted Oenah one of his lieutenants, an organiser, from one of the old families who had some influence amongst the wealthier landed gentry. His becoming a priest had caused tongues to wag. Oenah too was convinced of the 'coming' having withdrawn from his estate to join the priests at Orst.

Inamus never belaboured his mission. The idea was to bring them around by hints here, the promise of a better world if they aligned their souls to the true overriding majesty of the most powerful god of gods. His face still hidden yet his presence felt. For now it was pertinent to make sure they understood the danger that was immanent. To make them feel affronted at the divine injustice they suffered and would continue to suffer if things were to remain the same. He saw his third companion, Agram the mystic. Once a priest serving Adur he now served the higher power.

"There is a potent evil in the universe. They sought to be like gods and vengeance was visited upon them. The signs are coming back. The eye of Bahlir that fell from the sky a few days ago is really not her eye at all. It is a sign that retribution will be visited upon us if we do not cleanse our inner souls of the mistaken vision. For the gods are a hallucination of a sick entity that had brought down the ancient ones."

Since no one knew the truth and Inamus would make sure none ever would he had history on his side. "But if we unite as one, believe in the one supreme god we shall be saved and a new kingdom present itself. We will be saved if we save ourselves. If we do not show our worth, if we do not act accordingly, humbly asking for forgiveness we shall be doomed. Is that what you want so that those in power remain there, taking your precious water, insisting on their false vision born of overweening pride whilst keeping you ignorant of the true state of the great cosmos around us? Your soul a unique link to the great god. You are closer to the ultimate truth than those in the city and their adoring

priestesses who will say anything to remain in the rulers favour. For Jaffir is being deceived and given his exalted status that of the people who follow blindly, with false visions to mask the truth from those who seek the answer, to feel and experience the revelation residing within your souls."

The crowd intent, soaking up his message of divine redemption. By not attacking their spirit world, their holy men, they would be converted in due time. Inamus and the priests would slowly turn them around.

"Your children cry from both a real hunger and a spiritual hunger. Their innocent souls know but cannot articulate in their pristine state the truth they feel. Your womenfolk suffer in silence, bereft of an answer to the spiritual hunger you new born feel deep within them. Your traders receive less and less for their breed of horses or cattle when they should be receiving more. The soldiers here to keep the peace are aware of the coming anarchy being used by those in power to keep their masters secure."

Some shouted just what this evil was for Inamus kept things deliberately vague. Why had it come and why did the gods remain aloof?

"The corruption of the empyrium of fallen souls who upon the great passing took that corruption with them to infest like a disease the once healthy heavens. So the gods withdrew wishing to keep themselves unsullied." He thought that was clever of him. The priests amongst the crowd were equally attentive. The idea was not to convince them directly of the coming revelation but to make them think the reason why the heavens were in discord. They had all felt the vision, the moment of utter desolation.

Inamus was patient, used reason and imbued his voice with a steadfast determination. The vision had been the first sign. They could not dispute that, nobody could. Inamus felt the impact of that divine warning waning like a bad dream. In the background the braying of a camel, the whinnying of a horse. The gathered attentive. He thought they might hunger for more. Well it would take time. In the distant south a dust storm sent up a pink brown plume emphasising the dryness of the season.

"The gods are showing themselves. They do not bring gladness but a parching of the soul. We will all be wasted if we do not align ourselves. The future is in your hands." Pay them due respect, empower them like a roaring river in flood to sweep all before them. Promise them power, for power was everything.

Oenah and Astram slowly moved to the front to Inamus.

"We," Astram said, his voice reedy, smooth, "are here for you all. Unlike the priestesses we do not ask for sacrifices, nor do we seek alms or even donations. We are here to offer guidance for those who seek. Those who feel spiritually fulfilled we bless you,

those who seek succour we will do our best to uplift you, those who are troubled we shall offer guidance. The truth is out there for all. Not just the privileged, the wealthy, the strong, but each and everyone of us." Astram like Oenah and Inamus knew these nomads and occasional bandits were not stupid. They had their lore, their customs, their entrenched way of life. That would not change. It was their souls they were after. Nor would they bribe them with golden promises, inveigle themselves with smooth words or pretend to be spiritually exalted. Humbleness would do the trick. The tenor was of an equality they could relate to.

The meeting was over. They dispersed among themselves. Some made ready to ride back to their distant camps, others returning to their tents at the edge of town. The soldiers relieved there was no trouble. Inamus satisfied enough was said. No point belabouring or embellishing the core of the message. They too had their tent where those who wished to know more were welcome to speak to any of the priests amongst them.

For the rest of the afternoon, Inamus, Oennah and Astram answered the questions of the tribal elders. Copious amounts of tea were served, dried fruits and nuts offered as their aroused spirits animated them. The priest dealt with the people in the other tent. One thing was clear, they were taken by Inamus hinting at a supreme power. Given their shamanistic outlook they saw this divine being as the ultimate spiritual guide and residing power. Even the odd soldier sought an explanation. Astram assured them that they were not interested in temporal power. The days of the priestesses were numbered. In days, weeks, months at most. The immanence of the supreme god having through his concern for them shown the future if they remained set in their ways. Messengers were sent out to inform both Jaffir and Norhat through the priests of the intent of their message. Lest their informers twist it to mould it into something it was not. It was spiritual in content, no more, no less.

They were not here to abuse their power but to share it. Of course the three of them realised there would always be some resistance. That was normal. To deny the gods as supreme arbiters was one thing they avoided so merely stating the gods were withdrawing was an interpretation. They were not against them, just that the gods were not for them anymore. So the priests would fill the vacuum. Simple really. The vision could not have come at a better time.

Towards evening Kahl made his appearance. Given he too wore black Inamus busy talking to the assembled missed him, yet Oenah and Astram could not believe Kahl

would be interested. Unless his presence was there to gather information. They knew he had been taken to see Norhat who had spoken with him. They were more concerned with the disposal of Jea, Fehz and Efham. The culprits were long gone, back into the desert with their people, amply rewarded. Even the murder of the teacher got Norhat nowhere. There were simply no witnesses. Thus his reasoned, balanced speech should arouse no suspicion. So Kahl ventured amongst them. Must be feeling certain of himself. That Nada had rid them of Verhat was in itself a sign of their god disposing of possible opposition. For Verhat claimed the power itself as an end, not the god who created it. Kahl was like his shadow, quiet, reserved, keeping his true thoughts to himself. The priests who had been in attendance were there to keep an eye on him.

Kahl shown in as the sun was setting. Not to be ignored. In fact Astram was already thinking of how to deal with him. He would let Inamus do the talking as they agreed. Oenah coming from a wealthy family was their connection to Jaffir's city, Astram got things done, Inamus their spokesman. The public face of their priesthood.

Kahl was announced in respectful tones. Astram was at the kitchen they had set up for the evening feast where all were invited. The sheep slaughtered roasting slowly in an earthen oven since morning. Copious barrels of wine for special guests, beer for the rest. A jovial atmosphere for such a serious event. Now and then a priest would come in and pass some message as to who was amendable, who was cautious, who were the sceptics, who stuck to their beliefs. Inamus was getting the picture of how they reacted to their message.

Astram spoke to one of the women at the kitchen. She was a herbalist and druggist. They needed to know what Kahl knew. Verhat's prodigy, one imbued with knowledge he pretended to not be of in possession of. Someone could have put a spell on him, closed his mind for good reason. They needed to know what Kahl knew and the last recourse was the use of hallucinogenic drugs. The shamans used mushrooms to attain a state of divinity and walk with their spirits. Drugs did delude but they had their uses. The immaculate could not be denied. Nor would they be denied Kahl's inner mysteries. Unless he was being kept in check by other powers. If so who were they? Someone who could affect a mind so directly was worth knowing about. He was satisfied that the woman understood what he required. He did not return to the main tent. He was content to mingle with the multitude around him who were squatting on their haunches awaiting the free meal. Beer was already being served, a cheery air enjoyed by all. Some brought out their primitive stringed instruments and played various tunes of love, of

love denied, of love absent, of longing for love, of their heroic deeds of the past and deeds to come.

Inside the tent Inamus greeted Kahl impressed that he sought them out. Oenah sat there on his haunches relaxed amongst the colourful embroidered cushions strewn over the hard earth.

Kahl felt a little uncomfortable. He was not here for the message, did not believe a word of what had been said, but showed enough respect because he was waiting to be approached by a shaman, a spiritual guide to unlock his mind. Whilst among the crowd no one paid any particular attention to him. So if they were not interested maybe these leaders were. Kahl certainly did not feel as one with the people. Maybe he was from some ancient family yet even if they did exist they showed no interest in him. He really needed to know what was going on. He considered he might have transgressed and been ostracised for what he had done. The affinity with Verhat had something to do with it. Even then he only was vaguely aware of what Verhat said to him. An overriding power in the universe and that one's inner spirit when aligned would be as one with it. Then all of life's mysteries, even the great passing back to the stars, revealed. If he remembered correctly. As such Inamus preaching of a supreme god of gods was not that far removed. Accept Verhat denied the gods, or thought them of no consequences. More like stumbling blocks, diversions. So if this supreme god was all, then so must be its power. Maybe one of the priest's leaders knew what he sought. As such Kahl decided to be circumspect.

Inamus's coat, black was cleverly interwoven with threads of yellow, orange and red. Like thin flames here and there almost touching each other but not quite. Oenah wearing a cloak of light blue looking like one of the priestesses of the god of air.

"So Kahl, welcome indeed an honour." Inamus extended an open arm for him to make himself comfortable amongst the cushions. Oenah made some room, his smooth face betraying the city life. "My condolence at the loss of your friend." Inamus added thoughtfully.

"Thank you. Friend might be too strong a word. I knew him but not for long. The gods removed him. Fate. Destiny."

Inamus was smart enough not to counter the fact that Kahl still believed in the gods. Kahl coming here was a portent he was thankful for.

"Verhat did have a dark vision, an occult vision." Inamus hinted.

"That he did."

"One you shared."

"One that interested me."

Inamus rang a bell. A priest entered.

"What would you like? Wine? Beer? Tea?"

"Wine."

"So it shall be." Then turning to the priest. "Three pitchers please." The priest bowed and left. Turning behind him Inamus managed to pick up a low table, helped by Oenah and moved it in front of them. Bowls of fruit and nuts. Small pieces of flat dried bread. They waited for Kahl as their guest to begin. So he nibbled some dates with a small piece of flat bread.

Moments later the priest returned with three pitchers of cool wine with three goblets each in front of them.

"We shall serve ourselves." Oenah said. The priest bowed and left. The wine Kahl tasted was mixed with herbs and spices. A little bitter sweet, smooth with a lingering roughness but tasty enough. He sipped his wine and ate some more mixed nuts.

"Is this a social visit?" Inamur asked pleasantly.

"In a way. The gods have cut me loose. So I seek signs, guidance..."

"Well you have come to the right place." But he was not going to ask what he thought of his little speech.

"Yes." Kahl said thoughtfully.

"You know Verhat's passing will go unpunished. Maybe even Ephan's."

"If that is the gods will that they were to pass on, who can deny them?"

"Indeed. Who can deny them?" Inamus hinted.

"You seem to have an answer."

"Not my answer Kahl. Divinely inspired."

"You are lucky then." Reflecting on his abandonment.

"It can come to us all. You heard me speak of the need to align one's soul."

"I have that. Not unlike Verhat."

"Yes, Verhat, and Ephan. They had one thing in common."

"They did?" he sipped some more wine as did Oenah.

"Soulless."

"Just as I feel. Maybe we, as individuals are the future."

Inamus tried not to be surprised at the casual way in which Kahl exclaimed his position. It was not one he had expected. What if Kahl was right?

A priest asked to be allowed to pass a message. Inamus nodded. The priest whispered that Kahl's wine was drugged. Not in so many words, saying obliquely that the

wine was special, more herbs and spices reserved for special guests. Inamus understood without betraying anything. He merely nodded then turned to Kahl and said that he had to apologize but that was the best wine they had.

"Piquant." Kahl agreed. "I've had much worse."

"Haven't we all." Oenah allowed himself a smile.

"So you are the future then?"

"I said this is what I feel. It is not the truth. I may be mistaken. Yet the gods make us in many different ways. This is just one of them."

"Like a rock in flowing waters." Oenah suggested.

"Not bad. To demark the true spiritual state of those who are blessed."

"I see your logic Kahl." Inamus agreed. "Did you experience the vision?"

"Oh yes."

They looked at him expectantly.

"Rather terrible."

"Soulless?"

"Lifeless."

"A premonition?"

"Definitely."

"Unless...?" Inamus asked.

"Unless what?"

"We align ourselves."

"Maybe. There are many futures in the realm of the gods. It is our actions that decide which one's come into being." Kahl's words tumbled out. He certainly had not thought of it. His mind felt wonderfully warm, smoother, smarter.

"How can there be many futures when there is only one present and one past Kahl?" Inamus astounded at Kahl's revelation.

"Don't ask me. It must have been a god's insight." he felt the warmth spread to his stomach, slowing radiating through him. Immensely satisfied.

"Perhaps the divine mind is really within you." Oenah suggested. His face looked lustrous in the half gloom of the tent.

"Funny way of showing it, voiding me."

"A vessel in preparation." Inamus ventured.

Kahl thought on that. He could be right. Though exactly what he was being prepared for was beyond his ken.

"Efhan tried to prepare the way and was passed on. Verhat was onto something, passed on. There seems to be a pattern here." In fact he saw patterns in the cushions, the inlaid glass glowing like huge silver stars. Oenah's threads shimmered lambent flames. His perception acute. He could discern the voices outside, then they receded and he was in the tent again.

"Yes." Inamus concurred.

"Some god is moving against them. Maybe a powerful shaman." Kahl's brain thought for him. He knew it was one of these three or perhaps a misguided priest. Though none were spiritually attuned the way Inamus hinted at. Verhat undone by Nada and she was no believer in the priests message. Or...? He decided to let his racing mind void Nada's involvement. The king was taking no action. Which led back to why now? Something was going on. He felt it in the very air, pregnant with unspoken thoughts. Inamus's mind filling the space or Oeneah or both. Powerful men but not as powerful as he was. What he was feeling now was not vacancy, but an immense vastness. Yes he was a vessel, not awaiting fulfilment but already filled. With the essence Verhat had spoken of. A totality within him, beyond thoughts, beyond words, beyond expression. Vast and pure, uncontaminated by...the words of the priests...the images of the gods...what gods?...this was much bigger than them. Verhat was right after all. No wonder they had been attracted to each other.

"Nice wine." Kahl felt like grinning knowing what he knew. Which was not much, it was more a sensation, complete, unformed, filled with potential. He felt the warmth now ebbing with his breath, radiating outwards pushing their unspoken thoughts back into their heads. Comfortable, embracing, fulfilling, overflowing. He looked at Oenah. His eyes hid something, a secret as he looked away taking some nuts in his hands. Pure diversion. Hiding something. Kahl felt Inamus's presence, a different person entirely. Smart, astute, a vessel like himself but filled with his message that swam in his head. Very in control, his real self removed from what he wished to project. His eyes blank dark orbs, flat, dimensionless.

Kahl was beginning to feel hot. His clothes strangely light. A shield keeping the heat in, which was now pouring out of his head. Shadows moved amongst them, spirits of the dead from the stars. Or dead gods banished, the ancient forces still amongst them. Or the void brimming within him. His skull, his mind so open it was more than emptiness, it was a substantial field of immense potentialities. He tried to remember what he had said but his thoughts would not form into any coherent pattern.

Inamus and Oenah jumped in and out between the shadows quivering around

them. The cushions abstract patterns, the silver orbs radiant with energy. In a field of stars come down to him, surrounding him. On the verge of some great release. The depth within overwhelming, dazzling, resplendent on the brink of completion. He was about to find out what was locked out. No not locked out, removed. Removed? By Verhat? Verhat. Betrayed. Instead this vastness full of unrealised promise. They could keep their gods, they could keep this god of gods. All illusions, created and designed by minds because they would not or could not take in the truth; that all this was so irrelevant to what was both out there and within them all. Twisted deceit, malformed intelligence, tainted souls.

Kahl's mind, his soul, his divinenes pouring out of him. That would teach them. His breath was slowing, taking longer to breathe in and out. The tent and its two occupants heaving with his breath, getting smaller, more distant with every long and longer breath. Time slowed as Kahl experienced the expanding vastness. They had spoken of aligning the soul or was that Verhat? No matter. It was true and he knew he had the power. Not as some simple mindlessness insisting on answers that plainly were not there, did not exist, never had and never would.

He seemed to have forgotten to breathe, not that it mattered. As time slowed the darkness began to coalesce around him like mist materializing out of nowhere. Or had it been there all the time? Irrelevant. An intelligence. No, don't tell me the priests were right, Inamus's message containing the shadow of truth dimly grasped by a limited mind?

An intelligence with intent. Not godlike but extremely powerful. Surely not. Residing in space? Grena had spoken of a group mind. This entity was far more than that. It had it's own design, a pattern that was slowly emerging when Kahl stopped breathing. In that final moment the last remnant energy of his soul transpired towards a glowing dim radiance in the galaxy. He was with the passed on, nearer to the gods who were uncannily absent. Instead a monstrous black star and near it a glowing pale lilac misty orb, patterns sparkling and forming in quick succession on it's outer shell, a shell that was expanding with lightning rapidity towards him, through space leaving it's design upon the essence of the universe. The pattern filled him. Enmeshed, entrapped, drowning in it's invisible substance, expiring his life but not without extracting his essence which fractured. Absorbed into its heaving cosmic pattern, almost recognisable, near enough to grasp yet beyond reach.

Inamus did not think Kahl would pass out. The dosage in the wine may have been too strong. Astram thought this was the opportunity to get into Kahl's head. Oenah

closest shook Kahl. He was out cold. His legs at an odd angle, certainly not comfortable. He called out to Kahl but there was no answer. It was then he noticed Kahl was not breathing. He stared at the prostrate body.

Inamus sensing the worst rose reluctantly, the wine was making him feel good and he was in no mood for his state of happiness to be interfered with. What they both suspected had come to pass.

Kahl was dead.

"It seems our guest is beyond us." Oenah said.

"Pity. We were getting somewhere. Better call the guards. They won't be able to pin this one on us. The gods do move in mysterious ways."

"The gods Inamus?" Oenah queried.

"Well he did still believe in them." Inamus said indifferently.

"Maybe some shaman can trace his soul's journey."

"Not easily done Oenah. No one knows who they are."

"And none of our priests..."

"Alas they are not ready...yet."

"Maybe. Get a priest to call the guards over. Full burial rites."

"Kahl was a mystery." Astrah, the eldest of the three said as the priests gathered around the cemetery outside the northern gate. In the distance towering impenetrable reddish brown mountains radiant in the morning sun. Some curious onlookers stood back from the dug out grave. Small poles with symbolic pennants to identify those resting in the earth. Once the pennants had finally succumbed to the elements they were then forgotten for they were amongst the stars and with their god if they were worthy of that holy privilege. As Kahl had no god to call his own, no priestesses from the temple were expected. Then when an older white robed priestess appeared, walking up to the grave site Astrah, Oenah and Inamu were surprised.

The priests had finished digging prior their arrival. A little hung over from last night's festivities. It was not that unusual for someone to die from either drinking too much or in Kahl's case being poisoned by the mushrooms. Tricky, not recommended by the priests, but for other reasons than just their dubious effects.

"Yes." Grena said as she saw Kahl in a makeshift shroud. "He had sought solace and I was found wanting. I had no idea his time had come." Curious if either of these three strangers, there were so many about now had been his friends or companions. Or his terminators. She could tell they were not from the tribes, their skin, even Astrah's

though old and lined was smooth. Oenah and Inamus introduced themselves out of deference to her position.

"Only the great divinity knows." Oenah, a little corpulent said. No matter, in death all are equal. It was what happened after the passing on which was important. The priests were vague claiming the soul returned to the hidden kingdom that was about to manifest itself in their paradise. She felt like countering this statement but let it go. This was no time to get theological. Let them believe what they wanted. It was all in the hands of the gods anyway.

The priests were ready to lower the body of Kahl into the grave, standing next to the mound of earth excavated at first light. Ready no doubt to claim his soul as belonging to their god of gods.

"Shall we?" Inamu asked wanting to get the burial over with. He was slightly annoyed with Astram for having misjudged the dosage unless he wanted to be rid of Kahl and whatever secret he now took to his grave.

The priests were about to start. Instead Grena was intoning Urus and Bahlir along with Rena to accept his travelling soul. Then she nodded at the three men and left. They watched her leave in silence.

"Proceed." Inamu said to the priests.

They invoked the holy of holies, asking him to receive the recently departed, then the group said in unison "So be it." The priests started to shovel the earth back into the gaping hole and merely placed a pole to mark Kahl's gravesite, the pennant hanging limp. A sign of his soul's state. Listless.

They walked in silence back to their tent, each in his own thoughts. Inamu dissatisfied with not being able to ascertain why Kahl's mind was so vacant. Not even his family known to him. Had he been a waiting vessel ready to be filled with the divine grace of their coming god? If so why then see him as a threat unless Astram wanted to be the one, the messenger of the supreme deity. Inamu had no such designs. He was perfectly content with being the spokesperson of the priests with Oenah the facilitator between the priests and the people whilst Astram took it upon himself, coming from an ancient family which meant connections to the court to slowly spread the divine message there. First Verhat and now Kahl. Both occultists. They might have been useful. But apparently that was not to be.

"He could have disturbed the divine manifestation." Astram said at last.

"That powerful?" Oenah genuinely surprised.

"Yes. And using our power for his own ends."

"Which was?" Inamus asked.

"Total control. No gods or god, just himself. Usurping us."

"Really." Inamus said disbelieving Astram's explanation. "How?"

"Kahl was the vessel, Verhat his own focal point. Drawing down the power of the universe into themselves. Then whoever they met would be drawn into their orbit. They would have succeeded too. Not by converting the masses as we intend, but influencing the elite, the families, countering our objectives."

Astram might be right Inamus conceded. Oenah was suitably impressed. But then he did have the tendency to agree with just about anything. A good diplomat but one easily swayed, or appearing so. Useful especially now. For soon the revelation would occur. Many would misconstrue it clinging to their old, useless, spiritually depleted beliefs. Oenah would smoothen the way, encouraging the priests in their work of converting the families and most importantly Kahleff. Kahleff. Maybe he would be next Inamus thought with relish. If their god decreed this they could move in. Jaffir of course had to be recognised as the final arbiter so leaving him alone was important. If the people accepted the divine kingdom in this paradise then there was not much Jaffir could do about it.

Things were moving in the right direction.

When they reached the camp they were surprised to see one of Norhat's senior ranking officers waiting outside their tent. He rose having been offered tea whilst waiting their return. A strong man in his prime, unshielded wearing merely his riding clothes.

"I am Haeram come here by Norhat's orders."

"An honour and a privilege to meet you Haeram." Oenah replied pleasantly. They had nothing to hide. Astram was cautious, Inamus curious.

"Shall we go inside?" Oenah suggested.

They made themselves comfortable inside the tent rearranging the colourful ground cushions to suit themselves.

"Would you like some wine?" Oenah enquired.

"Thank you no. The tea was adequate."

They sat in a semicircle facing Haeram.

"Since the arrival of the priests there have been too many deaths." He came out with it. They were not fazed. "The coincidences are obvious." Keeping his voice even, his statement factual.

"They are...signs." Oenah replied.

"Signs." Haeram repeated. Too easy an explanation for him.

"Consider. Have you ever met Eghan?" Inamus asked.

"No."

"Denying the gods. What a person believes is between themselves and the...divine realm." Inamus was not going to mention their belief. Now was not the time to even drop a hint in that direction. "But Eghan was leading his students astray with his sophistry. That the mind could answer all questions it posed. It lead to aposty and atheism. The gods sent the first sign with the passing of the teacher. In a way they recalled his soul. Eghan did not interpret the true meaning of that. Thus he and his cohorts paid the ultimate price, or sacrifice depending on your view." Oenah replied smoothly. "As to Verhat, well something was going on at Castari's camp. He probably posed a threat. And in case you're wondering what those priests were doing with an escort it was none of our doing. They were certainly not the priests you see here. They could have been, most probably were from the city. We have no knowledge of them. As for Kahl's sudden demise that was most likely accidental poisoning. He had ingested the divine mushroom. Maybe the brew was too strong, maybe they were off. If others imbibed them they are still alive Haeram."

Norhat had sent Haeram because his scouts had had no success in recruiting any shaman with the outer roving tribes and clans. They were not interested in this Kahl. If he was of no consequence then maybe Norhat reasoned with Haeram Kahl was not. Thus Norhat suggested, find out what you can from the camp. Talk to either Inamus, Oenah or Astram. So here he was fulfilling his duty.

"Hm." Haeram could not argue with that. He was a soldier not a priest.

"Verhat and Kahl were exceptionally different."

"How so?"

"Occultists."

Haeram was only vaguely familiar with that expression.

"They both, we think," Oenah suggested cautiously "were going to be powers unto themselves. A divine transgression. Wanting to become like gods. Now that is not so unnatural in itself. But taking on such an undertaking obviously has risks." He let the officer draw his own conclusion.

"Those who wish to disturb the realm of the divine invoke divine wrath." Astrah added for good measure.

"So as I understand it, these six deaths were ordained."

"Tempting destiny at the least." Oenah explained.

"Given we are surrounded by the divine all our actions do have an effect. Those who overstep their limitations attract a reaction. In a way all six, in their own way must have transgressed in what they dealt with."

"So the priests had nothing to do with this." Haeram was not about to accuse these three ringleaders of being complicit. That would only alert them. Norhat wanted information and accusing people of murder had certain unpredictable and predictable consequences. Going to ground was the last thing Norhat wanted. Treat them with circumspection. Let them think suspicion rested with the priests. Then their influence might be curtailed. But Norhat warned, one more suspicious death, he had allowed himself a frosty smile, then I shall move against them. Remove them from Orst. Haeram understood his orders.

"I certainly hope not." Inamus not wishing to be too cocksure. "But let's say we have some rogues amongst us. And there are some who might fit that description, how would they organise it? We are strangers here. Who would we contact to do this foul deed? There are, as yet, no witnesses. So either it is divine intervention, or it was planned. If planned it needs people. To be informed, organised, paid. Maybe one of the tribe's were affronted or that of a priestess. Maybe they prayed to their gods to intervene. To us," Inamus paused, "it is indeed a mystery."

"For a religion which promises equality and harmony there seems to be a lot of disharmony about." Haeram countered.

"The disharmony you speak of is in the realm of the divine. The disturbance manifest in this paradise. A sign of troubles indeed." Astram admitted.

"And our duty is to keep the peace. Those deliberately disturbing it will be punished to the full extent of the law." Haeram reminded them.

"The gods brought to account?" Astram asked.

"No just the perpetrators."

"Even if they were divinely moved?"

"The gods do not resort to murder. They take those whose time has come, for whatever reason by illness, in their sleep, an accident. Sometimes, one has to admit, a drunken brawl may lead to unfortunate consequences. But that is in the heat of the moment when some god's intent is overstepped, I agree. But cold blooded murder is something else."

"As we said," Oenah replied, "the divine moves in mysterious ways. Even I would not presume to fully comprehend its true intent."

"Keep your priests in line. If they even dare to question people's true beliefs then that could be seen as causing conflict."

"Rest assured Haeram the priests only converse with those who come to them. We let the divine guide each soul, we do not guide." Inamus explained.

They knew they were on notice. So far they had gotten away with it. But it did not matter now. The thorns removed, the soulless infestation contained, the threat to their mission obviated. Ephan's school in jeopardy, Verhat and Kahl no more. It was enough for the moment.

"That'd better be the case."

"Rest assured the last thing we want is to disturb the serenity of the people. It would serve no purpose." Oenah deflected the warning.

Haeram rose. "Thank you for your time and your candidness."

"It was an honour to have you visit us." Oenah thanking Haeram.

The three of them escorted Norhat's emissary back out of the tent. There were still many tribesmen milling around with yesterday's roasted meat plentiful today. There was even some beer and wine left. A scene of merriment. Just as they intended.

"I think it is time for our kindred brothers to make their preparations." Astran said after Norhat's inquisitive visitor had left.

"You think he suspects?" Oenah frowned.

"They always suspect. They are military. Six people in extreme circumstances passed on. You know yourself there has not been something like this," for even Inamus could not bring himself to use the word 'murder', "for generations. The penalty, banishment, loss of goods or years of penance at some temple as a mere servant is enough to make anyone reluctant to resort to such extreme measures."

"Don't forget the military." Astram added for good measure.

"Yes, to perpetually serve in the army at the lowest rank for decades if so decreed. I hear they hate rogues and bandits with barely subdued distaste." Oenah said.

"And make them pay for it. Cleaning out stables, waxing bridles, polishing, being washers, all with the intent to demean them at every possible moment. Then locked in their cells away from the others. Outcasts amongst them."

"Fed left overs, eating gruel, drinking foul water..."

"To waste them away, until disease strikes...."

"Locked up, isolated to die a miserable death." Astram smiled darkly. "Now what about this eye of Bahlir."

"Yes. Castari has it now."

"Inamus, you think Kahleff knows what that means?"

"Oh yes. Jaffir's archimage. Inducted into the secrets of the past."

"Are they coming back? This a sign?"

"A sign Oenah. But if I were them I would not make my coming known. So it is not the race who destroyed the unbelievers."

"It could be their eye. See where we are, what we are, what we have become in the millennia since the ancestors were destroyed."

"We have kept to the path. We have not strayed. Even the priestesses, deluded into thinking their puny gods are of divine worth have not deviated in that regard. The eye is a puzzle indeed. A warning or..."

"Astram. We should talk with the king." Oenah interrupted. They knew the secret lore for they themselves, were inductees, sworn to secrecy. Now with the source of that lore covered in the rubble burying the temple the link to the past was severed. Removing the fallen mountainside would only attract attention. They knew this. Astram did not think it was the gods doing. If so it was too little too late. Whatever secret writings were with Kahleff was but a fraction of the historical truth. Not that it mattered. Their god was coming, a new millennial age on the cusp. The signs everywhere in the form of more priests, more converts giving their soul to the great coming.

"Reveal to him what has been revealed to us?" Oenah queried.

"Perhaps." Inamus looked at Astram. Astram was their 'seer'. Inamus knew his inner shortcomings. A bit like Kahl he thought with the exception that he too had been shown the way whereas Kahl had been taken out of the outer realm where their god dwelt. Verhat aware of the impending power. It was good Nada had finished him off. He could have united the shamans into a potent force twisting the divine revelation into something else entirely. Yes Astram thought it was time the king knew the truth.

Oenah was thus chosen to speak to Jaffir. He rode furiously changing horses at relay stations. Passing lumbering convoys of merchant carts bringing in the wheat and barley, casks of wine, herds of sheep and cattle, horses for the wealthy. Around him the fields fallow under a pink sky. Dust storms in the distance often blotting out the sun, at night the stars hidden. The gods he smiled were retreating leaving the field open for their god, the ultimate power and final arbiter of all in the universe. It felt good to be in touch with the immaculate, the divine, to be chosen, to have the strength and knowledge of the ultimate. Nothing could stop the cosmic manifestation.

The king's city was a hive of activity. With the last of the grain arriving deals were made, contracts signed for the next season, advance orders placed. Jaffir of course was well stocked. His palace a citadel, in the centre of the city, of the kingdom. Oenah saw the priests everywhere. More converts by the day. The temple's smouldering braziers still pretended to have some sort of hold on this world but not for much longer. Soon these places would be their houses of worship. Out with the old in with the new. Oenah felt the energy crackling in the air. Not many soldiers about. Norhat was gathering his forces at Orst. It was all working out.

Before Oenah could see Jaffir he had to go through Kahleff. Where he stood was a mystery. Shamanistically inclined, accepting the gods as more or less given, not unlike Verhat it occurred to Oenah as he rode slowly down the main thoroughfare that the similarities were striking. Maybe Kahleff had his own plan. Well whatever it was it would be of no consequence.

He found an inn for the night after returning his horse at a depot then sent word to see both king and his spiritual adviser. The nature of the message merely stating it concerned the peace of the kingdom. Nothing too overt. Messengers might pretend to be illiterate but some could read. Even open the sealed messages. If only to inform themselves, become dealers in information. What merchants were up to, mainly manipulating the market, now of course what the priests were up to, who ran the various cells, their methods of communication, the routes of caravans, what they carried with them, the tribes, bandit activity and sometimes military manoeuvres. Of course if they were caught, fingered, informed on they ended up as servants of the lowest rank to be auctioned off.

Kahleff welcomed Oenah with due curtesy and respect. His message lying opened at his writing desk in his apartments at the palace. A sign the king allowed him access even when messages were addressed to his lord. Or the king was already acquainted with its content.

Kahleff did not offer him any wine, just tea. Obviously a short interview. They discussed the situation at Orst in general terms. Kahleff after their true intent. He used the term 'brethren' which was not too far off the mark.

"I might as well come out with it." Oenah finally admitted. "In a way, Astram, Inamus and myself are what you might call both executive and spiritual guides."

Kahleff merely looked at him. No revelation there. He was informed both by his spies, sometimes even Jaffir's and at rarer moments Norhat's. Kahleff was more than the

king's spiritual adviser he was also his spymaster. For whilst the king inherited the system of gathering intelligence Kahleff worked hard to expand it. He trusted no one. Now with the priests spreading their message all were suspect. Many seemed amenable to their influence, uplifting the low, the fallen, the misguided who if they cleansed their souls, their past mistakes, their blinded faith, their deviously acquired wealth, would all be forgiven.

Kahleff prior meeting with Oenah had spoken with Gheros, the king's administrator. Old, the man well beyond his prime, but knowledgeable in the way a kingdom was run spoke of his concerns if the priests were to rule over the people. If all were equal, how would society function? What would become of the merchants? How would they be able to feed the cities? If the high were brought low, what role of the priestesses? Gheros was concerned with the functional aspect of the kingdom's lifelines. The priests hinted the vast estates would belong to the people. Wealth a sign of greed not business acumen. Then there was the military. Their role diminished for if peace did reign supreme, what to do with the thousands of disbanded soldiers? Gheros feared anarchy. Kahleff concurred. They both made this known to the king. So what to do with the priests? They seemed to multiply daily. So when Oenah sent himself as messenger the king's highest advisers were informed how to deal with him. 'Find out by any means' Jaffir ordered what their true intent was. Jaffir of course knew Norhat was making his own enquiries. The disposal of Eghan and the others a challenge to his rule. If the priests were behind it he would act with the ruthlessness necessary to contain them at a minimum, remove them if need be, send them out into the desert where they could do no harm. The other alternative was to infiltrate them, take over, remove their leaders if they proved recalcitrant or dispose of them if need be.

That suited Kahleff and calmed Gheros. And now Oenah was at the centre in their grasp. Then the king surprised them with an idea. He announced a public feast for the citizens. Three days of celebration and rejoicing. Kahleff asked the reason and Jaffir answered, 'pure benevolence. That I think of their welfare. The priests have done this at Orst, so we do it here. Show them our goodwill. Strengthen their belief in us and thus the gods. The priests whilst promising them a kingdom can only do this by taking everything away from them. The ruling families are suspicious enough as it is, so if word got out that even those with nothing were there to serve the priests, basically becoming their servants then we can nip this insidiousness in the bud.'

Khalef returned to his opulent guest.

"Your candidness is appreciated Oenah. So tell me, what of the peace you mention."

"To assure the king we mean what we say. Eternal peace, social harmony. Hope for all, divine blessings. With a reduced military manpower freed up to till the soil, or have more craftsmen. With more goods available it is only natural the prices will come down. That will benefit the masses. More wealth distribution. With more wealth, more can be gainfully employed. More irrigation projects, the potential is limitless."

"Fine words indeed Oenah. You think the merchants will stand idly by as their wealth is reduced? Or the military give up their honourable calling? What of the outer tribes and clans? Seeing so much temptation around them you think they will stand casually by?"

"They are welcome to join our happy communities."

"Tilling the soil?" Kahleff replied in disbelief.

"No. With more wealth, the new farmers will be buying more beasts of burden from them. They gain as well. If they were to destroy or rob them then how can they profit from them?"

Kahleff had to admit the idea made some sense.

"What of the temples, the priestesses, the gods?"

Crunch time.

"They will not be touched. As people see the truth the temples will become public houses of worship."

"Manned by your priests."

Oenah remained silent. Of course.

"And what of the king?" meaning by default himself Oenah smiled to himself.

"The king is the temporal ruler of the kingdom. We guide his subjects to the true spirituality within us. Keeping the peace by the will of the divine. With the cleansing of souls, their inner essence aligned to the cosmic will. Thus the king's rule will be easier. The people will be content, discord and strife will vanish, complete harmony all around."

"And what if the king remains true to the gods?" again thinking of himself Oenah realised.

"The king is the king. If that is how the divine will guides him, so be it." Oenah answered easily.

Kahleff understood just how far they had thought this through. It was a tempting vision.

"You think the gods will simply stand by?"

"The gods are a manifestation. They were the initial guides to open one's soul to the cosmic both out there and within us. Messengers of the divine."

"But not the divine itself."

"Of the divine, not separate Kahleff. Messengers preparing the way."

"The gods never spoke of a greater power whom they serve. Accept for the creators, the original gods who made this universe. If what you say is true surely you can see messages, visions as you claim that would have been revealed."

"But they have Kahleff."

"Oh?" he arched his brows.

"The priests. They are the messengers. If the gods did not wish them amongst us then they would not be amongst us."

"What if they are misguided, deluded."

Now Oenah looked surprised.

"What if this power you claim is supreme in the universe, is, let's say for the moment there. But what if it was something else?"

"Something else?"

"Yes Oenah, something else." For Kahleff was thinking of the ancient lore.

"It is what it is." He answered lamely. His tea was cold.

"And I say it is not."

"What then?" turn the tables.

"An alien power. You know of the secret books, the gate at the buried temple. Our past civilisation utterly destroyed."

"They wanted to usurp the gods. We only do his will. We serve, Kahleff." That should do it.

"So your story goes Oenah. There is much you do not know."

"The great divine mind will enlighten."

"The great mind as you say has designs of its own."

"Spiritual revelation."

"The promise. What if it is a trap." Kahleff stated.

"To what aim?" answer that one.

"To usurp the gods of course. A rogue god if you will." Kahleff's brain racing ahead of itself.

"That's an impossibility. Gods are supreme, the unitary god behind them. Nothing rogue about that. If it were as you suggest then surely there would be discord. Evil signs, dangerous revelations, discordant portents, nature in chaos, people at odds with each other..."

"And the murder of six people are not signs of discord? Or the priests inherent attitude at odds with everything we have believed since the beginning of our world?"

"The gods move in mysterious ways."

"Or your god disposing of those who know the truth perhaps?"

"Then punish the guilty." Oenah knew even the king's informants would never find the culprits. The only one who was seen to remove Verhat, Nada was pardoned. Castari having met the king was not even discomfited by that unfortunate event. What Kahleff hinted at sounded dangerous indeed. A rogue god. Was such a thing possible? The idea annoyed him. Mere sophistry.

"We shall in good time." Kahleff countered.

This was not good. Did he or Jaffir know then? Letting the culprits fly to see where they would lead them to. The tribes would be held responsible for the deed. If they said the priests were responsible, well, who would believe a murderer to speak the truth. All six were apostates. Retribution was divine. Not punished. Chastised at worst. They were in the clear. It might also be time to move their timetable forward.

"I think it is time to explain yourself to the king." This interview was over.

Oenah nodded.

The king was feasting with his court in front of the temple of the sun goddess Nurdass. Long trestle tables groaned with roasted meats, suckling pigs, marinated fish, spiced vegetables, barrels of wine and beer. The tables stretched down the main thoroughfare. Candles on the tables and burning torches sending up sparks into the still night. The revellers were noisy, boisterous, exuberant, content. Behind the towering edifice of the temple glowing rosily from the many flames around it. Minstrels played jolly tunes, people caroused, sang, danced, drank more, passed out even though it was only early evening. Servants on duty moved those overcome by drink to one side making room for others less inebriated. The city in merry uproar.

At the high table, the only one with a richly embroidered red cloth, golden threads woven through it designating it to Nurdass, Jaffir was flanked by Nurdass to his left Kahleff to his right, Oenah next to him. Alongside Nurdass the king's military governor Stroem. Jaffir had plenty of visitors to thank him for the feast. Not just the merchants who supplied most of the fare though Jaffir contributed from his warehouse as well, feeling generous. If the priests could do it they would on a royal scale. At the lower table were his court advisors, his astronomer Arbour, servant and messenger of Bahlir. Another powerful advisor in the king's entourage. And Oenah noted an absence of priests. The

feast in honour of the gods. A smart move. Soldiers were stationed all around to make sure they did not get even near a table. Some of course discarded their garb and came as citizens. Oenah's eyes and ears. Nor stupid enough to go anywhere near him.

A tent was set up behind the high table. Guards posted around it. Hours later, stuffed with food, satiated with wine Jaffir rose as did the table out of curtesy. Some wobbled on their feet, others had to be nudged not having seen the king rise. The king stood, resplendent in his wine and food stained blue shirt, glittering with stars and the sun in honour of Nurdass. A hush fell over the gathered multitude. The minstrels stopped playing.

Jaffir thanked them for their attendance. A series of huzzah's were shouted in return cheering the king, the kingdom, the gods. With no prompting Oenah found to his surprise. Take the priests away and the old ways came through as strong as ever. Maybe stronger measures were needed to convince the people of his god's pleasure or displeasure. A statement, an act would be necessary and quickly at that.

Jaffir waited for the adulation to cease. It took a while. He spoke with remarkable soberness. The kingdom was secure, the harvest in, winter approaching but no one would be found wanting. The granaries full. Those in need could apply for relief and another round of huzzah's filled the air. Then he told them to continue their revelry. Matters of state Jaffir intoned, the burden of high office never ceased. Reminding all Jaffir was doing his duty even when his subjects could enjoy their leisure. Another chorus of cheers rose all around. Oenah did his best to wish the king well. He had to.

As Jaffir made his way to the tent behind him he motioned for Oenah to accompany him. Inside a table, sweetmeats, dried food, cheese, bread and wine awaited them. Along with Oenah came Kahleff, then Stroem and Arbour the court astronomer.

They waited for Jaffir to seat himself at the high chair, then took their places around the square table.

"Please serve yourselves. Enjoy the offerings of the gods."

They thanked Jaffir and sat, pouring the tasty white wine into clay goblets. Rare glass was too precious for a night of feasting. Accidents will happen.

They sat and waited courteously. The torches burnt steadily, the smoke escaping through an opening at a small apex above them. Two soldiers came in which surprised Oenah. It did not bode well. Oenah felt trapped but he put on a brave face. At worst he would be detained just as Kahl had been. The king had his own pitcher of wine, the others shared theirs. Having filled their goblets they waited for the king to take his first

drink which he did. Relieved they thanked their host once more and drank his health, then one to Nurdass and finally to the peace and prosperity of the kingdom.

"It seems Oenah you have plans for my kingdom." Jaffir looked sober even though in the light of the torches his face was slightly flushed. Kahleff no doubt making the king acquainted with his interview.

"To bring peace and prosperity king." Stroem was watching him with suspicion, Arbour with interest.

"No doubt that is what you say. Disband the army, turn swords into ploughshares, enrich all, peace and goodwill."

"Yes my liege."

"So you don't think we are doing enough?" the threat implacable. Oenah nor Agram or Inamus had even considered this retort. Oenah thought by improving the kingdom he would have the king, and Gheros on side. If not Kahleff then maybe Arbour who really was more a second to Kahleff's advice.

"Your majesty can only work with what he has. We offer more for his majesty. With more wealth created, your subjects will love you, as I do..."

"You only love the power your priests will bring you, to rule over my subjects by filling their heads with this delusional hallucination."

The silence frosty.

"Your lands will expand my lord, your realm even greater." Who could argue with that?

"At the beck and call of your carrion ravens."

The priests.

"Who seem to attract the dregs, the miscreants, the wastrels, the affronted and jealous lusting after easy gotten gains. In a way your kind have been of service. At least we now know who they are."

What had occurred? What had turned the king's mind? Even Kahleff had come to understand this momentous change was written in the stars. Ah thus the presence of Arbour. Or was Jaffir merely testing him. Had Kahl revealed something after all, or Verhat? They were dead so whatever they did know was now passed on as were their souls. Unless Kahleff or some other shaman had communed with their departed souls. It could not be discounted. Most unlikely but not impossible.

"The idea is to bring out what is good in them majesty."

"Which the priestess's are unable to achieve?"

"They are messengers of the gods." Oenah obfuscated.

"As we are aware. Yet your kind want to do away with what is divinely ordained."

"We, ah, seem to be labouring under a divine vision." Oenah collected himself. The wine was not helping, slowing his reasoning. He had managed to just hold his own with Kahleff. Jaffir was even more astute than his advisor.

"Arbour." Jaffir nodded at the black clad astronomer. Kahleff watched him as well. Anticipating.

"The stars are divine. Millions of them. For one combined god to be master of all is impossible. Now one's mind can create any thought possible, but thinking something does not make it so. People once thought the sun vanished at the horizon and so it appears. But we know it travels around our globe. So if this god of gods exists, where does it reside? It cannot be the stars. Even the river of stars that stretch across the sky are teeming with more stars. Then there are the aberrant stars that move according to their own rules. That means there is more than one rule. That is the way of the universe, the proof is there for all to see." Arbour replied easily.

"The seasons change," Kahleff added, "rivers change their course, some animals are hunted others hunt. Different manifestations of diversity, not overarching unity."

"The unity is life."

"In life, some are farmers, others merchants. If we were meant to be similar if not equal we would be. But we are not. Many labour and live adequately, others labour little and gain rewards. It has always been so." Kahleff expanded on Arbour's opening statement.

"_"

"Well priest?" Jaffir prompted.

"Our minds are not completely divine. Our knowledge limited. We see reality each according to our own. It is that that creates differences." Having time to fashion an answer.

"So my mind is limited priest?" Jaffir's expression pure ice.

"No, the divine power in the universe has chosen you as the supreme being amongst us lesser mortals."

"Words priest, mere words but of a lesser mind, a limited mind as you said yourself. And if you are one of their leaders how more limited that of your priests. So I say they are deluded."

"We do not claim they are perfect my lord."

"No but you claim to be in touch with something that is."

"It has come to us. We did not seek it. We did not even know it was there." He said humbly.

"Arbour." Jaffir commanded.

"If that is so, then why was not this so-called supreme god made manifest? If it has always been there why has no one ever known?"

"It sent the gods as messengers as I explained to Kahleff." Hoping for support though not expecting any.

"Why would it do that?" Arbour asked.

"To prepare our souls. Children learn by stages and so do we."

"If this entity is so complete it would not need to complicate the simple. Since the gods created this paradise for us to enjoy and give thanks to, blessed be they in the starry realms and here with us, then this entity cannot perfect it. It sends less than perfect deities to do its will. Or conversely it is not able to achieve its perfection by itself. And why would there be so many natural laws if all is unitary. Unitary as you claim means exactly that. The cosmos is diverse. The very opposite, as is life. You have it all wrong." Arbour said with certainty.

"Our minds see it as diversity, true. But the underlying force is one."

"No no no no no. Experience, knowledge, the study of everything around us tells us otherwise. There are six elements. Why would that be if there is only one force. You are labouring under a misconception." Arbour replied.

"The eye of Bahlir." Jaffir changed the conversation satisfied the obvious was made plain to Oenah. "It is a sign, a portent. It could mean the ancient ones are returning. They did not believe in any gods. Oh everybody thinks they were destroyed. The ruins on the other side of this planet do testify to a cosmic war. Maybe your god of gods destroyed our ancestors and now wants either submission or destruction." Jaffir hissed.

"It wants redemption and enlightenment. Not destruction. It created the energy in the universe to make life possible. To destroy life would go against the very essence of its imminence."

"Redemption from what?" Jaffir asked. He broke off some bread and cheese and nibbled.

"Our fractured state of mind." Oenah replied. He could not really say what they thought as the truth. That would imply even the king and the gods were less than perfect which they were. The great coming would remove the scales from their souls. True revelation was at hand.

"The ancient ones were destroyed by a wrathful race who believed they were doing the will of the divine. They destroyed our future priest. We could be living like them, they were supreme magicians. We were denied. Some in case you didn't know did escape. The secret lore tells us this. It may well be that this eye is theirs, is announcing their return. To bring back what is rightfully ours by fated destiny priest." Jaffir exclaimed. Oenah knew nothing of the secret lore except it existed. If this was indeed true it complicated matters. Was there then a magical race that was as powerful as the gods? Would the supreme deity allow this? If so how should he react? Was it ordained or a challenge? He was speechless. This could change everything. Maybe they had to act quickly to make sure their plan, the supreme god's plan was in place before this long lost magician race returned and once more incur divine wrath.

"It seems the priest is a little lost for words." Jaffir joked. Smiles from Stroem and Arbour. The guards tried not to show any expression.

"I am not exalted enough to know of the secret's destined only for you."

"Perhaps you would like to think on it?"

It was best to concur. He did.

"Guards, make this priest comfortable in the quarters we have prepared for him. He has much to think about. It may also open his memory as to what exactly their intentions are for this kingdom of theirs."

The guards saluted and stood behind Oenah.

He looked quizzically at Jaffir.

"Remove him. Let him ponder the situation. If he wants to speak to me he will do so, soon I hope." The guards lifted Oenah off his chair which fell back.

"I would advise you priest to tell us what your intentions are regarding the kingdom. Not the sweet words you try to befuddle my subjects or myself and my advisors with. Your freedom if not your life is in balance, depending on what the gods have in mind for your fallen corrupted soul, or have in mind regarding your fate and destiny." Jaffir bored glacially into him. "Take him away."

Unceremoniously they dragged Oenah out of the king's presence and into a cell at his dungeon.

"Well that's one down. Now we shall see..." Jaffir said pleased. "Kahleff you did well in acquainting me with our ancient history." Kahleff merely nodded. He had interpreted it completely differently. Thought the gods had punished them for not believing. Jaffir amendable. Verhat had hinted at that without mentioning the past. Arbour had conversed with him often enough. Kahl knew something but now he was

dead. Suspected the priests for the goddesses were never vindictive. The tribes believed in their spirit worlds and the gods let them be. Maybe he was right. They had been a great race destroyed not by the gods and their servants but by a race who took offence at their disbelief in *their* god of gods. He would need to think on this.

"Well gentlemen. A profitable conversation. Shall we return?" Stroem and Arbour agreed. The merriment outside was getting louder amongst the music, the singing, the carousing. Life was good.

"We celebrate with the people for the next three days. Tomorrow afternoon, near sun down come and see me. Think upon what was said here. But think amongst yourselves. What transpired here remains amongst us. I think there is no need for me to make you swear an oath." Jaffir said as he rose.

"No my lord." They replied in unison.

Orbital: Prima

Risea listened to Khral's report with rising concern. As an Enhanced Natural she managed to keep her reactions in check. The emotive response was there but it did not overwhelm the calculating part of her brain. The news was not good, it was awful. In fact it appeared from what he said disastrous. With the Domain Lord's focused on Regum's inserted spaceship they let Kroena and Elentra continue with their specific targeting of the individuals the DVs accessed through their remote viewing capabilities on Mars.

She looked at the status screens for Verhat and Kahl. They were completely off-line. Two things were possible. Maybe they managed to cloak themselves given their natural resonance states. What attracted the DV sweep and search probing was their powerful minds. Veritable beacons now out. Still, if this was a case of cloaking then some sort of shadow echo ought to be discernable. It was not. She hoped they had not lost them completely. One could only hide oneself for so long and everybody had to sleep sometimes.

The second possibility she thought branched off into two more possibilities. Her brain balked at the bifurcations. Primaian's were naturally focussed unlike their kindred race on Regum who could juggle concurrent lines of thought with consummate ease. Not very focussed but effective. Weaker as a psychic presence which did not necessarily translate into being dominated by the DVs. To the Martians the incoming input states by the DVs were there, in place. More akin to themselves, but as yet not smart enough to fully comprehend the nature of what they received putting it down, she smiled at that, to the influence of their gods.

Verhat and Kahl were unitary in outlook. Which made them so attractive to the DVs and their mission to guide, to position them and their race to where Prima wanted them. Accept according to the read outs they had vanished. Either the Reganians hovering over Mars like a blot in the sky had created some sort of protective envelope around them, hijacked them out of the DVs psychic embrace or worse, they were no

longer living. She found the latter hard to believe. Try not think of the worst. The Martian's showed no homicidal tendencies.

Broad spectrum sweeps did indicate individual mental patterns tending towards the murderous. Perplexing. This whole operation was getting messier and messier. The incoming data did not add up. It was not the parameter settings. She checked them regularly as required so it had to be something else. Some future state of what was to be. After all psychic phenomena existed in a field of their own, independent of space and time. Subjective relativism. It could even be assumed that the Martians were heading into a downward spiral of basic animal aggression coupled with an elevated consciousness. The only thing Risea could think of was that at least they knew where, overall, the Martians were heading.

Psychic decay towards a mental bloodbath.

So the question remained: were they themselves responsible or had the Reganians interfered? The weird thing about the inserted field of the Reganians was that it was like a huge elongated teardrop shape, the bulge encompassing that distant planet. Psychic activity near zero. Soft scanning indicated extremely sluggish minds working with a minimum of activity. Not asleep, REM states non-existent. Some form of artificial hibernation. Waiting. For what? Their own activity up here? Questions with too many possible answers. Risea sometimes wished she were Reganian. A heresy in itself. It would make her suspect to the Divines and Ecclesiastics. She would be removed, BrainDrained at worst including reconfiguring, a zombie at best. She was not about to lay her life on the line even if it uncovered a worse truth, independent self-centred realignment.

Risea needed answers. Khral continued to brief her. Prior going off-line Verhat's resonant signature had been getting stronger. Khral focussing on Kahl had easily subdued him, an open mind really with an unfortunate side effect. His total mind withdrawing into its unconscious state. Interesting in itself. It made remote viewing so much easier. Still the latter showed no signs of temporal aberrations unlike Verhat. Both a perfect match. No more. Kahl had understood the concept but could not make that last mental jump to see where it led to: the Great Cosmic Mind. But with the essentials in place it was only a matter of time. And now they both had vanished. Not consecutively. First Verhat, then Kahl.

Verhat resonance upon playback went into instant extinction. With the collapse of his psychic field the baseline data, the environment which caused the deletion went void. These things happened. For one of such astuteness of perceptive mindfulness it

should not have occurred. It certainly was not illness so the only other possibility was murder. However the overall resonant state of the homicidal event-field had not flared in any specific way. If it was murder and Risea came around to that possibility with the utmost of reluctance than the perpetrator possessed an amazing mind. That could spell more trouble. If the Martians could cloak their homicidal intent then there was nothing they could do about it.

To have the special unit of DVs go back over the event exposed them to the resonant field which effected Verhat's demise and could easily affect the DVs as well. The attrition rate was already high enough and she did not want to risk further burn outs. The decision luckily rested not with her. Kroena or Elenra would have to decide. One advantage of being lower down the command chain.

Kahl's demise was weirder though. His brain overheated, gone hyper then burnt out, literally. Mental activity so high it nearly went off the pre-sets. Super psychic. Now there was a revelation. With no focus. The system's memory banks merely indicated heightened activity. Enhanced Natural. What enhancement though. An aberration but on what a scale. If they ever harnessed that mental state it could turn this whole operation around and they become the targets. It was lucky that Khral instantly disengaged his contact for otherwise he might have suffered a searing flash attack.

Khral stopped the run sequences.

"So we lost two valuable contacts." There was no blame assigned.

"Yes."

"Certain. Not even the slightest reverberations?"

"None."

"What did you make of it?"

Not that Khral could tell her anything which might surprise her.

"Loss of contact could be due to my end. Lack of concentration though to be honest I was holding him. Verhat's vanishing was instant. Could be anything. Maybe a heart attack, brain seizure or a psychic attack. With no other resonant states of that magnitude. Instant death. With Kahl no overt homicidal surge. The overall field, more like a fog than a presence remained unchanged. The target though as I told you burnt out. When I felt it coming on I disengaged and let the system take over to shadow Kahl. It would have taken too many DVs to counter his demise. What made it so dangerous was its sudden onset. Normally," he paused, "normal as in such heightened consciousness, extreme activity has advance shock waves to put it figuratively. The brain charges up in

quick but discernable stages sort of boosting itself. But in this case it was sudden and overwhelming."

"You did right in disengaging. Who knows what might have happened to you. A less experienced operative might have hung in there to the grim end and gone down with the target. Good thinking given the circumstances."

Krahl was relieved. Usually the loss of a target did not reflect too well on a DV.

"There was something else Risea."

She waited for the bad news.

"Other deletions. As you know my target was in touch with pertinent minds. Lesser potencies but above average. Amendable to our way of thinking. Far from ready but along the way. They are gone as well. This I checked out from the general field resonance the DVs picked up. Someone down there suspects something and is removing exactly those who are of interest to us."

"You are observant. I may have to recommend you for a promotion."

That was the last he expected.

"True. You not only focus on your target but keep the big picture in mind as well. Very commendable. Can't guarantee anything of course, but I shall certainly mention this to Kroena."

"Thank you controller."

"I'll get the data and give my superior the unwelcome news. She won't be pleased. I guess I'll get some heat over this."

"Hope not. What do I do now?"

"Oh yes. Your target's gone. Do a general soft scan. You've concentrated enough. Same for the relief ops. Scout for other possibilities, find attractors."

"Will do."

Risea went over to the console, downloaded the data, sent the original files into a secure memory bank, encrypted then locked that down and shrouded it with a chameleon programme so it looked like mere superficial data. If the locals down there could burn out one of their own, one enhanced from her view then they had a potent psychic weapon available. If they could do that to one of their own they could do it over here if they ever discovered the truth of what exactly was going on.

The download complete Risea took the data disk and announced herself to Kroena.

Kroena listened to Risea's report without interruption, including her explanations of what might have caused both targets demise.

"So a homicidal attack executed psychically." Kroena said referring to Kahl.

"By all indications, yes."

"And Verhat snuffed out just like that."

"Ditto that."

"Not good."

"I know."

"What are you doing about it?"

"I got Khral on light duties. He's put a lot of energy, as has his team, into this. Plus the additional info."

"That they suspect something but haven't gotten this far."

"Indeed. I think we are secure."

Kroena opened the monitors. Overall readings were as they ought to be. The priests were multiplying which was good news. Having lost one definite leader, Verhat and their eyes on the ground Kahl. With Khral's suggestion she punched in a rerun of the other deletions. Kroena brightened in the glow of the screen. Risea waited.

"Hm. Two of the four deletions mimicked a Reganian imprint. Could be natural, has to be expected given the diversity of their minds down there. So Risea it's not all bad news after all. Win some loose some."

Risea was relieved at Kroena's stance. She hoped her superior was as philosophical. It had to be expected but losing high value targets never went down well.

Kroena called up Elentra. Elentra said she would come over. Until then Kroena and Risea studied the data. Looked at the relevant fields, compared them to the overall state, focussed on the thinly dispersed psychic negativity field which had reached into their universe. And the Reganian insertion field. Elentra swept into Kroena's office.

"So what you got?" she asked pleasantly. If Elentra was displeased she did not show it. Totally professional she watched the unfolding events, first Verhat being extinguished then Kahl's hyper state being the end of him.

"Drugs."

"What?" Risea a little surprised. Why had she not thought of that.

"Has to be. No other psychic activity around. Unless Kahl self boosted himself and flipped. But that would be suicidal and he does not seem the kind. Admittedly having his

mind contained might have caused him some worry, after all it was necessary so that Khral could guide. It certainly was not Khral's doing. So what else?" Elentra was satisfied.

"They knocked him off." Risea comprehending Elentra's explanation.

"Could be accidental, then again...well speculation has its uses. At least we got the psychic signatures of those who were with him. Inamus and Oenah. We continue. Check these two out Risea. Make sure they don't suspect undue influence. Tell the DVs, all of them to hold back for a while"

"I already have." Risea informed her.

"Good call. They might be onto something. Trouble is when dealing with primitives their orientation is so annoyingly unstable. One moment they think like us, the next moment they show signs of Reganian influence. I'll check out the Reganian end. That ship of theirs by the way is in lock-down mode. What that means is they are there and not there. Tricky for the mind to get around that concept. It's their resonance that gives it away. Not your brief so you couldn't know. But look," and Elentra zoomed in on their RS. "hardly any activity. As a presence yes, but the activity is barely noticeable. That counts them out. For some reason Regum is holding them back. They know of course of our DVs so that might be the reason they're being shy not to reveal themselves. Risea you did well to call the DVs back and of course your team. Good work there."

Risea said nothing, Kroena all attention.

"There is something else to consider."

They waited.

"Regum's insertion field."

All ears all mind.

"It is obvious that Regum has made a move. They must feel extremely confident to reveal their capabilities."

"I've been looking at their RS." Kroena mentioned.

"Yes so have I." Elentra said encouragingly.

"They got extremely enhanced natural's on board."

"You considered the alternative?" Elentra replied pleasantly.

"Their infernal machines?"

"Apt. Yes."

"Look at the field. Too steady."

"That might be the suspended state they are in."

"True. But very revealing. They are virtually letting us see into their heads and their complete field state."

"You think it's intentional?"

"They must be feeling very secure." She repeated.

"Cocky." Risea added.

"Maybe they know the outcome." Kroena suggested.

"Now that would outdo our DVs. We cannot discount Regum's capabilities. They may have ideas we never even considered."

"Let's hope not Elentra." Kroena quickly added.

"It's a window of opportunity."

"I was thinking that myself." Risea said. "We have to get at exactly how they can insert, in real time, a ship and its crew. The longer they remain in place the better we are in a position to understand this feat of theirs."

"It's as if they copied the capabilities of our DVs and somehow transformed that into a physical event. The other question is do they know we are active on that planet or is it pure curiosity?" Elentra considered.

"I'm glad I'm only a controller." Risea quipped.

"It's a great challenge. The more they reveal themselves the more we find out about them as well. Runs both ways for us. They can't crack into our DV field insertions, they can't stop our target acquisition, cannot deflect remote viewing. So the best they have come up with so far is boost their brains with their computers and extend their grasp in physical space. But what is that compared to our mental powers?"

"Almost irrelevant."

"Not quite Kroena. What if their minds and their machine intelligence merge? Or has?"

"Then why aren't they doing it? Because I suspect they can't."

"Not at this stage. Never forget the future."

"The future is ours." Risea certain in response to Regum's challenge.

"As it stands now." Elentra replied with some reservation. The mantra was of course Prima was supreme. But the universe kept on throwing up surprises. First the alien field, then the revelation of a distant world at an early stage of evolutionary development and now Regum's continual conquest of space. Plus a possible blending of their machines with their minds. Elentra was confident they would surmount it all. Just a matter of getting into their heads, see it their way. Then their machines, their intelligence would be in Prima's control. But they would have to work at it. Once they knew exactly how Regum achieved this massive experiment then she considered, not only could they duplicate that, but convince them of their pacific intentions. Cosmic harmony. Of course

there was the counter move to be considered as well. If need be shut down, sabotage the Reganian insertion.

Mars

The next day Jaffir along with Kahleff decided to pay Oenah a visit. The dungeon was directly beneath the royal apartments making for easy and surreptitious access to the incarcerated. There was another subterranean goal for treasonous offences which was filling up rapidly during the festivities. Brawls, fights, heated words exchanged, threats made, libellous accusations thrown about were in some instances deemed serious enough to constitute a sombre breach of the peace. The soldiers were busy bringing the often violent and abusive drunks in. What surprised the struggling soldiers was not just the viciousness of the distempered revellers but also their vindictiveness towards them. All they were doing was removing foul mouthed and raging uncontrollable citizens who had turned into beasts as the festivities progressed.

Most were men some known to the sweating constabulary. A few women who screeched like hyenas whilst the men screamed themselves hoarse. Indicating possession. Many did indeed curse the peace keepers who were merely removing the bad tempered. What made this festive gathering so horrendous was the sheer number of the demented who exhibited such a paroxysm of rage. Rested from their labours they were puzzled at this aberrant behaviour in how these normally family loving, peacefully abiding citizens could turn into brutal, intemperate, fuming, screaming frenzied beings. Not even the bandits in the outer reaches of the kingdom acted with such sudden savagery against those around them.

Then there were the injured. With fights breaking out, noses out of joint, lips cut, teeth knocked out, heads cracked, arms broken, knives and forks used to stab, gouge and threaten those who were deemed to have given or caused offence. At first it was thought the copious amount of wine was responsible but festivities were not so rare that people were not used to several days drinking. Harvest time was the high time of the year to celebrate, revellers known to continue for a week. Winter brought out festive cheer as well. To lighten the gloom, then spring revived the spirit which put people in a jovial mood and summer of course was perfect for drinking copious amount of beer.

Jaffir listened to the magistrate's representative. Arbour his court astronomer had toured the holding cells, seen the mayhem of the wine sodden, food and blood splattered culprits. What surprised Arbour was the fact even when sobering up they were still under some mental contagion. Foaming, frothing, fuming with angry inflamed invective against their goalers, their neighbours who were responsible for causing the grievance in the first place. Or railed against the tyranny of fate and destiny threatening to sort out those who were causing the real, to them imagined trouble.

"Any ringleaders?" Jaffir asked as he sat with Arbour in his underground office hearing the shouts of affronted men who thought they had been wronged by being held as common criminals.

"That your majesty is the mystery. We all know how wine and beer along with good cheer loosens tongues. But..." he gestured helplessly.

Jaffir was nursing a mild hangover and was in no mood to be burdened with unnecessary diversions. He felt worn out, indifferent but still focussed. So it could not be the wine itself for they all drank from the same kegs.

"Nor can we blame the priests."

"Those black carrion birds." Jaffir half mumbled, his displeasure unmistakable.

"Yes my lord. Did you ban them from attending?"

"Only them Arbour. It was not my intention to ban anybody else. Except the guards on duty, the servants preparing the food and those engaged in running the kingdom. They too could come when done with their labours."

"Turning into animals my lord."

"Cut the my lord for now Arbour. Makes me remind myself of my responsibilities. You are advising me so just advise, and speak freely. This is too unusual to be taken lightly."

"As you wish. Nothing like it in living memory. Folklore has some songs about quarrels leading to tragedy and thus the memory of the violence deeply etched upon those whom it so sadly affected. It would be easy to blame the gods for these outbreaks of violence. Maybe it's lucky I'm an astronomer as well, but there is nothing in the heavens to indicate discord below."

"It's the priests."

"I cannot see how my lord."

"I can and I don't like it."

Arbour whose other duties doubled as an examining magistrate sat there with his sheets relating their uncivilised deeds of discord towards their neighbours, companions,

friends, even strangers. Truth be he was not feeling up to it. Enervated. Either more wine or sleep or some time with a good woman. He smiled for a moment then voided the latter. Too much energy involved, unless he wanted to be pampered but even then it required him to walk all the way back to his apartment. Not yet.

"If you could elucidate Jaffir."

"What?" he sighed, "Yes, the rabble going bezerk. Something has stirred them up. Or someone put them up to it. Anybody would think this is the first time they touched drink. And for so many to be bad tempered at the same time..."

"More than bad tempered." Arbour suggested.

"Maybe the tribes sent provocateurs amongst the people."

"Nothing from Norhat."

"Norhat is not here. Patrols have spotted nothing. The only thing occurring is the multiplication of priests. Spawning, crawling out from some hidden realm which we seem to be missing Arbour."

The astrologer come magistrate looked shocked.

"You look surprised Arbour."

"Your expression."

"Spawn. Can you think of something more apt?" Jaffir half joked. "They multiply like cockroaches. So I have to ask where and why and what for?"

"Of course."

"Now we all know that some shamans can meet with the soul's of the departed."

Arbour was a little mystified where Jaffir was heading.

"What if these priests had learnt the same trick from them? Or if some had been shamans before converting? Stir up trouble. And worse Arbour. Putting a curse on the people. Shocking enough I would think."

"Most definitely."

"Well if it is all connected then you would have your answer as to where the priests came from or what is creating them and why anybody would want to follow their path in the first place. Tell me Arbour, what do they believe in?"

Arbour was surprised at the question. Given Jaffir's intelligence he was surprised unless he was asking Arbour directly for his opinion. Ever since having been in touch with Verhat he had been thinking about that tenacious mind venturing so far into something vast, beyond the gods, frightening. Then there had been Kahl. Equanimous, blasé, relaxed with this knowledge of his. No wonder the priests had gravitated towards these two possible archimages. Then Astrah the shaman, Inamus and oily Oenah a member of

an ancient family who finally showed themselves at the festivities at Orst. Had the priests all left the city? Is that why they were so absent from the king's feast? He was getting sidetracked.

"A supreme god Jaffir. The days of the gods, even the ancient ones are numbered. Even a drug addled brain couldn't come up with that. Too simple, too puerile, too pathetic, too impossible."

"So I gather you don't agree Arbour?"

"If I thought it had any merit I would have informed your majesty."

"So how can a person be convinced of its merits?"

"You are asking me?"

"Yes Arbour, though my head wants me to leave it alone. When you have answered that question I shall know more about what I may need to do."

"I see my lord. Well, from what little I know, the promise of more wealth, freedom and with all the gods rolled into one."

"Hm. Oenah sweated that one out yesterday. Which still leaves these howling brawling animals around me. The priests vanish, violence erupts." His head hurt his mind racing. "Arbour. Make sense to you? Honestly now, I need real opinions not court flattery."

"Very much so. No doubt the priests want in. By any means." Shuffling some papers.

"Not to be trusted?"

"With such an unprovable heresy..."

"Arbour. Go and talk with Oenah. Not now. Let him cool his heels. Food might not be the best, straw full of vermin, but he's lucky to have straw in the first place. After a few days he may be eager for some company. But do not quiz him. You'll only get what he wants you to hear. That we know. He may protest his loyalty, who knows he may attempt to bribe you. If so be amendable. Consider it a bonus." Jaffir smiled. "Not that it will do him much good." He reminded Arbour. "And finally we shall know just how important he may be in the scheme of things. Will they abandon him? Make moves to get in contact? Attempt his release by legal or other means. You and Stroem were there, witnesses beyond reproach. No one accuses me of not running the kingdom to the best of my and by the gods will ability. The wanton arrogance..."

"Yes my lord."

"Arbour, it is only the two of us here."

"I know. It's they way I've been brought up."

"It's like a receding tide that will be back."

"My lord?" and bit his tongue.

"The priests. Abandoned the royal city. They may have gone to ground which given the public feast makes it all the more obvious they are planning something. I must be prepared for the worst. So Arbour, alert the constabulary to be on the lookout for not just priests but anybody coming and going out of this city. So that there is coordination I shall also inform Stroem of instigating a search of houses where the priests were seen or where they lived. The neighbours might be of help there, unless they are protecting the priests. Why why why?" Jaffir complained. He was in no mood for so much thinking. Still there was no way out. He smelt a rat. Several. A whole horde of them.

"So alert the constabulary. Stroem's guards will assist you if need be. Now if there is something on your mind..."

"Just the apprehended. Disturbing the peace for those who resisted to be arrested?"

"Yes. A week in the cells so they can come to their senses. No special privileges."

Arbour nodded. He understood. The cells were overcrowded. Bad luck. Next time they might think before being such idiots.

The preternatural prescience feeling of being shadowed by a hidden intelligencer grew stronger moment to moment. Astram knew he was asleep and within its domain wide awake. He really did want to sleep, his bodily mind certainly craving rest. The demands of physical existence. To be like the beings dwelling between the dimensional space that imaged itself as reality was far more relevant than his normal self. Normal. More a constricted oddity. The mind flooded with continual sensory visuals, the mosaic weaving its forced landscape around the true nature of what really is. Those who took the waking reality as the defining moment trying to make sense if they ever thought that far, barely penetrated the cloak woven around the posited realms stretching off in a million directions.

He was in an ancient temple. Underground, deep in its cavernous precinct. The gods present. At best supernatural beings. There in essence but not revealing themselves. A sign that his mind carried itself across his outer shell into an expanding vista. Moving rapidly outward. Or rather flooding into him. One part wanted to let go and let it infuse its horizonless realm so that he was truly connected to the multidimensionality of its magical environment. His normal self clinging to what it knew which compared to what could be rather than what is. The constant battle reminding him of his limited corporeal life. Like

moving through thick mud. Every effort to progress further into this expanse needing all the energy he could muster. Like someone dragging him back.

Oenah. No wonder. Astram immersed in sleep in the world beyond the grave, the intermediate realm between where the spirit intelligences originated and those clinging to the other side still maintained a weak grasp on his released soul. How often had he been so close to some divine revelation, his mind tasting its revolutionary essence and thereby a path to its source. One of many vortices which allowed those with unshakable will and focussed determination to make it through to the other side. He had been there many times, returning during sleep or whilst in a trance state that felt like home, where his true self was centred. The beings which populated these multidimensional spaces were endowed with the knowledge of the future. One he sought given the complexities of the world in which he was incarnated.

Oenah. A trapped soul in more ways than one. His true essence simply not made of the stuff to transmigrate out of physical existence. Useful due to his connections, the ancient families whose bloodline ran like a river to the fountainhead of their race.

It was no use. The columned hall he was in, sometimes filled with statuesque beings, frozen in time, more timeless really, ready to be questioned to reveal their own cosmic knowledge were not materialising. He did not have the requisite attunement due to this belabouring mental sludge that weighed on his mind. Oenah was reaching out. Could he not wait? Still he was at the centre of the real world. That centre of power trying to shift out from there to weaken Jaffir and Kahlef's hold along with Nurdas's presence, a minor link to the outer realms. The layers of the rest of the gods, their progenitors and then, and then, the undefinable realm of the source of it all. That essence a permanent sensation in his memory. Every time he came close something, someone would interfere. Be it in the spiritual realm demanding his attention with some minor revelation or given their project the demands of some interfering person whose own idea of what they wanted to be always created powerful disturbances denying him the final link to the ultimate centre. A limitless, potential which would make it possible for Astram to seize power.

Thwarted. So close yet so far. He might as well give up, let his weary mind rest. The ultimate would always be there. Or would it? He was not certain that even that was permanent as a pure state. Other beings, other minds were also aware of its existence. He wanted to be the first, beat them too it, take control and thus be the arbiter of their world.

Oenah's presence remained persistent. Desperate. Which annoyed Astram. An insistent child demanding attention, right now. Nothing much was going on that was of interest. The priests were slowly consolidating their power. True the magnetic influence of Verhat and Kahl were no longer present which meant he and Inamus had to step into their shoes, become the attractor to unfold and keep the outer realms open. For the moment no overt active psychic activity present. With the priests throwing a cordon around the city, the lesser shamans of the tribes in their own realms, he and Inamus had an open field. Inamus was busy preparing the ground for the coming revelation at Orst. That left him free to forge the final link.

What did Oenah want that was so important, now? Could he not escape into his own dream realm and meet him here? Unless he was magically entrapped. The priestesses of Nurdass? Her ethereal presence was not palpable. Kahleff? His brooding resonance absent as well. There was a total deficiency of anything but himself. Stumbled into a deserted perhaps forgotten dimensionality. Unless, unless it was his own domain. Well at least it was there. His own retreat. A secure haven between other realities. Here he could have rested and waited as a sentinel to see what was going on elsewhere. For a moment the feeling of being watched, probed flooded through him. A powerful being far more than he expected. A vast mind. Or he was so close it only appeared so, just beyond these walls. He sighed. Next time.

Oenah's insistence annoyed him. Why could he not exert such power when needed? Instead he wasted it on trivialities. What did he want? With the interference the vision shook, the hall grew diffuse, out of focus, a fog pouring out of it's walls. Then it was gone. Oenah in a cell, a dungeon. Was that all? So Jaffir locked him away. No big deal. He was not being harmed, under no duress. Oenah demanded attention.

'What?' Astram asked brusquely.

The sense of Oenah's relief that of a child having been found after being lost. The receding panic made Astram realise Oenah would never make the grade. Not if these minor setbacks had such a powerful influence on him. Truly ensnared in the web of reality. At least Oenah could navigate within that with ease. Useful in the outer realm,

'Jaffir has thrown me into his dungeon.'

Astram did not even bother to answer. It was of no importance. The priests were doing the real work now, weaving their plans into the matrix that was reality. Crafting it to their will. The great coming, the cleansing, the redemption, the opening, the infusion of their power, a front for his power. Why did not Oenah concentrate on that. Instead he complained of his incarceration. Did he expect him to aid his escape? Astram was not

that stupid to fall for the trap. Jaffir was no fool. He had locked Oenah up for a good reason. Or several. Oenah might have offended the king, blurted something out. Or through Kahleff, one very unassailable character, knowing Oenah was their weak link. Maybe Jaffir suspected their involvement with Eghan's demise. That in itself was no problem. It would be next to impossible to trace the now vanished culprits back to him. Anyway Eghan was suspect of being an apostate if not worse, an unbeliever. Those who denied the gods were expelled. Became outcasts. There were not many who strayed down that path of spiritual perdition. Abandon the gods and they abandoned you. Then when the passing came the soul would disintegrate for ever. Not a pleasant prospect. Nothing to live for.

Oenah abandoned. What did he expect? Astram arrange his release? That would alert Kahleff. Astram was not about to use his influence, nor would Inamus. No need to make it easy for Kahleff. For ever waiting, looking for flaws to manipulate. They were too close now to slip up.

As Astram lay there, both asleep and awake a thought occurred to him. Oenah was with them purely for the power they would wield after the great revelation. The priests were readying themselves to become the conduits. They had withdrawn to prepare their souls to irradiate the power of the ultimate deity. The elite families would be in a quandary. There Oenah was useful. Once the revelation would resonate in the collective soul of the planet, once all saw the power which was equal to all and feeling it directly thanks to the presence of the priests who would amplify the kingdom of the new eternity the opportunists would quickly realign themselves to the new status quo. Those who would join them would be privileged. Astram's thoughts made sure Oenah understood this. He needed reminding.

'Make that offer to Jaffir. Don't worry about Kahleff. Concentrate on Jaffir. Let him know that he remains undisputed ruler whatever happens. Remember also that as our strength grows that of the gods will diminish. They were the messengers. Their work done. A new age is dawning. Take your strength from that.'

Oenah's terrified state receded. He was drawing strength from Astram's infusing presence in his mind. His disturbed sense of forlornness dissipated. Astram acknowledged how unfounded his sense of isolation really was. Was not Astram with him in his moment of need?

For a moment an image of carnage, of blood flowing in the streets, of resistance and resentment overwhelmed Astram. It was so sudden it cut his contact with Oenah. What if things went wrong? What if Jaffir went after the priests instead? Could the

ultimate vision vouchsafed by the ultra god be somehow flawed. Surely not. His coming was certain. Was this initial attempt abortive? Were the gods resisting? Astram did not feel their implacable presence. Indifferent. So many possibilities were still intertwined in the outer realms, the power being forged by their indomitable will. Or was another power making itself felt? An essence unaccounted for? Or perhaps a darker side of the supreme god if it were resisted?

The images of bloodshed, of murder, of conflict unclear in the mayhem as to who was resisting whom. Was Jaffir planning something? Should the priests be armed? Ready to defend the faith by whatever means to achieve the ultimate aim? Smuggling in arms would be impossible. Astram would trust in the god's power to do his will. Oenah would have to remain where he was. If there was to be strife being safely locked away in the dungeon could be a blessing. Keeping him safe from the coming conflict.

Astram felt exhausted. His disparate thoughts draining him. He decided to void it all, let go and get some sleep. He felt drained. Somnolence embraced his agitated soul.

"Nada's been informed Castari." Protas told his master as he reported his intelligence whilst Castari fumbled with his sleeve. There was something he was missing, which he could not put his finger on. Disturbing. Focus. The bulk of the trading season was over. He had placed next year's investments with solid partners. Protas one of his most trusted lieutenants, having enjoyed Castari's hospitality now that the king's feast was over was relaxed, bursting with information which he wanted to repeat the moment he had ridden into the city.

Castari's warehouse, where he lived on the ground floor along with boxed tea, dried coffee beans, salted meat for winter. Upstairs the strong room where he kept the semiprecious stones which were cut for the jewellery trade along with ingots of silver, copper and tin whilst on the third floor were finished woven scarves, embroidered, interwoven with strands of gold and silver, silks, cotton for the rag trade. Castari believed in diversification. Bales of raw shorn wool and hops stored in the secure warehouse behind his house along the 'merchant quarter', protected by Jaffir's guards who patrolled the area day and night for a fee. Castari paid in cut precious stones as his craftsmen readied the finished product for the jewellers who had their own street. .

Protas, now with a meal in him, having drunk some light wine told Castari how Inamus and Astrah were getting the tribes on side with the two day feast. As to what exactly transpired remained somewhat obscure. Norhat had interviewed Kahl who had conveniently passed on which made Castari think: innate power and death, for Castari

could not discount the occult capabilities of shamans and magicians. Astram once a shaman would remain one Castari thought. The power to influence amendable souls could not be discounted. With somebody giving the order for the priests to go to ground in the city. During the feast which he attended rumours flew thick and fast as the wine made people more loquacious that either they had given up, retreating to make it appear they had no intentions of converting the citizens wholesale or were contained by the actions of either Kahleff or Nurdass or both.

"The thing is Castari," Protas fixing his steady gaze of his weather-beaten face, showing all the signs of age for he was relatively old, in his sixties, "the inhabitants of Orst are restless. Waiting for something to happen though nobody knows what, priests aside with their vision of the coming kingdom..."

"Same here." Castari concurred. "This anticipation is a trick on their behalf. Make them feel the priests can somehow assuage their restlessness which implies the gods are found wanting. Now Nada?"

"Their camp is secure Castari. They are waiting for you to decide whether they should move back here or to Orst or to remain."

"Remain until we really know. Personally I think the priests are up to something."

"They always are." Protus shooed some flies away from the leftovers of his meal. A servant came and removed the plates, the flies followed.

"Yes, true. But I think something much bigger is in store for the city. Their withdrawal is not one of retreat. More consolidation. What about Orst?"

"The school is closed for the moment. The death of Ephan has hit them hard, along with his companions and that teacher. The students are still there but the classes have been cancelled. That of course is causing a certain amount of resentment. In general as long as the students and the remaining staff, who have withdrawn into their lodgings, remain their custom is still welcome in the bazaar. If they were to leave I think the townspeople, the small traders would take their resentment out on the priests. Norhat is doing all he can to maintain the peace which is fragile though holding. Now with Ephan gone the priests are proselysing..."

"How is that going?"

"Oh the people listen. As to whether they believe..."

"Yes, tricky. Unless the priests show themselves as to what they really are we are in the dark. Therefore it is best if Nada remains for now. I need them out there as a secure base. When I am done here and we know the city is secure they can return. A pity I'm no

shaman. I could get into Astram's head. You know Oenah's been removed to the king's dungeon."

"Really? That's a plus."

"Indeed so it is. I think the king is trying to force their hand. Get them to act. That's why I sent you to Orst. Without specific instructions of course. Astrah as a shaman can invade even your dreams, your mind, your soul. Has he?"

"No Castari. Nothing unusual happened to me."

"Good. No priest take an interest in you?"

"Nor that Castari. A priest will give his speech in the market and as I said, they listen but more out of curiosity than with the intent of being converted. More like a casual interest. Some of course try to find them out, asking tricky questions to try and trip them up. So in general I don't think they are abandoning their belief in the gods. The tribes and clans basically ignore them. Who knows, with the soldiers present everywhere the priests might be holding back. There may be converts but if so they are reticent to show their new devotions publicly. Of course they could be meeting in houses planning for the big day."

"If my guess is right they could have seditious intentions. Yet what can the priests actually do? They can't take on the constabulary here, or the soldiers at Orst. It's all too disconcerting....Protas what do you really think?"

"I master?"

Castari looked good naturedly at his wizened intelligencer.

"Ramblings. If there is to be a new order then the priests will want to be the one's in control. If anything they are trying to take over the citizenry, the streets. The only question remains, then what?"

"To rob the merchants."

"That has to be considered. Take over the trade."

"Jaffir would never allow that."

"Unless they bribe him. Who could resist the extra wealth?"

"You think they have the king's ear?"

Protas looked at Castari surprised at the question.

"Jaffir accepted whatever you told him regarding Verhat's passing on."

"Correct."

"Maybe if the merchants got together and removed the priests from the city. It would show Jaffir where their loyalty lay. Solidly behind Jaffir."

"You have an excellent point."

Protas remained silent.

"If the priests are behind the murders at Orst then maybe someone should question Oenah."

"He might not know much Castari. Astrah is the centre, Inamus there for the power and Oenah the link to the king. How have the families reacted to Oenah's incarceration?"

"I don't think they care."

"So they have basically abandoned him to his fate."

"Yes Protas. During the festivities he was mentioned but more as a fool for showing his colours. No one is decrying his fate."

"All seems well. Except for the priests."

"It always comes back to them. What power is animating them? Not the gods surely. Nor the ancient ones who gave their birth. It's all so seriously flawed Protas."

"It has a certain arrogance about it Castari."

"In the face of the gods and by implication Jaffir. Yet he does nothing."

"Could be on the advice of Kahleff."

"Nada. Did she report of any unusual travellers?"

"With feasts in both cities the road is unusually quiet."

"I assume with the festivities over the tribes are returning to their winter quarters, for trading is over."

"They are hanging around Orst. A little unusual. Nohrat is watching them all, priests, nomads, the populace. One false move and I am certain he will act decisively against whoever disturbs the peace."

"You know this?"

"The soldiers are alert, watchful. Of course the furnaces are guarded so they have their priorities right. The smithies are busy making swords which means Norhat maybe gathering a militia. Orst is secure. Of course the arms hammered out by the blacksmiths could also be destined here. As long as it does not fall into the hands of the priests."

"Most are rabble. Even if they did lay their hands on arms they would be no match for the discipline and training of the military."

"Still the priests incessant insistence of this coming has stirred many up."

"Keep the people on edge. Why does not Jaffir act?"

Protas was beginning to see just how effective the priests were. Without crossing the line towards sedition. The soldiers at Orst vigilant.

"The priests really should be rounded up." Protas said at last.

"It would resolve the issue."

They heard horses approach, tethered to the hitching post outside Castari's domicile. A loud knock on the door asking to be admitted in the name of the king. A servant hurried past them but Castari said he would answer it himself. The servant returned to the kitchen.

At the door stood a liveried royal messenger with two guards of the royal household. The messenger in the name of the king delivered the communication then waited. Castari took the sealed copper cylinder and went past the living room into his office to break the soldered seal with his little hammer. It stated that Castari was requested to make his presence with his intelligencer available to the king.

Returning into the front living room he said to Protas "We are called into the king's presence."

At last thought Protas. Two spare horses were ready to convey them to the palace. Castari advised his servants that he had business there, then collecting his riding coat left along with Protas and the escort. It was early afternoon, a little chill in the air, the streets unusually deserted. The feast might have finished two nights ago but people's hangovers still lingered. The few townsfolk who had not indulged as much were out and about but many of the shopfronts were still shuttered up. The bakers, fruit and vegetable vendors, butchers, herb and spice sellers were there of course but those trading in luxury goods were still recovering.

Jaffir listened to Protas as the situation at Orst was clarified. In the king's sumptuous private chamber, just the four of them. Castari declined the offer of wine. Protas followed suit. Jaffir shrugged, smiled and poured himself some light wine and listened. It tallied with what he knew but independent confirmation was still deemed essential. Oenah had been next to useless. Kahleff his presence essential in the king's private chambers listened attentively as the picture unfolded.

The priests were becoming a pest. It appeared that some of the tribal elders actually accepted, accepted! Jaffir was hiding his apprehension that they could be taken in so easily in being agreeable. Converted to this invisible god of gods. The tribe's beliefs had always been both complex and simplistic. At one level reality was populated with countless spirit beings. They could be in the form of an eagle or a lizard, a ghost of the passed on or a celestial presence living amongst the stars. Beneath these

interweaving presences resided the power that animated all and everything in the universe. Or so the priests claimed.

Jaffir called a servant and asked the sun-goddess to come to his quarters. The man left hurriedly whilst they discussed the situation. Jaffir did not like his hand being forced. Oenah abandoned. It was obvious they could do without him. His influence was one of a courtier. The city knew of Oenah's incarceration. Not one of the aristocratic families batted an eyelid. Waiting for a sign which might indicate whether Oenah had real power behind him or whether he was a sacrifice for higher aims. Kahleff thought him worthless in the greater scheme but should remain under lock and key to send a message to Astram and Inamus. That these two remained at Orst was significant in itself. Kahleff informed Jaffir that the removal of the priests was not one of withdrawal but consolidation.

"They are probably praying to this invisible god of theirs. Strengthening their souls for the coming struggle."

"Struggle?" Jaffir asked.

"My lord. They speak of a 'cleansing' of the soul. Scouring is more like it. Whatever it really is, or will be, it certainly is not some peaceful transition even though they preach a new serenity encompassing us all. Not even a choice in the matter. Not as things now stand." Kahleff said solemnly.

"Is this your impression?" Jaffir asked.

"There is always a choice my lord. It would be interesting to see how the priests react to us ignoring their injunctions. If Protus is correct," quickly acknowledging his information, "your soldiers and Norhat are remaining aloof from this spiritual struggle. Being promised land, become farmers, even traders might not be so appealing. There are benefits in serving. A roof over their heads, meals, order within the ranks and power of course. And there my lord is the rub. The priests under the auspices of Astrah and Inamus want it all. I think you should round them up and isolate them. This world is big enough to accommodate them somewhere far out in the desert. There are many rivers which flow into the desert. It's not as if we are holding them to a death sentence. Then suitably isolated they can do what they will. An invisible god." Kahleff scoffed.

"Yes it always comes back to this."

A peremptory knock on the solid door. The guards opened it on Jaffir's order and Nurdass appeared, cloaked all in black. Had she become one of them? Nurdass did not always wear the apparel of the goddess when at night.

She bowed before them. Her hair tucked into her cowl, a figure in black. The colour of the priests. Perhaps Jaffir thought it was camouflage. Let the priests think she was amenable to their strange future visions.

"Please Nurdass, be seated." Jaffir had actually stood, the others following suit. Protas moved a chair over to the table they were sitting around. The wizened woman, in her later years, her sky blue eyes blazing thanked her king, acknowledged the others, sat and waited.

"The sun sees all on what transpires on this world." Jaffir began. "We always thank her presence at the rising dawn and wish her well as she descends to let Bahlir and Urus watch over us."

"She is grateful."

"So what is it you see?" Jaffir probed.

Nurdass was of course aware of Kahl's visit to the temple at Orst where all the gods were present. What disturbed her was the notion of the group mind which Grena relayed to the other supreme priestesses. Nurdass had searched in the realm of the sun, as the living goddesses Bahlir and Urus had done. If anything there seemed to be too many minds, recumbent intelligences dwelling amongst them in the total empyrium. The skies awakening in response to the priests presence which she could not completely clarify and thus satisfy herself to the veracity of the visions. Jaffir listened without exhibiting what he really felt. As she spoke a thought occurred to Jaffir. When Nurdass was finished he called his servant who waited in the antechamber and asked that Arbour have a little chat with Oenah. No direct order was necessary for Arbour knew what the king wished to know. The servant left to fulfil the kings command.

"And the people Nurdass, how are they?"

"Nursing a monumental hangover." Nurdass smiled.

The others smiled nodding at that. The city was remarkably quiet after the festivities. Some of the taverns were busy for there were those who needed to recover by imbibing some more to remove the fog in their brain and energize their souls by indulging in some more festive cheer.

"As to the spiritual, disturbed, agitated, nervous, apprehensive even..."

"Of what?" Jaffir enquired.

"This coming."

"Are they less engaged in the temple's devotions?"

"Yes my lord. The harvest season usually fills all the temples, giving thanks to the goddesses for the bounty bestowed. Either they are holding back or," she paused for a

moment, wondering how to frame her next words, "have given up. There is," she continued quickly, "a feeling of forlornness in the air, that it really does not matter what they do. By that I mean their actual engagement with the gods. Having lost the will to believe."

"Gone over?"

"No my king. Not openly. More withdrawn into themselves. Under some unspoken bourn..."

"The priests." Jaffir added.

"Perhaps."

"Perhaps?" he asked surprised.

"Yes my lord. They are not just releasing themselves from their chosen gods, but all belief. Some may be accepting this creed of the priests but the general feeling I get, and from what I hear at the other temples is they are not so much rejecting as being indifferent to the divine itself."

A knock at the door. The servant announced Arbour. He was welcomed, payed obeisance to Jaffir then Nurdass and greeted the others. Though there was wine for all they were too concerned with the state of the kingdom to imbibe. Focussed. Jaffir welcomed that. Good people.

"Please Arbour."

"Oenah is nothing. A mouthpiece for Astram."

"Nothing?"

"Yes my lord." Arbour replied confidently. "Or pretending to." He added for good measure.

"Should we let him go?"

Arbour was surprised he was being asked.

"No. They should all be locked up. Astram, Inamus, any of their spawn."

"An unusual expression Arbour." Jaffir smiled wryly.

"These priests my lord. They might appear normal but there is something about them that seems wrong."

"Wrong?"

Nurdass picked up on that. Arbour was right. She felt it too. In this world but not of this world. That worried her. Whether this invisible god really existed was really of no consequence to her. She knew what she knew which was good enough for her. The sun gave life. It was so obvious it did not bear any need for deep reflection. As to what occurred, some claimed like Arbour, it was written in the stars. The wandering stars

changed as did people's emotions and outlook. Subtle influences of cosmic proportions. For the soul was different at night. During dreams magnificent realms opened up. There was some truth in that the night sky, its vast domain was not insignificant. There were many who were troubled by their dreams she recalled. Images of horrific entities plaguing their well being, influencing their soul, invading their minds, disturbing their peace.

She explained this to Jaffir.

Kahleff agreed: "Nurdass and Arbour are right. I too have had strange dreams. Beings that seem familiar but are not. Sentient entities with immense power which they are using to influence us. I have tried to discover more but am resisted." Kahleff looked at Arbour and Nurdass.

They nodded in acknowledgement.

"I have always had strange dreams." Protas said at last. Now they looked at him.

"You mentioned this to your priestess?"

Protas sighed. "I have a confession to make. I accept the cosmos as is, but I am somewhere between Ephan's school of thought, Verhat's concept of the divine and what the shamans believe."

"You did originate with the tribes." Castari said gently.

"I did indeed master." Protas replied.

"And what do you make of this then?" Jaffir asked him.

"Confusion. The priests are a sign of transition."

"You sense it too?" Arbour said eagerly. Though it was impolite to interrupt the king this was too important to stand on ceremony. Jaffir was not offended. He needed answers.

Kahleff was in deep thought. Other intelligences in the universe. Not gods but beings. Could they have done this? Was their planet under duress? The priests the advance guards?

Kahleff revealed his thoughts. They fell silent given the profound implications. Nurdass and Arbour agreed it was not impossible.

"Why would the gods allow this?" Jaffir asked perplexed.

"Indeed." Kahleff answered. "Maybe it is not relevant. There is of course the old lore..." he trailed off. He had familiarised Jaffir as to their secret history. Were the ancient one's coming back or their enemies? He feared the worst.

"You may continue."

"Thank you my lord." And Kahleff gave them a quick outline of their lost civilisation, how at one stage they had been almost like gods themselves. Powerful magic to fly through the sky, to live at ease without the need to work. Using strange artifices to till the fields, bring in the crops, bring water to their glittering homes in huge buildings until the revenge when all had been destroyed. The few holy priests...the priests again...had written down the calamity as having attracted the wrath of divine beings serving their god of gods to punish them for the affront of wishing to usurp the true divine order. The others listened in awe. But, Kahleff continued there were yet other writings that hinted that this calamity was more ordinary. Another race of beings saw them as a threat to their own domination and since their ancestors had not bowed down to these alien beings, they had paid the supreme sacrifice to remain free of them: and lost. These alien beings had then rewritten their history and were going to make sure they would never pursue that path again.

For a moment they all sat in silence.

Jaffir composed himself first. "What has that to do with now? We are nothing like our ancestors Kahleff."

"True my lord. But some started to think along similar lines. Verhat and Kahl believed we could use the cosmic force to use for our will. Eghan taught that all the secrets of the universe were in our own divine minds. This does not negate our gods. We already possess the arts of forging metals. We use water wheels to grind flour, draw water from wells by using animals that use contraptions."

"That is one thing Kahleff but nowhere near what our ancestors achieved."

"My lord. If Eghan is right, was right, blessed be his soul that we are the repository of everything that is in the universe and will be. Then surely it is only a matter of time until we rediscover what our ancestors knew."

"It is said the ancient kingdom on the other side of the planet is cursed. That any who venture there will have their souls destroyed."

"Maybe those hoary priests have cursed the ruins. It certainly kept us away."

"Let alone that no expedition could cover the deserts to make it there."

"Our ancestors made it here."

Kahleff Jaffir realised was right.

"I apologize for something I left out. The climate changed since then. Our planet was once an even greater paradise than it is now. There were more forests, so thick the sun did not penetrate the ground. Greater oceans. Now the planet is much drier. Sure the mountains still have rivers nourishing the land. But..."

"And for the last few years our yields have been less and less. Still enough surplus to see us through winter. Maybe it is a sign of divine disfavour." Jaffir said with a hint of sadness in his voice.

"If I may?" Arbour asked.

"You may."

"This might sound crazy but I just had a thought. Actually not just now. I too know something of our ancient past."

Kahleff was surprised Arbour knew anything relating to the secret history. The spiritual head, Kahleff knew and when his time came his successor would be Arbour. In a way it pleased him that he would make a worthy progenitor but that he claimed to know something at all surprised him.

"Like Protas I too have had strange dreams. I even encourage them."

"You follow a strange path." Nurdass said.

"I do, I do. The gods do belong within the universe. As do these alien beings. My dreams are full of them. The priests are here to destroy those dreams."

"Makes sense." Jaffir replied. He was interested. There was hope yet.

Arbour continued. "There is no reason why we cannot pay obeisance to the gods and pursue our dreams of greatness. Use the knowledge we once possessed to make this world our paradise."

"The priests are promising that." Kahleff said.

"Yes. Smart of them. But why let them lead when it is up to us to lead ourselves back to paradise?"

"How?" Jaffir asked.

"By reclaiming the old knowledge."

"If it exists." Kahleff wondered aloud.

"It might, in the ruins. Thus the curse. To stop us from remembering." Arbour triumphant.

"But how to get there?" Jaffir asked.

"Yes my lord, that is the problem. The requirements for such a mission is daunting indeed. The great ocean. Maybe not as great as it once was. Then the desert in between. There is a possible way though. It can be done. It would be a task. "But," he brightened, "we don't have to go through the desert"

"How then?" Kahleff asked.

"Across the ice caps."

"We'd freeze to death."

"Not colder than our winters." He found his groove.

"Crossing the mountains?" Kahleff ever the pragmatist.

"Yes, it would have to be in summer."

"No one has ever attempted that." Kahleff reminded him.

"He has a point. An excellent point." Jaffir agreed with Arbour.

They sensed hope.

"What if the knowledge is not there anymore? You think our ancient enemies would have left that behind? They destroyed everything Arbour. Everything."

"I'm not too sure. Anyway the point I was trying to make was that maybe the gods want us to resurrect that knowledge. Maybe it is the only way of saving our planet. Irrigate the desert using the icecaps as they melt in summer. We can resurrect the land. It is by using our innate intelligence the gods gave us that we can save ourselves. Build a better future. All the priests are promising is more of the same. They want us to remain in this state of spiritual bondage to them."

"Which still does not explain their presence." Khalef reminded Arbour. He had his own dark imaginings cloaked in dreams. But whose? The gods? The priests? This group mind? Or the ancient ones? Or equally the ancient enemy. Even if they did succeed would they attract them once more and be completely destroyed? Was that how it would end? A planet without life?

At last Kahleff unburdened his thoughts. When he was done Castari wished to add something.

"Nada had a dream like that."

"Of...?"

"Paradise lost. Nothing. No life. No rivers, no trees, no animals, nothing at all accept desert and mountains." Castari related. "She did say this is how things might have been before our coming. But that could be a hope. I fear the future is bleak if things do continue this way. I sometimes wonder if this is really what the priests intent is. Keep us ignorant of our past achievements, have us remain subdued so that this race that did spawn them..." he looked at Arbour, "...can remain supreme. And vanquish our gods."

"The gods cannot be vanquished Castari. They might withdraw their favours, but something eternal is eternal."

"Yes my lord. I agree that in the end this life is in part a stage for the passing on. Maybe," Kahleff said a little sadly, "the end is coming and the priests the final revelation. Maybe all this is meant to be. Who are we to question fated destiny?"

"Indeed. But I feel we should avenge our ancestors and vanquish our enemies, if they still exist."

"Something does, is." Arbour replied.

"True. So we must be careful and not arouse suspicions." Jaffir spoke. "And we are all sworn to secrecy. Is that understood?"

They readily accepted.

"The first thing we must do is collect whatever Eghan knew. From what I gather it was his students who wrote down his teachings. We acquire that first. If the priests resist, then they are defying a royal order. And since they say that the power of the king is unassailable they cannot defy me or my successor. Kahleff go through the secret books and search them well. Arbour has a point. Going over the roof of the world might seem impossible but there must be rivers flowing in the other direction from the mountains. And where there is water there is grazing land, pastures, trees. Remember all, not a word. You too Nurdass. I normally do not give orders to one as exalted as you, but your fellow priestess must not know of this. It might be several years before we can mount an expedition at all. It need not be large. First we scout for a way over the mountains and see what really lays beyond. I think we have been too content, too relaxed in remaining in our little realm. I think it is time to discover our own world."

"My king." Castari said, as they contemplated this development. "I will put what I can spare at your disposal. Pack animals, feed, provisions. I may end up poorer but the quest to regain our past has fired my soul. The gods are not adverse to our plan. I pray to Iambar the goddess of fire to keep both body and soul warm. Be guided by Bahlir in the night, Nurdass," he looked at her, "during the day, whilst Urus the celestial queen watches over all. I am content if we succeed. And of course if the land is as it is on this side of the mountains we can create more settlements."

"Thank you Castari." The king grateful.

"I think, if I may interrupt..." Arbour again, Jaffir in a good mood now assented graciously, "...we should have a feint. Send a scouting expedition to the ocean just the same. Build great ships and sail east and see what is on the other side. See how the priests react to that! And as far as the northern expedition goes, we could convince the tribes that maybe they would be interested in finding more land for their beasts."

"For an astronomer you certainly have your feet firmly on the ground." Jaffir was pleased with Arbours reasoning. "The priests will have to be duped. Let them do what they want. The king's mission they would not dare interfere with."

Relieved at last that their future was not so bleak Jaffir rose and walked over to the side table.

"I think a celebratory drink is in order."

Orbital: Prima

Elentra along with Kroena and Risea studied the simulated resonance field that embraced the time constrained space ship over the dark planet below. Without the DVs now in full control of the priests they would never have suspected that there was sentient life below. Or Regum's inserted ship.

"Look at that." Elentra was pleased with the resonance state in which the spaceship hung. "The DVs have cracked it."

The others looked at the monitors. One bank for the planet, one for the priests, one for the ship's insertion field. Though the linear spikes varied one subtle underlying spatial field was apparent concerning the ship.

"Don't you see it?" Elentra looked at them, her brain fired up. "It's been there all the time. We just didn't adjust the specs. The DVs have been feeding us their insertion field all the time. It was constant so the computers kept that in the background because," she paused relishing the moment, "it had nothing to do with the psychic end. Just background interference, much like the alien field. It was automatically filtered out, irrelevant to our primary objective."

"The Reganian's amaze me. So open, so indifferent..." Kroena thought out aloud.

"So sure of themselves." Risea beamed. "Now we have the codes. You are routing them into a subdomain?"

"Am now." Elentra was triumphant. "Might come in handy."

"Might." Kroena smiled. "Will."

"Oh yes." Elentra replied. "We go forwards from here on. The field is both localised and universal. Their people in that ship are a part of the whole. They are in some sort of near zero time sequence. On hold if you like. We should have done this right away. Kroena, get a group of DVs, a fresh shift and get them into their resonant state. Broad search field. That is imperative. That ought to lead back, instantaneously to the source. The two will be one, connected. Then once the data's in we tune the DVs and crash it. Bring it all down. Then the planet will be ours."

"Won't they reboot?" Kroena asked.

"Not if we hit them at the source. We'll effectively block them. They may find a way around that. From the resonant signatures they radiate we know they got some sort of enhanced capabilities. So Kroena, a back up team to deal with that. Run interference. Anything will do. What do they fear the most? Chaos of course. So chaos we create in their minds. The imagery is everything. The trick is that with the DVs in their field they become part of it, dominate it and shut it down. Then we act down there. Activate the priests. The DVs are charging them up. I'm not anticipating any feedback or flash strikes. I know what you're thinking, the shamans. They think the DVs presence belong to their spirit world. The priestess Grena has sensed us. But there is little she can do, or the others. I believe we are in control." Elentra was satisfied. The read outs on the monitors confirmed her analysis.

Kroena and Risea looked closely at the spikes, the wave fronts, the overall fields. Elentra was right. It was all there.

Risea organised the DVs as they started their shift. One group was designated to the ships entities as a whole, another to align with the insertion field whilst the others concentrated on the priests.

"Easy once you know." Elentra said to them. They nodded.

As the ships crew was in near time stasis their minds were like an open book. Jamming their mental activity by having them in a time constrained space time frame actually left them wide open to run interference. The first group of DVs were onto them. The second group aligned with the insertion field resonating their inserted data field into their processors.

"Got it." indicating the field. Elentra impressed at the DVs success. How was another matter. The computers could look after that. The DVs were in and in control.

"So I guess it's up to me." Elentra continued. Whilst Risea and Kroena had some knowledge of physics, Elentra, being the enhanced stable volatile she was had been taught the esoteric end. Basically it was that every state in the universe, including but not openly revealed, that the cosmic consciousness was a field state. So was the insertion field. It was all a matter of resonant projections. *The reality was that whilst the various states were probables, sentience somehow converted them into actuality.* It was merely a matter as to who would dominate in the end. Regum might be winning at the material end though with enhanced capabilities, Prima was catching up.

They had to move quickly before their window of opportunity would be shut out to them. By rights Elentra should clear it with Gharbel, Qatus or Lord Pentham. She knew

she was breaking the rules going it alone. But time, that strange phenomenon which Regum had actually bypassed, was still of the essence. Very much so. Reality was not all it appeared to be. It was much more, depended on their consciousness. So rearrange the crews consciousness and lock them out. Lock into the field and shut it down. Energy which had stumped them was immaterial if the DVs could insert their reality. And it was not a matter of countering it with a more potent reality, Elentra working furiously at the console, uploading the DVs with a brilliant hunch. Instead of countering the reality of the insertion field, negate it. Insert nothing. Clear the minds of the DVs. This was no countermove in the classical sense. That was what the Reganians counted on and thus felt secure. But voiding it was something else entirely. The probable became the actual by negation.

"Game theory." Elentra said when she had finished uploading the new group of DVs telling them that they were aligned to void their inserted minds in unison. Elentra took another gamble. She made a general announcement that all DVs not concerned with the priests and any other target they acquired below, meaning for a moment they would disengage from trying to block the alien field to all void their heads and align with the core group of DVs.

"Meaning?" Kroena asked.

"One winner. Us. Games are linear more or less. So we shift that precept. Negate the inherent probabilities becoming possibilities and end up as actualities."

"Elentra you make it sound so simple." Risea said taken by the idea.

"The ship's field and it's crew are all aligned. The DVs are going to void that. As you can see on the sub-monitors their void state is slowly starting to meld. It takes a while and long practice to not just calm the mind, but actually stop it from being it's own resonance. The Reganians have created a positive state, we a negative one. It's like taking away the foundation. Not the energy itself, but the informational content of that energy field wave state. Simultaneously."

"How do you know all this? How can you be certain?"

Elentra merely said: "The stuff I was taught. The esoteric sciences."

"Yes, we got some basic physics, field states...yes I see what you mean." Kroena replied. The divine mind was the supreme apex of it all. The universe full of energy projections defined by information. The supreme architect the full repository. What Elentra was doing was going against everything she, they, were taught. It might just work.

"But by creating a vacuum..."

"Exactly Kroena."

"Something will fill it."

"That's what the other DVs are there for. Run interference. Whatever comes in, if anything will get garbled. Enough for us to insert our reality." Elentra was certain. If not they had nothing to loose. "We deconfigure." It was the most obvious path to take. "With a zero field, to call it something, there is no past, no future. Thus no present. Their insertion field ought to collapse."

"It might get messy." Risea added.

"It might."

"And rebooting won't work because of the interference that the other DVs are getting ready for. Letting their minds run at random, their normal state not actually engaged in the target acquisition. You can see it on the monitors."

One particular screen was turning into white noise. Elentra was right. Those DVs were ready. The others voiding their minds were taking longer. But slowly the active spikes were declining, loosing their resonance, heading towards zero.

"What about a back up resonance state?" Risea asked. "In case..."

"The interference does not work. Good point."

Elentra tapped in some more commands detaching a group of DVs to beam the planet's environment into that space prior the ships insertion.

"There that should do it."

The monitors confirmed the scenario.

"Now we wait."

Mars

Protas was riding out towards Nada's camp. Though Jaffir and Kahleff having made up their minds as to what action to take on the long run, Castari was still concerned about the priests. Given the murders at Orst, taking into account the volatility of the tribes, it might be best if she and her paramour Amos remained for the moment where they were. They had enough provisions to keep them there for some time yet. With their flock of sheep, grazing was adequate, water plentiful and it was on the main road. They would pick up information from travellers as well.

Protas was sent by Castari to not just check up on his daughter but ride to Orst as well and see what the priests were up to there. No good was the general feeling.

As he rode slowly, not wishing to put a strain on his charger he sauntered along the near deserted road to Orst. A thin layer of clouds was enough to turn the air a little chilly. Better than the relentless sun.

A patrol was approaching. The king's soldiers he hoped. Lances, one with Jaffir's pendant of the sun, unmistakable, Protas relaxed. They would question him, or merely exchange some words so he stopped and waited whilst they approached. They were not riding fast. Making sure all was well. Their leader approached, the other mounted soldiers at the ready, hands free from their reigns ready to arm themselves. Professional.

They exchanged greetings, hailed the king, offered thanks to Nurdass for her divine protection. From his travelling coat Protas extracted his reason for travelling. It was not necessary but it helped being open. Jaffir having taken Castari into his confidence had given his master passports for his servants on official business to carry the sealed order for Protas to travel freely and be assisted in any way if need be. Their captain acknowledged the document looking at it intently in case of forgery. He was satisfied.

"Travelling alone?"

"My life is in Nurdas's hands."

"Orst?"

"Yes, after stopping at Nada's camp. Everything alright there?"

"They are doing fine. Woe to those who would disturb the king's peace." The captain said for Nada's precipitate action in dealing with Verhat and the priests thugs was now common knowledge. It earned her respect amongst the soldiers.

"And Orst?"

"Norhat is battle ready."

"That is good to hear. The tribes?"

"Drifting back to their winter camps. Others are staying where they can. The town is patrolled day and night. We do not anticipate any more suspicious moves by the priests."

"And what of Astram?"

"Astram." The captain said with a hint of distaste, "is under constant observation Protas."

"Good. And the people in general?"

"A little restless. They don't know what to make of the priests. Of course there are always fools, the gullible who lend an ear, but most pay no heed. As long as the priests leave them alone, the peace will be kept."

"Thank you captain."

"Safe journey Protas."

"May the gods protect you and your men."

The captain acknowledged the blessing and motioned his squad to continue.

So thought Protas all is well at Orst. The calm before the storm. This so called 'coming' bothered him as it bothered his master and the king. They were ready to deal with any rebellion but it was the waiting that hung over them like a dark cloud that would not dissipate. It might be all a ruse on the part of the priests. Create an anticipation which they had to fill. But the nagging doubt remained, as to what? Insurrection? Now less likely. Some mass prayer meetings? Probably. Whip up the populace? Could not be ignored. They were brewing trouble by giving the semblance of doing nothing overt.

Protas rode into Nada's encampment. The sheep and horses grazed where they would, the goats already slaughtered for Castari might deal in animals but he kept no herds himself. Just enough meat to see them through winter. The camp was quiet until he came. A servant looked after his horse whilst Protas made his way past the smaller tents into the bright patchwork of Nada's central abode, smoke wisping out of its raised roof.

Glad to see one of her father's most trusted aides he was made welcome, dried fruits and nuts ready as always, a servant quickly moulding flat breads to bake on the hot

rocks of the hearth's fire in the centre of the tent. Amos roused himself, Protas smiling. Young lovers. Amos smiled sheepishly at Protas who merely grinned. He too had been young once.

Though he could not relate everything which transpired he informed her Castari was watching his goods and property in the king's city. The feast had gone well, the people there content. It was a timely gesture Jaffir thinking of his subjects. It would dampen the enthusiasm for the black cowled scourges.

Then Nada came out with it.

"That ancient book. It said things which made me think."

Protas sipped his offered tea. He would not reveal the king's intentions.

"What book?" Protas not aware of Nada's find.

"Oh." Too late. "I thought you knew." And she told him what they found at the cairn.

"Interesting. And this is..."

"With my father." She got up gracefully, Amos merely smiling at Protas. A young man of few words. Strange how such opposites could and did attract. Castari had been vague about the need to find a path through the mountains. That was all Protas knew for he was going to Orst to parley with tribesmen who might be interested in forging a way through what seemed like an impenetrable wall. To be pursued meticulously and cautiously. According to Nada their ancient history told of a blasted city on the other side of their world. It was all so long ago. If they did venture beyond the mountains, if he acted quickly and staked out a claim he could run cattle, prospect for gold, precious stones. With Castari as his backer, the possibilities were there.

"What do you think?" she asked. The flat breads were ready, piping hot they tore into them, for the servant had brought them cuts of lamb reheated in the fire.

"Fascinating what you said."

"Is that all?"

"It's ancient. Something for the school at Orst."

"But what has the school to do with anything?" Protas asked aware it may harbour hoary secrets.

"I think Eghan knew more than he let on. You know of the ancient temple now buried under rocks."

"Vaguely."

"Our past is not what we think it was."

"So, does that surprise you?"

"Doesn't it you?" Nada a little disappointed.

"It's the present that counts."

"True Protas. But the past leads to the future."

"And?"

"The past can be resurrected."

"You speak like an...occultist."

"Maybe I am. After all, the word means 'hidden'. I am not Verhat or Kahl. I believe in the gods. But if we once had this glorious past then what is to stop us from regaining that past once more? Even if this is a little embellished, even if only a fraction of this is true..."

"Well you certainly have found an interest. Maybe you should talk to someone at the school. If they can be found."

"You mean the teachers, the sages have left?" Nada was shocked.

"Well I am off to Orst. Maybe you wish to come with me. Amos here can look after the camp."

"Maybe Joach. It would only be a few days at most." Amos eager.

"The decision is yours of course." Protas not comfortable. He worked better alone.

"We can discuss this later. There is another way though."

They waited.

"Given that Protas here is not exactly taken by our history..." she sat once more on a pile of cushions in front of warming fire. Then resumed her sentence: "his casual interest would be a better cover than one who eagerly sought something which might attract the attention of Astram."

Amos nodded. Protas saw the sense in that.

"What am I looking for then?" aware of his orders.

"Anything Protas anything to do with our ancient past. Maybe even before the coming of the gods."

"But the gods are eternal." Amos exclaimed.

"To be sure. Alright, before they revealed themselves to us. Better?"

"What would I be looking for?"

"Books with strange pictures. Writings, documents. Maybe some of Efhan's best teachers know something. Talk to them."

"If I can find them."

"They are in hiding?"

"If they are still there. They may have left."

"The obvious place would be the king's city."

"They might have gone to the coast, back to their hamlets, anywhere Nada."

"Well do what you can, if you can spare the time."

"I will try Nada."

"Thank you Protas." She said brightly. "Now you are staying the night."

"That was part of the plan."

"Good, we can slaughter a sheep in your honour. And drink wine."

Astram woke determined to act, to do something about that festering spiritual sickness: the school. His agents, handpicked long ago as students kept him informed of the tenor and nature of their mind numbing philosophy of Ephan's, and Jea. Words words words. In the end unless they translated into power, into attaining the divine which even the shamans knew, this questioning of how one thought, why one thought – as if that was not obvious – or where thought would lead to – one out of three right, it merely confused what was always there in the first place. To cleanse, to align one's soul with the divine majesty of the supreme god. The ultimate revelation was there for all, to a greater and lesser degree according to one's given spirit. What Ephan had taught were a series of dead ends. What was the nature of nature? Really! What were the heavens composed of? The divine effluvium, the essence of the supreme being. Ephan demanded proof. As if they could simply fly there like the birds. Well they were not birds but the soul did ascend into spiritual realms, something the shamans achieved naturally.

As Astram lay in his woollen covers in the large tent pitched in the public square outside the school buildings, listening to the voices outside, laughing, jesting, busy with the day's affairs, mules braying, the sound of horses hooves on the hard ground, squeaking carts. Astram lay restlessly. Since going through some of the notes of his infiltrators even his mind's natural equilibrium was out of kilter. He understood the pernicious influence Ephan's reasoning had on him. Sure thoughts came and went. Some were divine, some pertaining to the self, some just thoughts. The trouble was having imbibed Ephan's philosophies now had him thinking. If it were not for his knowledge of the supreme being which made it all happen, giving them the sense of the divine to communicate with it he might have gone crazy. Was the basic effluvium, the stuff of life made of breath, driven by the elemental fire of the spirit, or water nourishing life, earth the essential substance they needed to live, or that mysterious fifth element, the unitary invisible energy which branched out into the world as different elements? If not for the unitary god his mind might have fractured. Instead of enlightening one's being Ephan

threw all into confusion. Yes! That was it! Confusion! Which lead to discontent, the need to find answers Eghan purported to possess. The hook by which he kept them in his orbit. Well the nexus was broken like an old clay vessel. It's hollowness revealed to all.

Laying warm and cosy, his mind ruminating, listening to the noises of the people in the square Astram decided instead of destroying the school, preferably burning it to the ground it would be smarter to take it over. It would be a home for the priests. They could then teach the truth to the people. Those teachers who were not amendable to their way of thinking would be evicted. They could return to wherever they came from. What a simple solution. All he needed was Norhat's permission. Most of the students were gone now, frightened by the violence done to their teachers. The school would become a beacon for the kingdom.

Destiny was on his side. Inamus would be useful now that Oenah was being detained at Jaffir's pleasure. Luckily he did not know much. His mere presence originally useful as a representative of the noble families. Enough for them to take note of Astram's power. Knowing the attitude of the Families, survival at any cost, maintaining their status with the incessant jostling for power at the palace they would soon come around to his way of thinking. They even sent their creatures, their servants to check out his message. Tailored to their needs. With more lands open for grazing and cultivation they would be there in a flash to stake out their claims. They might be all equal spiritually, yet as nature was ordered between the hunted and the hunters, or the passive nature of the plants, nurtured to sustain life so the divinely ordained order of the people was in place. The only time these distinctions were held in abeyance was in their houses of worship, hopefully the temples once the goddesses saw that he had the power. Reduced to only a fraction given the gods were mere emissaries of the greater being who ruled over all. In the holy places of worship the elite would be up front and then in descending order of social importance the rest. Here Inamus was indeed useful explaining patiently to their stewards that their social status would actually be enhanced, not diminished as they currently were in the temples, where anybody had access to the incarnate goddesses. Those women who accepted his message would have their own order. They could minister to the daily needs of the spirit leaving the priests free to maintain order, make sure the divine injunctions, he was still working on that, were kept.

Ah he felt better. He had already achieved much simply by laying in his soft woollen covers. All it took was brains. Rising, now that he felt full of energy, quickly washing himself, shivering a little in the cool morning air, the central hearth's glowing

ambers flickering tiny flames whilst he had some tea. He was not hungry. Inambar had his own tent.

With a change of clothes Astram felt refreshed, ready to continue the great work. Outside the open air kitchen still had some meat and bread left for those who were hungry. Later a small tax would be levied on the believers to keep these going, every place of worship feeding the needy. Hopefully they would rely on their benevolent nature, seeing the goodness of their intent. To convert, both by word and deed. The more one gave the more divinely exalted one would be, assured a place in the divine kingdom when the great passing came to be.

He saw Inamus eating his morning repast with some locals. Just ordinary people. The traders and merchants had indeed sent some victuals. It was insurance in a way. By keeping the beggars away from their doors Astram's priests were really doing them a favour. Nor could Norahat complain as to their good intent. He would send Inamus to the military commander regarding the future of the school. He saw no difficulty in taking possession of the buildings. Evict the unbelievers. The dormitory would house the common priests and the social outcasts. They would be agreeable if only because they were being cared for. He had to be careful not to indulge them too much. He ventured outside. Inamus stopped chewing, swallowed and greeted Astram.

"When you have finished go and see Norhat. The school's future."

"At last. Things are looking good."

"They are that."

"Some of the teachers along with the odd student are holding open air lectures."

"They think they are protected."

"Little do they know..."

"They do know Inamus, they just will never be able to prove it. Norhat's soldiers have questioned many and came away with nothing." Others were drifting towards the open air kitchen, awaiting their morning meal of recooked lamb and fresh bread. The wine and beer had run out but there was still plenty of tea. Some acknowledged Astram and Inamus who nodded back.

"A few actually agree with you in razing the school. Get rid of this pestilence. Others, mainly the itinerants, even some of the clans want to move in for the coming winter. You know their common grazing grounds stretch as far as the river for their goats and sheep."

Keeping his mind focussed he said: "You will present our case to Norhat. It will make his job of keeping the peace easier. We will control the people." Astram smiled,

satisfied things were indeed working in their favour. "But tell the priests that they are not to go on a rampage. There will always be troublemakers, the bored or the greedy looting for their own pleasure. So get them to patrol the grounds. We also have to find out what their insipid and insidious teachings are all about. There might be more than just mere word games here. Who knows what Ephan and his dead successor Nagor had up their sleeve. Whilst you are parleying with Norhat I will have a look. They have a library."

"Very good. What if Norhat says no? He may want the buildings for himself, his people."

"Then we share."

"And if not?"

"Simple. If we can't have it nobody can."

Inamus understood but remained silent.

"The wrath of the people. Nothing we can do about that." Atram smiled crookedly.

"Raze it?"

"Unfortunate isn't it?" he suppressed a chuckle. "Finish your tea, then go."

Inamus nodded.

Atram rose, dusted himself off then walked towards the priest's tent. He knew that the lower ranks were already up, wanting to be noticed that they were no slackers. Those who had come over from the higher families kept to their lazy ways. There were some who were smart, having received their own education through private tutors. Mainly husbandry, martial arts, some book keeping for they had to learn how to run their estates, though their own stewards and marshals saw to that, rudimentary science, different soils, what wood was good for what, riding skills, architecture so that they could understand the art of stone masonry, and the necessary need to fulfil their spirituality. Soon every estate would have a representative priest. Then he would have knowledge to be used to keep a firm hold of the rich and elite. He would create special orders of priests. That would motivate them, many called and few chosen. It was all working out.

Inamus rose saying: "I think I will walk. Keep my ears peeled to the ground."

"The priests can do that. Not today. You ride there."

"As you wish." Inamus went to make one of the horses in the outer corral ready.

"If I am not here, I will be at the school."

Inamus merely waved and galloped off.

Astram walked to the priests tent and found those of the nobler families taking breakfast. He told them to remain seated and asked who could read and write. Nearly all of them.

"Good. I need only one for now. I need someone worthy to impress the left overs. I know we are all equal but impressions count. No point having some clod."

They snickered at that. He searched their faces. Most were young. So Astram decided to take the oldest.

"When you have finished, work the merchants. Promise them the keys to the kingdom, an exalted status after the nobility of course in the new divine order. You know what to do. Any alms go to the secretary. He will note the contribution and your part in it. When we become richer, your good works will not be forgotten."

They accepted this gladly.

The black clad, cowed man waited. Astram nodded to him and they left the tent.

"And you are?" as they walked around the crude stockade made of young tree trunks and solid branches held together by hempen rope, the smell of the animals and their dung wafting in the still morning air.

"Joach my lord. From the family of Urnaf. Traders in wines, beer, spirits."

"Ah yes. A worthy family."

What Joach did not say was that he was sent by Nada with Castari's blessing to glean whatever he could from Astram's camp. Joach surprised how open they were. Surely they would be on the look out for infiltrators. Maybe Astram did not care. Certain of his divine mission. Joach intrigued. There was talk of forming different orders, Inamus had said so. If that was the case and he could get appointed in some prominent position he might just stay. A foot in each camp. Nada and Castari were smart enough not to send any messengers to him. As long as there were no designs that would affect them then there was no need to make contact. In fact he would suggest that he become a volunteer to minister to their needs. If Inamus accepted that he could not see why Astram would reject the request. He would wait. Plenty of time.

"Humble really my lord."

"Call me Astram Joach, we are all equal in the eyes of the supreme deity,"

"Of course."

Astram had seen Joach with the others. He was respected, less ebullient than the rest. Holding back. A good sign in one way. Those who were too eager could be a

liability. He would need cool heads as the orders expanded. There might be a special position for him.

"What have you studied then Joach?" they passed the coral and were closer to the school now. The main building, three stories, long, behind it a similar building housing the students looked deserted. Some were sitting outside under a broad old tree listening to a lecture. They eyed the two priests warily, the teacher, animated fell silent.

Astram knew the layout of the buildings. Downstairs a few offices to manage the school. Then upstairs the attendees, the staff assigned to maintain and clean the buildings and all that was necessary to run the place. Next floor lecture rooms and the top living quarters of the teachers. The library was downstairs.

They walked into the foyer where a nervous looking office bearer greeted them reluctantly.

"I have come to see your famous library." Astram announced.

"I shall get an attendant." And the old man pulled a chord. In the interior a bell rang. The office contained along its walls hundreds of scrolls. If Astram was to bring down the school, the records would come in useful as to who was here, either as teacher or student. Benefactors who might be persuaded to shift allegiances. Who knows, he might convert this place into a seminary.

An even older man, dressed in brown robes, some rustic, gnarled hands, weather beaten face, deep sunken brown eyes, crooked nose and strands of unruly white hair greeted them effusively.

"Normally one can only be a student or staff or an invitee to see the library but one such as yourself and your worthy companion, well, it is an honour indeed to have such a presence amongst us." He chatted.

"Just lead the way." Astram answered peremptorily as if he owned the place. He soon would. Joach stood a little behind him, thus indicating Astram's importance. Joach could not believe his luck that Astram had chosen him. Now he too would find out what the school was all about. The taverns had been of little use, though not altogether useless. Now he would find out what really went on here.

They walked down the gloomy hallway through a rude wooden door with a huge solid steel lock. Interesting securing the library. Inside they found themselves in a large room, well lit with a huge open window, the shutters thrown open to the morning light. Along its walls countless scrolls, along the centre an equally large back to back bookcase crammed with leather bound tomes. This had to be the largest library in the kingdom. On top of each row the various subjects, subdivided into different groupings.

Astram walked down the rows, looking intently at the subjects. Mainly philosophy, the nature of the elements, the heavens, the stars, wandering stars, subjects on divinity, the goddesses, geography, he pulled out a scroll and undid it's ribbon, the old man hovering nervously around them. A map of Orst, the building marked, the roads, river, the parcelled out land, it's owners. So it was more than just a philosophical library.

Astram turned about and looked along the central bookcase. Thick velum bound tomes. The mystics, the ancients, ah, he took that down, a small step ladder handy to reach it. The clasp was locked. The librarian was not about to give him the key.

"That is only for initiates..." he apologised.

"I can break this open or you can open it for me." Astram demanded.

Along the window several desks. All empty.

"Joach, you look at the mystics whilst I peruse this."

Reluctantly the old man retrieved a set of keys on a large ring from within his robe and with some ceremony opened the dusty book. Not much in use then.

They both sat near the window. The ancients. Here was the old history! The fallen city, their fallen race destroyed by angered divines! This was precious. In this Astram could build on a foundation. They harked right back to the beginning, before the coming of the lesser gods. An idea germinated in his excited mind. He would get those, like Joach to use these records to write the real history of their belief. How their ancestor's had lost the true spiritual past, were punished and condemned to live the life they lead now. With the resurrection at hand. Their path to inner glory redeeming their ancient heritage. They had wandered in the spiritual wilderness and he would lead them out of it. It would need specially chosen Visionaries, prophets even. Invent them if need be.

Joach looked through the mystics. Everyone had their own view. All agreed that the universe was filled with a magical substance, the stuff of life. All sought divine knowledge and claimed to have found it.

Astram for the moment had seen enough. No point getting excited. They might hide the books. He walked over to the table where Joach was studying his book. What divine guidance. To walk in and find exactly what they needed. The mystics could become the prophets! They were the initiates, the chosen. The progeny though given they were not that could be easily remedied, cobbled together. Create lineages, his included. Then knowing the elite families incorporate those most useful to the cause.

"Old man. We're taking these. Don't worry they will be returned."

"You...may...study these here..."

"I will study them where I see fit. You forget yourself. If it were not for me this place would be ashes. The people do not take kindly to apostates and unbelievers. If you have a complaint go and see Norhat."

"I...ahm...this is most unusual."

"So are the lies being put about by your teachers."

"Lies?" he looked agog.

"The philosophies man. You think I'm stupid." Atram feeling his own wrath and it felt good.

"No...err...no." he mumbled forlornly.

"That is settled then. Come." Atram said to Joach. They headed with the two books out of the library leaving the librarian standing there with tears in his eyes.

The office was still manned by the attendant. He too looked surprised as they walked out with the two huge books. Atram thanked him throwing the words in his face.

Outside the group which had been listening to their teacher saw the two black clad priests with their precious tomes. They rose as one body but made no move to stop them. Atram had not expected resistance. They moved cautiously forward keeping their distance.

"You want this place to burn?" Atram challenged them.

"Norhat would never allow it." someone called back. Atram searched for the cocky young man. They stared, about twenty of them sullenly at him. The teacher told them to let them leave adding: "They are only books." That surprised Atram. Did that mean there were others hidden somewhere? The place would have to be searched. It would also have to be watched in case they tried to smuggle out their precious tomes, keeping them out of his reach.

The group resentful, their teacher looking almost indifferently at him. It could be an act. He certainly was not going to stop him. Either he was weak or saw the sense of mollifying Atram. At least he was not hostile.

"Thank you." Atram tried not to sound too facetious.

Back at their camp Inamus was waiting for their return. About to report but Atram cut him short. "I need some private quarters. I mean a house we can use."

"Oh, let me think. Several really. There is the abandoned house where Ephan was undone. But it is cursed, no one will go near it. If we use that we too will be cursed. There is always my house."

"Too far but thank you. No merchant or trader?"

"They are all waiting to see what will happen. I could make enquires."

"Well later."

"There is Nada's camp." Joach suggested. Get the books into his hands.

"Or the fort."

"Yes maybe. Any scholars about?"

"They are in hiding Astram."

"Surely someone..."

"I will ask around the camp."

"Do that. In the meantime I shall retire with Joach. Oh yes before you do that Inamus, what did Norhat say?"

"Great news. He's got nothing against it."

"We have the school?"

"He's not stopping you but said you have to work it out with them."

"And if they say no? You did mention it?"

"Yes I did. Basically it is a civil matter."

"Civil. What if there was to be a disturbance, it would not be very civil then. You did point that out."

"I alluded to it. He would be forced to keep the peace."

"So not taking any sides."

"No Astram."

"He will. When the cleansing is done his opinion will change."

"Yes Astram."

"That still leaves us with a need for a quiet place, where we will not be noticed."

"The taverns maybe?"

"Yes Inamus, two priests taking rooms, very good." He said sarcastically.

"Not if you change your garb."

"Now that is an idea worthy of you. We will need writing material, lots of it. Can you acquire that?"

"I do have some resources available."

"Good. Find me the most trustworthy Inamus. Those who can keep their mouths shut especially when drinking. I need several scribes. No I have a better idea. Joach has a point. Thank you for the suggestion. But tell me Joach why did you choose Nada's camp?"

"It is the closest." Joach said easily.

"I have a better idea. We go into the desert with our own camp. Near the lake at the other side. A retreat, for divine inspiration. Given that when the coming is at hand, there might be trouble initially. Things could get out of hand. Yes. We will choose those who can be trusted. I have a plan. Simplicity itself. Then when done, we shall have a firm foundation for the faith."

Inamus nodded.

"In fact Inamus you could lead it. Come let us go into my tent. I will explain. You too Joach. I make you first overseer of this project." They entered and sat around the warm hearth. A priestly servant bowed and Astram asked him kindly to leave and not disturb them.

When he was gone Astram outlined what he had in mind.

"You will have noted we have two books. One dealing with our ancient lore, the other the line of mystics prior the revelation of the gods. It is time I think we have our own lore. Our own divine pedigree. The ancients had fallen due to their straying from what was divinely ordained. And were duly punished. The mystics though rambling on somewhat are our progenitors. That way we have continuity. We just rewrite it according to the revealed truth. Slightly edited of course. We will make it so clear to all that our belief was, is," Astram emphasized, "predestined. The fulfilling of their visions, a little clouded perhaps but well they were being led without seeing it all. We will make sure they saw all. The divine plan, the necessary rituals, the gods the initial divine messengers. They led the way, as did the divines, meaning the mystics, and with a little embellishment here and there we have the final testament." He looked pleased.

"Audacious." Inamus said.

Astram let that pass. He had hardly begun. "By using different scribes we have the different authors at different times, living witnesses revealing the truth."

"We will need old parchment. Age the ink."

"Good. Heat ages. We bake the written word slowly. It will then be old."

Inamus was impressed. Joach astounded. Rewriting history. Never in living memory, he was lost for words and understood he had to agree to this ruse.

"And all are sworn to secrecy. Those who talk will meet their maker." He said it as of throwing scraps to the dogs.

"Fine by me." Inamus said.

"I will gladly help Astram." Joach not too eager, as if mulling it over.

"Good. Joach, you know your fellow priests. Broach the subject obliquely. It is a holy project. The divine cannot be revealed too quickly. Thus the need for secrecy. So for

the moment we are engaged by the will of the divine in this most holy of undertakings. We shall create the final testament, the true revelation, all in historical context. Tell me Joach how familiar are you with the philosophies?"

"Not very."

"Well that cannot be helped. Any of the priests in your group...?"

"Some are natural speculators."

"Excellent. We need sharp minds to mould their godless philosophy into an initial groping towards the unitary divine. So any writings even hinting in whatever form, vague even, at some underlying principle will be used. We shall triumph yet. Then when done, we can disseminate the truth. You see the doubters will bring up counter arguments. With our knowledge of their misguided reasonings they will be no match. We need an answer for every counter argument. Use the heretical writings as bait and prove them wrong. You do understand what we are about?"

The idea was heinous to Joach. But at least he was in. Witness to this spiritual and intellectual crime. Forging the past, twisting the present for an unprovable and as yet unproven deity. For organisational abilities both Inamus and Astram knew exactly what to do. What drove them to this? Why this incessant need for a unitary god? Things were, well, there was peace in the kingdom and the heavens majestic unto eternity. They were driven. But not possessed. More rational if misguided. He certainly had no sense of their definition of the divine. So why change it all? Power? Until proven otherwise that could be the main guiding principle. Possess the masses. That was their real kingdom of the future, with the priests at the apex. For now there was little he could do. They were not challenging Jaffir, or Norhat, or even the social order. It was a naked grab for power based it would appear on monumental lies. Joach would need to find out how Kahleff would react. If Astram was smart he would offer the king's spiritual advisor...

"Astram."

"Yes Joach."

"Kahleff."

"You have been thinking. That is welcome. He will have his own station. I know what you're getting at. This all has to get past him. He won't live forever you know. Nor will Jaffir. So for the moment we are amendable. Naturally. Kahlef's exalted position remains. As does Jaffir's. We have eternity in front of us. What are mere mortals then?"

'Eternity.' Joach pondered. 'Without the living what were the gods?' the thought came to him. 'If they were not there they would have been created. For the gods

pleasure?’ He had never considered the true state of his being. And now he was in the thick of some very dodgy theological shenanigans.

Joach entered the tent of the others. Though they pledged their soul as priests to spread the word they were a disconsolate group. Coming from wealthy families it did not take long for the group to think themselves above the need to preach to the masses. Perhaps considering the power trip delegating to the lesser, including himself to travel the stony road of saving lost souls. Astram Joach made plain was bent on having his own way. That much these acolytes accepted.

He talked of the divine mission. They listened in their bored attitude. Indifferent. But when Joach broached the need for learned minds they became attentive.

“Astram needs intelligent volunteers. How many he did not say. But those who have had a broader education should see him. He will probably,” he was guessing here, but knew how things were organised, “form a group responsible only to him.”

“He has certainly confided in you.” One of the young bucks challenged. That one such as he took precedence over them irked him. Bad luck. Stay alert.

“His decision.” Joach replied with the some indifference. “So who has any qualifications. Able to read and write?”

Most did.

“Well since you are all possible candidates it will be up to Astram to decide who will undertake this worthy task.”

Some snickered.

“We know about the library.” Another said. It sounded like an accusation.

“Yeah, the library.” Another scoffed.

“Detritus.” A third said.

“Shit from shitty minds.” Someone else put in.

“Up to you.” Joach unfazed. “Astram has many who would be glad to engage in this holy work.” He was holding up well. What was it with their resentment? Joach considered them wastrels, probably never cut it with their teachers. Rejects, like so many of the priests. If they were inept which he seriously considered to be the case then the project would perhaps fail. So he talked them up, paid compliments to their innate intelligence seeing through the empty rhetoric which was the husk of their minds, not Ephan's philosophy. Some comprehended his reasoning and actually showed an interest. Not much, but at least they were focused now. Having had enough of them he rose and left the tent.

Joach was restless. He felt like leaving. He had the information of what Astram intended. His heart was rebelling. Having been curious, knowing Castari needed to know which way the wind was blowing Joach came to a decision. A little premature yet knowing what he knew it was enough.

All this time whilst amongst them he had merely worn the cloak of a priest over his own clothes. Discarding it now would draw attention. But he had made up his mind to leave. Astram had to accept there would be defectors. Or in his case informants. Since the coming of the priests and Astram's arrival the town was simply not the same. Their religious attitude which infected the people. Subdued around the priests. Reserved, cautious, apprehensive. Maybe that is what Astram wanted. A show of spiritual submission.

"I have things to do." Which gave him an air of mystery, of being in with Astram and they were not.

He left them there and then. Outside the camp all was activity. Food being prepared, a sheep's throat slit, the blood collected in a bowl to be mixed into broth. There were the usual hangers about. Joach wondered how many were informers like him. Watching laconically those around them. One thing was certain he hoped. That the families might consolidate against them. The knowledge of more land being parcelled out to the masses would certainly not appeal to them. With more producers on the market prices would decrease. Astram was sure to know the effect that would have. It might even disturb the families, the traders and dealers in staying Astram's hand. He made no secret as to his social reformation.

It was time to leave. He had his horse. The saddles were with a group of priests guarding the coral. They might inform Astram that he had ridden out. But what could they say? Not much. Anyway no one could force him to remain. The oath administered upon being accepted in the ranks was to be true to the divine deity and to accept the decrees handed from on high by Astram, Inamus and in some cases Oenah. One he was dismissing.

"Off on a mission?" one of them asked. Joach had his answer.

"Oh yes." He beamed. "Astram's orders. I cannot say much except," he winked conspiratorially, it would relax him and his fellow guards, "Astram needs certain individuals for his great work he is engaged in. It is an honour for me to undertake this valuable task. He has entrusted in me I suppose a secret mission. So say nothing to anyone who is inquisitive. Only Astram is to know if he asks. If Inamus asks refer him to Astram. I cannot say more."

"We understand. Good luck."

"May the divinity be with you."

"And you." The priest replied.

Nothing was said of swearing an allegiance that made Astram own his soul let alone his presence. He saddled his horse, the priests not asking where he was going, then merely watched as he rode out towards the school. No point in making it too obvious, the eastern road which led to the coast travelled often by townsfolk. And traders coming in with their loads of salted dried fish, kelp, and timber. The road north were for the tribes and clans who stocked up provisions, trading their semi precious stones from their guarded mines. Property which they would defend at all costs. South the king's highway was the only well travelled road, towards the west the desert.

The school was a hive of activity. Joach was surprised. Whilst still in sight from Astram's camp Joach was far enough to make his identification difficult. Just another rider. Seeing his black garb the students stopped what they were doing. They were carrying parchments and books, piles of them. Carts being loaded. Joach smiled to himself. They were secreting their treasure, the library. It must contain knowledge the teachers did not wish Astram's kind to gain a hold of.

"What do you want." One of the students spat at him. An older man, one of the teachers gave the student a look though glowered at Joach. He removed his cloak and threw it to one of those standing near him: "Take it. Someone may find a use for it."

At that the teacher, a man in middling years took it from a student who had caught it.

"A gift?"

"A resource." The teacher looked puzzled for a moment. "Use it. Walk amongst them."

The teachers face brightened.

"Thank you..."

"No names."

"Of course."

"I see you are saving your treasures. Disperse them well. Astram will not be satisfied until he has uncovered, or more likely discovered your true knowledge and enlightened wisdom. I will see if maybe some of my people might ride with you for protection." The decision was not his to make but he would put that to Nada.

"I just hope there are more of you." The teacher said. Other students were busy tying down the first cart, two mules standing docile. Another cart came creaking around

ready to be loaded. The activity was frantic. Agram's visit and the taking of their books galvanised them into action. It made sense not to be a target. Having all these scrolls in one place made for temptation now that Joach knew Agram's true intent.

"So do I. The desert would make a great repository. Dry soil, dry air."

"We understand you. Rest assured we are doing our best."

"Let's hope you succeed. Oh yes. Agram is looking for scholars. I leave it up to you if you intend to satisfy his request. Still having someone on the inside..." he smiled cheekily.

Joach spurred his horse travelling first east then when out of sight from Orst headed south to Nada's camp.

He expected to be followed but was not. Having been taken into Agram's confidence to seek out more scholars and discovering real brains were thin on the ground. It made sense to search further afar. He hoped that reasoning would help his departure.

He rode slowly through the night. Passed a patrol and informed them that he had left Agram's camp. The reason he explained was confidential but the important thing was for them not to tell any of his people they had seen him. Norhat was another matter.

"Are any of you believers in this unitary deity?"

They looked at him askance.

"Please, I have to know."

"Why?" their captain enquired.

"Because of the knowledge I possess."

"I think it might be useful if you told us anyway."

"Agram is trouble." Joach ventured.

"That is possible." The captain admitted.

"He has certain designs. If you are with the priests then I am sworn to secrecy." He held out temptingly.

"We are true to the gods."

"Thank you, as am I. I am actually with Castari and off to Nada's camp with important information. In fact, you can tell Norhat that Agram is writing a divine book. He's using the library at the school to rewrite our history. So he will have designs on the library. You may have to beef up security there."

"We are informed."

"I was taken into Agram's confidence."

"What is his intention..."

"His intentions. To become defacto ruler of the people. Have the priests convert them to his false religion. You know the rest."

"We might. But we would like to hear it from you, if as you say you are in his confidence."

"Well," Joach sighed, "to give his followers land. Enrich and empower them. That offer even extends to you, if you accept his message of course."

"Me a farmer?" one of the soldiers laughed. "Tilling the soil under the scorching sun from morning to night. I would rather risk my life cleaning out bandits. Not that farming is dishonourable, but keeping the peace is also necessary."

The captain held up his hand for his soldier to remain silent.

"What Astram intends is close to treason. One could consider him a usurper."

"He's too clever for that captain. It's the rest he is after."

"I understand what you are saying, what Astram is about. We thank you for what you have freely told us. A safe journey then. The road is clear ahead of you."

"Thank you captain."

"May the gods be with you."

"And you."

They parted. The next day he rested his horse for a while. There was sparse grass around. The king had sunk wells along the way where Joach was taking his rest. Not a soul in sight. The land deserted. He felt the freedom of the open spaces. One could get inspired out here. No incessant priests jabbering on about their mission, no gossip. Just nothing. It took a special person to be completely free out here. At least freedom was to be had if one had the means and knowledge of surviving the elements.

Towards the river further east, more a ravine with a rough trail this road was the shortest route to the king's city for the river meandered east before resuming its southern course. Having let his charger recuperate Joach resumed his journey. By morning he saw Nada's camp near the lake. He saw the rubble from the earthquake having buried the entrance to the old temple. The only reason he thought of it now was Astram's interest in their ancient history. There were also caves where devotees had once lived. Growing crops at the lakes edge they had been self sufficient until abandoned so many lifetimes ago. As to what gods they worshipped none could remember.

They saw his approach and welcomed him back. Nada and Amos came out of their tent to greet him.

"Back so soon?"

"Oh yes." And slid off his horse to let one of the servants take care of it. "And sore. Passed a patrol and that was about it."

"Yes the road is deserted. Well I am sure you have much to tell."

"Indeed Nada. I must also go to Castari, unless he is coming here."

"He is as far as I know staying at our house. But come, eat, drink, relax, then we can talk. If of course I am to be privy to what you know."

"You are his second, so I can talk freely."

They went inside the tent. The smell of fresh roast lamb made him hungry. He had not eaten for nearly two days, surviving by drinking water and nibbling some nuts. After having filled his needs, and drunk some wine Joach relayed everything to Nada. She listened focussing her utmost concentration, hanging on every word, taking in the nuances, keeping her own thoughts in check.

What Joach revealed astounded her. Amos, reticent as ever merely sat there. Not surprised what Astram was doing. Maybe given the priests self acclaimed mission the logical sequence made sense. In a way it did. Nada though given her position needed to think further than just running this camp. What she saw in Amos Joach could guess. A good lover, devoted to her. Amos asked for nothing which was good. He accepted his secondary position and never talked across Nada. In a way he would make the ideal husband for her. Accepting her superior status without complaint, there for her. What more could a woman want? From a humble family Joach might have expected Amos to connive something out of her. Castari was extremely wealthy. If Astram's scheme of expanding the farms succeeded the market would be sorely tested. Nada understood this especially after Joach had put that to her.

"Not that we can stop him. Only Jaffir can. A lot also depends on Kahleff. Up to now they seem to let things run their course. If I had my way," she poured them all more wine, "I would round them up. They contribute nothing, inveigle themselves into people's homes and the gullible accept their words of holy redemption. It really is too much."

"It isn't it?" Joach agreed.

"Well now that we know more regarding Astram's true intent I think it might be wise of someone else passed that information on. If Astram thinks you have defected..."

"Remember I'm seeking scholars Nada."

"Yes I know, but the city is full of priests. I will tell my guards to keep a sharp look out as to who passes."

"There is the longer track along the ravine. They might use that if they are following me. I did say I was seeking the right minds Nada. It's only when I fail to return

and that will be days from now might he suspect that I have left for good. Then he still has to get word out, more time wasted. I think I am safe for now."

"Then you should not travel alone."

"You need your people here."

"You think we are not safe?" she asked. "After all, our reputation is very much enhanced after we dealt with Verhat and his thugs. I think even Norhat was impressed. And speaking of Norhat it is a pity you did not see him before leaving or getting a message to him."

"I am sure he has his agents amongst them. It may even be that the group I was with was infiltrated. Some were not exactly eager to embrace Astram's vision of his holy kingdom."

"You think so?"

"Think yes. Certain? No."

"Well it's not exactly that they would reveal that fact."

"No. You are right there. It would be nice though if it was so."

"I'm sure it is. I just cannot imagine Jaffir or Kahleff just standing by. What is the situation in Orst then, meaning Norhat."

"Ever since the murders there are more patrols, more soldiers on the streets Nada."

"That at least is something."

"Well I think I've covered all I know."

"You have done well. It was indeed extremely lucky that he took you in his confidence. We thank the gods for the revelation. It is our duty to act. But I can see you are tired. Must be the food and wine. If you do wish to rest..."

"I am feeling sleepy. You will forgive me?"

"But of course. You can sleep here or in the guests tent."

"The guests tent will be fine. You have things to consider no doubt."

"And plan ahead. We will see you tomorrow then."

"You will indeed."

Mission control came through as the 'Explorer' came out of her statis induced time compression. A simple matter of holding their particular probability waves whilst the environment around them, including the surface of the planet was scanned, analysed, observed, regarding developments amongst the inhabitants. As a first contact scenario, going in blind would have been premature. Observe first, then act.

"You are ready to go." The command came.

"Perdus receiving."

"Prior contact...your data we collected is coming through...now. When you have digested that with your team let us know which scenario is in play."

"Understood."

The link was cut. Not a link in the classical sense for being quantum entangled they were with mission control in real time.

The data they had at Regum was now in the ship's com-system then re-routed into a secure contained area cleared from its initial receiving buffers.

They were all together in the lounge, the cockpit up front on auto for the ship could easily be run from where they were gathered. The slow down effect of their near zero stasis negligible to their bio rhythms since time really had crawled at a snail's pace inside the quantum insertion field.

The team looked at the readouts, the graphs of the sentients below, all in glorious real time vision. The first thing they concentrated on was the intense DV activity. Remote viewers targeting specific individuals who suddenly vanished. Verhat and Kahl. The worst case scenario in effect. They watched the ground base state to run and ascertain improbables. The DVs targets deleted. Death induced, meaning homicide on the ground or through DV interference.

"Prima." Los spat out. "Can't help themselves. Have to get involved."

"Yeah." Mirn said herself. "Bunch of shits."

"Please concentrate on the data." Perdus got them back on track.

"My E end is handling it." Mirn advised. "I'll let it rummage through the data then make up my mind. Know yet whose going down?"

"Not until we've digested this." Perdus answered.

They watched Nada discover the book in the desert and zoomed in on it.

"Now that is revealing." Nuhan as usual understating the immensity and implications of the planets early history. His mind totally focussed now.

"Looks like these people may have, a long time ago emigrated from another planet. Or the reverse. Tricky. Either way they were a stage two world." Nuhan said.

Jez's natural abilities to enphase her mind was locking into the data, trying to get the feel of the authors of this little segment of history. "Something went terribly wrong. Cataclysmic. Some survived. They're the ones below. Everything forgotten..."

"Or hidden." Perdus advised.

"Or that. That will mean factions. Bit like Prima."

"So...?" Mirn asked. Her primary concern space itself and now, who else might be there. Jez's department. Mirn's E capabilities only aware of the remnant alien field, which she advised them was non-localised.

"It must have a source." Nuhan interested that it obviously did not originate below.

"Well we now know there is a space-faring civilisation around." Jez organising her thoughts.

"Or was. Might have moved on or abandoned the planet. Maybe the war spread to them as well and I hate to say this, got wasted." Mirn muted. "We should get base to do a search for them."

"After we're done here." Nuhan said. "Only one insertion at this time is possible. When we have more stations..."

"Yeah, let's hope so. Prima. They really..." Mirn was disgusted with what transpired regarding DV incursions. "Wouldn't be surprised if they had a hand in this."

"Hard to say. It happened so long ago. Prima would have trumpeted their victory. Asserting themselves." Perdus reasoned.

"Can't rule it out." Los added.

"Which means they could do it again. Stir the pot." Mirn in a foul mood.

Their scanners riding the data observed Jaffir's city, Nada's camp and Orst. Gaining data similar to the DVs, through their heads but via quantum entanglement.

At Orst people were milling about like angry wasps. Jez felt the psychic tension. They saw the priests moving enmasse towards several buildings to the east of the town.

"That'd be the school according to the data. Looks like they're taking it over. The staff emptied the library. Taken to who knows where. If they're smart they'll disperse it, hide it, dig it into the ground, use caves. One thing I found interesting is how their king and his advisors are interested in their ruins. According to the ship's log there are traces of exotic materials in clusters. All that's left of their once high-tech cities. The desert reclaimed them, the wind piling on the sand building hills. Luckily our x-ray lasers penetrated the ground. But whatever was there is long gone. The launch pads would have decayed as well. But we do have pockets of plastic type polymers. Buried deep in the ground." Perdus explained.

"You think we're too late?" Jez asked.

"Millions of years. Figure of speech. Millennia for sure." Nuhan told them.

"Well at least we know the alien field's not from where we are. It's no denser here." Mirn said authoritatively. "So where did you come from?" she asked the bank of screens.

"Our problem is being in the insertion field. We cannot probe beyond it. Only what it encompasses. Up to base really. We'll have to tell them."

"Of course." Perdus agreed. "But let's get as much as we can before we decide who goes down. Since this is a friendly mission and we're here to learn Nuhan is definite to go. Los you of course have to stay with the ship."

She knew this.

"Mirn you'll get the sense of place down there. Jez might even be able to phase in with them."

"I certainly hope so."

"As team leader I of course can go myself but whether that is necessary is another matter. In a way this is also a diplomatic mission. But only having one of us on the ship makes me feel uncomfortable."

"The ship's got its own brain Perdus." Los reminded him. "We'll be fine."

They watched the priests flooding into the buildings.

"So are the DVs stirring them up or are they doing this of their own accord?"

"I'm trying Perdus." Jez answered. The danger was that if it was DV activity she could be located and traced back to the ship. So she had to hover without making direct sensory contact. From the scurrying priests below that would not matter so much but the DVs would know there was another presence. Once down there she'd be one of the locals.

"Well, the priest's mental activity is suppressed hostility. I think they're none too pleased that most of the library and the inhabitants are gone. But I get the impression they wanted the school for themselves either way. The military very much in control of their own mental faculties. So they at least are still their own masters. Some of the locals mingling amongst them, probably out of curiosity or after loot." Jez informed them.

"Preliminary conclusion: DV activity focussed on the priests."

"We should also ascertain what's happening at their capital." Nuhan wanted to know. Whether the priests were in some sort of total push to assert themselves over the whole kingdom.

"Gotcha." Jez smiled. They looked at her. "Astram's the ring leader." The scanners zoomed in on a black cowed figure, no different to the priests. But he had a group around him. Giving orders, receiving information, walking slowly at the rear of the

mass of priests. Soldiers were there as well as a show of force. Since no one was coming out it appeared the school was deserted, abandoned by the original inhabitants.

Whether Astram was under DV control was hard to ascertain for Jez. He would be a Natural with potent mental capabilities. Astram was not even trying to hide his attitude. Either he felt so certain of his move secure in the knowledge he would get away with it, or the DVs were powering him up.

"Given their stratified society, can you Jez find the military commander. We may need to speak to him." Perdus requested.

"Aren't we going to the capital?"

"The ship indicates all is at peace there. Some mental agitation but nothing like at Orst. And visuals indicated an absence of priests." Mirn watching intently events spinning out of control below.

"Their king, ahm, one called Jaffir should be told Prima is interfering." Jez suggested.

"Not if he is taken over. We need neutrals Jez. In a way it changes everything now that they've gone hyper. Control gave me several scenario's and courses of action. Can't have the DVs become aware of us digging up whatever I may be thinking." Perdus explained.

"But you got E capabilities."

"I know but I don't want even that to be known to them. If they slide around me then that's enough for them to know I am enhanced. As you two are." Meaning Los and Mirn. Nuhan his scientific officer was merely augmented. He wanted it that way.

"So, when are we going down?" Mirn asked eagerly.

They saw as several priests mounted horses and started of east. They knew the library had been emptied and were searching for its precious information.

"What a mess." Los said.

"Isn't it just?" Mirn agreed.

"If they have their way, this planet will go like Prima." Nuham warned. He was wondering what their overall mission objectives really were. It was more than just to find the source of the alien field. Nuhan was under the impression they were there to explain some basic truths and then let them make up their mind. Give them a choice.

"Well well well."

They looked at Jez.

"One of the king's advisors. Kahleff. Talk about a powerful mind. He is amazingly apt at cloaking himself. Don't worry I'm not homing in on him. The vacancy he has

surrounded his mind with itself is a mental field. So calm he's in a controlled meditative state. He knows something is happening and is doing his best to remain invisible. Whether he is in on this or not I won't know unless I go in myself."

"Later Jez. I think we should concentrate on Orst. That's where it's all happening."

"I concur Perdus." Nuhan agreed. "Maybe we go in two stages. First acquaint Norhat that certain agents of influence are driving the priests. We cannot be certain he knows of the ancient battle they lost. You'd think the military were acquainted at least with the knowledge of their defeat."

"Unless it's too distant." Jez explained. "A bit like our history. Or Prima's. Take the great calamity. It's so remote even we only remember its occurrence. No one really studies it."

"Yes you are correct in your assumption." Nuhan readily agreed. Though he did not venture to reveal he and a handful of scholars were devoted to that occurrence. It was all in the Web anyway. Gamers played with it as a backdrop without ascertaining the real facts behind it. Most of it was reconstructed from their own information for Prima as unusual had rewritten that history. Regum had the only real data. Whether the truth existed academically somewhere in Prima's libraries was anybody's guess.

"Nuhan, you've studied the military."

That surprised the rest of the crew. They knew he was one of their most eminent scientists yet should not have been surprised that his education did not limit itself to his immediate studies.

"Well of course. One of the other reasons I'm here."

"You done military history?"

"As a social phenomena Jez."

"Right everybody." Perdus refocussing the group. "Let's all go over what the ship picked up whilst we were in stasis. Then tomorrow we decide who goes down and what our objectives are. I can say this. One diplomacy. Two to ascertain if they were being unduly influenced. If not then our mere presence and that of Prima's DVs will be revealed to them either way. Three our own interest in being here. Four the alien field. Now that we know it's not from here leaves them out of the equation. Five. They are the survivors of some past off planet contact. It's obvious that whoever they were we got nothing to indicate where or who they are, now. They could have been travellers exploring, or their home world was dying, their star in its end phase looking for an inhabitable world. So what's their state of astronomy? We show them the vastness of the universe. So that brings me to number six. If under Prima's influence, well we'd be noted

and reported on. That is the risk we have to take. If it is the sixth scenario we leave without further interaction. Remember we are primarily a scouting expedition. The follow up depends on what we find out down there."

They comprehended the scenarios Perdus outlined.

"Now there are two ways of going down. Conventional or insertion. I prefer conventional. Less activity in the insertion field. Takes a while but we got three shuttles. With nano packaged bikes. Configured in a mass that looks like a box. Just activate it and it self assembles."

"Clever." Los was impressed. Being the ship's tech back up.

"I've got an idea. Why don't we make contact with Nada? She knows the contents of the book. She's aware of what occurred. Her encampment is outside of Orst. Admittedly going straight to the military fort is the most secure place."

"It would send a message to the priests. Do we want them to know of our presence?" Nuhan asked.

"Indeed. Good point Jez, Nuhan." Perdus considered. "The shuttles have three ground bikes. They got gyroscopes so anyone can ride them. Extremely fuel efficient. Pressurised hydrogen gas. It would be a shortish ride to Orst from their camp. If we can convince Nada to come with us and see Noraht, rather than just appear..."

"Your call Perdus." Nuhan said.

"I know. Well we got till tomorrow. We'll decide then. Oh yes for obvious reasons we'll go down nigh time. Hopefully there may be another thunderstorm. The pods are g drives anyway. Only the bikes might be heard."

"I'll hook up and check systems." Los said.

Joach rode out of Nada's camp the next day on his way to report to Castari. Given the priests activities, given Astram finally revealing his true intent Nada worried about his designs regarding the king's city: Jaffir. The granaries, the bulging warehouses would make tempting targets. There might not be enough soldiers to keep all the merchants safe. The kingdom had been at peace so long now, that only a military presence was really necessary at Orst just to let the tribes know that raiding the caravans was a risky business as they traversed the mountain pass between Orst and Jaffir. Then there were the farms and orchards along the river that needed protection from thieves. The tribes finally understood that by trading their precious stones for goods was far more beneficial and less messy then raiding traders and merchants. It worked.

Astram by staging his show of strength at Orst sent a message to the king. Pretending to follow the will of his followers made him appear the reluctant messenger of spiritual change. Clever in his brazenness. His priest's intent in the open for all to see and choose accordingly. The old gods of eternity or this new unitary confabulation. Nada knew where she stood and Amos agreed with her. Astram was trying to stir discontent. Jaffir would have to act. How would the priests react. Accept the king's will? That remained to be seen. Would they be rounded up and removed? They both hoped so, the sooner the better.

Astram's little talk with his chosen got them going. The more affluent were causing some difficulties as they were used to being obeyed. So he allowed them their special tent, two priests as guards purely for privacy, not to be bothered. Then he waited for boredom to set in. As they were all well off, or at least self sufficient Astram promised much, telling them to be patient. His army of priests walked the streets, preached at the market place where there would always be the curious. More audacious boys would throw small rocks at them, darting between the crowds, the soldiers merely watching.

Over time Astram along with Inamus gathered enough information to gauge the mood of the town. Even some of the tribes listened so that over the days the itinerant came to him. With the harvests in many were now out of work. That did not mean they were destitute. Merely free from labouring in the fields and the farms along the river. The rag trade did well in sowing up the priests garb so they were happy. Whilst the priests accepted alms they did not solicit the people directly. Takings were few but Astram and Inamus's wealth saw to their survival. Soon Astram knew they would have land, to be held in common. They would thus equal the rich and influential families.

Reading the revealed history of their world was a new experience. What slim books existed on the gods would be as nothing compared to what Astram was envisaging. Nor would they be so convoluted as what the school had churned out. There was only one independent printer outside the temple and he was interested in Astram's contract. His main work was essentially printing up contracts, bills of sales, declamations by traders which diminished in orders at the end of the season. The owner Horm was delighted to be of service. If he heavily discounted Astram's order he would be remembered and could possibly be the printer of choice once Astram was in control as the spiritual head of their order of the unitary god.

He liked the sound of 'unitary'. So inclusive. Not the threat it was to their doomed religion. Once their history was explained in clear and concise examples the people would come around. A two pronged approach.

The town's councillors representing the king kept away from Astram until Jaffir would finally make up his mind concerning them. That was one of the reasons Astram had withdrawn the priests from there. When the moment came they would be in possession of the city. Jaffir and Kahleff isolated.

His intelligences reported regarding the activity at the school. They had seen wagons leaving with baggage. They could not see what was being loaded being sheathed in Hessian bags.

"So are they abandoning the buildings?" Astram asked one of them.

"Looks like it."

"Well go back and find out what you can. Remain in your civilian garb. Be curious yet disinterested. You two should manage that."

They nodded.

"You see, if they are leaving, we move in. No more tents. Winter is coming. I must say it is obliging of them. Praise be the great god."

"Praise be." They mumbled dutifully.

Arriving they were shocked to see what the remaining teachers and their students envisaged for the school. Knowing they could not remove all the precious volumes, the notes of their teachers and better students, Astram's intelligencers were appalled to see to what lengths they went.

They were wrecking the place. They heard the splintering of wood as furniture was being broken up. Wood was precious thinking they were making firewood for the coming winter. The crashing was coming from nearly every room. The carts had left hours ago, already out of sight.

Jamu and Onos, both from the city could not comprehend the wanton destruction. Unthinkable. An affront to their sensibilities. Furniture fetched a good price yet these scholastics were smashing up their belongings. They shook their head at the violence. A group of young students approached them at the outer open field where once tutorials took place under the huge trees. They carried planks of wood, broken off legs which they swung jauntily about. Were they about to be beaten up? They were in their own clothes. Had they been recognised from their first visit mere moments ago?

"There is nothing for you here." A crash upstairs as a huge piece of furniture fell over. A resounding thump. The sound of axes smashing into whatever they were breaking up.

"We wanted to speak to..." but Jamu was cut off.

"You're with them."

"With whom?" Onus asked in all innocence.

"We know Astram sends his spies."

"How do you know we're not from the fort?"

"Your hands for starters."

They looked at them puzzled.

"White, uncaloused, thin. You're Astram's lackeys."

"We are authorised to deal with your master. Take us to him." Jamu tried to sound authoritative, taking the lead. They were not impressed.

"He's busy." One of them said. As if that settled it.

"So send word. I assume he can make his own decision."

"We want nothing from you."

Then they smelt it. Fire. Wisps of smoke wafted out of the windows below. The students not alarmed. Now pouring out of the main building. The same thing was happening at the dormitory. At the edge of the open space some soldiers were watching from the distance. Behind them the furnaces of the metal workshops further away. Most of the soldiers were guarding the fire belching ovens.

Others were exiting the three storied brick structure. The first orange glimmerings of flames. Jamus and Onos stood transfixed. They were burning down their school and dormitory. Flames were already flaring out of the dormitory. Grey smoke billowing out rich thick, flames illuminating the spreading conflagration. The soldiers became interested and sauntered over. Further away two soldiers got on their horses and rode towards the fort to report the fire.

Behind Jamu and Onus the murmur of a forming crowd of town dwellers. People were coming to see what was happening. Jamu and Onus felt helpless and cheated. Astram had promised them the place was theirs. It was not to be. Behind excited voices. The two buildings were far enough from the town to be no threat regarding the fire.

Flames were shooting out of the ground floor, smoke edging out at the top of the entrance, sparks and cinders sparking in the air momentarily. It dawned on Jamu and Onus, regaining their mental balance now that the first shock of what they were doing passed. That the library was being destroyed as well. They were actually annihilating their

knowledge, their wisdom, all they knew. What had these people learnt that they would do anything to stop Astram acquiring their accumulated teachings?

"Surprised?" one of them said, still brandishing his wooden leg. Jamu and Onus had their knives of course, hidden but both grasping them ready to defend themselves. The two soldiers were closer now, listening in on the little group. The flames were taking possession of the burning dormitory. Bright orange red flames shot out as it took hold. The thatched roof smoking, then starting to glow from the fire exploding into flames.

No one was doing anything to save it. Behind more townspeople flooded into the open square. All were excited.

They could feel the heat of the conflagration. The two of them were affronted at being denied the building, the library, the beds, the school's belongings. Deliberately denied in a wanton act of sabotage.

The sound of horses hooves. More soldiers. The two soldiers near the group drifted away to converse with the reinforcements. The crowd was not dispersed. They had been ready to make a run for it. The students too many to take on.

Something crashed in the main building. A floor had given way. Flames shot out, the crowd 'ahhed' at the sight. Smoke wafted their way moving instinctively back. There was nothing anyone could do. Jamus and Onus moved away from the students and had to push their way through the gathered crowd that barely moved out of their way. They were being jostled. Nothing too overt. Just haughty resistance. So the people were not entirely on their side. Rumours abounded from snatches of conversation they picked up. Some suggested they hoped to find priests in there being offered to lambar the god of fire. Laughter. Did these people know they were with Astram? This did not look good.

A platoon of soldiers rode at speed down the wide street. Then veered off right to the furnaces. Behind them trundling more slowly three bullock drawn water carts. As Jamus and Onus made their way through the thick crowd, still being elbowed, the soldiers organised themselves to keep the furnaces and the workers cottages safe from the raging fire. Flames crackled, masonry fell, the crash of the library's roof collapsing into the conflagration.

When they finally returned to their camp they found confusion. The priests were running around but doing little. Their tent was empty. The others gone to see the fire in their own clothes for the priests garb was strewn around the floor. Abandoning the faith, their future to be the elite now less attractive.

"If we stay with Astram it will stand in our favour Onus. What do you say?"

"I agree." His companion answered. "Unless they are mingling with the crowd and people. See what really is going on. I mean this could be a sign."

"Oh that it is Onus."

"I meant something larger. News will reach Jaffir. Since we were there and they basically admitted to destroying their own school I think we should inform the king of the truth. There will be some who will turn this to their own advantage. We must find Astram or Inamus."

"I see what you mean. Well at least our camp is not being molested. There are still guards around." They left their tent. Searched for Astram not finding him. Nor was Inamus present. They were a little disappointed. Now was the time for leadership. Jamus was tempted to take charge. He did.

"Listen." He shouted. Some of the distracted priests turned to them. Confusion on their faces.

"The heretics," why not start at the deep end Jamus reasoned, "are burning their own school and dormitory to the ground. The soldiers are doing nothing. Some may blame us. We had nothing to do with it. They did it of their own accord. Even burning the library. What they could save they removed. Who knows where they went, where their misbegotten parchments, scrolls or books were squirreled."

"Where is Astram?" one of them shouted.

"Here." Came the answer. "Thank you Jamus." Astram made his way through the gathered priests. In the distance more people going to the fire. The thick black clouds of smoke pouring like an angry volcano staining the sky.

Astram was at the front of the gathered.

"I have sent some brethren," Astram began, looking at Jamus and Onus, "to the city, to the tribes. The teachers are gone, but so are their lies. They in fact have copied our ways, to disseminate their aposty amongst the people. In a way it is a declaration of war. So we shall rise to the occasion. Let them burn their school. Though I promised we would inherit it our god decided against it." he paused for a moment as they reflected on that. Higher powers were at play.

"This is not a defeat but the beginning of our victory. We can always build our own seminary when the time is right. We were too early too ahead of ourselves. We must disperse. Enlighten the distant farmers, the fishermen on the coast, live amongst the tribes, journey with the clans, be everywhere at once. This is the beginning of our great mission."

They cheered Astram.

"some are already journeying north to talk to the shamans, the elders. Our aim is to capture Jaffir's city. I need some volunteers."

For a moment they fell silent. They knew of Oenah's arrest and were reluctant to share that fate. Astram had an idea. It was insane, but when people acted as if crazed by the gods then only an equal counter measure would suffice. But he needed some he could trust.

"Why not us." Jamus said.

"Gather your belongings. Return to your homes. Travel in two's or four's. Arm yourselves with stout sticks to defend yourselves against the blind of faith. We break this camp now. I know it is already the middle of the day. By tomorrow only those who are from Orst are to remain. You are all well versed in the knowledge, the ultimate mysterium of the god of gods. Be the seeds that will grow into the spiritual harvest. The future is ours."

More hearty cheers.

"Your tent is empty?" Astram asked.

"It is." Onus answered.

"Good. I will acquaint you with your mission."

Astram had an audacious plan to weaken Jaffir. Kahleff would equally be helpless. It was a ruse in his dark design to thwart the coming of the divine light that would burn away the dross leaving the pure to finish his designs.

The camp was astir. They all saw the rising plume of smoke slowly rising into the sky.

"Looks like a funeral pyre." Amos said to Nada after one of their servants came excitedly into their tent. Joach was still sleeping. They let him.

"This is bad." Nada felt the heavy vibes. How volatile everything was since the arrival of the priests. A warning by the gods of what was in store if this pestilential scourge was not contained. Whether the gods were displeased to have moved the people to this wanton act of destruction or it had been whipped up by the priests themselves, which she assumed, remained to be seen.

The black plume rose defiantly into the sky. Its dark crown smeared outward as it poured maliciously up. Its smudge pointing south. A bad omen.

"If there are refugees on the road we know the worst is happening. I really should be with my father."

"Nada, if the priests have some dark design, it may be best for you to stay here. I could go with Joach to make sure your father and his belongings, his home, your home, is safe." Nada appreciated that. Especially as Amos had said 'your home', not 'our'. He had no designs on her fortune and loved him for that.

"If we see soldiers then we must find out what they know. They will be sending at least one messenger." Nada reasoned.

"Shall we send some scouts?" Amos asked.

"Good idea." Nada walked over to the gathered who were all watching the black smoke, thick, heavy, illuminated by the glow of the fire.

"Kerach, Retan."

"Yes my lady?" two solid built men answered.

"Ride to Orst and see what you can find out. Arm yourselves. Any priest offers resistance..." She smiled, her eyes glinting with hatred.

"We understand."

"If you can speak with the soldiers even better. If Orst is safe see what is going on at Norhat's fort. See if he needs help in any way."

"Yes my lady." Kerach obeyed.

"If the situation is unclear, spend some time in the taverns. The best place for news, gossip, conspiracies, anything. One night should suffice. Unless you get some leads. Our main concern is not just our and your safety but that of Jaffir. See if the priests have designs upon our glorious city. If it is only a fire, though it's a big fire, then of course return."

"Yes my lady." Kerach repeated.

"Go then, and travel well."

"May the gods be with you."

"And you."

She watched as they chose two good chargers, saddled them, took some feed and water pouches, went to their tents to get their broad swords, then with one easy move were in the saddle and galloped off towards Orst.

A squad of soldiers were galloping from Jaffir halting at Nada's camp. She offered the horses water as well as for the men.

"Any news?" their captain asked.

"No. It just started. I have sent two of my men, Kerach and Retan to find out. They just left. You might catch up with them. They aren't riding too fast."

They watched the plume of smoke, terrifying in its violence.

"Could be anything." Amos tried to sound calm.

"Let's hope Orst is not burning." The captain said.

"Or your fort." Nada cautiously added.

"Don't think so. It is a way out of the town. Self sufficient." The captain said.

"Any news from Jaffir?" Nada asked at last. The horses were drinking from wooden buckets her servants had placed in front of them.

"All is quiet. The priests seem to have vanished. In hiding no doubt. Ready for some treachery."

"That at least is something. I have Joach here. He was riding all through the night and is resting. Later I will wake him and send him to Jaffir to tell the king of the fire. At least he will know until further news arrives."

"We thank you for that my lady."

"Nada."

"I am honoured." The captain smiled. She returned the gesture.

"You know captain, the priests talk of a cleansing. I assumed it was spiritual. Maybe they meant something else."

"Burning Orst?" he asked surprised.

"Something." Nada indecisive. "But they are planning something."

"We know and watch them well."

"And they are completely gone from the streets?"

"Yes. Jaffir is thinking of doing a house to house search."

"Good idea. Flush them out, remove them, send them into the desert. Let them rot." Amos said.

The captain nodded at the sentiment.

The horses stopped drinking.

"Well, we'd better be on our way. Kerach and Retan?"

"Yes captain."

They rode out.

"Nada, there is treachery afoot."

"Do tell Amos."

"I mean it."

"I know you do."

"You know it could be something else entirely."

"Oh?" as she watched the dark plume of smoke.

"Maybe the townsfolk are burning the priest's camp."

"Now that would be something. Dangerous of course. It might make them act foolishly at Jaffir."

"Maybe that is the intent. Flush them out. Show them their false god is nothing."

"Nothing. Yes. Well until we know..."

"Nada we must be prepared for all contingencies."

"I am aware of that Amos. Thank you for the thought. The camp is always guarded. I have good people. If the priests do go on a rampage, we will be ready. After all we do have a reputation."

"That is true." Amos was satisfied. Nada conversant regarding the different possibilities which might affect them.

Joach came out of the tent, looking sleepy. Then he saw the smoke and was instantly awake. He greeted Nada and Amos, lifting a ladle out of one of the buckets to drink some water.

"Orst in flames?"

"We hope not. Something anyway. I have sent two men to find out. A patrol just came past. We will know soon. Can you ride to Jaffir?"

"Of course my lady."

"Slept enough?"

He smiled meaning 'no'. "This might be too important." He offered.

"We are pleased. Listen to me Joach. We will make it up to you when you have delivered the news. See Castari. Does he need more men? Has he enough to secure the warehouse? Do we shift our goods somewhere else?"

"I understand."

"Find out if possible what Kahleff knows. The captain said the priests have all vanished. Are they up to something or merely hiding?"

"Maybe if I collar one."

"Use whatever means. And arm yourself."

"I will. I'll take some dried meat and bread, a few water bags as well."

Nada agreed. Joach was intending to ride right through.

"Take one of our disposable horses. Swap them at the way stations. You'll need some money for the difference."

She walked back into her tent and from the secure box made up a purse for Joach which she handed to him. He was already in the saddle.

"May the gods be with you and a safe journey."

Joach waved riding out of the camp.

"How to bring Agram down." Nada mused.

"That conflagration may do the trick. Of course he would not be so stupid in actually having a hand in it." Amos suggested.

"Like the murders."

"Let's hope he overplayed his hand."

"I wish some devious mind convinces Jaffir of that."

"I gladly would."

"Tell a lie? Amos, I'm shocked." She joked. "If only I could be with my father."

"We may be safest here."

"I know. But I'm worried."

"I'm sure if he wants you with him he'll let you know."

"I cannot help but worry."

"It was good of you to send Joach. In a few days we'll know what your father intends to do."

"By then we will also know what happened at Orst."

The smoke was spreading fast, thick and menacing.

"We got our three eyes on the ground." Nuhan had the screens on line. Two showed the barren desert landscape. One of the eyes detected trees along a sunken river bed. Farms on both sides using water wheels to irrigate small channels. Simple mud huts, thatched reed rooves. To the north grazing lands which the second eye confirmed being to the right, the east. The third eye showed a crude woollen weave. Someone had thrown a cover over it. Its penetrating laser probe to study its environment was instantly deactivated. Perdus reasoned that there was a reason for it being cloaked literally.

"Talking of cloaked, we are I assume going in without overawing the locals."

Nuhan asked Perdus. The three of them were in the g-drive shuttle on their way to the pink blotchy brown mountain strewn planet. Cloud cover was negligible.

"Yes."

"And the ship's system analysed their language?" Nuhan asked again. A little nervous now that the moment had come. The covered probe uploaded the conversations around it. Jez, the third crew member had an external com link feeding into her head. She was there to 'read' the locals state of mind. Perdus was the only one going down totally enhanced. Los the head tech for the ship was always destined to remain on board whilst Mirn, the empirical end of ascertaining their spatial environment kept the probability field under observation. Alerting them to any spikes or variations

should they occur. She had enough computational power to boost the difference if it should fall too far away from sustainable parameters. Using the ship's fusion reactor to patch up the probability field should the Primaian's try to counteract their presence. So far they had gotten away with it. General DV surveillance concentrating on the total environment was steady. In fact over the last few hours their inserted resonances were diminishing. Probably reassigned to some other target. Hopefully not here.

"Yes Nuhan." Perdus replied not put out by Nuhan's nervous excitement. Since he was not enhanced, it was only to be expected that his emotions would come through.

"This your first trip in space?"

"You know that this is so."

"I'm not told everything. You might have been on missions which are beyond my brief concerning our contact."

"What about the ruins? Do we tell them, whoever?"

"Well you saw the remnant history. From what it picked up they found some ancient artefact. Being sentient attuned our probe read their overall headspace. Once their world was not unlike ours. Then something went horribly wrong, a war of annihilation."

"You think it started again?" they were watching one screen showing the two blazing buildings. The plume could be seen even from space.

"Fires were not uncommon in the old days. Best not to make an appearance there until we retrieved the probe."

"I thought they had enough juice to make it back."

"They do Jez but I think it best if we talk to the people who have hidden it. Now remember they did not try to damage it or take it to some higher authority or even use it. They are keeping it to themselves. There must be a reason. One we have to find out."

"I agree."

"Thank you Nuhan." Perdus studied the uploads. "You getting anything?"

"Matter of fact yes. Overall the picture is of heightened mental activity. As a sub group, sub groups I should say. Given that it's been coming in all at once I tried to focus on some loci. They exist, several in fact." Jez explained, all concentration. "Could be DVs. Courtesy of Prima or they are naturally endowed. I cannot tell. I do know the DVs are less intense yet their signatures remain the same. So my guess..."

"Guess?" Perdus interrupted.

"Figure of speech. The locals got what it takes. In general they are at the beginning of the first transition. The water wheels prove it."

"I concur." Nuhan agreed.

"If their past ever becomes known, given the excitement around the burning buildings would indicate we have come at a historical moment. So how we deal with the inhabitants is over to you Perdus." Jez watching the read outs.

"I know. I've been thinking this myself. Explaining we're from another planet I thought would be enough."

"And warn them about Prima's meddling."

"Trouble is can we prove it?"

"Well the ship thinks so. So do I." Jez added hastily.

"Since it's been confirmed several times we have to decide who to tell."

"You think they might be hostile?"

"You never know."

Nuhan added, "It may be expeditious if we contact their military commander. They usually have clout in these societies."

"Why not their leader?"

"Because Jez, kings are unpredictable by nature and usually get their own way."

"You mean we could be in trouble?"

"Yes."

"But isn't part of your inserted programming also self defence?"

"That I'm not supposed to reveal but the answer is yes."

"Let's hope we don't have to use it."

"Thus us coming in at the periphery."

Jez and Nuhan were satisfied with that. "Let's hope we get a chance to ride our bikes." She smiled.

"Let's wait and see." Perdus studied the approach vector. They were hitting the thin upper atmosphere using the correct insertion angle to glide smoothly into the atmosphere. At this speed even the thin air was a solid substance.

They landed in the middle of the night near the western end of the camp, the black lake between them. The ship's auto system touched down with the barest of shudders. The engines went on stand-by.

"First thing is to call in the two probes." Perdus said to Nuhan. He activated the sequences. Out in the desert the satellites hummed into life using simple dry chemical propulsion systems. Some of the horses were spooked, dogs started to bark. On the screens they saw the tell tale exhaust plume dirty white, dust billowing out obscuring direct visuals. The computers adjusted their reception editing out the minor dust storm the

sats created as they skipped across the ground to the shuttle. The side loading bay doors opened and the two satellites were secured, the doors shut.

"We're cloaked now."

"You mean Perdus someone could have seen us?" Nuhan feeling uncomfortable. Uneasy but didn't know why. He looked searchingly at Jez who had her eyes closed, inwardly focussed on their surroundings. None of them knew the full status of her head. Whether she was a natural, boosted, configured or enhanced. From her general reactions on board with the others, the minute time lags indicated she was unconfigured. But that could easily be programmed as well. Not that it mattered. She was the best psychic the planet had.

Nuhan went to the small cargo bay. First he made sure the sats were securely locked to the floor. They were. Magnetic and physical clamps in place. Downloading their data to the ships computers. He checked the three dark oblong boxes, the bikes. Activating a light pad he punched in the 'assemble' button. In a few hours the bikes would be built by the tiny nano-bots within them who would reconfigure the mass into its design details. With the help of the shuttle's fusion generator the task would be easy.

"Last instructions?" Nuhan asked, apprehensive and excited. Jez came out of her internal focus.

"Not all are asleep. They got guards. Wide awake, alert, some psychic activity. Images of the location of the nearby burnt out buildings. Images of their homes," then she smiled, "Nuhan can you jack me in?"

Nuhan nodded. From the wall he pulled out an optic fibre feed and inserted it at the base of her neck. She was uploading her brain's sensory impressions feeling a warm surge. The computer was activating her endomorphism to relax her. The mind-machine nexus always created some emotional excitement which could muddy the information. This way her mental field state remained more neutral. She felt brilliant, great, fantastic, supremely confident. What a few molecules could do to one's sense of being. Her mind clean as well, cool, calm, mentally on top of it all. The multispectrum imagery flashed in fast visionary splendour, super fast run-time. Then the images of her memory stopped. The endomorphin activity subsided, the warm inner mental afterglow remained.

"Done. All there." Jez unplugged herself. The creamy white link not glowing white anymore. It self retrieved itself back into the console.

"Since I am trained in contact procedure I shall be our spokesperson."

They agreed to Perdus's order.

"You Nuhan will observe of course. We'll explain the sat, which they retrieved."

"The eye of Bahlir. A god of theirs." Jez informed them. She then told them of the other gods.

"Excellent work Jez. We can now be on familiar ground. So for appearance sake we have to pretend to believe, or at least not give offence."

They nodded dutifully at that. "Real explanations depend on them."

More nods. They had gone over this before but it was useful to be reminded. So easy to slip into one's own conceptual thinking.

"Jez you focus not on them but ascertain DV activity. We know their resonance so that should be no problem for you. As I'm enhanced I'll be your back up. I'll focus on our contactees."

"That'll make things easier for me."

"So do we wake them?" Nuhan barely suppressing his excitement, his anticipation of meeting new minds, on a new world two hundred light years from home.

"Base is staying out as of now. They've disconnected themselves. Less clutter for us."

"But they can retrieve us if things go belly up." Jez a little unsure.

"That is the beauty of the probability field. Both virtual and real. They can uncollapse it and we're back at base, ship and all."

"So why the long way round?"

"Training Jez."

"But we can simulate."

"True. The visceral experience is irreplaceable."

"Maybe we should have come enmasse."

"Our capabilities are not that advanced as yet."

"And Jez," Nuhan chimed in, "this way is safer. It's the mass involved. The power needed is phenomenal."

"I believe that."

"So let us rest. I'm going to study the data." Perdus related. "Sunrise is still some time away."

"I'll do the same." Nuhan agreed.

"Then I shall do a sweep. Get a feel for them."

"Good. At sunrise we move out."

"We should have had an extra body to watch over the shuttle."

"It's invisible Jez."

"Yeah right, forgot. What if someone throws a pebble in it's direction. It's gonna bounce isn't it?"

"There our computer engineers created a unique programme. Even though it bounces, there will be an image generated that makes it appear as if the pebble is continuing in it's arc. The original pebble will actual fracture and be absorbed by the ships outer shell. It absorbs matter and the excess energy fed into stand by batteries layered beneath the outer skin."

"Nice."

"So let's get our orientation together. Nuhan you know what to look for. I will read the overall picture and you Jez the feel of the people. Those with heightened mental capabilities. I know I'm repeating myself but we have to stay focused now and even more so once amongst them. Nothing is to go wrong. So no dissention. No contradictions either. We are on an alien planet. Let them be, we are primarily observers. And checking on DV activity. Our real purpose here. We have to know how much free will they have."

"It's OK Perdus. As mission head some things have to be said." Jez making him feel comfortable in his job.

"I'll link you up," Nuhan said, "and then you can plug me in." He rose and extracted another fibre optic link and hooked Jez up. She did the same. Nuhan hit the run programme. Their heads were now 'in place' in the sats. The programmes configured so that they could move with ease amongst the downloaded data, just like WebWorld.

For the next several hours Perdus watched the imagery their satellites acquired. Studied the farms, the inhabitants going about their laborious tasks. He saw riders on horses on the road, itinerant travellers, pictures from their past. Living history. The priests. Perdus hoped Jez could extract something there. He replayed that several times. Then told the computer to feed that to Jez.

Jez picked it up. Ran the DV signatures. There were similarities with Verhat and Kahl but not the same. Natural psychics, very close to Primaian's. The priests aligned. She fed that back to Nuhan. The priests were the one's to watch. She was horrified at the murder of Verhat. The mental signatures between Nada, a volatile natural and Verhat could not be more diametrically opposed. Kahl kept himself very much in control. The accompanying violence stunned her. How far Regum and even Prima had come since those distant days when murder and homicide, whilst not the norm were not uncommon

either. That was millennia ago. This race was just starting out on the long trajectory that was civilisation. Not a murderous race by nature.

Something in the air. DVs of course. Moving their pawns about. The priests held back. Maybe this Verhat would have been a problem for them later on. The DVs looking into the future. Now that she knew how quantum probability fields worked the possibility of homing in on a specific future had to be taken into consideration. Perhaps somewhere down the track Verhat might have become a powerful archimage and a challenge to Prima's intent. Then moving in on Kahl's glowing mind. He'd been drugged. Psychotropics. Mushrooms. The food of the gods. After a while he had a heart attack from his brainstorm.

Calculating all possibilities. This one was the most secure. Not exactly benign though. Maybe she could use her powers to sabotage the DVs meddling. It was part of her brief. Either find powerful psychics to move against them, build up their own resonance to stonewall their presence or use the ships computers to generate a distortion field to blank them out. Released from their hold the locals would come to their senses. It would also neutralise the priests. She was looking forward to this. With Perdus, once outside, backing her up she relished the challenge.

Nuhan moved through the kings city, studied the workshops, the water wheels, the windmills and the crude transport. At Orst he studied the basic blast furnaces happy that the rudiments of science were in place. Technology would follow. Ships still used oars and sails. Their astronomy was rudimentary, the stars both gods and destinations of the departed.

Jez latched onto the shamans. She was delighted. They could move through different realities with practiced ease. Here the DVs were having no effect on them. That was something important. Prima's grip tenuous. If she could make them aware of the outside influence the DVs were having...then Grena appeared. Who sensed in the confines of her temple a group mind. It had to be the DVs. Onto them. Things were looking up.

The book appeared in her head. A high tech city under attack. Powerful lasers searing through the air, massive plasma pulse-bombs obliterating the buildings, targeting scrambled jets that exploded in dull orange fireballs in the sky. A massive attack from space. Utter destruction. Since the book itself was value neutral Jez could not fathom the intent or purpose behind this monstrous attack. A very technologically advanced and very homicidal race wreaking their revenge. The way the pages folded it was some sort of polymer. This had to have happened in the past. Nada certainly had no knowledge of

their history. The parks that were also incinerated indicated a healthier ecosystem. Forests surrounded the city now in flames. The tragedy occurred millennia ago. She read with Nada the awful truth. The locals considered a threat. Or had they started it? Jez ahead of herself. No this was unprovoked. Then it made sense. This planet was a colony. So that was it. They had deviated, evolved, maybe genetic drift was at work fashioning the next step in these beings evolution. Considered a threat so much so that the attackers did their best to sear them back into the stone age. Simply because they would not accept, or rather seemed indifferent to their home world's belief system. A religious or an ideological war. The ultimate tragedy. A war over interpretation.

Then she stumbled mentally. Her mind still linked to Nada. From that locus Jez expanded momentarily into thousands of minds with one vision: desolation. Absolute absence of life. Total nothing. The planet one vast desert. Linked to Nada's vision Jez was as puzzled as Nada. The sats showed nothing. Mass psychosis. What did it mean? The past prior life evolving here or the future of a doomed race? She held the image and searched. With no life present there was not much that could be done. The colours paler. The sun was weaker. Global ecocollapse. If it was the future. She fed the image to Nuhan. Then her and Nada's quandary. Past or future?

Linked Nuhan was more dispassionate concerning the vision. An intriguing phenomenon. How to ascertain the moment in time. Had some probability field impinged somehow collapsing into the current reality ? It vanished. This scenario out of sequence. He passed it on to Perdus.

Perdus was concerned the effect the priests had on the population. They were changing the equilibrium. Moving the mind set. The people not so much resisted rather they were indifferent. At least that meant there would be no negative effects on their society at large. The priests presence trying to disturb their inherent serenity. Manipulators. Their little group would have to be careful. As to what the vision meant he left that to Jez and Nuhan. Perdus was focussed on the present.

Sunrise. The sky glowed crimson, then pink, wisps of white clouds high up in the sky. The lake shimmered in the morning light. Dew on the ground slowly dissipating. Time to make contact.

Jez felt Nuhan's excitement.

"Any last thoughts?" Perdus asked.

"Stage one civilisation. Water and wind power. Crude but fully functional blast furnaces. Just add a steam engine..." Nuhan quipped.

"That close?"

"Yes."

"What about the war?" Jez was uncomfortable with that.

"From what I can gather, the ship did pick up remains of some exotic elements on the other side of the planet. If that is the destroyed city it happened more than just centuries ago. Maybe ten thousand years."

"Certain?" Jez queried.

"Give or take."

"So it doesn't impinge on the present?" Perdus looking concerned.

"From what I can gather, Nada, the woman we are about to meet found it in a cairn to the west."

"Has she still got it?"

"I don't know."

"Anything else Jez?"

"You got all my uploads?"

"We did." Nuhan replied.

"Well, we're about to walk into the annals of history." Perdus smiled benevolently.

"Let's hope it's a good ending." Jez joked.

Nuhan looked spooked.

"Don't worry. You as our primary scientist ought to know that we can be extracted just like that if things turn ugly."

"I know the theory."

"Then you should feel reassured. After all we're here aren't we?" Jez encouraged him to think positive.

"I think Jez," Perdus said, "Nuhan is running through more probabilities than we are. And there is that one in a million chance that things can, I won't say go wrong because we are dealing with probability insertion fields, field I mean. Probabilities impinging on possibilities. Quantum that is."

"Like a power failure?" Jez understood the remote precariousness they found themselves in.

"That's just one of them." Nuhan seemed worried.

"What are the others then. Get it off your chest." Jez in control.

"A more potent PWF."

"As in real time?"

"The DVs."

"No chance Nuhan. Mere candle power. Oh they could screw your mind if they got through, but that's what I'm here for, remember?" she coaxed.

"You're right of course." He pulled himself together. "Let's go then. After you Perdus. You being the leader."

Jez felt a momentary void in her mind. A tiny nothingness. Lots of them. Then the vacancies receded into her unconscious. The absence instantaneous as they were walking towards the camp three abreast. She put it down to a localized event. Her awareness more acute on the lookout for any probing from the locals at the camp or anyone on this planet. Unlike Perdus she was not directly link-boosted by an enhanced state.

Perdus felt a momentary fracture inside his head. Several. Singular, unrelated to each other but from the same data rich realm somewhere. But where? His brain's E capabilities searched and found...nothing. Then it was gone, not receding, just disappeared. Nothing could disappear. Involuntarily he shook his head as if adjusting reception. His cognitive intuition tried to focus but it was like grasping at something ephemeral. Local interference. His AI core tagged the event. Nothing in his contained inserted data realm came up with anything. At best environmental, a condition either of or in space. Near yet far. He let it go. They had to concentrate on their immediate task to meet the locals.

The guards saw them coming. One went into Nada's tent to announce the arrival of these strangers. Black like the priests, skull caps. No visible knives. Not armed. Two men and one woman. Not threatening, curious.

To them a tall woman appeared outside her tent. Black hair, brown skin, amulets glinting in the morning sun. The aroma of fresh bread and a stew, the smell of the animals in the corral, the whiff of dung drying in the air. Flies.

"Welcome strangers." Nada spoke firmly. No fear, no surprise either.

Nada watched these strange clad persons. All in black yet not looking like priests. Tight fitting clothes. No dirt or dust on them. They must have walked from wherever they had come from.

Nuhan was relieved that his internal AI understood her speech. So would Perdus. Jez had a language programme as well. Now to find out if it worked.

"Greetings to you." Perdus replied. The tiny time lag in translation was a mere instant. At least they could communicate.

"Some tea?"

This was great Jez smiled. At least they won't be poisoned by some local concoction. She felt at home. Some ancient instinctual residue kicking in from her distant evolutionary memory. She knew now why she was chosen for this mission. The basic connection that, hopefully, any society shared.

"You are most kind." Perdus answered. "We bring news."

"That is always welcome. Please enter my humble tent." Nada holding open the flap. Wisps of smoke coming out of its pointed top. Perdus and Nuhan's embedded information uploaded the knowledge they had of this ancient past. The similarities uncanny and a relief. They could relate with these inhabitants. And the language system worked. Data added as they took in all they saw. Nada was looking into the distance. Jez turned and saw a thin pale column of smoke drift skywards. The buildings ashes and tinder now.

They entered the dark tent. Several oil lamps shone meagre though sufficient light about. Richly embroidered cushions strewn across the floor. A wooden chest to one side, sheep skins near the central hearth, a round collection of stones with a fire flickering amongst burning chunks of wood mixed with dry dung. The aroma potent which they soon got used to.

One a young man, long black hair, belt and sheathed knives, and a servant busy making the tea. Five clay cups. The remnants of last night's meal, a leather wine flask deflated next to it.

"I am Nada, daughter of Castari, this is Amos, son of Trum."

"I am Perdus, Nuhan our brains and Jez, a seer, a sort of guide."

"We are honoured to be your host."

The water was starting to simmer as the servant prepared the tea.

"You have eaten?"

"We are fine thank you."

"As you wish. So Perdus, Nuhan and Jez, the seer. Anything to enlighten us with. There is much that is happening and we are curious."

"So are we Nada, Amos."

"You have travelled far?"

"Very." Perdus answered honestly. "Our reason being here is a little complex. It is both of a secret nature and not. We come from another land and are unfamiliar here. We chose to come here first. Something is going on at Orst and want to make sure it is safe to be there."

"We too await developments. You dress like priests."

Their brains recalled the imagery they gathered whilst observing the planet.

"I assure you we are not their kind. Rather the opposite. Well not exactly opposite. Put it this way, we don't trust them."

"Yet you dress like them. Maybe there is a reason for this." Nada hoping they could be agents sent by Kahleff.

Perdus wanted to explain that black absorbs light and energy feeding their inbuilt microprocessors, augmenting the necessary power to run them. But the words would be meaningless. They had to keep it simple.

"Warmth."

"Indeed that is so."

The tea was ready. Nada dismissed the servant who left them.

"Now we can talk. I trust my people but gossip is gossip. And in these changing times even misconstrued information can lead to unfortunate events."

"We too are aware of the changes Nada. That is the sole reason we are here."

Amos poured the tea for them. Jez first, then Perdus and Nuhan. Nada poured herself then Amos. Bitter and sweet. It felt good, for though the hearth warmed them in front there was still a chill in the air which they felt at their backs.

"Yes, changes. Not necessarily in our best interest." Nada broached.

"The priests." Perdus guessed. Given the link to the DVs it seemed obvious.

"Correct. A puzzle, like yourselves." She watched them acutely.

"How are the priests a puzzle?"

"Like yourselves, appearing out of nowhere. A brotherhood. No women. That is strange as it is the women who are more inclined, like you Jez, to have the gift."

"If that is the case then the use of men has social implications."

"They claim a communion with all. A revelation to be uniting us all."

"But you are united."

"We fear the priests have a hidden agenda."

Perdus paused, linking with Nuhan.

"No time like the present."

"We really came to speak to one with authority Nada. Ideally the king should be our destined embassy. However before approaching your exalted ruler it would be wise for us to know more so as to acquaint him with our information."

"You are certainly no spies then." She said relieved. "Or if you are, and what embassy is not, may I ask whom you represent? You clothes are unlike anything we have

seen." Thinking whether these three were representatives from the other side of the planet. Or perhaps star farers returning after all this time. Carrying no weapons. So they could not be the avengers who had destroyed their ancient world. Unless they were and having studied them only pretended to have peaceful intentions. Nothing could be ruled out.

"We represent a people who have your best intentions at heart."

"That is good to hear Perdus."

"We mean it. Nuhan our brains has knowledge that could be beneficial for your future. Jez, our seer as you know is our eyes and ears. Some priests may have certain capabilities. We need to be prepared regarding them. Needless to say I am authorised to represent our kind."

"You are from the stars." Nada tried a long shot. They were courteous and civilised, not like the scum who attended the priests with Verhat.

Silence. They weren't uncomfortable with Nada's guess.

"What makes you think that?" Perdus smiled.

"Your clothes. Your coming as if out of nowhere. Though we neither saw nor heard your flying house. Your self assurance. A sign of superior demeanour. I too have knowledge." Maybe she should not have said that but she felt comfortable with these three visitors.

"You think it will attract undue attention?"

"Only to the observant."

"Ah."

"Are you?"

"In a way everyone is from the stars Nada."

"You are from the gods?"

"Your gods we are aware of. We are acquainted with that knowledge."

Nada looked seriously at him.

The moment of truth. Even with his E capabilities able to dampen heightened emotional states that could interfere clear thinking he still was excited.

"What we are about to reveal is in the strictest of confidence. When we have explained all we wish to be taken to your military commander, Norhat. We know, suspect rather what the real intentions of the priests are. In return neither will we mention that we spoke with you or what you wish to reveal to us."

"That is accommodating. Any news regarding the priest is precious. As you may be aware a large conflagration occurred at Orst. We are waiting for news which as yet has not arrived. Anything you know is appreciated."

Perdus gathered his thoughts. Rather than explain reality, themselves, the politics of Prima and Regum top down he reasoned it was better to begin with what Nada and her people knew and work back to the source, the DVs.

He informed her of the priests mission to convert all the people, or as many as possible. And that they were not their own masters. Nada mentioned Astram. If not Astram Perdus replied someone else. It mattered not. They were all in thrall. He hinted at the group mind Grena, one of the priestesses Nada interjected, discovered. They were behind the priests power.

"Power?" Nada asked discomfited.

"The group mind focuses on them all. Doing their will."

"Who are these beings?"

"Like Jez. They are seers. With intent. To get your people to believe their belief system. Negate your gods Nada."

"That they make no secret of Perdus. At least we know who is behind this. The trick is how to stop them. To leave us alone. They preach of a coming kingdom. I can now assume it is the design of this group mind."

"Correct Nada."

"Can we stop them?"

"Of course." Even though that was not a certainty.

"How?"

"Don't believe them. Ignore them. It is that simple. Believe in your own selves. Figure out the universe according to you own wishes. Learn from the laws of nature and the universe. Be your own destiny."

"Noble thoughts Perdus. Yet if this group mind is behind this then maybe if we know where they are we can confront them, seers or not. We have many shamans amongst us. We are not without our own resources. Storm them. But somehow I have a feeling it is not as simple as that. If it were you would not be here for your people could have stopped them. Why haven't you?"

Perdus explained that they came from a planet called Regum colonised by their distant kind who over time started to see the universe differently. Perdus explained that he, they, were not here to dictate the right or wrong way of interpreting reality. Just that Prima had a different view one they wished to convince as being the *only* belief system.

Any deviation was seen as a heretical deviation. He explained the struggle between their two worlds. Regum had no trouble with other belief systems, Prima did. Using the Deep Visionaries in influencing not just their world but this world as well.

"And how are your people coping?"

"We ignore them. True there are some who are taken by their vision of a unitary god. But they are few. Anyway it is just a mental projection of the unitary nature of the universe. The big difference is that to the Primaian's and by extension the priests they want their vision to be accepted."

"What if they are denied?"

"Both our worlds eschew weapons and war. We have not engaged in this psychotic homicidal madness for millennia. So they use DVs. The battle ground is the mind. We do our best to enlighten."

"Are you succeeding?"

"No."

"So your people sent you here to warn us."

"That is the aim."

"Then you are right in being here. We shall take you to Norhat for somehow I believe you. What about you Amos?"

"Life amongst the stars. It gives one hope. We are not alone. And if these visitors speak the truth, or their version, it makes sense in what is happening here. But what I fear is that if we resist we may be destroyed like our ancestors."

"What price life?" Nada replied. "Death or freedom. A hard choice. I know when we pass on we are back in eternity with the gods who gave us life. I want us to continue, to forge our own destiny and not that of what others wish us to be. No matter how benevolent it seems. To say that we must accept a unitary god and forget about our gods is wrong. But let us say we accept Prima's vision, what then?"

"Nothing."

"Nothing?"

"What I meant was you remain in your state."

"Our state?"

"Your ancestors achieved great things. Learnt a lot, used that knowledge to build a magnificent civilisation. We do not know what happened or why. But whoever wreaked their vengeance upon your world never returned either. We can only hope that they either learnt from their heinous mistake and mended their ways or they are no more. We certainly have no knowledge of any other world as yet." Perdu added as an

afterthought. It was troubling to have a people who had such awesome technology so close.

"You haven't answered my question Perdus. Our state."

"My apologies. You remain as you are."

"That cannot be so bad. We have a good life. The earth gives us nourishment, the skies water, we have plenty. Even if only one god instead of many."

"We are not here to tell you what you wish to believe Nada. But Prima itself is not so dissimilar to your planet. Yet they have accepted our machine worlds, our technology. The rest toil in the fields just like here. Prima would make sure you remain at this level of your development."

"How far can one develop?"

"Ah." Perdus beamed looking at Nuhan.

"You build your cities. Once you may have been nomads. But you progressed. Irrigation channels, wind and water mills. These are all developments. As you study nature, knowledge is revealed. As you watch the stars understanding broadens. The limits of your natural horizon expand. And with that expansion your mind as well. The more you see the more you learn, the more you know. You will be able to cure sicknesses that afflict you now. Maybe less children will die at birth, many things are possible for any thinking living being. Prima would restrict all that. Or if they passed it on it would be at their choosing not yours."

"To cure sickness. That would be a blessing. We have knowledge of herbs that heal."

"You see that is development Nada." Nuhan encouraging her.

"Some priests say, illness comes as punishment for denying the divine." Amos said.

"Illness is like an infection. Nothing divine about it. You have sickness, do you not try and heal? Or do you see that is divine punishment?" Nuhan asked.

"I see what you mean." Amos was relieved.

"We thank you for your frankness. At least we know now the priests are under the group minds influence. Their thoughts not their own, not our own. That is enough for me. I think it is pertinent we see Norhat. Time to saddle some horses. Get some provisions."

"We may be able to assist you there." Perdus said proudly.

"Off all people to send." Norhat both incredulous and surprised to see the king's astronomer Arbour stand in front of him. The king's investigator pertaining to the trouble stirring at Orst.

Norhat offering tea for his esteemed guest related how just yesterday it had been reported by a very tense angry young man, Hutyen, who breathless, looking over his shoulder reported to the sentries the theft of two books by Astram. Astram and Inamus. It was recorded in the daily report.

Arbour, riding post haste along the kings highway in four days flat. Last night he deviated to approach Orst along the river further east to find out what the farmers knew. The priests were making the usual nuisance of themselves, accosting all and sundry regarding their divine message of some promised spiritual redemption. The rising plume of smoke made him hesitant. If Orst was in uproar he deemed it safer to wait for the commotion to run its course. In the meantime, whilst checking out Hutyen's allegations Norhat sent two guards who could read and write to investigate. They came back with the news that the school was being burnt to the ground.

"Yes I too saw the smoke churning. Lot's of people milling about, more out of curiosity. It seems the teachers decided on this desperate act of defiance." Arbour said drinking his tea. He was slightly saddle sore from the ride. Staying the night at the last farmstead helped soothe his aching body from the fast ride.

"The king detained one of the ring leaders."

"Does that mean I detain Astram and Inamus?"

"I was only told to gather whatever intelligence you have regarding the priests intentions, which includes the instigators of this new religion of theirs. You know we have no laws or decrees as to what anybody wishes to believe."

"Maybe that ought to be changed."

"It wouldn't work. Pry into every soul?"

"Yes the difficulties would be...more work."

"So the people aren't exactly endeared to the priests?"

"Tolerated. Now with the school in ashes, a point has been made. Nothing legally to stop them engaging in this act of defiance. I hear they took their most precious books and scrolls away from there. Many have headed for the coast with their cargo. The students, most anyway have returned to their homes. Nothing for them here now."

"So by accident, by mere whim the priests have won."

"You mean the school."

"I do Norhat. Otherwise the town is as always?"

"Subtracting the priests, yes. They have made Orst their home. How goes it in the capital?"

"Vanished. Hiding. Or waiting. Thus my reason for being here. So the priests remain in the open?"

"Yes. A bit of a pain."

"There are still the unresolved murders."

"I know. The culprits have long gone. Could have been the nomads."

"Why would they? It would only reflect badly on them."

"They were probably put up to this foul deed."

"You think Agram's orders?"

"Perhaps."

"Maybe you should call him in, for a little chat?"

"Arbour. I have him watched. Alerting that fiend to the fact that I, as an officer of the king would deem to question him would only make him even more cautious. Unless you bring specific orders."

"None whatsoever. Just a fact finding visit Norhat."

"Well as I said, murder aside, the theft of two books. Then again they might have been, even if reluctantly handed over. Since the librarian is gone, the acolytes, unless we track them down, more resources needed for that, we won't know even if it was theft. More likely under duress. But they could have alerted us. The furnaces are under constant guard. No one approached them. Until I hear otherwise, this alleged theft is a mere incident."

"Well at least it shows how sure Agram is. Being obeyed."

For a moment both Norhat and Arbour saw a flicker. Everything was vibrating. An earthquake yet no shock, the shaking sensation purely visual. Even their brains felt momentarily affected. A transitory nothingness, an utter absence of all sensation. Then it was over.

"Did you feel that?" Norhat asked puzzled.

"I did."

Murmurs outside. Tension in the air. Stillness pervading everything. Norhat remembered the strange vision when the land looked devoid of all life.

"You think this is the priests doing?" Norhat trying to contain his apprehension. He had to remain on top of things. Any sign of weakness would be exploited by the priests. Norhat was sure of it.

Arbour thought deep and hard. This was the second time something strange occurred. There was nothing in the books, in their records of these odd phenomena. He didn't like it. Were the priests truly avatars of this unitary god? So why then the sense of

desolation? It did not add up. Gods revealed, they did not destroy. They did not send visions of potential calamity. Unless the gods did send this vision to warn them that the priests were jeopardising everything, even life itself. He the foremost astronomer, watching Urus's realm, along with her co-ruler of the stars, Bahlir. Like that first vision, the empyrium was still there. Just no one in the land. Of course it could also have been a hint of what the other side of their planet looked like. Pointing the way there? To the desolation of long gone ruins? He was perplexed. Tonight, when he was done with his work here he would concentrate on the changes manifesting themselves in such concrete visions. Talk to the priestesses at the temple of Nurdass, the sun goddess. Even though the voidness all too real, there was still light. The sun still there.

Norhat was thinking along similar lines. Someone was dabbling with powerful forces.

Grena was in her cell when this strangeness manifested. It's short duration an eternity. Deep, receding into infinity, as broad and vast as the blackness of the night sky. A darkness trying to replace the stars themselves. But there was something else which made her ponder. The group mind which she imagined to be a hive. Working behind the scenes in unison. Then it struck her. The coming deity. It would, if they had their way, usurp everything everybody believed in. Was this then a sign of the coming? their promise? Then why this sense of extreme loss? Of an absence rather than a presence? Was this being rather unconvincingly she thought in her small room, real then? She would meditate on Bahlur and Urus even if she was a servant of Nurdass. Grena needed answers.

She listened. All was quiet. It may have affected them all. The murmur of the market place subdued. It had only been a fraction of time. It's portent was immense, vast, powered by a relentless force. She would consult the annals of their temple. She was well acquainted with their collective wisdom. Fearing the worst. This was something new, something else entirely. If this was indeed a momentary vision of the coming god then it was a god of destruction not creation. What could the priests gain by that? Was Astram in league, or Inamus?

As evening was approaching Grena decided to go on a fast. She was going to concentrate on what just passed. But only the memory of a memory remained. Like waking from a dream which so uncannily vanished from the mind's eye so too this, whatever it was, was gone. At least she remembered. Try as she might she could not recall what it was. Something. Now nothing.

Stroem came back from routine duties in town. Seeing Norhat was with Arbour he apologized for the intrusion. Stroem reported his impression of the people, already having forgotten that weird sense of oddness in his head. As if he were in another place and here as well. For a moment he feared the gods had withdrawn their presence, the absence palpable, then everything was back to normal. The gods would reveal everything in good time.

Having acquainted Norhat and Arbour regarding the daily events Norhat dismissed him. As he was walking out, excited voices. Another visitor. On the way out he saw Nada with three very strangely dressed men and a woman. At first glance they looked like priests, just as black with tight fitting skull caps. A tiny glowing stone on their arms, a penetrating green. Probably Astram's kind.

There was a presence about them. An assurance of self control unlike the priests who were both withdrawn and had a barely suppressed eagerness ready to pour their words in a torrent of fervour over anyone willing to listen to their message of redemption. These three, accompanied by two guards were unlike them. Well Stroem was glad Norhat had to deal with them. He just wanted to go to the tavern with other off duty soldiers and partake of many ales then retire and sleep. Tomorrow was another day. Norhat had given him no orders so he was free until then. With a sprightly step he walked off into town.

The visitors told Norhat what they wished him to know. Norhat understood that any embassy was always two sided. What was meant to be known and the real reason if that. Arbour sat there completely intrigued. Star farers. Were they behind the odd feeling he had felt? Thinking back on it he could not even remember what that had been. A message from the gods. These three people, coming from another world...gave him hope. That they came with good intentions, both he and Norhat accepted for the moment.

The devices they travelled on, the size of a small pony, sleek, two wheeled were amazing. They had not arrived by going through Orst but had approached the fort from the western desert only seen by the small dusty plumes they left behind in their wake. Moving fast.

After Nada explained the terrible history of the fallen cities. Arbour and Norhat though sceptical accepted the facts presented before them. If they indeed were from some distant planet, not star, for as Arbour explained, planet's had colours as opposed

to stars. And these beings did not pretend to be gods either. They claimed to come in peace.

The priests had been finally unveiled.

Norhat was thinking. The priests unmasked. Perhaps it was time to do the same to Astram. Inamus was of no consequence. Important yes but he followed Astram as long as it was convenient for him to do so. Maybe if they were brought in, find out what Astram knew. And send for the high priestess from Nurdas's temple.

Things were happening fast. Weird sensations and visions, the teachers murdered, the school razed. Burning their bridges whilst saving their accumulated wisdom, dispersed who knew where. At least out of reach of the priests. Visitors from amongst the stars. Now that was a sign the gods were still with them. And Perdus, Jez and Nuhan amenable to their beliefs. Not hostile.

He suggested bringing Astram in. With the purloined books?

"No. First see what Astram makes of their contents. Then we can compare the original to his interpretation." Arbour suggested.

"Makes sense. Let him reveal his intent."

Two guards were sent to fetch him.

Astram was pouring over the huge dusty tome in his room at the 'Courttyard Tavern'. The two rooms he occupied, the other for Inamus as he wanted him close were bright, well appointed, even with carpets, mattresses not straw beds, pitchers of water, a closet, writing desk, cushioned wicker chairs for visitors and plenty of candles. The burrowed book, a compendium of the greatest thinkers of the land including, what interested him most, the ancestors.

Until a clearer picture emerged he would study this most remarkable of books. Really a history of all the philosophers. What pertained to the ancestors was mostly cribbed from long lost source materials. He gleaned enough to fathom their mindset. Outright materialists, in denial of the present gods the people deluded themselves with. Apostates at best. Their calamity, their downfall sudden. No mention of an impending conflict. A surprise attack. Over in literally a sudden flash. Maybe other books or scrolls were as detailed but now that the library was dispersed, he might not find it on the long run. The other book was speculative, the heavens, treatises on astronomy. That would hopefully reveal how they saw the cosmos and by default reveal their souls.

Engrossed, marking passages here, paragraphs there for future reference. To recompile their knowledge. Searching for ideas which would lead the people towards

their ancient prescience indicating the presence of the unitary god. He liked the sound of it. Embracing, inclusive, non threatening. The gods its messengers. Astram did give the astronomy book a cursory glance. Mathematical models of the trajectory of the stars, planets, smaller satellites. But first to fathom their ideas.

Concentrating on the thick sentences, loaded with meaning, revealing a convolution of ideas leading to a veritable maze of speculative conclusions, each more contradictory than previous one. Which elements were more important? Which stratum was the basis for the rest. Earth? Water? Fire? Air? Or some magical effluvium, a combination, a unifying force termed the Aether? He marked that passage. The first inkling of what Astram sought. Confusion below, unity above. The celestial realm a perfect harmony. He was making progress.

Then the strangeness infused itself into his mind. The room invaded by some odd combination of the elements. Looking out the open shutters, overlooking the town it was for one moment quivering on the brink of dissolution. A quaking of elements. A sign!

For one pertinent moment nothing. Just the desert. Like that first vision. Now a second one. The unitary god making its presence felt. What was to be if they continued in their blinkered vision, doomed to decay. Or the gods withdrawing their essence, retreating back to their realm. Negate the unitary being and life itself was negated.

Dipping quill into ink he quickly noted his reaction. Busy, writing furiously barely paying attention to the hush which had fallen over the town. Barely noticing the almost night-like silence as he concentrated on the importance of the revelation. The portents were on his side. Deny and die, or accept and be granted cosmic eternity. The conclusion obvious. That of course would be revealed in the new testament at a later stage. First impress upon the reader the natural confusion when being misaligned in the great scheme of things. Then through subtle hints, leading to revelatory insights the ultimate truth. He hoped there would be more signs such as the one which had passed. Looking up again everything was back to normal.

A knock from Inamus's connecting door. Astram put the quill in its ink stand. He knew what Inamus was going to say. The momentary vision might have been universal, not just due to his astute mind. This interruption thus timely to confirm what he just experienced.

He bade Inamus to enter. Looking surprised, astounded even, Inamus revealed to Astram exactly what he too experienced. Good news. The ultimate god was making its presence felt. Warning unbelievers of their fate if they continued in their misconstrued ways. Inamus of course agreed. How could he think otherwise. Satisfied Astram told

Inamus to continue working through the other book. Their priority. The school? So what. That too was a portent. The projected seminary premature. Other opportunities would arise. Walking in the path of the new god would assure them success. Inamus was satisfied. The soldiers he said had not interfered at all at the burning of the school. That too was divinely ordained. Inamus left Astram to continue the great work.

Norhat's guards visited Astram seeking him for an interview. With some reluctance, working on his testament he put the quill down, inserted a marker in the book and shut it.

Was he a prisoner or was Norhat merely curious? Maybe he wanted an insight into the second divine sign. Astram hoped there were more to come. As he was escorted out of the tavern, momentary looks from the drinkers, subdued mumbles and whispers for the gossips of the town resented Astram. He felt their sullenness. All an act. As if he or his priests were responsible for the burning of the school. The very thought! Let them think what they wanted, the future was in his hands, in his mind, his soul, his divine being. Astram felt chosen as did the priests. More so than the almost dimensionalessness of their gods and the priestesses, mere appendages sorting out life's little problems. Compared to the divine message which he felt deep within, their sporadic resistance would be blown away like chaff in the wind.

They entered the fort, past the outer palisade, the deep ditch, the earthworks and ramparts, the observation towers, the place a hive of activity. A group of soldiers and three weird elongated wheeled shapes. His heart stopped, his brain froze in momentary panic. He tried to refuse to believe what he saw: three infernal alien objects! The tome alluding to magical artifices, but that had been so long ago. Was the vision then a rending of the heavens? Had this misbegotten apostate race returned? Were they challenging the coming revelation? If so they were indeed doomed. The intimidations crystal clear. He would have to enlighten Norhat, Kahleff and Jaffir of just how precarious things were right now. The ingress threatening to usurp reality itself. If they accepted these beings then divine retribution was at hand. He must have stopped and gawked at the three machines. The two accompanying guards were in no hurry to move him along. At least he was not under arrest. They wanted him to see this.

Recovering from the shock, his mind racing, Astram collected his thoughts. It all was becoming a slowly discernable pattern. History was being made. And he was at the centre, the fulcrum which would tip the scales, in his and his god's favour. It was just a matter of explaining divine revelation. The choice then was not his but theirs. Calamity or

redemption. How sweet, how straight forward, how simple. Accept or take the consequences. Enjoin in an eternal future or enshrine that future into a catafalque of mortal decay. He felt emboldened, ready for anything.

Astram fell into step with the guards moving through the inner courtyard. Blacksmiths were busy, soldiers grooming horses, cooks sweating, carpenters hammering away, others practicing their sword skills, scouts leaving, officers instructing the men and women who served here, just like the school, in open classes imbuing them in the theory of the martial arts. Other instructors drawing lines in the sand eagerly watched by their charges. Here they were focussed.

Instead of being taken to Norhat's downstairs command centre the guards led him into the centred tower. Reaching the top observation post the guards saluted and left. Norhat was with Arbour. What was he doing here? Three strangers with Nada. They too were in black, two men one woman. Were they messengers of his priests? He felt assured for a moment. Their apparel. Unlike any other. Seamless, cut from a single piece of cloth. Matte black.

Norhat made the introductions, even thanking him for taking the time to make his presence available. So far so good. If he could convince Norhat about what he knew, what he felt deep within his soul then the future was bright indeed.

The view was remarkable from up here. The highest of towers the whole of Orst was clearly visible. To the east the smouldering remains of the school still sent thin grey wisps of smoke into the clear sky. Soldiers were patrolling the upper walled bulwarks. The town square with his tents the priests milling with the crowd. The bright white temple of Nurdass, the braziers with their incense sending tiny clouds of their fragrance into the air. The odd priestess at the bottom of the steps conversing with a few of the gathered crowd. Seeking answers they could not give.

"You say Astram that you serve this unitary god." Norhat not asking.

"It is his will." Astrah speaking humbly. Not foolish enough to proclaim in his pride the divine truth.

"Does this god tolerate murder then." Another exclamation.

"The divine will encompasses all. I know what you are alluding to Norhat," focussing solely upon him, "for those who have done this outrage were moved by spirits with dark designs."

"Yet those spirits, as you claim, chose only those of the school."

Astram would not admit to anything.

"A sign of divine disfavour."

"So your god condones the most despicable of human folly."

"The jealousy of men is dangerous Norhat. It is not the way, nor is it my way or my intention to condone this tragedy."

"And now we have lost the school. You see Astram I have to report to the king. Should I tell him what the whole town thinks?"

Astram knew that the whole town did not think anything. Most of the students came from the king's city, the great estates and maybe the odd local. As they brought money with them they were accepted. If only for that alone.

"You know more than me Norhat."

Norhat let out a sigh. "Astram. Whilst you know yourself there is no direct evidence linking you to this outrage the whole town knows of you and your priests attitude regarding the school. In a way you drove them to this desperate act. Now we have lost not just the school but its library as well. And with that the students and the money they brought in. Jaffir by the way is considering moving you and your kind out. Into the desert. What say you to that?"

"Fine by me. We are in the hands of the divine."

Norhat realised Astram was as slippery as an eel. Even accepting banishment by royal decree did not bother him.

"There are those who would wish to see your priests removed permanently. Since the suspicion for the murders points in your direction there are those who would quite happily visit their revenge upon your kind. By law I cannot allow this. But at the same time we cannot watch every individual soul. This is not a prison, it is a free town Astram. If I were to remove my guards the lives of your priests..." Norhat let the assumption hang in the air.

Astram could not disguise his shock. Was the resentment real? Or feigned?

"Unless you answer truthfully I will withdraw my guards. You see," Norhat bluffed, "I have orders from the king to fortify the capital. Your priests are up to no good. So you can tell me now or your priests will be unprotected. The shamans of the tribes have no love of your religion. Nor does Jaffir."

Kahleff Astram thought. His days would be over unless he decided to enjoin Astram's ranks.

"I see."

"So you are willing to remove your spawn?"

"Spawn?" Astram was perplexed. The term loaded with malignancy.

"You don't really believe they are their own spiritual masters?" though Norhat knew what Astram's answer would be. A patrol was moving out north. It was then Astram saw groups of people making their way from the outer lands into the town. He understood what Norhat was doing. He must have stirred up the clans and tribes. Loading the dice. If these ferocious tribesmen were allowed in en mass then there could be dire consequences for his priests.

As Astram said nothing, letting him see the precariousness which faced him Norhat continued: "I know you will say they are serving this invisible, unprovable divinity. But there are those who think otherwise."

"Of course they would Norhat." Whilst watching the travellers from the north come into town in small groups.

"So they are lying?"

"Those who harbour such dark thoughts are misguided."

"How convenient Astram. You probably have an answer for everything. But we have intelligence that gives a different picture."

Astram waited. What deviousness was at play here? There was something deeper to this. The strangers proved that.

"The ancient war. They too deviated from the path and were destroyed by a mighty force. I have no wish for that to be visited upon us a second time. The portents prove it. Unless we redeem our souls then we are truly doomed."

"Yes Astram you are correct in your assumption."

Astram waited for the rest.

"The doom is of a deeper nature. You want to usurp the gods."

"They are his messengers. They have done much good. Now a new age is upon us."

"Is that it? Have you any idea what your...kind are involved with?"

"The coming revelation."

"Yes. You are being used Astram."

"I am in the hands of the divine."

"You are in no such thing."

"You..." But Astram dropped the thought. It was clear to him Norhat had made up his mind. The strangers.

"Grena."

From out of the shadows Grena appeared. What was she doing here?

"Norhat. Greetings strangers. I have heard of your presence. We welcome you."

So they were all in league. What did she know?

"Tell him."

"Astram," she turned to him. Her face serious yet calm. "I too have had visions, or to be precise one recurring vision. You are being manipulated. Do you not feel this deep within your soul?"

"The unitary divine essence is all and everything. The seer blessed with divine intervention will perceive this according to their own nature Grena."

"Yes, to be sure. But I'm afraid it is worse than that."

"Worse? Are the gods rebelling then?" which should be interesting.

"No Astram. You are, as are your priests, being controlled by a group mind."

"A group mind?" he felt at a loss. What lies were these?

"Yes. In a distant galaxy."

"Galaxy?" he felt stupid.

"Astram, the stars we see are grouped, millions of them in what is a galaxy." Arbour explained.

"So where is it?" Astram felt his confidence returning. The sun was turning orange as it started to set in the west. The sky glowing, the desert almost shining. It looked beautiful. He felt the divine glowing within him.

"As we are in it, we cannot rightly see it."

"Oh, I am disappointed."

"You will be when you hear the truth." Arbour answered.

"The group mind is guiding your priests. It is they who believe in this god of yours. Which is their intent. They have discovered us by psychic means. Now they are using the priests to further their will. Not yours, not ours, not anybody's but theirs. Think of it like the shaman spirit world. With dark intent." Grena explained patiently.

"This is not the truth. Even if this group mind exists. Maybe they are his messengers." Astram found his equilibrium. "Divine messengers."

"Manipulators." One of the strangers, the oldest said.

"And you would be the apostates." Astram countered not caring for the insult.

"Apostates are one's who turn away from their belief. We think otherwise. No we are not apostates. What we think is irrelevant here. It is what is being done to your minds that counts. You can be free or you can be possessed. That is what is at stake here for your people, your future." Their leader said.

He looked at Nada who was remarkably quiet. Arbour obviously satisfied with that odd explanation as was Grena. Norhat convinced by these strangers who were denying the truth.

"You saw the vision, you know the consequences. If we continue on this false path then we are doomed."

"That is what they want you to think Astram." Grena replied.

"Lies."

"Indeed, lies." Grena said sadly.

An image appeared on the wall of the tower. It surprised Astram. One of the strangers, the other man was holding his arm. A small picture was on his arm, glowing projecting stars and what must be a galaxy into the wall. His eyes opened in wonder. He nearly lost his footing as the stars came closer. Potent magic. Verhat would have liked that. Two planets circling a sun. Then one grey brown blue white crested orb appeared. Tiny white dots hung above it next to a sphere with tiny lights.

"Those dots are what are called Deep Visionaries. They are like shamans Astram." The second stranger said calmly. "It is they who are inserting their belief into your priests mind, and yours as well."

"It means nothing. Where is the proof?"

"That is the proof. They try the same trick on our world Astram."

"Just because you have this powerful magic does not mean you are right,"

"I sense them Astram." Grena added.

"Well, if these shamans know of this great god then it must be so."

"It is true in the sense that they want to believe." Their leader explained.

"What if, for the sake of argument I and the priests deny this revelation?"

"We think that they would rather see you succumb if you deny them."

"As in...?"

"We cannot be sure. But they will do everything in their power to keep you in this state you are in." the leader explained.

"State?" spluttering.

"Your people have a great future. One they wish to deny you."

"You mean instead of going your way? That is what destroyed our ancestors."

Astram guessed.

"Nada." Norhat said.

She showed him the book brought back by Arbour.

"More magic." Astram scoffed but took it just the same. Silence amongst them as Astram took in its contents. The images were enough. The picture on the wall vanished.

"Divine retribution."

"Just retribution. The Primaian's, our ancestors do not wish any world to be other than like them. They will use any means to achieve that aim." Their leader said.

"What if they are right? What if by leaving the true path divine retribution will visit those who deny the ultimate truth?"

"Even our gods are not that insane." Grena said.

"What if it was them?"

"Astram we are getting nowhere. The visitors, Grena, Nada have shown you conclusive proof of the problem we, as a planet face." Arbour replied.

"We have nothing against individuals believing whatever." Norhat was pragmatic. "But what you have in mind cannot be. You must make the choice. Now. Otherwise..."

"What Norhat? My priests are murdered? They will be martyrs. You forget the priests are at the kingdom's centre. If there is to be slaughter you think Jaffir will stand idly by and see Orst in flames? The crime then would be on your head."

"So you threaten the peace?"

"I cannot control how the priests would react to their brethren being assassinated. Surely you see that?" Astram confident again. He had been wise to argue for his own rights, where it mattered. Here and now. As soon as he was out of here he would have to get a message to them to take to the streets.

"If this powerful group mind is indeed the link then they would know of the crime committed here. You want to risk that?"

"You are free to choose your destiny." Their leader said. "If you choose your own path our kind will be there to assist you."

"So it is a choice between what you believe and what they believe. Which happens to be what we believe."

"Yes. But if you follow their path you will remain as you are, for ever. Your future negated. This present, unto eternity. Any deviation snuffed out, obviated from deep within your soul. Your mind never aware of the many possibilities it can think of, what the universe has to offer. To be in their perpetual thralldom."

"I would rather have my salvation assured than a precarious future with no guarantees at all. Are you not engrossed with this magic of yours?"

"It cannot possess. We are here by choice. To us the group mind is but an irritant Astram." Their leader said.

"Do you not have names?" Astram asked brusquely.

"If we reveal our identities the DVs, I mean the group mind will target us as well. The last thing we want is to bring the conflict here."

"But you have. By being here."

"No it is they who have started this Astram."

"They have shown the way."

"We are getting nowhere." Norhat said. "I have my duties to perform. Mark this well Astram. If the priests do anything that threatens the kingdom's serenity they will be rounded up and removed to the desert. Jaffir of course may use whatever means he wishes. Thus I cannot guarantee you or your priests safety. Even as we speak the nomads are pouring into Orst. I can only do so much. The decision is entirely yours Astram. You started this, you end it." Norhat commanded.

"You put them up to this."

"It began with the first murder of Nagor. Then Efhan, Jea and Fehz. So far no priest has been harmed. Your threats meant the end of the school. Now what did they know that so frightened you? Oh yes, I hear you removed some books as well."

"They were loaned."

"I'm sure they were Astram. Call off your priests. Recall them from Jaffir. And remove them from Orst. The king will decide their and your future. If you agree I will make sure no harm comes your way. As it is evening you move them out at sunrise. There are plenty of rivers out west to sustain a community. I will even, if Jaffir wishes this, assist you in establishing a monastery. But you are to desist from interfering, as from now, with the people. Is that understood?"

Astram did understand. He also realised that he would need to train the priests in martial arts. He had thought that the message alone would suffice along with the promise of the coming revelation. The signs were already there, two had come to pass. Maybe if the group mind were to discover these other visitors from that distant galaxy they would aid him in his holy mission.

"I accept your conditions Norhat." Astram feigned reluctance. It was not over. It, the great struggle had just begun.

"At last." Norhat was relieved. "Your word is good enough."

The visitors relaxed.

At least Norhat guaranteed their survival even if Jaffir was vacillating. The longer he and Kahleff delayed their decision the stronger Astram's presence. Astram knew he was the conduit to the ultimate god, the apex of cosmic power. Let these beings think he was cornered. At made no difference on the long run. The future an eternal presence of consummate control. The future a mere thought process, not an actuality, one they would dominate, for ever.

Perdus's comlink glowed on his sleeve's screen. If Mars went the way Astram insisted upon, their culture would mirror Prima's. Regum would be on its own. They knew it was one possibility, one choice.

Yet something *other* was hovering within the world of appearance. Another probability state trying to phase in. The vision had passed through his mind as a sub-set of events working simultaneously within the current reality. The DVs were trying to literally break in. Perdus's EAI was in full alert mode. He dared not let it run for fear of giving the DVs a hook.

The next comment by Astram surprised him.

"The visions are a foretaste of what will occur if these star travellers get their way Norhat."

Norhat eyeballed Astram. He seemed to be glowing, his eyes energized.

"Oh?"

"Their minds are as empty shells. If we follow their path, our world will collapse. With no gods there can be no life. We deny that reality we deny our reality. The emptiness foreboding. These beings are the threat Norhat, not the unitary god." Astram was on sure ground here.

"This embassy of theirs is to soften us up. They claim it is our doing that will see us vanish. Perhaps their magic deludes them. It does not delude me or the priests. It is their monstrous unbelief that will negate our world's essence. With the life force drained for they are psychic eviscerating beings whose intent is to weaken us. When the spirit is absent nothing will remain. The visions the warning of what is in store...if we follow their advice."

Norhat's mind seemed to bifurcate. Two realities impingent as one at odds with each other.

Perdus's mind was flooded with the recurring vision of Mars eviscerated. With two other images concurrent as well. One where everything was as it is now, one absent of life. The real present tenuous and fragile. A mere stop gap, a bridge between two competing alternatives. Neither dominant.

Jez's mind started to shake and vibrate. A massive mental surge overwhelmed her. The dominance of a powerful outside source triumphant. Way beyond her capabilities.

The DVs were on the attack. Not through their remote targeting though targeted they were. Not by their inserted psychic presence willing their mental state upon them here but by an *absence*. Withdrawing the mentally constructed sensory translation the mind engaged in to feed information of their world to the brain. They were *withdrawing* the present reality by *voiding* their minds here! With the brain not receiving any inputs, nothingness was all that remained. Another reality flickered behind the illusion of appearances. A combined force, an essence, an intelligent presence, undefined, unformed, hiding, a *probability*, a potential cosmic powered essence drawing *everything around them into its realm*. Like the unitary god Astram spoke of! *Or a configured probability data embedded propagated field wave. Mimicking the unitary god of the DVs. The DVs the source of this total absence..*

Nuhan's mind fractured, splintered. He was dumbfounded, overwhelmed by the conflict of realities. Was he perceiving some weird apotheosis? Were the beings here even more potent than Primaians? No wonder they were so interested in this planet. And winning. What dominated his sensory perception even more was the voidness. His mental processes incapable of grasping its reality, an absence in and of itself. Nuhan knew of course that at the quantum level there were only energy fields, what one saw was created by the mind's configured processing capabilities. This was utterly unreal and real. The DVs were dominant. Instead of infusing reality with their predetermined vision they had somehow created nothingness. The no-thing-ness of quantum reality loaded with extraneous non-data. It flooded his brain, poured into his mind, deleting everything within him.

Perdus tried to uplink himself to the ship so it could boost his being drained of all mental faculties. He felt rooted to the spot encased in a frame of space-time reality where time had stopped. Trapped in the moment, an eternity unto itself.

He was in the ships systems. It too was bifurcating. Two realities on one. The fractal pathways cascaded outwards drawing on one reality. Mars in another probability field wave. A vortex deep in space. A location in their galaxy. An energy field ballooned outwards, inflating faster than the speed of light, jumping exponentially into *all quantum field states*. Total dominance. Subtracting this reality into the DVs *configured non-reality*.

Norhat and Astram's minds were being riven apart. Too many conflicting realities. The mind had no chance of holding on. Merely grasping. It was an infusion of a

dominant presence tearing them away from their sense of self, their sense of reality. The fort, the town, their world both there and not there. The vision of a planet absent of all life appearing in flickering moments of perception. They were all being drawn away. They sensed the presence of the visitors concurrently as well. They too were being drained into this expanding surging energy inserting with it's intent upon them, moving through them, into them and sub extracting their world into it's domain. Norhat understood. Agram had been right. Something cosmic was there.

Norhat's mind fractured, teetered on the brink of exploding into a multitude of fragmented thoughts, pushed apart by a yawning chasm, an infinite abyss that poured into him, leaving nothing in its wake.

Agram felt the surge of redemption. The void was negating the false reality to leave the real penultimate divine revelation. His soul soaring predetermined into its inclusive realm. He sensed this ultimate of revelations gladly, leaving his other vacant shell behind. For a moment two worlds, one devoid of life, of everything, the other, *this world* immersed in the divine expanding into it. The redemption palpably present, eternal, the forever here, now, unto eternity.

The universe to Agram still looked the same. Everything was there yet he felt as if somewhere else. His lagging mind hanging uselessly onto a negated past. The struggle was over. The priests were as one spiritual essence, the holy infusion pouring through them into the minds of the people. Strangely enough he experienced a constriction even though the infinitude of space was there. He accepted the supreme revelation for it united them all. A fleeting sensation of Nuhan, ah, a name, Perdus the leader struggling against the inevitable. The void took them, only their outer shells remained, mere puppets devoid of volition, barely alive, but not dead.

Nada felt unsteady. Her mind, her soul exploded into shards. Hanging onto dear life she instinctively knew she was fighting a lost battle. Something utterly strange, yet familiar, a grasping essence infusing itself into her. In a net. The ocean of reality all around, constrained then immobilised. Time stopped. One part of her was being filled with the void, the other a screaming multitude of insanities completely overwhelming her whilst her remains were gutted. One soul lost in the receding reality of her world. The other a turbulent combination of all thoughts present at once. Marionettes in a mad frenzy pulled about by an unseen puppet master who refused to reveal himself. She felt the ascendancy of the priests, the group mind dominating the people who reacted as one to this perfidious vision. The world, the stars, the empyrium sucked into the expanding realm. She and everything around her swept into its encompassing embrace. Infinitely

vast yet trapped in this constrained realm. Everything was lost. She tried to grasp the reality left behind. Her memory of the past vanished like a dream then it too was gone.

On the ship Mirn, Head AI asked Los "You get that?" A momentary absence of...almost everything.

"Stray PWs."

"I wonder if they got that."

"We'll know when they make contact."

"You reckon I should let them know?"

"Perdus said no contact. Too delicate. Don't want to let our presence be revealed. We don't know how potent their minds are down there. Then there are the DVs. We know they're targeting the planet. We wait."

They both watched the array of screens and global read-outs. Everything was back to normal.

"OK. I'm gonna check the hyper-visuals." Mirn was curious. Stray PWs. It had come to her brain just like that. Since they were in a relative probability field it could interface where the placing impinged on other probable states. "Pity we can't see beyond our insertion field."

"Well when we get back we can get our brains to work on that." Los said,

"I'm gonna check on the aberration."

"OK. But if the ship gets compromised..."

"Of course, pull the plug." Mirn laughed. She reran the sequence at the stray insertion. The status field on the screens lost their clarity as the default analysis programme tried to latch onto that reality. The imagery of the empty planet pixellated, then the screens read outs went blank. Not zero, but blank. White noise which inverted itself into blackness. Absolute nothing. Nothing to analyse. Devoid of information.

"Strange." Mirn said. Los was watching the status of the ship. Everything normal at that end.

"Exponential decrease of information, fading into minus infinities." Mirn's Brain told her.

"Infinities? Well obviously the equations must be flawed."

"Can't be." Los was puzzled.

"Have to. Infinity is a false positive. Something they'll have to go over when we get back."

"This is the second time it's happened."

"Yes stray PWFs."

"You think it could be DV activity?"

"Maybe. Trouble is we can't backtrack to them. We're not here as far as they are concerned. Not even a softscan."

"Keep it that way Mirn."

"Don't worry I won't compromise us."

Information was dropping off and out no matter how she ran it. She created a sub-domain and reran the stray PWF. Same void. First a null result, the equations irrelevant, the algorithms absent. A strange field, hopefully not an attractor. But that would be positive, not negative. Well the quantum universe was not going to be logical in the normal sense. The trick was not to infect the ship's systems with its voidstate.

"Didn't originate our end?" Los asked.

"Nothing around us doing it. No source as such." She watched the simulated data realms go offline, black threads of nothingness snaking between them. Turning to black soot. She stopped the simulation regarding the stray field and using it called up the visuals focusing on the planet below. For a moment the simulation looked normal, then it too broke up leaving a blank read out. Mirn checked for viruses but the ship would have alerted her of that. She hoped this had nothing to do with their presence. They all knew if they were discovered by the DVs the mission would be unduly influenced, their aim: create failure.

Staying with the simulation she called up the complete ship's AI integrity. It kept itself complete. One of the processing nodes, in simulated real time was out, then vanished. Focussing on the stray PWF was dangerous.

"Energy can't vanish." Mirn said perplexed.

"It's a virtual vanishing."

"Somewhere the equations have to be faulty."

"If they were we wouldn't even be here."

"I know Los."

"Hm virtual space a total absence. There might be pockets in space that are totally void. Where there is real nothingness. Maybe a pocket passed this way. You know, a baseline way below anything we ever considered. Absolute zero. The lowest of the low."

"I'm gonna see what the ship's picking up."

"Covering you." Los ran all the back ups available.

"And running the virtual scenario."

"Gotcha."

"A PW shift. Different field."

"Can't be. Oh yes it can. Virtual again." Los said.

"It's in, then it's out, and holding. Doesn't make sense."

The image of the planet was going fuzzy. Internal corrections reimaged but it went blurry just the same. "Resolution's decaying. It's like, like..." Mirn watching the screens, "...there are two planets. One breaking up, the other remaining."

"I got news for you Mirn. The systems gone live. The virtual's become real."

"It can't."

"Quantum entanglement. Both are real now." Los explained. "And look. Both PWs are transitioning. Energy quotients shifting between the two. One going less the other going more. Ship's OK though."

Visual scanners showed the stars hazy, out of focus, growing momentarily dimmer as if obscured by dust. With nothing material present.

"Dark matter." Los's Brain said.

"Weird and weirder. Some form of energy insertion. But where's it coming from?"

"Or who's doing it. Our end?" Los asked.

"Prima's dark angels?"

"You mean the DVs."

Mirn nodded fearing the worst. But relieved for if it was potent DV activity it was all in the mind. Everything they saw was interference straight into their heads. The read outs skewed within their heads. When they would cease the real real-time information would return and make sense.

"At a guess Mirn I'd say they're trying to wipe us. This dark matter is just a mental cloud."

More data flows broke down, nodes breaking up, caches deleted, memory centres vaporising into fragments of disjointed information turning into more black soot.

Below the planet shivered. Patches of vegetation flickered in and out of focus then in and out completely.

"Potent shit." Los was impressed with what she hoped was DV activity. So far the ship was not affected as such. Just some of the processors oriented below. The patches of cultivated land went dusty pink and brown reverting to desert land. Rivers disappeared, not vaporising just vanishing leaving spidery lines of dry beds. Canals dusty depressions, their linearity mere outlines. The only reminder of a vanished past.

"Maybe they're shoving us into the distant future. Make it seem as if we're maybe millions of years from now."

Storm clouds turned to dust clouds. The ice caps at the poles shrunk to a fraction of their original size. The atmosphere much thinner, devoid of oxygen. Nothing could live down there.

"Potent." Los alluding to the DVs.

The stray probability field returned en masse. It became coherent, in phase displacing the PWF of the ship and its embrace of the planet which contained the crew below. The initial inserted field rumbled. For a moment the ship's system 'read' the new field but could not latch onto it. It was an absence, a void. All information drained including its entropic state. The sector of the universe momentarily was 'not there', then the normal enphasized probability fields of the current reality reinserted themselves. But with the informational content absent in real time, all data was lost, wiped off reality.

The ship was gone as were those onboard.

Mars was still there. The DVs inserted PWF negated everything. Mars was now a dead planet. No life. No people. No ruins. Nothing. Past or present.

In Reganian space Solar Station One, using the most powerful quantum computers in the universe which created the configured inserted probability field uncollapsed, smeared out as the void-environment flashed back through them from the DVs. Within the new superimposed projection space-time was equal due to zero quantum entanglement. The DVs absent field stronger. The void deleted everything. The combined DVs projection targeting their field in toto. The original probability field now absent. It was enough to delete the information content within the projected probability wave field of the SS 1's Quantum Computers.

The base and its scientists vanished.

A new set of continuing collapsing probability waves were dominant. Those of Prima's DVs. Not that they knew it. Their success absent The contents, the information simply not there. Unless one knew where to look for what and how, using QCs to relocate the uncollapsed PWFs, the evidence of that vanished reality would remain void.

Orbital: Prima

Elentra, Kroena and Risea were manning the consoles keeping the DVs under remote observation. The experiment needed to be contained. The DVs focussed their void-minds on the projected probability wave-field surrounding the distant alien planet. As the DVs were linked in an absolute continuum zero time frame, the individual specific monitors were ignored. Only the secondary target group, under observation contained the resonant signature of that distant race with tertiary stand by back up DVs holding the resonant fields. A quick conference between the three of them pondered if they could negate Regum's forced field. Risea reaffirmed the blank DVs mind-states. If they could void their minds they might neutralise Regum's effect as well. They had no idea how exactly the Reganian's technology achieved this, that could be sorted later. For the moment negating their presence was the primary concern.

Ung volunteered to be the group leader in this experiment. No one had ever attempted something like this before. They could burn out in the process through flash back overload, a price the volunteers gladly accepted. If they did burn out at least they could be realigned, reconstituted to a persona of their choice. For once BrainDraining was a blessing. If the DVs under Ung's guidance, even Ratze volunteering to be a back up for her, could blank Regum then the field would be void for Prima to take. Totally dominant. Shut down the planet completely. Deny Regum.

Ratze wished Ung luck. The null insertion field was what mattered. Here was a civilisation on the brink of stupendous potentiality. Ratze aligned in space with Ung's forward targeting assault DVs. Depending on the outcome they would decide what their next step would be. Aware of destiny in the making. This was a moment in time when everything hinged on what happened next. The moment everything. Ung quantum entangled with Ratze indicated this zero continuum could do untold damage to the actual PWF. If the DVs crashed it the results could coalesce into absolute chaos. If that was Elentra's intention then they both knew instinctively that their future was not with the

Primaians. Ratze concurred. This race was important somehow to their own future. It was criminal that Prima's DLs were bent on mindfucking the Martians. That made the Reganian's even more important. They were the ones that mattered. With Ratze already working for a general who seemed to have ideas of his own she was looking forward to what the DVs might or might not achieve. Going void was certainly unique. Perhaps even deadly.

Both their Brains could imitate the void state. Pre setup both women realised. Meant to be. By going hyper-void the chosen DVs, all natural psychics, would link up and project that void as a field over the whole planet. At best Ratze hoped they would wipe their own presence thus leaving the inhabitants of Mars free to continue to develop according to their evolutionary development whilst secretly hoping it would backfire on them all at the orbital.

At best by projecting the voidstate the inserted DV states would collapse a phased out field so that the natural state of the planet's resonance reassumed itself as it had done prior their interference. Maybe. This had never been tried before.

They were ready. Elentra herself taking command.

Ung and Ratze deleted their mental activity using strange logic attractors. To think of nothing, nothing being something even if it was an absence of everything. It only made sense at the quantum level.

The minds of the DVs like Ung and Ratze's, for she wanted to make sure Ung's absence was backed up directly by her, went into an easy phase transition, then aligned completely. For some time individual DVs were still flickering, remnant thoughts receding slowly as the void infused itself into their psyche. They might become so blank that they lost their memories as well. Even better.

The darkness which now was in Ung and Ratze's Brain held steady. Freedom of infinite expansion both within and without. Some DVs were still struggling to attain this zero state.

They blended into the inserted non-probability field. With a distant loci. Regum's PWF. Generated at a remote star using quantum processors. Both did their best not to focus on that location for fear of revealing it to their controllers. The data was buried deep in their heads, camouflaged by mental confusion, which when running sequentially made hacking into their Brains psychically impossible. Their combined voids held, remained on top, spreading like a membrane throughout the space of the inserted probability field. They were now embedded along with the DVs who were aligned as well. Stage one achieved.

It was tempting to insert their own preternatural knowledge but their configured Brains held Ung and Ratze in check. The void had to remain in place at all costs. Otherwise they'd be blown, the mask of their identities revealed. Neither knew as such the real, the true distinctiveness of themselves. Something to be maintained yet hidden at all cost. Concentrating for now just on this vast repository as an absence.

At first, feeling the link in unison, each individual psyche and its attendant memory were now void. Contact complete with the DVs and the field. For a moment all the information of Mars replaced by the void. That was merely preparatory. Nothing infused. The trap sprung. Too late for either Ung or Ratze to counter this insertion without blowing their cover. A non state now the overlaying reality, breaking up the dispersed redundant current probability field state. What replaced it was less dense, the bare minimum. A *planet void of life*. The attendant field waves of Regum demolished, gone, decoherent, uncollapsed, dispersed into the mega and meta fields of dark matter. The base state of space reabsorbing the now decayed reality they had so assiduously studied and contained. Dispersed into the quantum foam of space. All data gone.

Then nothing.

Ratze saw the DVs and Ung's mind fracture, shatter, disperse. Ratze immediately reached out to Ung to hang on for they had latched onto another powerful field coming from *behind* them, from *this section of space*. Not Prima but somewhere in this galaxy. A powerful mind, an artifice perhaps, a dormant AI making it's presence felt. It exploded outwards, using the void to insert its field for one moment. And one moment was enough for eternity. A configured set of fractal infinities, a construct drawing on some immense source of power. Not of space itself but using space to flood into the absence they created.

Fooled. Set up. Caught out. Mars's civilisation demolished. Ung's Brain split as part of it was extracted into this other field. Letting some conflicted contaminated modules go, excising the cyber contagion. Ung's mind steadied. Both of them remembered what had been lost to the DVs.

Everything went blank concerning the planet. The resonance field vanished as did all life. A desert planet. Ratze's Brain opened a subchannel instantaneously to Ung and pulled her back from the brink of her own dissolution. The DVs were caught in this matrixed webvoid existing in the substratum of space. The DVs resonance like dust motes in a receding vacuum cleaner taking all informational content with them. And more. Being linked to the orbital's computers who ran runtime checks on their status they

sucked out the information from the memory banks as well. What a pleasant surprise Ratze's Brain smirked. Prima would have no knowledge of anything.

Ratze checked on Ung. Catatonic or maybe just her Brain having shut down to remain in place, keeping her real state secure as this other external wave like expansion extended in quantum leaps out into the universe. Then it too was gone. As was the information of its presence. Riding the voidstate. Using it as camouflage. Self deleting as a source whilst expanding throughout space. Two quantum states. There and not there. Unless with the required sub-atomic quantum codes its presence near absolute zero the phenomenon was affective only at the sub atomic scale. Normal detection techniques had to be non aligned to detect its presence. Ratze's memory in the voidstate. She tried to remember something just out of reach. It was more important to hang onto Ung, to keep her here as the DVs were mentally sucked away, jumping out of their quantum collapsing wave having lost all information.

Then everything went back to normal. Ung was unconscious. Luckily the vital life signs were there. And her mind was not catatonic anymore. Just passed out. She had shut down so not to be overwhelmed by what? Ratze could not remember. The DVs they had been with were gone. Then that memory receded and vanished into the dark as well. What DVs?

Aware of a vanished event they made their way back to the orbital. Ung had woken.

"The alien field is real." Her first thoughts. **"Extraneous. Non localized."**

"Not Earth."

"No. Bury the data."

Ratze let the current inserted reality suppress that snippet of information. Another reality came online. Resumption of thought processes. Elentra had ordered them to ascertain if this alien field infusing their space was verifiable. The remaining DVs focussed. Ratze thinking time had been *wound back*, then steadied into its natural space-time continuum.

"Done. Notice the change?"

"Yes I felt it too." Ung referring to some quantum transitional wave state. She shook her head trying to clear something from her mind. What?

"They got no clue." Ung said **"We're enhanced Ratze."** Ratze always knew she was more than the sum of her head.

"Better keep it to ourselves. Some naturals might pick that up."

"So we're naturals." Ratze was happy with that.

Back onboard they both, as group leaders reported to Risea.

"So it's confirmed. The foreign influence is real. Even if all we got is a dead planet. Something isn't right." Risea mused. Ung and Ratze barely watched the monitors. Risea was thinking. Trying to remember something that simply eluded to be ascertained. She put that down to the influence of the alien field.

A momentary glitch, like a black out. Systems normal.

"When fully analysed we find out the exact location. More importantly your minds survived. High rate of burn outs trying to just get a fix. You both held. No need for a deep scan, you both came through brilliantly. The computers are working on it. Our supposition's right. The resonant signature indicates sentience. Now for the world it came from. This is not some cosmic freak. And it's certainly not the cosmic consciousness. Neither were either of you infected. We would have known. So go have a well earned rest. You did well. Your next assignment is easier. Mena. A natural. Shows much promise. Given that somehow your resonance is not affected by this alien field should give her the necessary protection when she's out there. You will be called regarding her. Thank you for a job well done."

Risea felt she was missing something though. Probably the quirkiness of the field being fed directly back to her. Next time she would let the computer digest the incoming data first. Ung and Ratze's resonance tighter than most. She'd run the risk of infection being linked with them, but well, sometimes one had to be adventurous. Natural's were like that she reasoned. If Kroena or Elentra found out they'd have a fit.

Kroena paced the floor in the observation room. "How do we explain that?" The log's entries showed more DVs present than were in actuality.

"Yes." Risea said. Having ridden Ung's mindstate including the crashed data pertaining Mars. "A momentary voidstate. Source unknown. Absolute Ultra Zero. No flashback, no containment," watching Prima's resonant envelope, "and no rupture. Not even a slight distortion. We're secure."

"The loss of personnel I'll explain as the capriciousness of the alien field incursion. A resonant darkness with field deletion capabilities. Problem is it self extracted its own data. The DLs wont believe it. At least we have learnt what to watch out for. Wont be caught out a second time." Elentra in two minds. Something had crashed over Mars. DVs missing. Success with a heavy price.

"None of this gets out. None. Our ability to finally having achieved a breakthrough in that there are forces at work with a potential previously not envisaged must be kept within our domain. It's up to Drassid. He's the one who's gonna have to inform the Domain Lords."

"Where is Drassid?" Kroena asked.

"On his way. Next shuttle."

Mission Control: Andromeda Station Three

The collapse of the probability field sent alerts to all four stations discretely dispersed throughout their sector in space. The surprise deletion came from station two which shadowed Ung. The facilitator looking after her nearly had his mind ripped apart as Ung's split into multiple fractal pathways. Status readouts surging through extra quadruple memory caches. Processors switching to locked secure data detection realms as the quantum waves went out of phase, then vanished.

Stray PWs impinging on the insertion field originating from near Regum. Cloaked. The relevant controllers could only observe. In a way now was an ideal moment to make contact letting the Reganian's know they were not alone. Overall command wanted to wait and see what the Reganian's intent was. They soon found out: Mars.

A flurry of activity. Another planet, another sentient race. On Command Station Three the overseers, back ups for the crews tailing Ung and Ratze observed at first with delight the fact that the Primaian's suspected nothing. Ung and Ratze in place as enhanced naturals. Their EAI configuration completely cloaked. Phantom programmes working in the background at the quantum level at a fraction above that of the phase state of space itself to give them cover. Prima's astronomical capabilities were basic, observing space but not fathoming it. Given their obsession with their hypothesis of space being infiltrated by some sort of intelligent design the controllers wondered why they were not milking Regum's analytical capabilities in trying to read the essential condition of space. The Primaian's simply accepted their factual interpretation as given. No analysis required.

But when the DVs started voiding their minds mission control was onto it. Given the remarkable ability of sentient minds to mimic so many of the possible quantum states intellectually it was only a matter of time until someone would put that to the test. What occurred was not totally unexpected. When the DVs linked their localized zero state the data processors within Ung and Ratze remained off line. Any probing would reveal more

about their inherent capabilities which they were not yet ready to display, even if merely passively.

This was not just a new experiment in quantum states on a virtual level, the Reganians were running the insert in real time. Superimposing their probability states by design. They had cracked the quantum code. They were capable of being anywhere in space. Given the success in inserting a ship as well as it's crew was a profound paradigm shift. The next logical step would be to insert their perceived reality, based on actual real space time probable states. Future jumping reality, making the future happen according to their design. It was that notion that was so tempting to reveal to them their existence here. It was lucky they held back given what happened next.

At central mission control on station three the back up facilitators were working in tandem with the actual back-ups in space. Ung and Ratze shielded from probing resonant scans, whether via the DVs or enhanced psychics. So far so good. The near total zero state, beyond the lowest phase state of space was building up in their heads of a specific advanced group of DVs under Ung's watchful mental eye. Ung of course was not aware of the link-back. The absent field state, devoid of all data would if let into the quantum processors delete everything within them as they enphased the data void. With no entropy there was no information rich fields. Somehow the DVs managed to posit a zero state. The aim was to ascertain Regum's probable insertion field.

Then it dawned on mission control: the Primaian's were going to crash the field. Not that they knew it. Instead of manipulating it by inserting themselves they were doing the exact opposite. They were on a hunch, following a whim. The ever present unpredictability of sentient intelligence. Being logical for a certain sequential unfolding of ordered thought, then transition points where quantum leaps of the imagination self-boosted, jumped mental states. Going void the least expected. Not that their processors had not anticipated that one out of thousands of possible mental probabilities. Singular experimental states which some mystics and other able minds could self create for a fraction of time, thus seeing reality unconditionally. The act of unifying void minds increased the void state exponentially.

Then aligned to Regum's insertion field by forward projection. Remote viewing into that state the DVs dissolved all informational content within that field. Not only did the field un-collapse, going uncoherent, they also deleted the source. Solar Station One. As it vanished so did its crew. As those on Mars and the ship. The DVs intent on inserting their reality, which apart from mentally dominating the Martians had the adverse effect of deleting their reality through their void state.

Unless that was their true intent.

They must have realised that the Martians were, in one possible future following the scientific path of both an emergent Earth and Regum. So rather than risk a second race, for they were not as yet aware of Earth's existence, they wiped that reality thanks to the insertion field Regum had in place. It was all too easy for them and they succeeded.

Head mission control was on line with the controller of station two and four. Ung's headspace was riding the void with her group of DVs. They watched nervously whether Ung would be deleted as well. That could entangle them here so Ung's facilitator was ordered to cut loose. They could still remote view her as well as Ratze. Ung secured herself, letting the void enter, except when the field vanished with the data. Whatever Ratze and Ung had known was no more. It existed in another probable rather than actual state. The Primaian's had managed to assert their reality as the dominant probability.

Ung's mind did fracture. Thousands of possible futures stranded out. Information overload. A part of her headstate collapsed with the void.

"Impossible." The controller said. "Energy, information cannot be voided."

"They've done it though." The back up facilitator replied keeping his counterpart on station two online.

"Apparently so." The controller reminded them.

"They created the perfect zero state. Less than the vacuum. Now we know there are vast holes in the universe where there is such a state. But these voids are so distant from where we are as to be a curiosity rather than an impinging actuality."

"You are correct." The controller added. "But look."

The void. "Even a pico second would do to delete the whole field and all its contents."

Mars desolate. The civilisation not present in the new reality.

"Prima has won. Their universe is now following their future probability." The facilitator said with dismay.

"It gets worse." The controller said as they watched the read outs. Another field made it's appearance. Tenuous yet expanding rapidly from the Primaian galaxy.

"The Discrepancy. At least we have a location." Its own informational content superimposed. That future specific state embedded, embraced, collected and absorbed, replacing the vanished PFW. That future captured, obviated, configured, discordant probabilities deleted from the new reality in space.

"It's lucky we are self isolated." The facilitator said, "Otherwise we would have lost the data as well."

"Our field is holding." The controller advised.

"Good. The Primaian's are far more powerful then we ever considered. Their DVs universally potent." As the controller watched Ung battle with her split mind. She held on, survived but her data was lost as well. Everything Ung and Ratze gained gone in the expanded field pulsing outwards, whilst withdrawing the caught, embedded data.

"What is that?" the facilitator asked frustrated. "None of our systems can get a fix on it."

"That is because it is still in a future state. It's leaking into the relative present but not of it."

"If it succeeds it will overwhelm all."

"You're right, we have to consider that scenario. Time for action." The controller had made up her mind. "Time to insert Nervina."

They busied themselves alerting station five to activate Nervina.

On station five Nervina was woken. The mission controller running the command sequence. The quantum computers opened a tunnel through space. Nervina woken, fully uploaded, enhanced, chameleon drives cloaking her capabilities was inserted into the container sitting out of phase in sub-space. The multiple array of VB generators came on, aligned and voided space just like the DVs managed except with requisite data content embedded on a much higher scale.

Nervina vanished from their space time continuum and found herself on Prima. Fully loaded. Not that she knew. The chameleon programme in her enhanced state hiding her true self. Like Ung and Ratze, whom she would feel were akin to her, creating an instant rapport, would like them upload any data to secure her legend, her history, her past, her present.

"Right. Transfer successful." The commander said at station three. Nervina's facilitator and back up linked to her. If her programme deviated thus giving her true potential away the facilitators would guide her back to the mapped out path. Buried in her head was the possible location of the Discrepancy. Announcing the fact would give her away as being far too smart. Maybe it was luck that the void-state DVs had vanished as well, leaving no trace of the information they contained. Prima's memory banks blank. The danger in merely revealing these known facts could trigger some remnant data that might have been left behind. Any hint could be picked up by the other remote viewers

focussing again on what Prima considered the alien field. Mission control ascertaining not so much where the discrepancy was but what it contained. Was it sentient driven? Was it a rogue AI? Was it real? Virtual quantum computers created virtual worlds, not unlike Regum's WebSpace and WebWorld. Now to ascertain whether the Discrepancy was hostile, benign or with its own intent.

They also had to make sure the Primaian's would not access it. Once more was known about it, then the data Nervina, Ung or Ratze gathered could be fed incrementally to the Reganian's, currently the most advanced civilisation there. Earth was still in initial stages of development. They could tilt in any direction. Until more was known given that both Prima and Regum would eventually make contact, revealing the Discrepancy too soon could have Earth jumping, like Prima to the wrong conclusion.

It was now a waiting game. They had their three agents in place.

Carias

"The night makes me feel free. No limits. The absence of everything so invigorating." Carias said quietly not sure even if words could explain what she felt, what she dreamt. The infinite manifest. Her dreams with a reality of their own. She wondered, whether the unbound mind was in a real actuality which upon waking wove a web of illusion around her head.

Fehna listened intently. That she was now spying on Carias invigorated her. Though she liked Carias Dr Shuss's calm explanation of the danger Carias posed, not just her addiction to the malignant delusions inherent in Regum's Web aside but what it's portents contained and the effect it had on the mind made Carias's attitude a danger to the serenity of society. In short, Shuss explained her deviation could trigger a mass psychosis through the influence of her twisted headspace. So to secure Fehna against Carias's influence she was to take some specific drugs that would secure her from Carias's beguiling delusions.

The drug, whatever it was, made her feel mentally superior. Total control. She could listen to Carias and not be influenced. Water off a duck's back.

The sun a brilliant orange low on the dark hills. The air turning cool, fresh, autumn in the air. The distant mountains jagged, glowing icy peaks in a cloudless sky.

Fehna was watching with Carias the glorious sunset as they sat in the gardens. She turned her face to her friend, the sun's glow on her smooth face, illuminating her. The light making her hair glow.

"It's too vast to comprehend. It makes me feel so alone, the vastness...scares me." Fehna sighed sadly.

"Scared?" Carias tried not to laugh. "Fehna, it is nothing...nothing, the potential of everything." And a flash back hit her. Some dream or another reality? Or the Web? Carias could not tell but the image of nothingness remained. Something lost, something taken, something stolen from the universe. Or was it her sense of self she was loosing here? She was certain they fed them all drugs to keep them stable, within their natural

limits. She saw Fehna's apprehension hiding her fear, her smile frozen her soft blue eyes retreating from her gaze.

"But what of the great divinity?" Fehna shocked that Carias could even think the universe was empty. Shuss was right. Carias was dangerous.

"Fehna, please."

"You think like that and you'll never get out."

"Contained, isolated for thinking. It's a crime Fehna."

"Denying reality Carias is the sign of an unstable mind."

"I like unstable. It's exciting." Carias felt invigorated. Especially now that she could get into the Web anytime she wanted. And with her father on side, what she could not tell anyone gave her hope. There was so much Fehna didn't know. Fehna was isolated, not her.

"We see so little." Carias said at last as Fehna was silent.

"You're different."

"Not really Fehna. There are many like me. And there will be more of us."

"Do you know what you're saying?" Fehna was shocked. Were the deviants on the rise? The thought disturbed her for if they did proliferate then she would be left out. Yet she feared the Web. It was too...

"Of course I do. At least to you." Fehna blushed hidden by the glow of the sun. Carias was set in her way. So certain of her illusions. So lost so unlike herself. Sure of herself until she met others, then her confidence crumbled. She hated herself. They made her feel weak yet Carias was so cool it soothed but still disturbed her equilibrium. Her world under threat. Even if the doctor thought she was the best person to try and get into Carias's head.

"I've got something to show you. It's going to be our secret." She looked conspiratorial. Fehna's heart raced. Apprehensive and curious. Carias retrieved from within her thick gown a small book. Fehna took it from her cautiously as if it was something dangerous. Mixed emotions. The writing was densely packed, little poems, thoughts scrawled over the small pages. The more Fehna read the more disturbed she became. Glorifying in a vast secret surrounding them, vibrating within the soul, unfolding within the realm of dreams. Strange worlds, stranger beings imbued with power to dominate their reality, masters of their own destiny, forging their own fate. No mention of the cosmic consciousness. Her writings peopled with godlike entities. Carias was really disturbed.

"You wrote this?" Fehna asked subdued.

"Aha." Carias expectant.

"It's...frightening. It's...weird." Fehna thinking the Web really got to her. False realities taking over her mind. And Carias appearing so normal. She was probably calmed by drugs. A breeze caressed them as the last sliver of molten gold wavered at the edge of the dark blue hills. The world was turning purple.

"Well given we are caught in the snares of what we are told to believe..."

"Carias." Fehna trying to hide her rising apprehension.

"It's getting chilly. Coming?" Carias rose shivering a little. The hills almost black, lights on at the buildings giving a sense of homeliness. The last of the liquid sun's glow illuminating the azure sky. Fehna handed the small booklet back. What Shuss would do to get his hands on that.

They walked back in silence. Carias wondered why she had even considered Fehna to have a look at her inmost thoughts. They walked up the path, climbed the few stairs.

"Are these beings real to you?" Fehna asked as they walked through the foyer.

"As real as my dreams are. Think of what other beings might imagine their world, their universe to be."

Fehna understood the content. She was thinking of what the Reganian's might be thinking. Had the Web really taken hold of her?

"So it's not spiritual?"

"It's a revelation. We all have the ability Fehna to see beyond the images, the appearance, the naked world."

"But it's real Carias."

"Perception is real Fehna."

Visions as gates to perception, inducing false illusions of some great mystery, fulfilling a false longing to Fehna of which Carias wanted more. The beauty of this world not enough.

Carias felt disappointed. Then a lingering depression. She thought Fehna might be excited, instead she was cautious. She thought she could find out if Fehna's mind was more than just the daily grind of rising, eating, vegetating, vacuous conversations, dinner, bed. Some life. If it were not for her dreams she knew she would go crazy. Reality could be dismal if she let it get to her.

Fehna sensed Carias's change of mood.

"Want to talk some more?" she asked clumsily.

"No Fehna. I'll think I'll crawl into my hole and be myself."

"What about dinner?"

"Don't know yet."

In her room automatically heading for the table and the view she watched the darkness encroach the land. The hills turning black from within. A void spreading over the material world of sensory images. Like some programme bent on usurping reality. Replacing, worse substituting all there was with a false image of what was normal. Normal. Ha! The doctors would probably frown at her view. Well she had her gear to get into the Web. A little twirl before dinner? Yes? No? Maybe. Damn. Decisions.

Dinner was not compulsory. But she guessed any absence might be noted. They might even send someone up. Up. Uploaded, up there, in there, in the Web. Reaching its very end. Two ends meeting. Her ending here physically, there mentally. If only mother, she could just not find her endearing, too uptight had let her have the education she wanted. No chance and what did dad do? Nothing. So nothing is what she got. She'd been good at basic maths, using equations to draw graphs, weird geometries just what the Web needed to spice it up a bit. Not like here, this world, this reality, this planet. Order of the highest essence. Deviations abhorred. The imagination suppressed. No wonder she'd painted her room industrial grey.

This room was nice though. Warm, cosy, relaxing with a magnificent view of the dark mushrooming trees, as black as night. Tiny guide lights for the paths now deserted. She got up, rummaged through her valise where there were still some underclothes to be unpacked and found the headband. Just a quick visit, random insertion. See what it was attuned to. There were countless portals. Find out what other realms there were. And check if her persona was realigned now that dad was onside. She a certified agent. She still couldn't believe it had happened.

Then she was in. A room of all places. Well the journey had to start somewhere. The image flickered labouring from a dodgy connection. Could be cross sequenced. Riding an instant duplication that responded to her presence. A dark silhouette, a woman perhaps, the adumbration too graceful to be any other. Around her ghosts. Three of them. She was not surprised. Anything was possible in here. Stand-by persona's. Maybe she could get into their headspace. Yeah, why not? How though. Was merely thinking the wish to be fulfilled? Parts of the web worked like that. Open domains. Something impinged on this room. Like a pressurized environment. Deep underwater. The feeling was real enough. The room bright but devoid of anything except a few chairs and a table. No screens, no hardware unless, unless the room was inside some vast computer. Thus the feeling of pressure, some force field. Hey what a breakthrough. The

ghosts steady in their foglike appearance, their soul like presence steady. Not volatiles. Were these beings masters of the Web's domains? No alerts indicating her intrusion. A feeling of not being quite there or in their relative time line.

The room began to fill out. Furniture appeared, panelled walls, a window, black, either night or absolute absence, her room! How strange. A duplicate reality. Of her own making? Memory filling in the blanks. The adumbrations unconcerned with the change in visuals. The graceful figure she concentrated upon had her back to her. Given the hazy appearance it looked like a jump suit DVs wore. Wow. Maybe they'd been contained. Isolated. They were the enemy. The calmness exuded contradicting their hostile attitude.

'Ah, you've come.' A disembodied woman's voice said. No way of knowing who exactly was doing the talking. Communicating. Their faces greyed out under dark light.

'I have.' Well she had.

'We knew you would.'

'Place is too irresistible.'

'It has its points.' Came the enigmatic reply. 'You found the end.'

'The end.' Carias repeated wondering what this self secreting presence meant. Then the image of her space trip. Returning in the distant future and running out of programming. Pixels breaking up. Nothing beyond. Only the undefined future. Not yet accessed. The probabilities uncertain. Shit her head was being filled with information. Thought transference. Way to go.

'The dark.' Carias thought.

'Undefined probabilities.'

'Calamity.' Her brain figured. 'Total eclipse.'

'So that future would seem. Dark Visionaries.'

'You mean Deep Visionaries.' Hey she knew something.

'Dark. They crashed a civilisation.'

'Why tell me?' Carias thought automatically. Her mind trying to fathom these ghostlike presences. Personas barely discernable. Abstractions from their real selves. The Web could be like that, was like that.

'We needed your memory for confirmation.'

'Which civilisation?'

'The one you visited.'

She tried to think. The memory was too vague. Two planets. One pink, brown, red the other blue, white clouds, greens, browns, yellow, masses of ocean, brilliant white ice caps.

'You've been most useful.'

'Glad to oblige.' Feeling used in a good way. Had her trip been predetermined? Had she been set up?

'No the decision was yours entirely.'

The three adumbrations amendable enough.

'You survived. Remarkable.'

Images of minds fracturing, splitting apart, overwhelmed by chaos.

'The fate of others.' Visions of insanity, catatonia, schizophrenia.

'When realities collide.'

'The future?' Carias a little frightened.

'A future.' One of them remarked.

'And you want me to...what?'

'Return.'

'To the chaos?'

'That is up to you. We needed confirmation. The data was scrambled. It too had turned into chaos. But chaos cannot be permanent. It is but one probability. Probabilities are potentialities. From there it falls into possibilities which collapse into actualities.'

'Time sequentials.'

'Indeed.'

'That future lead straight into chaos.'

Carias understood now why the Web existed. Probing the future, their destiny.

'Yes.' One of them responded.

'But if there are many, how can there be just one?'

'That is the problem. Something is controlling the future.'

'To your detriment.'

'One world's future is already gone.'

'And you think the same fate awaits you.' Carias certain these being were not Primaian insertions. Unless they were, leading her on.

'No we are not.'

'So why me?'

'Because you came.' Well that was obvious.

'Makes sense. What now?'

'Continue exploring. Test the limits, go beyond them. Every sentient being carries it's own futures within itself. If you can insert your presence, your entity, your potentialities, your life force into the chaos then it will disintegrate...'

'If it doesn't overcome me.'

'It did not. That is the proof.'

'What if it remembers me?'

The entity thought it ludicrous. 'Impossible. Both it's strength and weakness. Chaos is what it is and cannot be anything else. No past, no present, no future, no memory. Unaligned information, total entropy without any level of order. If chaos aligned even in your memory it would not be chaos anymore.'

'Ah. So why not yourselves?'

Silence.

'Surely I cannot be the only one.'

'You are not. But you succeeded where others have failed. You are unique.'

Carias knew that. It was nice to know others, even disembodied intelligences, virtual creations thought as much.

'So what now?'

'You push the limits. But if you feel any sense of threat, any disturbance that is inimical, anything, blank out of it. That is all we ask. We are not ordering you. It is voluntary, has to be. Otherwise your mind is labouring under preconceptions. Clarity is most important. Will you do this? When you feel like it. When it is opportune.'

Did they know of her presence at the asylum.

'Yes.'

'What about them?'

'Your controllers? They will see the end results as confirmation of their correct path, the decisions from on high as the right ones. They must continue to think that otherwise we will never know the actual causation involved.'

'That makes it easier.'

'Precisely the idea.'

'Who are you?'

'Concerned beings.'

'So why not reveal yourselves.'

'Our enemies.'

'The DVs'

'And them.'

'What happens after? What if I'm discovered?'

'Your visit will be scrambled. As long as they think we are in fear they will continue along their plans. That must remain so.' Emphatic.

'Can I come across?'

Hesitation. 'Eventually.'

'Ah, working on it.'

'Correct. In theory it is possible, but that too is in the future.'

'Beyond the chaos.'

'We have something for you.' The other entity thought. 'In your past there was a calamity. It came from this universe. Affecting others as well. Your Ecclesiastics want to keep that a secret.'

'Oh yes I remember now. That was not the alien thing?'

'There is no alien field.'

Revelation.

'Only information. It is being used to keep your planet, your people in fear.'

'A ruse.'

'A lie.'

'And the cosmic consciousness?' might as well ask.

'The unification of all information in the universe.'

'So it's real?'

'Only in your minds.'

Carias had always been indifferent to religion. It was a relief to know it was all an illusion based on facts reinterpreted to suit the aims of the Domain Lords, the Pontiff, the Ecclesiastics, the Divines, the DVs, down to the priests and from thence to the whole population.

'And they will do anything to keep it that way.'

'Now that I know won't that make me a heretic?'

'Not if you keep it to yourself.'

'So this has to remain hidden?'

'Up to you. But the time is not right. Not at this juncture.'

'Do others know?' meaning the people.

'You are not alone. There might be a future where you are free of this mental burden.'

'That is something.'

'There are ancient records testifying to another world, your world prior the calamity. Those books are hidden, on purpose. If they see the light of day...' the entity hinted.

Carias understood. Make that public and let the stories reveal what they are being denied.

'It's time to cut the link.'

Caria's mind was racing. The great lie, the imagined supreme being all a figment of their minds, in a universe of Prima's design. She had much to think about.

'Take your time.'

'Thank you for being there. Will you be back?'

'That might attract attention. Not in this form. We are not the only ones.' Meaning as Carias understood it, entities in the Web. It was enough. She felt she had her guardians with her in mind, linked to her cyber presence. 'Others will drop hints, offer suggestions, indicate specific orientations, reveal glimpses of possible future scenarios you could explore.'

'Yes.'

The room receded into blackness. Carias was looking out into the dark outside. She removed the headband and put it back in her valise.

Amazing. Who were they? On her side. Or...her father? Feminine. Their shapes too lithe. Tall, elegant. Constructed personas. Their density not as apparent as Primaian's. The thought startled her. Primaian's. She was one. Though felt more herself in the Web than outside it. Was that what the doctors feared. One's personality being subsumed or, even better, expanded. Free from the incessant social constraints. She certainly felt whole in there. Either way it was a relief, unshackled, an impervious essence. Her natural condition. And theirs. Who or whatever they were.

Her perception more objective. Memories of tutorials coming back when studying the self. Classic symptoms of alienation. No wonder she thought herself isolated from those around her. Of them but not with them. Never had been. Even her parents were outsiders. No friends really. No need either. Too vacuous, too engrossed in the immediate. Never seeing, or feeling, or being the total sum of one's self. Thoughts thoughts thoughts. It was enough to know. She felt better for it.

The panic attack hit her upon waking in her comfortable warm bed. Something was very wrong. Constrained mentally. Images of chaos pouring out of her. Where the ceiling ought to be were flat dimensional boulders. She heard birds chirping, moved her

head which felt as heavy as the boulders which jostled into position then became flat. The ceiling back in place.

What on earth had just happened? Another panic attack seized her mind, riveting her emotions into its fearful grasp of impending doom. Unseen, unfathomable, unavoidable. It's icy grip freezing her mind. She was shaking, shivering whilst being warm her mind an ice cold sphere of searing light. Burning her up on the inside, draining her energy, her body tense, her brain paralysed. The after image of being trapped recurred setting of another sensation of terror. She felt heavy, burdened by an invisible something unrecognisable denying her mind an explanation. Like a personality displacement, something invasive, subtle, persistent. How could this be real? A remnant resonance from her contact? A surge of warm excitement. The conversation came back. She was wanted. Accepted as she was. Friends? Maybe. Hostile? Definitely not.

The dream, whatever too foggy a substance, clammy, thick, viscous. It dissipated as her brain started to wake. Flawed. That was it. But what was flawed? This reality or the Web's? Or something else entirely? Aftershocks, mental tremors rippling right through her, targeting her. A baleful influence at work. Not of her making. An intrusion into her very being. Trying to craze her. Directed intent.

Nervous reaction. A spasm shook her at the thought of the calamity, ancient history haunting Prima, haunting her. The priests, no not the priests, the Divines and the rest of them behind it all. To what purpose? Control? Power? Domination! Well not her. Even if this was some desperate imaging in her mind. She had a focus, a fix. The Web an open source, untainted, more pure, accessible unlike her condition here, in this room, in this world, on this planet. Other worlds, other thoughts, other realities. Prima, one reality, one way of thinking, one way of being. Any deviation from that and one ended up here. How many others were in her position. Having mentally tasted freedom, even if in an artificial construct. If that is what it took then that's the way it was going to be for her.

The chime went off. Another day, more of the same. Caught in one's shell. Hiding one's true thoughts from them. Fehna was right about that. Maybe her room was some resonance chamber. Now she was getting paranoid. Did they have sensors installed? Until proven otherwise, yes. Reading her mind. What if...?

At least she was focussed now. An agent. Who would have thought her father and Dross were on her side. But why? Surely they had plenty to choose from. Was she some test case? The first? The anticipatory fear tried to rise within her but was repelled by her revulsion. She was not going to let that get to her. She tried to think of the outside world. Not much there. Tiny prisons every home.

The chime rang again. Staff. What did they want? Checking up on her. Had...how had she known...then smiled. She was a natural! Yes yes yes. The surging emotional sensation a release and relief. She was more than the sum of her parts. Add the Web and there was a volatile mix. Out of control here but in control there. Creating one's own reality, one's universe if one could be bothered. A universe unlike what Prima pretended was out there. Carias thinking in the third person as if she were someone else.

The door opened. Instinctively she pulled up her covers. The nurse was solidly built, thick square head, narrow set eyes betraying no emotion. Seeing her remotely like an automata. Some low life breed.

"Did you say something?"

She blinked. Could he read her mind? Or was he boosted? Well let him. Just looking at him exhausted her as if he was draining by his presence her life essence. His mouth a narrow thin slit. Reptilian. A throw back. His lips wet with saliva. What was he thinking? She turned her head away then heard him sigh. He lumbered over, pulled the sheets back, grunted as he put his brawny arms beneath her, lifting her up.

What was going on? Another nurse entered. This was not good. The door was open. All was silent. By the light of the sun it was early morning. Birds twittering. She went limp as he pulled her out of her warm cosy bed.

"Get dressed." He barked. The other nurse standing back, less concerned, indifferent. They must have done this many times. His clammy breath smelling of soil, soiled. Adjusting her pyjama.

She was having none of this. The rage in her mounted. He let go now that she was standing. Fearing the worst, rape she whipped around, pushed the flat palm of her outstretched hand square into his fat face, the flesh podgy. He squealed like the pig he was. She laid into him, whacking his face as he staggered backwards into the room. She was hoping he would fall and trip over the chair near the table. The other nurse too startled or bemused to bother reacting. Fat face's eyes lit up, two glowing malignant orbs. She had fallen into his trap. This is what he wanted. She could smell his anger and his sexual intent. Bastard. Another quick whack to his face for her arms were as long as his. He thought this a game! Idiot.

He deftly avoided falling into or over the chair using the table to balance himself. His thick headed accomplice sniggered coming up behind her. She lifted her left leg and stomped him on the shin. That would hurt whilst fat face stood in front of the window. Outside a peaceful sunny day, rich green hills, wonderful blue mountains, snow capped, crystal clear sky. Perfect.

Behind the nurse bent over rubbing his shin. His drooling mouth opened, his eyes basilisk, spewing hatred. She screamed which jolted him. He looked up and using both hands Carias whacked fat face under his chin. His corpulent frame light, so unresisting, then he toppled backwards, through the open window and out of sight. Close behind her a surprised gasp. Then the distinctive soft thud of the nurse's heavy body hitting the ground.

She felt better, spun around and saw the other nurse scurry like the rat he was out of her room. Well if the room had sensors whoever manned it would see her defiant act in maintaining her privacy, her dignity, her sense of preservation. She was surprised how well she'd handled herself.

Fearing that others would come she dressed quickly slamming the door shut. She wanted for a moment to get into the Web to get help. Or be retrieved but that was her mind playing games. Reality just didn't work like that. Maybe on Regum but not here.

In the communal meal room the others were all sitting like battery hens along rows of benches slurping, gulping their porridge. There was Fehna who quickly looked back down into her gruel. She heard their scraping, gulping, masticating, swallowing, grunting, which revolted her. Should she report the incident? They would find out anyway. It would reveal whether she was under direct observation in her room.

Fehna was surprised to see her. Maybe the nurses had been sent to take her away somewhere after they had their fun. Well any moment now Carias expected the goons to come for her. Well the scum would have a surprise on their hands if they thought she would succumb meekly. She would tell them all of what they were really like.

Her anger roared like a blazing fire inside her. She felt vengeful, hatred searing her mind in white hot heat. The whole room shimmered with her wrath irradiating the place. Someone dropped their utensils, others looked fearfully at her. They looked hollow, empty husks, depleted shells. They were afraid of her! Was it that obvious?

Carias looked at Fehna. Their eyes met. They linked mentally. Fehna was sending a distress signal. How? Was she enhanced? Upgraded? Boosted? A natural, a chameleon, a spy! Working for them. No wonder she had gone on about them. It was true and she was one of them. Bitch.

Someone moaned in fear or ecstasy or both. The clamour of discordant minds around her. At the edge of the room nurses looked puzzled still indecisive as to what to do. Move in or wait and see? Just like that other goon who had scampered off somewhere. One nurse moving towards her. Coming closer and ducked instinctively as an arcing arm whooshed over her head. She twisted around and with the flat palm of

her hand, it was coming in handy, whacked the nurse, a woman this time right on the side of her head. She toppled over, consternation and pandemonium breaking out in the breakfast hall. The nurses would be busy. Carias focussing on Fehna, so called friend. Moans and screams all around. Why? Just a little fracas. Nurses rushed in bundling off some of the hysterics. The nurse she flattened was lying there stunned. Must have hit her head on the leg of a chair. Some of the patients were whimpering, noses runny, some were pissing themselves, dark stains between their legs, others trembling in fear. Could they all sense her rage?

The stunned nurse got up and instead of looking at Carias looked at Fehna to see if she was alright. That confirmed it. Stool pigeon. The rage inside her exploded. Part of the attempted rape, now that she was over that, the sense of betrayal, well she would give Fehna something to think about. Fehna had risen, backing away from Carias as the nurse rose like some solid spectre intent to do her worst. Carias grabbed Fehna's long black hair, moved her head to the side and with a scream stuck her teeth into the tempting jugular. Though Fehna's neck muscles were tense, her whole body rigid with fear Carias did her best to rip her neck to shreds. Blood spurting in beautiful graceful arcing globules. Make her feel real fear...and her power. A needle was jabbed in her leg then vapid darkness enclosed her in its warm embrace.

She felt uncomfortable physically. The lethargy in her head mind numbing. Thoughts surfaced then sank rapidly, almost graspable then vanishing without a trace as her memory tried to latch onto them. Like covetous ghosts. Ghosts. They too vaporized, mist blown away in her mental turmoil. That too subsided. She was blank on the inside. Her loaded potential distant, way beyond her grasp.

She opened her eyes and her body stiffened, apprehensive, defensive. A spacious office, walls off white. She was sitting unconstrained in the middle of the bland room, in front a desk and a man in a suit. Not a doctor's coat. The desk empty as if whatever was there might give away his identity. Bulbous head, deep set dark eyes, sensuous lips. She felt drained. Bits were coming back. She remembered Fehna saying how they 'knew' what one thought. Carias knew about BrainDraining, everybody did. The last resort for the insane to reconstitute them. Remote controlled access to minds. She withdrew into her shell. Easy. The drug doing it for her. Think nothing and they would get nothing. They weren't that smart.

"How do you feel?" he asked at last. That was the last question she expected. A hint of a smile, eyes analytical, observant, professional, calculating.

"Numb." It took an effort to speak, to think even. He sat there, hands folded in front of him, so relaxed, so together, so there. His clothing bland really. He could be anybody. She felt weary. A moment of panic. Her head like jelly.

"You needed calming."

So she was deemed a volatile. Well even better. Unpredictable, with greater potential than the others, out there, in reality land. He was toying with the button on his sleeve. A microphone or transmitter perhaps. Seeing her watch him he folded his hands again. So calm, so sure, so neutral. His eyes never left her

She looked back. Nothing there. Flat orbs, like lenses. She tried to get her feelings across but couldn't work up the energy. A wave withdrawing, receding into chaotic thoughts. Bubbles in boiling water never making it to the surface. So many realms in one mind, her mind.

He even more remote. Was she being suppressed or was part of her mind putting a lid on her thoughts. To deny him access. My secrets not yours. She relaxed in the knowledge that they had not BrainDrained her. She tried to neutralise her thinking, inserting the image of the gardens, the hills, the trees, anything but what she really possessed. Not for him.

He shrank, withered, contracted in front of her. Her mind still as potent as when she had attacked Fehna. Viper. Sneak. Traitor. She let that out. See if he reacted. His brain oscillated. An enhanced natural, boosted no doubt, sensory heightened perception. His semblance of being neutral more than a mask, an attitude. Keeping his distance. That invigorated her. But what now? The attempted rape. She felt hot, affronted at the clumsy effort by that pig. The image seared her brain and she hoped he would get the picture. If he did he was not admitting to it, the eyes receding into their two dimensional flatness.

"Are you?"

"I am." What?

"Want to talk about it?"

"The attempted rape?"

He really did look surprised, shocked, almost.

"You tried to kill a patient."

"I did nothing of the sort." Taking a bite maybe.

"What made you freak out? Did you see demons?"

"Had one in my room, two in fact."

"Why would Fehna be a threat to you?" meaning why did she act the way she did.

Carias said nothing. If she mentioned she was one of them they would suggest she was paranoid. Yet if she did not reveal her duplicity then there was no cause for her to act the way she had. Carias wanted to show Fehna that there was more out there, more inside of her as well than met the eye. Appearances were deceptions.

"You screwed with my head. Maybe not you personally, but screwed it was. Otherwise why would I behave so differently? Drugs in the food. Dangerous you know, so unpredictable. Even the water is tampered with. All to make the treatment look like it's working. Well it's putting a sledgehammer to one's head. Trouble is there's a reaction. Not my doing doctor. So you gonna take the easy way out and drain me?" might as well find out.

"Why should we do that?"

"Because of the way you been brought up. What's been stuffed into your brain, the hyper paranoia, the crap up there, the crap in our heads to impress the dumbfucks. My mother is more demented than most patients here. Funny, she's normal. Sorry forgot." She said facetiously. "I'm not one of your cases, doctor, if that is what you are. Not some sneak in civilian clothes, changing your garb to hide your real vocation."

"What makes you think that?"

"Paranoia. Fear of revealing the truth. Hiding behind illusions. Repeat the game often enough and it takes on a life of its own."

"What game is that?"

"The bullshit pretending to be revealed reality."

"You know what you are saying?"

"What others think. Hundreds if not thousands. I'm not the only one." There. Take that, a dose of reality. "Doctor." She added for good measure.

"Dr Graben at your service Carias." He sounded gentle for a moment.

"Some service. Goons for nurses." She was disgusted.

"We are trying to cure you." Graben said with consideration. Her access to the Web irked him. Plus her insertion being encoded. Just jumbled data, screwed up numbers, messy pixels.

"I don't need curing. My mother does. I just want to be left alone. Who needs this shit anyway?"

"We have left you alone Carias." He was so gentle, so accommodating. "Now there is one dead nurse, and Fehna's in intensive care."

"Yeah well, piggy fell out the window. As for Fehna, she's not who you think she is."

"It's all on record Carias."

"So my room is censored. Then you'd know what your pig was up to."

He smiled sadly. So there were emotions. One for this sequence one for that sequence of events. How apt.

"Why Fehna?" as if the nurse was of no consequence. Maybe it happened all the time. Good.

"Indeed doctor."

"Carias. We will get to the truth. No matter how much you are in denial, subject to you delusions."

"This whole planet's deluded doctor. Or haven't you noticed. And one with your training, your high level of expertise." She scoffed.

His eyes hardened.

"Such a waste of potential." He sighed theatrically. Carias deemed an unstable volatile. So this silly experiment of Dross and Neghar would cease forthwith. Murder was murder. Rare but sadly it happened with her type.

"You gonna waste me then?" using his words. Not as he expected.

"Unless reconditioned, stabilized, sanitized. The other alternative is you remain here until your mind self heals. Could take an eternity. Your choice."

"Submission, like the rest."

He merely looked at her.

"So if you vacuum me I'm free. Is that it?"

"Not for me to decide. Though I do have the initial say as to your possibility of being cured. There is drug therapy of course, but we try to avoid that. Last recourse."

"From BrainDraining. I am here voluntarily you know."

"Not any more."

"One dead piggy. Can't molest the patients any more. He tried to rape me."

"All in your mind."

Set up. Bastards. Did he know that she was working undercover? Were they in this together? Had her dad or his boss spoken to this doctor? Cleared the way? Must be. But Groben didn't like it and so she was set up. Bastards.

"No doctor. Not my mind. Reality. That shit was after me."

"Paranoia. Maybe schizophrenic. You see things where nothing exists. You perceive plots in your mind. You suspect people of covert designs. Not unusual for someone in your condition."

"Maybe that is the divine mind's intent."

Now he really was surprised.

"Now you really are delusional."

"So why, according to you does it create schizophrenics then, doctor?"

"You know as well as any anybody why."

"OK. So why does it let the alien influence influence us?"

"To test our resolve. See if we are worthy. Strengthen us for the coming times of revelation. Weed out the fallen, the mentally corrupt which we are trying to help regain their inner equilibrium."

"Oh yes, can't have any original thoughts."

"The Web has messed with your mind. This Carias is reality, this and only this."

"So send me to Regum. You send the other delusional types."

"Oh? Who might they be then?"

"The priests on their mission of redemption."

"They are very adjusted Carias. Not volatile either."

"So where is this cosmic consciousness then doctor?"

"Everywhere."

"Well if it's everywhere we can't be here then, can we?"

"It's a subtle effluvium."

"Really."

"You don't believe?"

"I'm waiting for proof, doctor."

"Until you have adjusted, become stable, not a danger to others I will have to recommend you be isolated."

Inside she was happy. Finally to be left alone. She tried to look appropriately crestfallen.

"And my family?" Carias asked meekly.

"They will be informed." Groben was content.

Two female nurses entered the office.

"Take Carias back to her room. Her meals are to be served there. She is not to be let out for the duration. When we think Carias is stable enough we may let her enjoy the

gardens. But as she has a wonderful view I'm sure she can appreciate the panorama and imbibe its beauty."

Case dismissed Carias thought.

"We will talk again. Oh yes, Carias, given the incident, you appreciate there will be an enquiry. Murder is so unpleasant, so unnecessary. However I do believe you were out of your senses. You do appreciate what I am saying." Trying to look concerned.

"Yes doctor." She sighed. "I am grateful."

"That's good, that's good. We do mean to look after you."

"I know. I'm sorry." She said demurely. A little contrition would not hurt.

After Carias left Groben's office a wan smile from him. A psychopath in the Web. Should he contact Shuss. No he decided to wait until his superior liaising with Dross would get in touch with him. This was an internal matter. He was running Carias now. Dross and Neghar were involved in a dangerous game. Groben was well aware of the Ecclesiastics concern, in trouncing the Web, bringing it down. By any means. It was war of a different kind. Yet as far as he knew, which was precious little except that others were involved in this monumental struggle, Regum's WebSpace was expanding as they sent their satellites further into real space. Expanding relentlessly. Taking the misguided like Carias with it.

Dross finished looking at Caria's run in WebSpace. Two planets. Were they real? Their analytical capabilities were constrained. Remnant technology. The DVs were doing their best to get into Regum's scientists heads, subtract what they knew, what knowledge they possessed.

The trouble was the Reganian's got their computers to think for them, presenting possible avenues with which to continue, then make their decision which way to go. So that any development was always accomplished fact. Their computers inviolate. Machines, even smart ones mimicking awareness simply did not respond to psychic intruders. Totally useless. It was annoying. Maybe if one day their systems did evolve true sentience they might be able to influence them but as things stood now there was no chance of their interference yielding any results. Until then Neghar relied on operatives such as Carias. There were other agents in place. But most were overwhelmed by the multiplicity of alternative worlds. They got confused, lost their orientation and mission objectives, were sidelined by stealth programmes, contained by roving security sentinels which could be in any form. The enemy a master of camouflage. They were cornered and trapped with depressing regularity. Their people like self advertising beacons. Instant

targets. Except Carias. Their first success in being accepted for who she was, not who she worked for.

The real astronomical data concerning the two distant planets did not exist in their knowledge base except as a supposition. The alien field was presumed to have a source. It had to be somewhere. Could either of these planets be that hypothetical point of origin. Yet what Carias retrieved indicated nothing at all. In fact as far as the Reganian's were concerned the field did not even exist. Or if it did it was of no consequence to them. Background radiation was the term they used.

Frustrating as he sat in front of the consoles replaying Carias's excursion. Cyber worlds. Still it was something. Maybe their location was real. He doubted it. Just another construct amongst thousands. Its inhabitants had their own worlds simply because they could create them. Carias had chosen her destination on the grounds that they were the furthest out. In cyberspace there was no real distance. That space ships were needed was purely for fun, get the feel of being an explorer.

Carias coming to the cyber relative future. Dross marvelled at how the laws of physics were embedded in the architecture. The runtimes configured so that when she returned she was way ahead of the present she'd left when blasting off. Hitting the proverbial brick wall. It confirmed one thing though. Time was embedded and the future she accessed was as yet unconstructed. Now if he could get a future built according to what Prima wanted, then patch that into the Web they might be able to construct the cyber universe according to their designs, their view of the universe.

Having exhausted all the possibilities, which were far and few he called in Neghar. Entering Dross had him sit down and watch Caria's adventure as an explorer.

"So she survived." Neghar trying not to sound too proud.

"Yes, accepted by the inhabitants. The usual checks held. Another gamer wanting a fun ride."

"And no alerts."

"None whatsoever."

Neghar was relieved. Well his daughter had been in many times.

"Maybe they do know and want to see what she's after." Neghar suggested as her return hit the messy pixel image. "Though from what we retrieved of her previous insertions she was never after anything."

"Where our agents have gone wrong."

"Well I'm glad I don't set policy." Neghar smiled at Dross.

"All I can do is recommend. Not my decision. Though you would think as we are directly involved with the Web they would give us more leeway."

"Well Dross, we all know how they work." Meaning the Ecclesiastics who ran the higher Dominus and Domimax, secret enclaves of the different DV levels of activity.

"Yes, top down orders. Still they insist on playing spies. What we need is collaborators. Persona's that act like those inside. We're coming in basically as we are. And are subsequently neutralised. Sure we're making some progress," which he could not relate to Neghar, "but it's mostly trivial."

"If it helps to complete the picture."

"Except the picture is getting bigger all the time. More worlds, created upon mere whims. Soon they'll add new universes."

Neghar was surprised. He could barely fathom the concept. It was simply too big to comprehend. Almost illogical. With a cyber cosmos essentially being potentially infinite, adding more infinities boggled the mind.

"If they do this..." Neghar left his thoughts unfinished.

"I know. We're stuffed. Prima would not figure in them at all. We'd stick out even more. Our cyber planet there more for amusement."

It was a horrible thought but Dross was right. They were an irrelevance.

"So it's up to Carias then."

"For the moment. Trouble is we could use some of the DVs but up there," meaning the orbital, "they're not releasing any. And the burnt ones are of no use. Too unstable. We tried that Neghar."

"Yes. Didn't get them or us very far."

Dross could not admit they were losing this one. Unless the Web was brought down, which meant attacking Regum's global systems the best they could do is catch up. Always several steps behind.

"We have to convince Lord Qatus or Gharbel to use a new approach. Encourage our young, anybody really to get in there with no designated orientation. Let them play with the system. That way we might discover the inherent weakness that is in any system."

"Trouble is Dross this is a self rectifying system. They're using AIs. Multiple answers to any problem. Whatever we think if, it's covered."

"I know. How to get into the AI and reconfigure them."

"Our brief."

"At least Carias discovered a real end."

"Now if we could find more such ends and bring them in, we might be able to limit the web. Move the ends in until that is all that is left."

"A good point. Put real blocks in place. You want me to work on that?"

"It's worth exploring."

"Well at least we made some progress today."

"It's only a thought." Neghar said. "They might simply create more realms."

"You're right. But if we can get an operative to head into each of these realms future, hit the end and bring that in, it would be a start in containing the Web."

"If we get the right individuals."

"Yes back to that. Officially we don't exist. So releasing those who access the Web illegally becomes fraught with legalities. That's the trouble with prohibition, it locks out the very people, including the decision makers from the very environment needed to be controlled. Denying access gives the Reganian's more freedom whilst we flounder in the dark."

"And your position bears no weight?" Neghar asked.

"An advisor on the sidelines."

"I don't envy your position."

"Frustrating. Still we gotta work with what tools we're given. In a way I'm surprised they let us dabble in the web at all."

"Well it's not gonna go away."

Dross could not reveal the overall plan regarding the Web either. Those working in the field knew the final intent was to bring down the Web and hopefully cause a mighty calamity on Regum as well. Something the Reganian's did not suspect directly. Keeping their security on high alert. Viruses, stealth programmes, simulated warfare, sabotage, all a game to the Reganians. They relished the challenge and won every time. They knew what the Primaians were up to. They expected it. Most annoying.

"So what does Carias do now?"

"For the moment we let her run free. See how many dead ends there are. Maybe there's a pattern and if so can we use it to turn the whole Web into a dead end."

"Trick is to stop them creating new domains." Neghar sighed.

"Yes, back to that. Their AIs got everything covered."

"Doesn't look good does it?"

"Only on the outside Neghar. If we ever crash the Web, then we might be able to crash Regum in real time."

"Yes where would they be without their hardware."

"Indeed Neghar. Until then, Carias remains a free agent. She might pick up more surprises for us."

"Let's hope so."

"What we need is to maybe invade the Web. A massive assault. Put all the DVs in there at once, all the gamers, all our agents, the whole planet if need be."

"Neghar," Dross laughed, "you're dreaming." Then turning serious, "But it is an idea. One I might say will never be accepted. Our Lords would think we have capitulated. Plus it would leave Prima's resonance in a precarious state. They'd be able to infiltrate it and then, well that would be the end of our world as we know it."

"I was merely speculating Dross."

"I'm aware of that. You never know, it is a last resort. No, we have to be practical. But your opinion is not without relevance. Swamping the Web. Tempting."

"So what now?"

"As I said, let Carias do her own thing."

Orbital: Prima

Drassid listened to Elentra's report. She began with the missing target specific group of DVs under Ung's guidance.

"Yet Ung somehow was not affected by the experiment."

"Must have remained outside their field orientation."

"Lucky for her. Downloaded?"

"It's all there...what there is. Routine debrief. Remarkable woman. Part of her brain ran the insertion technique. As that got us no results it was decided, I," she corrected herself taking full responsibility, "decided to try this approach."

"Even though it was never attempted before. No simulations to see how dangerous this could be, was, and probably is." Drassid wanting to clear this up first. "For the record we will designate them as burnt. Held in isolation. All we have to do is insert their personal data, ghosts in the system."

"Drassid, there is something else that is odd. No files. No data. Nothing. Vanished."

"To what though? You said they emptied their minds. It's a scanning technique to have an observer there totally neutral. Yet this time something happened that self voided. Like popping a balloon and the balloon vanishes. I've had a look at the sequence. The interference of Regum's field is gone. I'm sure you were going to get around to that. It's good of you to relate the worst first. In a way this is a breakthrough but I'm wondering if Regum's not behind this."

"You mean they extracted themselves and took the DVs with them?" that thought had not occurred to her.

"It cannot be ruled out."

"So instead of us taking them out the reverse occurred. But Drassid, the ship, it's crew have mass. With us having a trace, thanks to Ung, wherever they would move we would know. Should know."

"Well the onboard systems confirm a puzzle. Now looking at this from a positive angle, you did succeed in removing them. I ought to congratulate you. Plus Ung of

course. Yet for security reasons I, nor you can enlighten her. In fact," he was studying the readouts on the monitors, "if Ung had vanished, then we'd have absolutely nothing. She's the anchor. An amazing brain, extremely tight focussed resonance. One of a new breed. The cosmic consciousness has given us this new evolved being. On par with that of the Domain Lords. There has never been a Natural like this before. Anywhere. I also went through the personnel files and the only other operative is Ratze. One is a fluke. Two makes a pattern."

It was his duty to know everything pertaining to their overall mission including the minutiae involved. What he could not say was there was a third. Nervina. How she managed to remain unnoticed for so long was due to her keeping her resonance at a level where she appeared other than what she truly was. Did that mean that these new beings, if that is what they were, an evolved leap having a higher level of resonance? Not just that but simultaneously playing down that level so that in Nervina's case she appeared less than what she was? There were ways of finding out. Deep Scanning. Drugs. See if they harboured a potential essence capable of compelling psychic feats. The opportunity offered would aid them in making inroads into Regum's protective cyber shell. Elentra's team had brought down the insertion field of Regum's experiment, maybe these beings could bring down the Web as well. But the danger of loosing them could not be ruled out. It would depend on what Regum did next. He had an idea.

"As I am going to assume the success is at this end, I am suggesting we run another experiment. First we get some DVs to go neutral."

"It's in place Drassid."

"Good. Anything else?"

"No. Just scanning space. The trouble is with the collapse of the field the source was lost as well."

"Even though Ung's downloaded data didn't wipe her memory. Yet the source should be within her and isn't. Something is not right here."

"Drassid. This is all new territory. Anything is possible. Remember Ung was not with them. She was more on the alert for any counter moves by the Reganian's."

"Yet managed to be both in and out. Remarkable."

"Fantastic." Elentra felt better. Loosing the DVs preyed on her mind, her well being. If not for the success she'd have been frantic. Drassid was completely professional about their apparent success. She did not like the idea though that maybe Regum self extracted. If they had they'd have their headspace as well. Basically it would then be an abduction. Officially there was little they could do. This game they were engaged in, this

struggle was all beyond the political horizon. Not even acknowledged. Regum released no information if in fact they did retrieve their ship and the DVs. It came back to the assumption that they were successful in crashing Regum's spatial extension. Since the Web was that as well the possibility was there now to bring it down. She told him.

"I agree. It must be explored. However since and let's assume this is our success they will of course expect us to repeat that performance. But we're going to have to disappoint them on that score."

Elentra waited. "Meaning?"

"We try a different approach."

"Glad to hear it."

Drassid's idea was to try and re-run what Elentra achieved from within the Web. It might then be sucked into the void-state. It became clearer to him whilst talking with Elentra that this was a state that acted differently to their resonance. Psychic at one level where distance and time was immaterial and possessed by a unique state that defied all analysis. The computers had come up with nothing. It never happened. That had potential. If they could get agents to duplicate this, then self delete the Reganians too had nothing. It was a great breakthrough. And with the appearance of Nervina's capabilities she would be perfect to send on the next mission to Regum.

"Until further orders, neutral run time sweeps. See what happens."

"Right. We'll get them yet."

"Of course. Only a matter of time." Drassid said confidently.

"Time. Such a limitation in one way even if we are independent of it."

"We are Elentra, we are."

"Pity we don't know the end result."

"Yes. So many futures with only one reality."

"It's going to be ours Drassid."

"That it is Elentra. Well I'm finished here. Oh yes, Ung. Don't release any data regarding our, your, success. Treat it as if what occurred is normal. Not for her to know anyway. Naturals are unpredictable, even when adjusted. If she were to vanish of her own volition along with that planet's future then any planet can be emptied of life as well."

"Yes that came as a surprise."

"We are dealing with something that can barely be explained. There it is, or was." He smiled for the first time. Elentra was relieved. She'd gotten away with it.

Carias

Back in her room, where the nurses left her. Then the unmistakable click as the door was locked. Removed, isolated, trapped. She felt nervous now, agitated. What had come over her to go for Fehna's jugular? Where had this searing hatred come from? She'd never been that emotional. Not like this. Were they mind screwing her? Fehna, in that moment of white boiling churning explosive heat was both horrified and almost willing as a victim. Giving in, giving up. Then something surfaced from the dark of her mind. The impression of Fehna asking for forgiveness. Forgive what? Ratting on her. Fehna had been used by Groben to spy on her. Why? What made her so special? Surely not going into the Web.

The ghosts gave her hope. Cautious. Remaining one step removed from character recognition. So good as not to be detected? Then there were the DVs. Could they insert themselves merely through their psychic capabilities? It was said they could be anywhere, including one's head. Messing with her resonance. Was she a target without knowing it?

The thoughts distracted her from her usual sense of equilibrium. Up to now, up to this morning she had been care-free, free even within the confinement of the asylum. Ung, her father all on her side. Her father helping her by working for his department. The link to the outside. Or a trap to remain here? Maybe he was being used as well. That all this was a game to keep her here. And do their dirty work for them in the Web.

She drank some water, she was that thirsty. It felt good, she was parched. She stared forlornly out of the window. Not even able to walk in the gardens. Like a cruel joke being so close yet so far, that everything that had happened was one reality removed. Like a dream, another state from which she was now disassociated. Gone for ever. Another cruel twist, another impossible attainability. If not for the headband she'd be totally lost. Completely confined. Isolated. Removed. Non existent. Condemned to life in this room.

A little calmer now. Her head a little thicker, the present more solid. The levity burdened by thoughts thoughts thoughts. Crowding in, persistent. Her lucidity swamped

by a heavy fog. More like a realm smudging out her imagination. Going blank. Her other realities distant memories. Not connecting. Receding as she tried to hang on to them. The portals to her inner self. Their reality denied to her. But not completely gone. The after images rippling through this weighted nothingness infusing her very being, body and soul.

Still thirsty she drank more water. Her movements remote, as if she was besides herself. Only the water felt real. A tangible something. The picture perfect view a projection, its immediacy curtained off. She thought of Ung. So free amongst the restrictions of socially accepted norms. How did she manage it? By simply doing it! What could she do here? Nothing. Even the Web was just another diversion. Using up energy, waylaying her being by distracting her inner senses from the real reality. What was she thinking? Her reasoning following its own pertinent logic. So what if there were multiple cyber worlds? Reality was still cloistered, no escape. Maybe the Reganian's felt this as well and escaped into the Web to get away from the enmeshed real web, the effusions of the cosmic consciousness trapping them all in its reality. What had the ghosts said? She had trouble remembering. Something about the content of the universe. Was the universe flawed due to the great mind? Were they all trapped inside its projected illusion?

Her sense of isolation gave her some hope. Just knowing that gave her what little strength she had left. How did the others cope? Shutting themselves off? Accepting this image of reality with reverence. She had tried to belong but could never quite bond. She'd connected with Fehna only to be betrayed. That meant she was something, something other. Alone amongst the vastness pouring into her.

Carias's body so heavy. She was sinking. Dragged down into its vortex, like water down the drain, being drained. Is that why she had gone for the jugular? Blood the liquescent essence of life? Was her inner self telling her something, creating the need to keep her energy which was subtly being extracted in this place? Though the thought should have horrified her there was only a vacant indifference, disavowed, meaningless, worse. Useless. Her father and Dross thought her of some use. To be used. So exhausting. It made no sense. Regum Prima Prima Regum, forever entwined in their stupid battle for reality. Turning reality into insanity.

Maybe by going out there, into the Web she'd been exposed to the alien field. Maybe that is why it was off limits. Infesting her with its life draining properties. Sapping the will to live so that it could survive. Or was that the great mind? In collusion. Otherwise why allow it at all? The great deception. With everyone caught in both its webs. No escape. Condemned for ever. No way out. Or was there? Negate the negation.

More water. The thirst did not surprise her. Thirst was thirst. She drained the glass. The water cool refreshing. The fog thickened. A twinkle of light. Light. The essence of life. Get to the light. The glass reflected in its tiny spark. Miniature stars of the universe. Right in front of her. A message of hope. She looked at the sun outside. Too bright. Only in the glass, as it captured its rays was her link to the outside established. The last link. That could not be taken from her. Ha! They thought they had her, whatever had her, didn't. There was always a possibility out if one but looked.

The insidious life leeching presence washed through her, mind and all. Memories vanished. Only the after glow remained. Tiny colourful beads dissipating in a slow explosion as the grey dimensionless fog poured into her. Time to put a stop to this. Infuse the light. The opposite of this limitless nothingness that was sucking out her very being.

Along the shards many suns. A beautiful array of starlight, enticingly close but still removed by one degree of reality. The pitcher was broken. She barely remembered smashing it. The twinkling light so pure. Beckoning her to infuse its pure essence into her vanishing self. Restore the link. Be one with it, become light itself. Self irradiate. She must have smashed it over the table. No pain, just warmth. She picked up the shards, all twinkling. So many suns, so much energy, the light her link out of this embodied prison.

Time to get at the light, to get it into her directly. She picked up one of the shards. It felt warm, infused with cosmic power. One of the stars glowing at its pointed jagged tip. She thrust it deep into her inner arm. For a moment searing pain which immediately receded deep into her head, the sharp awareness a minor sensation. Her body's feelings barely registering the immediacy of rent flesh, blood pouring out, so warm, washing over her arm's deep gash. The blood was capturing the light. She felt light. She picked up another shard and inserted that as well. She was getting it all, the power of the sun within her.

The fog inside her, this incestuous infusion shuddered as the light rippled through it, through her. She was linked to the stars themselves. More. Another shard entered her veins, right to the source. No wonder she had gone for Fehna's blood. Accept there she had misread the signs. It was her blood that mattered, not Fehna's.

Light headed. So much better than the heaviness from before. Ah bliss. So soothing, so relaxing, so expansive. Infused with the power of the stars. Gravity dissipated, her mind winging towards eternity. The crap, the bullshit, the useless thoughts turning irrelevant. Pure consciousness way beyond anything she ever felt. Bursting with joy. Freedom, the ultimate, the path opened, her soul ready like some heroine on the brink of revelation. High expectations, pregnant with the undefinable essence that had been

corrupted by vicious minds encouraging self delusion. She was free of that now. It was almost laughable, it was laughable. All problems destroyed. Self resurrecting. With that beautiful thought the mental burden dissipated from within her. The traps no more, the false reasoning mere illusions, it's malignant grip finally released. The light was everything now, then the soothing balm of eternal nothingness. The divine effluvium, the very stuff of the universe uniting her soaring soul as it left the containment of the body behind.

She was free.

It was not until dinner time, when her goalers enquired if she was hungry, for the water was drugged to sedate her aberrant mind that they found Carias sitting limp in a pool of blood. Jagged shards of glass in her arms, an angelic smile on her face. The eyes intense with wonder. Death looking at the sky as if she had received some divine revelation.

Dross felt for Neghar. He had known of Carias's suicide for over two days now. Dr. Groben through Shuss filed the report. Carias had gone volatile. First the murder of the nurse which Dross barely credited. The asylums were really the private domains of the DLs. Keep them up to date as to the extreme polarities of the people. The fallen at one end, the enhanced on the Orbital, the pure on the planet. By studying aberrant psychological states it was hoped some of the patients might be naturals with potent mental capabilities attuned hopefully to cause maximum mayhem on Regum and its spreading Web. The pure as the people were considered, more of a sop to make them feel good, make them accept their station and social status in life, keeping them Dross thought on the farm. Mainly those simply not mentally attuned to a sophisticated civilisation which Regum was.

Dross had to keep the bigger picture constantly in mind. The munitiae of their daily tasks was Neghar's province. Which included Carias. Now that she was dead they'd lost one of their best, if not the best. It was frustrating. With Carias's unique resonance, extremely tight they had had a chance.

Now she was dead.

Neghar was crestfallen.

"You can have time off. As long as you think necessary." Dross said with reserve.

Neghar was numb. "Carias was not the type. Something must have triggered her. How much do you know about the asylums?"

"In what way?"

"Well the routine regimen of the patients."

"Depends Neghar."

"I know. Are drugs a big deal?"

"Well the volatiles are suppressed. Sort of waking sleepers, or better said wakefully asleep. Doped up in other words."

"Depressants."

Dross nodded.

"Was Carias fed these drugs?"

"Not according to Groben. Mild sedatives yes, that was for all of them. In the water."

"Have they released the results? Any observational data?"

"Yes, we got that from Shuss. He extends his condolences as does Groben."

"Thank them will you?"

"I gather you don't want to see them."

"I have an aversion to Groben." Neghar trying not to dwell on his daughter's demise.

"Are there many suicides?"

"Not that we are aware of. Really not our domain Neghar. I think questions should be asked."

"I can envisage the answer there. Unstable volatiles."

"And no one noticed?"

"Apparently they were dealing with an outbreak of mass hysterics."

"So?"

"Not enough staff..." Dross said slowly. "Suicide is rare, very rare." As if that would help Neghar cope with his loss. He was almost going to say Carias's soul was with the maker but thought better of it. It would sound hollow. The priests of course would say the great divine being had called her, had created the mental ennui, that she actually wanted to ascend. Then there was that episode with Fehna. She had died of blood poisoning. Whilst there was a basic hospital at the asylum Groben had decided for whatever reason not to move her to a real hospital. Whether he had the power to deny proper treatment Dross was not sure. The evidence however showed a very confused young woman. Carias had lost it. Groben was insistent according to Shuss. Case closed. And it was.

As far as Neghar was concerned it was the treatment that sent Carias over the edge. She handled the web with aplomb, coped with extreme realities in the web. One who could handle that was not going to commit suicide.

"We got the headband back?"

"Shuss saw to that."

"So we have her data."

"We do." Dross was glad Neghar was still focussed. Must be an effort. "Dead end."

"How so?"

"Literally. She reached the limits of the web."

"Ah, a programmed dead end."

"Not so much programmed as the limit."

"Well that is something."

"In its relative future."

"At least it's not infinite."

"That is something Neghar."

"I guess it is."

"If you want you can take your leave right now. Get in touch in a day, a week, take all the time in the world."

"Thank you Dross." Dross respected Neghar. A good executive and hands on approach. He just hoped Neghar would stay here.

"I may as well keep an eye out for potentials whilst I'm gone."

"You don't have to Neghar. But is appreciated. It will go on your record. Very commendable. Again my deepest sympathies."

"Thank you Dross. I still cannot for the life of me understand what turned Carias suicidal."

"No one ever can Neghar. It's like...no I won't say it."

"Please do."

"It's always unexpected. There are no real tell tale signs. Or rather there are but they seem so ordinary at the time, in the context. It's as if suicides keep their intent secret. Maybe they don't even know it themselves. There is however a school of thought that claims, and I'm not saying this applies to your daughter, that the life essence, the resonance is depleted. It has done it's work in this life and as death cannot be natural for they are too young, the mind considers suicide as the only viable option. It's only a theory mind you."

"It does make some sense Dross. But not in Carias's case. She had so much to live for. The Web alone kept her going. And that was not denied. I can only think that the sedatives depressed her. The dosage too strong, even if as you say they claim it was mild. But she did drink the whole pitcher of water. Wanting her thirsty. You know Dross I almost think they wanted to sabotage our plan. Resented us running Carias in their domain. If I were you I would watch Groben very carefully. Either he is empire building, or simply a shit."

Dross smiled. "I prefer the latter."

"So do I. It would mean we could nail him. Not us but through Shuss. If he is empire building it would be nice to know who he's in league with."

"The DL?"

"They are in league with everybody Neghar."

"Still..."

"Well, we will see. So are we going to discuss work or are you taking your leave. Not that I'm trying to get rid of you."

Neghar rose. "I'll be in touch."

"When you're ready. And my condolences to your wife..."

"Ung. She's not going to like it."

"Of course not. Were they close?"

"Sort of. Ung older. No rivalry, the age difference saw to that. More protective, like a mentor. It's probably through Ung that Carias got into the web."

"I'm not hearing this."

"Thank you. I don't think Ung put her up to it. Please remember this."

"Of course."

"Ung is going to be very very angry. Who knows, it could be useful."

"In what way?" Dross asked as Neghar paced the floor.

"She moves in other circles."

"You mean we should have her with us?"

"It's a thought. If I can bring Groben down, I will be satisfied."

"You think he's responsible?"

"Maybe indirectly. Remember the interview."

"Oh yes."

"Well there you have it."

"I shall consider it. Now are you going to go on leave?"

"On my way Dross. See you soon."

"It's best if I don't come to the funeral. This position, you understand."

"Low profile."

"Exactly. Go now."

"On my way."

Mena

Mena and Ratze were hanging in space for Mena's daily meditation. When assigned a sector Ratze was informed they were to go into isolation well away from the DVs. Usually novices were engrouped, creating the feeling of being bonded. It was obvious the other DVs were on special assignment. Ung was in the rear as observer monitoring the overall situation of their combined resonant states including Mena's and Ratze's. Niatu was off duty. Ratze was tempted to say hello to Ung but held back. Something big was happening and as officially Ung was head overseer linking was not in her best interest. Keep the anonymity up.

Mena, in place with Ratze, the huge orbital behind them. Whatever the DVs were up to might influence Mena and any other novice. Rare indeed. Ratze's Brain anticipated something. She hoped Ung felt the same. This time Ratze would run an experiment of her own. It was risky and a little tricky. She was going to soft-scan Mena. The Dominus, persons unknown who basically ran the DVs on behalf of the Ecclesiastics were not to be trifled with. Whether they had capabilities way beyond naturals could not be ruled out. Ratze registered no probing. In the clear. She knew there was more to her than she herself realised but that was about all. With the DVs target mission specific now was a good time to get some information about how they worked, how they functioned, how they projected their headspace and maybe even the designated target of their psychic attention. She was surprised both her and Mena were let out at all. That could be due to Mena's status. Mena was no run of the mill acolyte. Fiercely determined to make contact with the great being. Who knows what Mena would come up with. She had to consider the possibility that they were being remotely observed. Thus the need to go into softscan open channel mode. Pretending her natural inclinations were active. Her Brain was ready.

Mena was excited. Feeling at home out here. The immensity of space invigorating. For some it was too much but for Mena she could not get enough. Every day she felt she was making progress. More within her than from any signs out here.

Aware that it would take time and effort to achieve her spiritual aims. If she could not get in touch here then...she banished the thought. She would make it, align her seeking soul with the great divinenes that was the whole universe. Be one with it. What would happen after she could not even guess. She was not after power. She had no intentions, not even any practical application in mind. Merely being in that transcendent state was enough. The rest would follow. Enlighten other seekers so that their resonance would be purified.

Even the space suit was normal to her now. The initial constriction of its physical reality merely a part of her. It occurred to her that whilst Niatu always made her aware of strange visions due to the alien field Ratze never mentioned it. She wanted Mena's mind clearer, less burdened with unnecessary mental diversions. Keep her focused. It was good having two different trainers.

Mena: time to concentrate. No thinking. Don't even think about not thinking. Breathe in breathe out. Breathe in breathe out. Get into the rhythm. Slowly her rambling mind receded, rambling but less of a presence. The distraction a minor disturbance until it was of no consequence. The feeling of lightness welcome. A burgeoning joy, refreshing. Her chattering mind at rest creating its own state of rapture. Incredible. She felt warm, comfortable, relaxed. The tension drained away.

Ratze aware of Mena's mental transition. She hoped Ung was onto it, keeping a mental eye here as Mena seemed to have somehow linked herself to the DVs. Ratze felt another back up kicking in. Without focussing on it, for she suspected it might be Ung she was satisfied that something within her Brain yet outside it was there. The field Mena acquired was like an elongated drop ballooning out into the universe. Tempted to find its source her Brain recoiled. Off limits. Interesting. No sense of danger, of devious intent. Value neutral. The DVs focussed determination overlayed itself within the field. Two membranes entwined, enphased. One actuality.

A third layer. The alien field? No that was too weak. A constant. Diaphonous. No source, non localised. Symmetric. Undefined potential.

A red planet. A space ship in an intense field. The DVs infusing themselves. A Reganian space ship in orbit. The sensation of living beings on the surface, intelligent life! Fantastic. Ratze's Brain tickled. A sweep from the DVs? Negative. The group mind dense. Focussed. Mena aligned, connected. But that had been the past. How...? The imagery collapsed back into a distant source in the opposite direction. A secret Reganian data domain. In deep space? Perhaps.

Anticipation. Vast possibilities of the third field, manifest, dormant awaiting activation. Waiting for the code. The DVs were ignoring it. Ratze's Brain isolated it. Back

to the actual field embracing the red planet. Mena's head space expanding with ghost DVs into it. Dual enphasing. There and not there. Typical quantum.

Mena did her best to remain neutral. The vision compelling. Too strong to be negated. A part of her sighed. This always happened. She was after the eternal and always got waylaid by some particularity. The universe was so full of stuff. How to get beyond these veils? She concentrated on her breath willing to still her mind. Floating in the field of the DVs. The sense of adventure enticing though. She let go. Ratze rode the field. Her Brain kept her in place pulling her back.

The DVs now enphased started to build down their unified psychic resonant state. This is interesting. Her head split in two. The soft scanning part with the DVs her Brain making sure she was in place there. Something weird was going on.

Mena, Ratze, Ung and the DVs partially united. The DVs a field in their own right flooding the inserted field encompassing the whole planet. Five Reganians on board the ship. Thousands on the planet. A stage one world. Pre technological. The DVs dominant. Not completely but influential just the same. Confirmation her Brain told her. As expected.

Temperature dropping. No not temperature, entropy rising. The DVs were going void. Disengaging.

A tidal wave coming in from behind her head. Mena's, Ratze's, Ung's and the source, the DVs. What were they up to? Ratze wondered. Her soft scan showed Mena in a transitional meta state. Amazing young woman. Definitely a natural. Potent unrealised psychic abilities. Without the intent of these DVs though. Along for the ride.

The DVs were powering down, powering out. Their minds muted containing the lot. The emptiness within them expanded and took over. A zero state of non perception. As a state in itself.

Mena felt the nothingness. It was a release from everything which bothered her. A heightened sense of awareness without awareness. Being. Being! She tried to not get excited. Hold on to this state. Remain within it. Finally a real breakthrough. Everything gone. Fantastic. The absence definitely something. The moment an eternity everywhere, nowhere, somewhere.

Absolute nothing.

Ratze's Brain recoiled thrown back into herself. Sudden shockwave repulsion. Her Brain linked with Ung's. She was the anchor. The planet was still there, running in parallel. The space ship gone, the civilisation vanished, the DVs gone! Shit! Only Ung and herself left.

Mena gone!

Self annihilated? Something. The void state. The DVs had brought down the insertion field. Total entropy washing out all data. But where did the mass, the inhabitants, everything go? Her Brain went up a notch automatically. She cloaked it, keeping Ung at bay aligned as Ratze was. The two of them had held back, their Brains had saved them from being in this void state. One loaded with momentary zero information.

The ship gone, the sentients gone, Mena gone.

Total extinction.

A heavy sense of déjà vu. Definitely. Weird. Strange. Entangled. Recalled.

Their survival might attract attention. Both Ung and Ratze were in a precarious position being more powerful than the best DVs. Then Ratze's Brain told her: the field negated with it's source. Then the source as well! The actual inserted probability field was negated and *a new probability field inserted*. One without Mars's civilisation. They would have aligned themselves with Regum so the DVs deleted them, the ship, the source of that manufactured probability field. Taking out two of the enemy at once. Regum's attempt at aligning Mars which made it antithetical to Prima's plans. Shit! If the Primaian's could do this, they could manipulate the present and align it to their future.

This was deadly stuff. Out of control. Devastating. Dangerous barely covered what the DVs just achieved. What Mena, or the third field had run. At their very own cost to their existence. Went out with the dissipated probability field that had been a present. Regum's attempt thwarted. All information lost. To the Reganian's, her Brain informed her the expedition never occurred. Lost as well was the knowledge of how they managed to insert *their* probability field as well. They would have to start all over again. A quick soft scan. Check Mena who had latched onto the process and was voided along with the DVs. But, but...the distant receding field reconfigured, realigned, stabilised.

"You can come in now." Risea said. Data still void. The DVs never existed. Mena? This went against the very laws of the universe. Matter, energy could not be destroyed. So where was it? Not in this present. Her Brain searched and found nothing. As if no violation of the laws of physics occurred at all. That meant only one thing. Changed realities. She and Ung knew it. Which made them what? Different beings. Differently aligned in space time. They might be discovered.

"Will do." Ratze replied. She moved back towards the orbital with Ung. On her way Ratze soft scanned the operators running the experiment. They were in a triple shielded secure control room. That would mean they might know what really happened

with a good chance of remembering. Elentra's crew. If she came into contact with them, they'd know she and Ung knew. Ung concurred.

'A bit of a dilemma.' Ung cool as always.

Ratze's Brain kicked in: no violation. The DVs are back on Prima. Potential recruits with no knowledge of having been out here. Living in this time line now, not the one that was deleted. So what happened to those on the planet? Wiped out during the war with Earth. Earth? An image of a blue white planet. In this present universe her Brain informed her. The prickling sensation alerted Ratze to being scanned. Her Brain went mute. The answer would have to wait. Her Brain receded as did Ung's.

That meant Mena would be down there somewhere as well.

She reached Ung.

'We have to get out.'

Keeping contact to a minimum. Brain to Brain. Both were running camouflage. It could only work for very brief moments. Any potent psychic and they both assumed the Dominus was one herself, or at least a natural would sense the cloak they threw around their minds.

They headed back to the orbital using one of the many launch bays. Both knew they would have to use their inherent programmes in their Brains to get away. They knew the Reganian's were in space, realtime. An idea. Though on the orbital the shuttles were for short runs there were ships which could traverse the distance to the twin planet as well. They would have to use their mental powers and make it appear they were cleared to take one.

'You agree?' Ratze to Ung. Ung assented.

Big moment. If they were caught they were well and truly stuffed. Turned into vegetables, something they had no intention of becoming. Time to create a smoke screen, make those they interacted with think nothing was amiss. If that worked all would be well.

They floated over to the open launch bay searching for the right ship. Since the initial DV exercise had stopped all traffic there were several to choose from. Their Brains would know how to navigate them.

They saw one of three clamped space ships. Fully prepared. No crew in sight, yet. Now that everything appeared back to normal whatever designated flights were ready to go would go. Ratze's Brain scanned the logs. Hacking in for them to get clearance. An interplanetary ship was fuelled, tanked up with air and provisions.

Easy if you have the capabilities. How long the ruse would last depended on the quality of the personnel and the systems. Then there was SpaceKorp to consider, the security. Two were in the bay suited up as well. Keeping guard.

Ratze's Brain entered the ships systems. Basic stuff really. Ratze was willing to expose her Brain whilst Ung remained on back up. She would handle the two guards on duty. Idle chit chat from Ung. Then Ung sent them a fast upload. As both were special trainers, Ung told them the data they'd collected was for DLs only. She faked a message that Lord Pentham was at a secret location, they understood, meaning a habitat. Thus the need for an interplanetary ship. They could check it out themselves as Ung uploaded the false data into the Dominus's systems. Like a knife through warm butter. Insert complete.

The two women made their way through the hatch and straight for the cockpit. Once inside they used their fibre optic links to upload the ship's systems, straight into their heads. As the prechecks were done the data came through. Easy. Clamps unclipped, magnetic clamps disengaged, using attitude jets the ship lifted off its pad and moved slowly out of the bay.

Control wanted to know the clearance codes, sounding surprised. Ung gave the codes, retrieved from the moment traffic control made contact. When asked for the destination Ung repeated what she uploaded to the two SpaceKorps guards.

`Clear to go. Good luck.'

`Thank you. See you soon.'

`No immediate traffic.'

`Over and out.'

When well away from the orbital Ratze fired the main hydrogen thrusters and they shot off into space away from Prima and the orbital.

"How's our chances?" Ung asked after a while reaching maximum thrust.

"You mean how long the codes will fool them?" Ratze replied.

"My Brain tells me as they're virtual they'll decay for the simple reason so as not to leave any trace of ever being there. Means we were never in the system. How long? Minutes. Maybe longer?"

"So far nothing. Don't know that one."

"At least we can communicate freely. I got the ship running silent."

"Good."

"I feel a prickle."

"Someone's onto us. DVs no doubt." Ratze confirmed.

"Ah traffic wants us to return. Some new orders."

"I bet. No chance."

"None."

"No reply Ung."

"No."

On the screens the rear view showed another ship leaving the orbital in pursuit.

"Time to get away." And Ratze hit the thrusters. "Might deplete the fuel a bit but speed is of the essence. We got any defence, or offence?"

"None. When the Primaian's acquired these ships the Reganian's stripped them down. Got some shielding though, more for asteroid hits."

The ship accelerated a pure white flame behind them.

"Time to see if we have any friendlies." Ratze using the basic radar to sweep the emptiness around them.

"They're holding but can't catch up." Ung advised.

"Sad isn't it? Wonder how long they'll do this."

"As long as us probably. Any other ships around?"

"Yes. Got one." Ratze got her Brain to override the ship's system and read the other vessel. Moments later her scanning was blocked.

"Must be Reganian. After all we're Primaian." She stopped the scan. The blocking stopped.

"This is Ratze and my companion Ung. We need help. This is no hoax no trick. We are being pursued. We are asking for asylum. Please confirm message."

Silence. Then came the reply.

"This is the Reganian `Blizzard'. Explain your status."

"Escaping Orbital. Escaping Prima. With pursuit on tail. About five minutes behind at current speed. On max burn. You get a free ship in the bargain." Ratze smiled at Ung.

"Oh oh. Two flares." Ung said.

"You got that?" Ratze asked the `Blizzard'.

Silence.

"Two missiles launched. We'll try and jam them. Though not guaranteeing success. You suited up?"

"Yes, ready to jettison ourselves."

Silence.

"We're on target to intercept you in around half a day. Your suits tanked up?"

Ratze made a quick check. As they had only been out for a mere half an hour before the vanishing trick they had three day's worth.

"Plenty."

Silence. The missiles gaining.

"My Brain tells me these missiles are mass and heat sensors."

"So this will turn into a junk heap. How long?"

"Five minutes."

"You ready to jettison?"

"Am."

"This is the `Blizzard. We'll be there in moments."

Ratze was not about to ask how they managed that. Keep as much information out of transmission.

"Keep away from the blast and debris." Ratze replied.

Silence.

"Look out for yourselves."

"Opening cockpit escape hatches."

"Now for one last little trick to make sure the `Blizzard' is safe. I'm turning the ship perpendicular. The rockets will hit the centre. At that point we hit the escape button. The detonation will give us extra acceleration. Good idea or what?"

"Fine." Ung focused as always.

The ship turned slowly, showing its underbelly to the two incoming rockets. With the canopy gone they saw the beautiful tranquil stars glowing serenely around them.

"These missiles Ratze are penetrators. Means first impact then detonation. The rockets could even be mere internal EM charges. My Brain's trying to confuse them but they're shielded. Smartware."

"Or basic ware. Mechanical."

"Could be. Any moment and counting, five, four, three, two, one, go!"

Ratze and Ung hit the escape buttons.

Two tiny explosions expelled them from the cockpit. Black space above. The small chemical rockets at the base of their seats fired them out of the ship, which receded away from them. A fireball exploded inside the abandoned ship. A flare of white fire detonating the oxygen and nearly empty fuel tanks. Then the ship was ripped apart, scrap polymer and metal fragments glowing white hot majestically expanding on arcing trajectories outwards as the fire ball enveloped the doomed ship. They watched in anxiety for incoming debris but the extra push of the rockets penetrating impact and

their seats jets had them accelerating safely away from the fire zone. Then the vacuum of space snuffed out the fire ball. In the blackness of space only the remnant glowing metallic shredded, torn, mangles pieces glowed a dull red.

"You OK?"

"Fine Ratze."

On the `Blizzard' the captain saw the tiny flares of the two escaping pilots. They had cut it fine. How had they managed to calculate the extra shove to coincide so close to give them extra velocity? Had the Primaian's updated their own computers? For to run an escape like this manually was folly in the most extreme. He understood that they wanted to make it appear as if they died in the explosion but the pursuit ship would, or should be able to sense their presence.

The `Blizzard' was cloaked so there was no way they could be detected. The pursuit ship turned slowly on it's axis and went into reverse using short thrusts to inspect the damage. The destroyed ship now scrap. Then they accelerated away.

By the laws of space any captain was obliged to come to their aid. Asylum. A first for him. He could not even remember when the last Primaian actually wanted to come across. Was Prima regressing? These pilots would know. The pursuers merely inspected the results of their mission and left the pilots in space. Interesting in itself not even bothering to retrieve them dead or alive.

Time to pick up the survivors.

Prima

Lord Qatus, Outer Guardian, was aware of the infusion of a low level energy state, undecided if the alien field was changing or whether the aliens had created a new form of psychic incursion into space. It was constant according to the remarkable sensitivity of the System Surveyors, cyber presences, inserted stand alone roving alert schemes making sure the overall resonance of the planet remained stable.

"It may be Lord Gharbel," Telafus gave a tight smile, as they sat in his private office at the palace, "that this aberration seems of no consequence at first appearances. But you still think this has nothing to do with the reason for the incident at the monastery. Elentra a worthy in her own right through the DVs thinks Regum is stepping up their activity in WebSpace. The Trine, the Immortals see all. Something did happen. The unfortunate death of Roshati is no light matter. She must have come in possession of knowledge dangerous to the holy mission entrusted in us. Deletion, not BrainDraining the preferable option." That a living soul had been sacrificed seemed hardly to matter at all.

Gharbel Telafus considered was not uncomfortable with the turn of events. That was relegated to those below him. Lord Penthan was satisfied that order prevailed, the status quo secure.

"These are minor irritants Lord Gharbel." Who with Qatus present were there to map out their next move. "The universe is indeed a strange place." Telafus added thoughtfully, playing with the golden frills of his white robed sleeve. Today not being busy with the functions of his public office, the simple white gown would suffice. Telafus had come through the ranks as one of the first in centuries to rise to the supreme office as a Natural Volatile. The Ecclesiastics no doubt thought a simple soul such as he would become their creature. On the surface he was. But within, within! There lurked the true person. One not to be used. Appearances, even his deeds were a cover, a deception to let them think he was furthering their aims in controlling the people.

Telafus had changed his private secretary once more. Not one suggested by the Es either. Semor, a cardinal was pragmatic. Telafus's engaged in a secret esoteric

visionary mission. Millennial, ushering in a new age. Using the alien field as a basis to demark the difference between the people's orientation, reinforcing their divine status even as Volatiles. Something his predecessors thought an obstacle. Volatility was divine activity straight from the Cosmic Architect. Bypassing those who saw themselves exalted harbouring the repository of divine wisdom. Like Gharbel. Not that Telafus cared one whit as to what Gharbel thought. Still he gave him his due respect.

The aberrant signs in the Trine could be easily explained as some minor cosmic disturbance. The Reganian scientists thought nothing of it. Background radiation, an apt term, a bit like the anomalous behaviour of the people. Constant yet not interfering with the overall resonance of the planet. The planet's resonance had incorporated this other essence. Not that it made much of a difference. The Trine merely noted it, the Sentinels aware as were the Immortal personas within in. Telafus would when time permitted, making time if need be to synchronise his holy state with theirs and see for himself what exactly was going on.

Though of concern to Gharbel if only in that he was trying to reshape events to suit his own position. By rights Gharbel would be the next pontiff if he chose that position. But Telafus knew Gharbel had more power being number two than being number one. He would make sure his successor was one like himself. For Telafus never revealed, except for outside appearances his true Volatile resonance. His inherent mental state, being a little unstable according to common wisdom enjoyed a broader sweep mentally. The mood swings opened up vistas a steady resonance could never appreciate. Times were changing and with that it needed a mind capable of handling change to make sure the overall resonance was charged not just with cosmic energy, but with that of all minds. Not just what the DLs and E's thought pertinent. They were ossifying and Telafus would see to it that they would have their grip loosened a little to keep the whole system subtle.

"Strangeness. An apt description." Gharbel said non committally. He second guessed where Telafus was going with this. In a way, strangeness made sense. Like using the alien field to keep the population on their toes. So too this background radiation could be useful. Gharbel was slightly perturbed, almost mentally ruffled with the intelligence received from the Orbital. Thanks to Reganian technology Elentra and her crew had witnessed a most phenomenal occurrence. The loss of a group of DVs, including a new acolyte showing amazing promise. And the loss of their data. An experiment gone wrong. A backflash, a cyber-void annihilation. Not that Telafus knew the details. But the Trine did in its own way. If DVs could vanish so could anybody. Either

the Reganian's abducted or deleted them, bad enough in itself or the Divine Mind had Ascended them. That was the official stance. It answered any uncomfortable questions if this event was cosmic based. A new occurrence, unexplainable. What had the DVs uncovered that made such an extreme move necessary? Worse if the Reganians were behind this then they could all be targets. Well Janon and Remo might come up with something.

"You are ponderous today."

"Yes pontiff."

"The decree for the priests to play down the changes in the holy domain."

"Indeed. It might make people think." The last thing anybody wanted. They might even question the nature of reality and come up with all sorts of answers, just like the Reganians. Then where would they be?

"Officially there is no substance to the rumours regarding the loss of two astronomers. Nothing is changing. That should be first and foremost on all our minds." Telafus emphasised.

"We must keep up appearances. Events, visions, signs can be made to conform. The faith maintained. It should be easy enough. Make it appear as a challenge from the Divine Mind. Test the spiritual mettle for the coming new age. Weed out those who are unworthy. Contain them and thus keep the peace."

"I agree Lord Gharbel. Still if the so called background radiation is the reason for disturbing the serenity of the people then it is our duty to investigate the true nature of this manifestation."

What Gharbel feared. The truth. He could advise against it but not command. Telafus was energized, rising to the challenge. If need be he might have to be contained as well. Not that a pontiff had ever been deposed in recent history. Those days were over. Their true history began with the great Calamity. A new age soon to reach its apogee for the next level of divine beingness.

Telafus could not rid his mind that this aberration, this disturbance was trouble. It could be explained away but that would not negate the actuality of it being there. He looked forward to the quest.

"The Immortals are unaffected." Gharbel said breezily.

"That is something." Telafus concurred.

They were both concerned in regards to the possible panic this could set off. It might sap spiritual fervour. A bit of an existential dilemma.

Qatus merely observing the two most powerful men on Prima.

"So far the divine state is coping. No realignment of cosmic forces. At a guess, another infiltration in our universe, apart maybe from the alien field or most likely a side effect of it."

"We know it exists. That foundation is secure." Telafus surprised at how logical it all seemed. Yet it was not logical at all. Still the Divine Mind chose what was to be revealed and what was not.

"There are plenty of rumours though. All guess work. There are heresies in some who think..."

"Heresies?" Telafus's eyes arched.

"Only in the sense that this is all wild speculation."

"Ah. Continue."

"Interpretations becoming more outlandish. Reconfigured by each individual. Compounded by imagined suppositions. No definite pattern as yet. Just rumours of some impending revelation."

"There you have it. The people are not fooled that easily. Their resonance holds as does our planet."

For how long? Gharbel thought. "I'm sure the priests can deal with it." Gharbel replied.

"Well that is settled then."

Gharbel was not so sure. Qatus keeping his thoughts to himself.

Telafus could not wait to get at the truth of the matter. Intriguing. If he was right, that this was indeed a new manifestation then it was his duty to get to the bottom of it.

Under normal circumstances, seeking the divine wisdom of an Immortal usually necessitated a spiritual pilgrimage with all the encumbrances of the sacred rites of holy passage. Prayers, fasting, divine invocations to ready the soul for the spiritual unity sought. Encumbrances indeed. Necessary for those obsessed with purity. What was really essential to Telafus was attitude. As one with a Volatile mind it was so much easier to align his soul with that of an Immortal. Only those who thought themselves unworthy needed these spiritual bridges to attain the requisite divine state to harmonize with that of an Immortal. Not that the people knew what these beings were now, after Ascension. Cyber persona's. That would never come out. Only four, three Domain Lords and he as pontiff knew this ultimate secret.

Alien field or not, this new resonance was a phenomena not to be feared but to be explored, understood and used to maintain their society as it had been for centuries.

No change envisaged. Ever. With Gharbel and Qatus on their way he was ready to align himself and seek answers.

Not that answers were in short supply. Gharbel, Qatus and Pentham all had their views but Telafus wanted certainty. Gharbel finally left, satisfied that nothing threatened their holy state.

All was quiet in the palatial grounds. No breeze. The sky overcast the night black. Veiled darkness. Telafus had changed from his robes of office to that of a priest in plain black garb. He was now a suppliant.

The dark trees unfolding forms of brooding life blending with the night. Footsteps. The palace guards doing their rounds. Telafus was at peace with himself. No turmoil, no agitation, just serene anticipation.

The mausoleum enshrining the Immortal appeared out of the gloom cast by the trees. Lit by electric torches throwing shadows on its marbled walls. With the public gone, for those who were permitted to enter its holy precinct, vetted by the palatial priests were long gone and back at their hearths. Two ceremonial guards were as usual on duty at the entrance keeping vigil through the dead of night. The rectangular building in front of him. As Telafus's head was bare they recognised him, bowed in acquiescence at his holy person and let him enter.

Inside it was cool, serene and deathly silent. His soul soared with inner happiness. He felt lighter, treading on air. The ground floor an empty space, the walls bare except for tiny lights just illuminating the area. A sensor pad in the floor activated not just the opening to the vault below but also the computer's machinery to activate the containment fields so that anyone going volatile was soothed to keep one's serenity so as to align one's inner self with that of the Immortal's eternal tranquillity. Telafus felt his mind warmer, the result of the containment fields working. The mental glow reassuring making him feel even more divine than he already was. His mind stronger than that of the field. Telafus calm. His thoughts opening inner realms not unlike that of his dreams. His dreams! If the domain lords knew what he knew they would be shocked. Not exactly outlandish but definitely other worldly. More like a Prima as it could be, or was, but certainly not as is.

With the slab in the floor receding silently he walked down the stairs into the inner chamber, the lights already on. The sarcophagus was plain black marble. On the inside where the decayed body was resting, intricate processors that not just linked the Immortal person with the Trine where it's remnant essence resided but also through the

containment fields it entered the seekers head giving the impression of cosmic connectivity with the Immortal.

There were cushions stacked in one corner. He arranged them to his liking and squatted length on with the sarcophagus. His soul enhanced, in a state of beatific bliss. He was being boosted. His previous thoughts faded away. His mood ebullient. Remembering the reason for his presence he focussed not so much on the question as rather the answer, whatever it might be. In short, the condition of the Divine Mind and thus the universe as well. The people, according to all information were restless, expectant, full of hope, others augured dissonant times at hand, an age of undoing, Telafus sensed within himself none of this. He did not share the millennial feel the people entertained. Either he was now unaligned, or rather realigned whilst the populace were succumbing to the subtle changes in the resonant envelope of the planet's united inherent unconscious essence. What mattered was: were the Immortals affected as well? Then he would see what needed to be done.

Time to stop thinking.

He concentrated on himself. Not to disturb the equilibrium, bring out whatever it was that had infused itself. Just be yourself he reminded himself. Slowly he relaxed, felt at one with the world, the cosmos, the Divine Being.

A presence.

A feeling of being watched.

The Immortal? They were neutral in their own unique way. The remnant personality traits in any case were more obvious than this. Unless this Immortal, and since they were linked through the Trine, the other five as well had undergone a change. But that would have been noted.

The sensation of intelligence unmistakable. Hidden. There and not there. A vastness circumscribed. Interesting. He felt like a vessel ready to be filled. Should he let go? How else to understand if not be seeking, or being found!

'Understand?' a voice in his head mocked.

A part of him recoiled. The acoustic was not his. An outside source. Expanding into predetermined space. His soul transcending. A seething mind like water about to boil. The mysterious effluvium. Had to be.

A thousand images exploded around him. Each a reality in itself. The Cosmic Mind? No answer. Silence on the other side. Worlds within worlds, bifurcating into multiples of themselves, stretching back in strange weird warped curving trajectories.

`Only the beginning.' The voice said. Mind wrenching excitement surged through him. He was insensate to his own being. The imagery dominant, disturbed, undiscernible. Hinting at its content without actually revealing its true substance. It now weighed on his soul, a burden carried. Should he negate it? Was this even an answer?

The foundation. But to what?

`Worlds to be.' The voice poured into his cavernous mind. So vast, so extensive, so hollow, ready for the infusion.

`Reveal yourself.' Telafus thought. The vibrant, dancing, pulsating imagery collapsed. Receded into the Immortal. He should not have asked. That was a stupid thing to do.

Another sentence. Totally unlike the Immortal. Unless some profound change occurred. Yet could everybody else have missed that? Or was he the first to notice the change?

He was barely hanging on by the tiniest of threads tenuously connected with his real self. He was both distant and here transmigrating into `it'. Something at least. `It' existed between space itself. Not of it but in it. Liquescent, insubstantial but there. Telafus tried to reach the Immortal essence for this sentence seemed to have usurped it.

Momentarily lost for some time now. Time. What time? There was a multitude of times. All concurrent, all real, all there.

Suffocating, drowning, overwhelmed, tossed by invisible yet sensible tides, currents and eddies. Torn along rips in space, sinking then rising. His brain putty, getting thinner dissolving in this sensate impregnating essence.

`I am the prophesy, the coming eternity. I am known by many names in many worlds. I have millions of believers throughout all time at my feet, at my call, doing my will. Will you do my will?' it mocked.

`What is your will?' Telafus asked feeling dim. Then the answer came. `It' was everywhere, and somewhere else. Possessor of many worlds. So many worlds. He had no idea the universe was so full of life. In the many pasts, presents and futures. Futures? Futures!

`I am my own will.' It said placidly. Sure of itself.

Telafus was shaken. This was not the Cosmic Consciousness, or was it?

`That?' it almost laughed. `Mere smoke, blown away by my power. Bonded to me.' It asserted. Subsuming infinity itself. Or aiming to, or had done, or would do, was doing!

`Creator of your future.'

`Show yourself.' Surprised at his audacity.

`I am everywhere. Creating your future.'

`You are a hallucination.' Telafus resisted, nearly saying `my hallucination.' The assertion dissipated amongst the furnace of its transforming power. Constant, relentless in conflict, restless with energy, glorying in its assumed supremacy.

`You are a figment of my mind for it is I who design.' It said imperiously.

`You,' Telafus responded with new found energy, `are either a construct, or a vestige of a dead past which we negated years ago.' He felt sure.

`My past cannot be destroyed. Your belief is tenuous glossing over the true reality to come. I have always been and will be.' Then anticipating Telafus's next comment added: `Your world is but one. Not even an obstacle. Far from it. Already the signs are there, seen by some, perceived by others who know the truth.' gloating its fervour. Undisputable.

`Prima is ageless. It is eternal.'

"It is what it is. Nothing more. Certainly less. Behold!"

Prima appeared. Then vanished.

`So easy.' It gloated.

Telafus thought of the vanished DVs. Holy shit. The image replayed itself of Prima vanishing, just to drive the point home. Then his planet reappeared. It looked so normal but not. Its resonance different, the amplitude changed, misconfigured. To all appearances the same. Worshipping the supreme deity. `It'!

`No.' Telafus's mind screamed.

`It is you who is misguided.'

`You are an excrescence. For every poison there is an antidote.' Telafus challenged. `All this is illusion.'

`And your childish belief is not?' It mocked. `I can give answers to questions you have not even thought of. I am the balm of the seeking soul, I am the answer to everything in the universe.'

Where was the cosmic consciousness?

Silence. Hesitance? Hope.

`I have the strength and knowledge to turn dreams into reality. Prima can accept and be the centre of my new creation. Or it can pretend to be defiant. It makes no difference. There are other worlds ready to accept me.'

Ah Telafus thought. Not there yet. His sense of mission intensified. If it was a mere matter of making dreams come true than Prima was on the right track to defy this hallucination. It was a matter of solidifying the resonance. It might rule it's designated realm, but Prima's solidity was already there. In any case Prima might not repel this strange entity but it could be usurped. If Telafus had his way. It's gloating boasts mere threats. If 'It's' will was indeed done then it would have been. As it had not, it was not. In its waxing insistence It had given itself away. More like a rogue Immortal than a god. Dependent only on the gullibility of believers to make it so. Telafus had found the enemy. It probably was using the alien field to further it's aims.

'Reading my thoughts? Good.'

Silence.

The fog in Telafus's mind was lifting

'See for yourself.' It came back.

The million images. Had they multiplied whilst he had been engaged with 'It'? flooded his brain. Worlds upon worlds. A trick for most were the same, just at different times making them appear to be more than there actually were. At least he was learning that other worlds, as suspected did exist. Now with the DVs it was merely a matter of connecting with them and alerting them to this cosmic danger. A blue white planet, one red, different permutations of other planets, all similar, most the same, just different time lines. Believing in the supreme consciousness. Behind the veil of belief, this spawned self created illusion hovered malignancy. Drawing on cosmic power. Find the source and 'It' could be neutered.

With that thought something snapped. The vision vanished just like that. Telafus nearly found the source. Somewhere close. One problem was that the universe was infinite. That would make the search difficult. Worse, one needed to align with 'It' to fathom its weakness to preferably dissipate it, destroy it. The realisation struck him, that with the help of Regum, try at least to contain it.

The Ecclesiastics would think him mad. He saw the sarcophagus, the warm wall lights, everything in its place. With creaking knees he rose. What a revelation.

His mind was racing. Was the Trine infected? Were the Immortals compromised? Was reality changing? What were the signs? Were the people being influenced? Was the planet's resonance contaminated enough to warp all their minds? All useful questions.

This had to be handled most delicately. Or, as he stood there looking about him, feeling the nightmare receding, alert the whole planet openly of this potency wanting to usurp their souls? Regum would be the litmus test. If they started believing would that be

due to the work of their priests or the alien presence? Maybe if they withdrew their priests and see if Regum's people's attitude changed then there would be proof. But to call back the priests would be an admission of failure. Maybe if they made contact. It was getting terribly confusing. To counteract this coming madness he would have to accept the help of Reganian technology and know how. Prima's whole attitude would have to accept something they decried since the Calamity. This was going to be messy, politically, socially and spiritually.

At least he had discovered `It'. Whatever it was. But where had `It' come from? From where he was in this moment of space and time `It' was not there. So it had to be in the future. Whose future? Theirs? Regum's? Those other worlds? It claimed them all yet It neither had made any impression on Regum or even here. So `It' had not succeeded yet. There was still time. Just.

Would the Ecclesiastics believe him? Or the Reganians. The DVs not aware. The experiment which went wrong at the orbital. Was that linked? Telafus was ready for the worst. They must have discovered something. Had `It' removed the DVs?

His mind was restless. He would take a sleeping draft, the only way he would get some peace. Then set to work. What a mission he had. It was perplexing that the Immortals, this Immortal had not been present. What if they had been deleted?

Right up to today, yesterday really no one had noticed any change. Perhaps it had all just occurred? That this had been the initial ingress, a hint of things to come.

He rose, left the inner sanctum. His mind still warm from the containment fields. A gasp. `It' had gone straight through Prima's resonant envelope. And his own personal resonance. If `It' could do that...

Outside the guards had changed. It was still night. So serene, so peaceful, so deceptive. So disturbing.

Nervina

Nervina was hot. She was sweating through every pore in her body. A furnace within her spreading its energy into the core of her bones. Her limbs flaccid her body some soft viscous fluid. Sitting in her favourite armchair, eyes open, the view out the window pleasant, familiar. The street outside her little flat a little fuzzy through the opaque thin white curtain.

Home. Home? Home her Brain emphatic.

A momentary memory flash instantly deleted. The remnant visuals suppressed. A dormitory, a library, books, pages of crabbed writing turning into tiny wriggling worms. Surging white heat obliterated the recall.

A spasm, then shock. Transitional. Glued to the armchair. Heavy gravity. In slowed motion she scanned the living room. Home. Reinforced application of her memory. Why the discomfort? The panic attack subsided like the receding tide. Its oceanic embrace relaxed her into somnolent ease.

Tiredness, exhausting then exhilaration as her head expanded then contracted. Her Brain riding the waves pulsing through her like she was some kind of oscillating device.

The walls quivered, the soft pastel colours glowing, full of texture. Velvet smoothness. A sense of pregnant urgency, something incomplete. What? The intensity of her heated body relaxed her totally, mind body and soul. Soul? Another receding memory flash nearly revealing what she'd just thought: persona. Not now her Brain informed her. The base line, an anchor amongst the fluid mental abstractions bubbling up from within. Silence. An intensity itself calming her, comforting.

Another rush of energetic heat nearly lifting her out of her armchair. Gravity won that one. Well her legs were still there. The soft smooth fabric of her trousers glowing from her inner radiance. A sense of summer in her head. But why was she at home? She had things to do, duties to fulfil. She had to be somewhere, had been somewhere else. Certainly not here. The sensation of both normalcy and abnormality tore at her mind.

An electric shock wave shot through her nearly wrenching her out of her chair. Something was not right yet not wrong. The living room energized. Charged. The walls glowed.

Another rush of warmth melted her back into her chair. Maybe getting up would clear her head. The room a goldfish bowl. A sense of supremacy, of impending greatness, on the brink of some stupendous revelation. All alone. Alone. As she was meant to be. Isolated. Secure. She wanted to rise, focussing on the window and the street outside, foggy through the thin white shimmering curtains. Instead her head telescoped the image closer. Why move if you don't have to? She nearly laughed. The dappled light intriguing on the carpet. So intense with power on the brink of dissolution quivering with dormant energy. Energy. Were the atoms feeding off something, transmuting into hidden emergent patterns almost discernable but then out of reach of her fluid mind.

On the other side of the mock living room four observers watched Nervina react to the powerful hallucinogen in full effect. The observation room at the Primaian embassy on Regum had Dr Olsen as advisor, Estra assisting. Tara Ostern, Nervina's case officer and Daros Sethum the political case officer of the Primaian mission all watching Nervina's mind unravel.

"She's coping well." Sitting comfortable, sipping coffees, Tara observed.

"Remarkable." Olsen replied. "Considering the dosage."

"That's Naturals for you." Daros said. "They can lap it up and spit it out just like that."

"Except she's holding it in. Enjoying it. She should be going to pieces, falling apart, ranting, raving, letting the contents of her brain out." Tara remarked.

Estra was content merely being present at this experiment.

They had been informed of Nervina's transgression back on Prima. Accessing forbidden books. How she got in, past security, oblivious to the containment fields suppressing any unauthorised intruder a remarkable feat. A security breach such as this was rare. It came to the attention of Reno, counter intelligence. The incident went up to Lord Pentham who ordered a full investigation. They checked her history, nothing remarkable. Just another Natural with potential. The other transgression that attracted attention was her lover Horat. As a Stable, their resonances were mismatched. Nervina polluting Horat's resonance. Breaking one of the fundamental laws on Prima. The choice was simple. Either throw her back amongst her own kind in the Outlands or use her. Data

checks revealed a remarkable, astute and very versatile mind. She had one option. Recruitment. Her mission to go with Horat, equally guilty of associating with an unaligned caste. A choice. A mission. Find what the Reganian's knew, remembered about not just the great Calamity but preceding it, written in folklore their ancient practiced magic that could cause problems for Prima's intent to format the Reganian mind set according to their intent.

Regum's Central University was soliciting a group of researchers, organised through Primaian back channels to scour their Outlands, the province of Kratham. An isolated remnant of the original inhabitants steeped in occult lore. If they, both the research team and with Prima's agents in place, retrieved their ancient knowledge of direct mind control it would be a remarkable boost in their inventory of psychic resources. Once understood how they practiced their occult powers the DVs would be able to enhance their psychic abilities. Stepping stones in dominating Regum's world.

So Nervina and Horat were sent as students to Regum who accepted them on the grounds that exposing Primaian's to Regum's knowledge base and way of life might from their point of view influence the Primaian's to their way of thinking. Both sides knew it was a battle of minds.

After arriving on Regum they were set up in the lower end of town, the student district in a run down flat. They had contacted the university and actually managed to get on the short list of applicants for Regum's mission to Kratham. They both passed the psyche tests. It was then that Janon, Reno's chief director of counter intelligence discovered gaps in Nervina's history. It was not that unusual in itself. The unwashed masses, peasants really were only rudimentary scanned by the priests when observing their holy communion in their local places of worship. Nervina's data base consistent. Yet when her parents were questioned they seemed rather vague as to their daughter. They had trouble remembering her, stuttering along wondering what her daughter's life was all about. Something was not right.

The alert was sent to the Primaian embassy and so Nervina and Horat had been called in, then separated. Nervina now set up in the observation room, a mock living room that would make Nervina think she was back home. With the infusion of the strong psychotropic drug, from her point of view she ought to think she was at home. Maybe the missing gaps of her life would be revealed.

Reno suspicious as his office demanded, considered whether Nervina might be a Reganian agent. If so it was a new development between the two planets. Whilst Prima had her agents on Regum the Reganians were denied access to their planet. They knew

though that the Reganians got more than enough on the Orbitals which through Primaian mind control allowed them to be up there with them. Of course the Primaian's, accept for the DVs once exposed to the Reganian way of thinking were never allowed back home. Exceptions were made now and then but Reno and Pentham knew the danger of Reganian thinking. It questioned everything whilst Prima's view was of accepting everything as it was, not what it might be, could be, and worse would be if they gained control by implementing their godless philosophy into their mind set.

If Nervina passed the test she was still slightly suspect. But no one had as yet managed to outsmart the hallucinogenic. The ultimate truth drug.

Still Nervina remained herself. The chair she was in was censored up. Prima would use Reganian technology when it suited them. For the elite, the DLs and their designated agents, but never for the masses. Never. For many good reasons. They might start to think, which would lead to them questioning not just their status but why the Reganians did not have to work at all. Their smart machines did that for them. Which would lead to the obvious question why they could not enjoy a life free of toil and labour. They might even question the theological tenets of their faith which ordained a caste structured society. If that fell apart it would be the end of the DLs, the ruling caste and possibly question the need for a pontiff as well. So everything was done on Prima's side to keep the status quo in place.

So who was Nervina?

Nervina felt the sweat, smelt the sweat on her. It was comforting and disconcerting. Was she overdressed? The idea of removing her clothing did occur to her but she felt too lazy to bother. It was not that bad. A rush of coldness sent goose bumps up her spine. The pleasant dreaminess crystallised into cold hard thoughts escaping from her open head. Leaking out, being sucked up by some invisible intelligence that seemed very immanent.

Ah.

Full of tumultuous thoughts, flashing in and out of her mind's perception, not being able to fully grasp them. Like flicking through pages of books. Books. She remembered reading books. Something to focus upon. But the changing environment in her head transmuted too fast for her to grasp her own thoughts. She felt 'other'. This could be the real her. Two presences. Her outer and inner self. Two personas. No dialogue between them. Two realities. One admitting everything as it was the other not

so sure. Isolated within this broader inclusiveness, the other exclusive loaded with so much more, just out of reach. By design.

With that comprehension the light through the window flared into cold white energy. Her sweat evaporated sending little plumes of vapour curling up above her, just like her thoughts leaking out of her head. Someone or something was extracting the contents of her mind.

The shock was instant. Spasmodic, fear ridden making her feel immobilised. An alien intelligence. Hers? Theirs? Who were they? Images of the past. Like a movie instilled in her. The library, the dormitory, the seminary, odd visions of a village, her parents. Parents? Parents. On a planet. Stars, space, Prima. A shiver went through her. Stars, space, Prima. So certain of the location. The place to be. Another image of 'others', a detritus of strange dreams crystallising, then dissolving in the mental warmth of her pulsing mind, gone.

A missed opportunity of some potent revelation. Her Brain blocked it. Then it too vanished like the momentary vision of the mind's construct. There within before. She was the repository of something great, awesome, monumental, cosmic in scope. This warmth, this well being a cloak to hide a promise of something stupendous. Cold, hard, fact. Deeply embedded, a seed. The kernel of truth, a heightened sense of reality out of reach.

She closed her eyes. Change. Abstract flowing geometric patterns danced in front of her. Weaving a web of, of illusion? Reality? The pulsing energy returned, as always, never stopping. And below, beneath, outside the remnant something much vaster in her head than it knew. Knew. Knew! A feeling of immanent revelation, on some stupendous mission in life. Her brain sparkled. No, that was not it. Just a diversion. The coruscating lights filled her with joy, full of wonder. Childhood. A strange weird longing superimposed itself. Alien at the same time. A distant past no longer there. Gone for ever with its hope of something she could not gather unto herself.

She sensed the approach. Someone was knocking at the door. She could almost see through it. A female. Panic. What? Who? How could she cope? This was ridiculous. Only a person. She tried to remember who she knew. Horat. Ah sweet Horat. Where was he? Another distant memory now. The flat. Regum. Yet this flat was on Prima. What on earth had occurred? Here, there, there, here. Here. Not there. Oh this is silly.

Another gentle knock. Not insistent. Reluctant.

"Nervina, how are you?" how did she get in? Door must have been unlocked. Silly me.

Tara stood there smiling. Warm eyes. Longish brown hair. Business suit. Sibylline, bathed in her own light. Friendly. Why? Who was she? Ah, recognition. From somewhere else. Approximate connection. Familiarity.

Tara was looking at her expectantly. Now what was she supposed to do? She could barely rise. Nor knew what to say. At ease.

"How have you been? Haven't seen you for a while." That much was true.

"Relaxing." Her voice sounded strange to her, speaking by remote control. Maybe she knew what was going on. A halo of lilac around her. Pretty.

"Heard you been away." She was way away. Almost not here at all. So where had she been? A flash of darkness, another space, gone. The dormitory? No. The seminary? No. Regum. Yes. But was her visitor allowed to know? Dare she tell?

"How did the trip go? The study group. Exciting? New stuff?" this woman continued chattering, her eyes excited.

"Oh that. Waiting." Ah yes, the interview. If..."Tara." Now it fell into place. Another interview? Or the same one? There had been several. Well something made sense at last.

"Your last message was so obscure. And your parents haven't heard from you either."

Why would she bother with her parents. She left them years, life times ago. Not her life. Intense emotional feelings flooded her warm brain.

"Rather difficult to explain."

"May I sit?"

A settee appeared. Oops. Where had that come from. Was she in some sort of cybergame? That would make sense. Virtual immersion. Well this was at some other level entirely. The Reganian's were smart. Or was that the Primaian's? Nervina went cautious. Reality was not as simple as it appeared.

"Yes." Eyeing Tara, looking for pixellated glitches. The aura around her lime green. Whatever that meant. So she was radiating as well. At least they were on a similar level mentally. Relief. Anxiety gone.

Then apprehension returned. If Tara was an insert, who was running this game? No idea. Was she uploaded or real? She felt too real, lithe, mental eddies rippling through her whole body resonating. Resonating. Primaian's resonated. Life resonated. The room was resonating. Tara. Someone concerned for her.

Maybe she was trapped and Tara was going to extricate her. Nervina tried to link her mind to hers. Resistance. No, more an absence, but not a void. An empty head. Ha! Comical.

"Something funny?" said lightly.

"Just you being here. I didn't think I'd see you." Nervina grinned, nearly dribbling saliva which she just managed to catch and slurp back.

"So how did it go? Learn anything?" being professional.

Learn anything? Her mind repeated. Full of it, just can't get to it.

"All there somewhere." Which was true. She searched the room for some exit icon. Everything was so full of itself. The doorknob a dark brown planet stuck on a plane of flat space. Dimensional and infinite in itself. Her gaze turned back on Tara. Not enhanced. And no exit points. Enclosed. The room everything. Comfortable.

"I, ahm, glad to see you're fine."

Fine? I'm brilliant. The inner fire flared, the room bathed in her light, brighter, glimmering walls, Tara glowing blue her face pale.

"So nothing for me?" Tara coaxed.

"Not yet. Too early." Memories of the university. The professor, his assistant, just faces, a committee interviewing her and Horat. Where was Horat?

"You think you're in?"

"Maybe."

"Did they show you any data?"

"No, just a general outline. Surprised that we came at all. Highly recommended. You're doing?"

"My boss." Tara replied happily, glowing yellow. Incredible. Did she know she was radiating her resonance?

"Of course." What was so recommendable about her? Apart from her dazzling mind. Was that it? Most likely. And something else, just out of reach.

"Well," Tara rose, the aura lime green, "good to see you."

"Off then?" wondering why one had to say the obvious.

"Afraid so."

Nervina frowned. At least she was not alone. Alone felt good. No one to have to bother with. Independent in this 'now'. Now is everything. Then the door shut. Relief. Peace, happiness, contentment.

Daros watched Tara return with interest taking his eyes off the monitors. Tara resumed her seat nodding to Olsen. His bald head reflecting the muted overhead lights. Nervina still in her cosy smart chair.

"Glad she's handling it rather well. Lucid enough, just, to remember the uni interview. But as you know that didn't reveal anything pertinent."

"Maybe she's hiding it. Like so much else about her." Daros said.

"Yes, a bit of a worry." Tara confirmed.

"From the scans I'd say she knows more than she's admitting to us. Back there and here. Yet her subterfuge, her mimicking resonant states that let her through security is such a rarity for a Natural. And only scant evidence that she progressed through the ranks. Fast tracked. Inserted at Lord Pentham's level." Daros concerned at the mystery.

"Unless Pentham recruited her, or Janon." Tara answered.

"Yes. And questioning Lord Pentham is out of our bounds. If we did that it would throw an aspersion his way. Not good for us. The implications alone in even thinking Pentham was engaged in anything untoward. Still we gotta get to the bottom of this."

"So we consider her suspect?"

"Make that an alert. The embassy found nothing this end. Either they deleted her if she is one of them, or she really is an advanced Natural."

"Almost too good to be true?"

"Well our professor here thought so. It was her casualness. Anyone who gets a chance at this survey of theirs dealing with their, ahm, darker states of mind should have thrown indicators out. Mental agitation, some reticence in being exposed to warped mind sets. Disturbing resonant patterns which an investigator would be exposed to. Trivial to her. You agree Dr Olsen?"

"I most certainly do. Horat's natural anxiety levels were as expected. But Nervina is a different personality entirely." The psychologist said.

"But is she Reganian?"

"From what we have observed, and what we know, can't tell."

"Not certain." Daros asked.

"Well," Olsen smiled benignly, "there is nothing this end. Unless the locals here have changed tactics. Now we know she was never at an orbital so contact up there can be ruled out. She's never been in space so contamination cannot explain her unique state of mind. Unless she is a new evolutionary development."

"You think so?"

"Suspect. Unless others like her appear. If not, which seems to be the case then we are dealing with a very unique individual."

"Any psychic powers?"

"That would have slipped out inadvertently under the influence. She showed no inclination to probe her mind. That in itself is another oddity. Psychotropics are natural gateways into the mind yet she remained aloof from that inner path. Anybody else would have delved right in. Not Nervina. She remained in control as far as possible. Another puzzle."

"Maybe this is not the first time." Tara suggested.

"A good point." Olsen answered. "But even so, the dosage we gave her was at a maximum. She should have been completely overwhelmed."

"And was not."

"Just so." He should know. He had delved into many disturbed minds at the asylums. Stripped the soul bare, exorcised their demons, their induced hallucinations and cured them of their mental aberrations. Fight fire with fire.

"Now we know Nervina got into our restricted zone. We know she fooled the scanners, the on the ground security, obviated the active containment fields, read we assume enough to know of our true ancient history, of what we contained thanks to the Calamity. When I was with her, not even that came out. One would think possessing such secrets would burn a hole in one's head. And as she remembered me she had no inclination to unburden herself. Anyone else ought to be shocked. Nothing made an impression on her." Tara puzzled. "Is she a spy though? That is the question right?"

"Well if she is, she's our spy now." Daros remarked amused. "She will be useful." They looked at him surprised. "Well it will give us leads back to whoever she is working for if she is one of them."

Olsen nodded at that.

Tara scratched her head. "Even so, she seems so like us."

"Annoying isn't it." Daros admitted. "No aberrant behaviour, if she is Reganian. They're into personal technology. Would be lost without it. Crave stimulation, almost addicted."

"And no such signs from her. Of course she could be configured."

"Tara, our scanners would have picked that up."

"You're right Daros. Just thinking."

"Glad to hear it." he joked.

"Nothing on record even indicating what she really thinks. Apart from her illicit liaison with Horat, she's very level headed." Olsen added.

"So we can assume she is not artificially conditioned?" Darros asked Olsen.

"If she is, it's a new development."

"And if that is true, then her being with us will give us plenty of opportunity, like now to learn." Daros rising to the challenge. "So Dr Olsen, could she be?"

"Configured? We know the Reganian's are always tinkering with their Als. We should consider her one such experiment."

"A newcomer. First visit. No records of having been here." Daros reminded him.

"Then we have to assume, as we broached already that she is a type."

"We might best them yet." Tara said.

Nervina's read outs were getting less erratic. Smaller surges, fewer spikes, more frequent lows. Purple.

"You noticed that?" Tara asked.

"Oh yes. A specific range akin to some though not all Naturals. By the way here's a surprise." Olsen's eyes merry. "The study group at Central's got Horat going under. He should be ready now. Our systems are linked. The test is whether these two are extricably linked. They commingled their resonant states. Now to find out if that is permanent."

"As in DV activity?"

"You got it Tara."

Estra was busy checking the condition of the relevant data domains. All was being routed into secure cached files. Bundled, wrapped, isolated, secured.

"System's fine." She said.

"Good."

"How did you manage to convince them?" Olsen queried.

"We run their department. Set it up, funded it."

"And they went along with it?" Olsen was surprised.

"Well," Daros smiled easily, "back door channels. Cultural exchange and all that. Not the embassy, philanthropists. Incognito bless them."

"They got access?" Tara asked concerned with security. They were not in the habit of disseminating information.

"Culled. Camouflaged. Surface stuff. Plus certain privileges. The names are concealed of course. Our intent a subterfuge. Innocent enough. General psychology really. And their contribution to furthering knowledge its own reward. After all this group

at the uni's going to the Outlands, Khratam. Can't have unstable volatiles out there. They'd be putty in the hands of some of the local shamans." Daros explained.

"I see. Well you have worked this out." Tara beamed.

"It's too important to just have anybody. Military is involved as well."

"Is that wise?" Olsen asked.

"Just riding along."

"But they got the some unpredictable wetware Daros." Tara uneasy.

"They're not the elite. Just Stable Volatile Naturals. Close to our own profiled students. Who knows what our two will stumble upon."

"Ah." Olsen comfortable with the doubled up approach. "More to this than meets the mind."

"Exactly doctor. Until we know more about Horat's headspace the team that is going on their jaunt into the country will for the moment remain with me. The link between us does not officially exist. We don't exist."

They nodded at that. Security. One never knew if a straying DV might come across their experiment. Or an intruding shaman out to make mischief.

"Everybody ready?"

They were manning the consoles.

"Maybe she might let some things slip that Horat might remember. After all their resonances interlocked. Who knows what might have seeped across." Daros said with relish.

"Is he on the same dosage?" Olsen asked.

"No. The cocktail is different. If we duplicated that they might link leaving us out. Similar dosage with some minor differences. The hallucinogenic component lighter, amphetamine boosted enough to keep his brain ticking over. Add some somnolent molecular tailored drugs to control what he's like under a hyper stressed state. Concordance on Nervina's side, discordance at Horat's. That would make their resonant unity harder to achieve. If they manage to match their resonances then we know they'll connect. Knowing at what level from the monitors will reveal their capabilities. We fine tune our scanners accordingly. If they don't entangle then we know cross pollution is at a minimum. Means each subject's RS was only temporarily effected. Right then, we're rolling." Daros focussing on the read outs coming through from the other observation room.

Horat

Sleeping was wonderful. His body comfortable, his brain warm, soothing. But his mind was all fervent activity. Ceaseless thoughts catapulted into his expanded head space: surfacing, vanishing, surfacing, twisting, turning, flitting from one moment to the next. One part of him was annoyed, the other indifferent. The duality disconcerting, then some benign calmness smoothed things over. More like vivid access into his head. So close, so there, enjoyable.

The calming darkness within him substantial. An essence. Enjoying sagacity with deep satisfaction. He felt whole, complete, brilliant. The tumultuous thoughts revealing patterns of mental activity just beyond conscious grasp. He let it go. The more these flashes of memory... the flat on Regum he shared with Nervina... ah sweet Nervina, cool Nervina, not sweet, more an inner radiating presence, her calm predisposition always on top of things.

Being caught out with him back on Prima had not bothered her. Horat experienced a momentary sense of panic. It passed, a warm wave of sensory feelings pacified the instant it happened. The initial interrogation. He actually felt guilty then but not now. She was not an incredible lover in the physical sense. He was taken by Nervina's calm predisposition. Her head so there. Nothing disturbed her equanimity. He reassured simply by her being there. Their resonances melded, flowed together, united yet each of their individuality remained in place. Exploring their headspaces even when making love. His brain definitely opening to hers as she flowed into his mind. So much potential within her.

Then came the feeling of timelessness. It was momentary, the sense of near infinity stunningly real. In that flowing intermingling of his soul with hers time itself expanded, illuminating the future with strange realms The expectation he felt...their united selves back then determined through their unity to conquer all. And conquer they did when physically entwined body to body, feeling to feeling, being to being. The future theirs, a future unlike anything he had ever come across with anybody. Even his past

girlfriends now seemed flat brained, loving more the moment for the moment. A dissimilar sensation of interwoven beingness. Nervina was different. Unlike any other.

Still something disturbed him now in the afterglow of happy memories. Something lost, something nearly gained, something no longer there. Nervina? Where was she? Where was he? Ah yes, the university. They had been separated for their final tests. The comfort of the bed, the embrace of consoling sleep washing over him in warm oceanic waves. He thought of their future. Without her a void, a nothingness, an absence of self.

Multiple realities would not let him dwell on trying to nail down the future. With Nervina's presence it was so reassuring, without her vacant. He hoped she would pass. That there was not some flaw, though all Naturals were flawed in some way. Would she fail the last hurdle?

Off on an adventure exploring the Outlands of Regum. Regum. That planet. The original aboriginals and their secret lore. Would he miss home if they never let him back? It did not matter. Nervina was with him. Even if she was not accepted, he sighed inwardly, he would survive here. The pressure to conform so absent on this planet. Maybe that was the future foretold when they were as close as can be.

He laughed in his sleep. The idea tickled him, nerves jangling merrily. The future was his, even if on Regum. What could they do to him from Prima? Nothing! Ha! Even if they abducted him their almost freakish, so childish really, obsession with resonant pollution would preclude his return to Prima. His destiny was here then.

The sense of being home surprised him. Preordained? Ah yes, forging one's own future. Thanks to Nervina, opening up areas in his mind he had barely grasped. There was so much more to Regum. Their glittering cities, at night a spread of jewelled splendour invigorated him, delighting his senses compared to the comparative gloom of Prima. He might even stay here. He would do his best on the team, as an explorer, accepted for who he was. Reassuring. Even at the interview there had been a calmness about it all. So casual even though it was of such importance to the team. Not trying to nail him down, probing his mental state the way they did on Prima. So tightly wrapped up in their relentlessness of maintaining one's precious resonance, the gift of the Divine Mind. It seemed ridiculous here. They didn't even bother with that concept, did not ask him about it. A welcome relief, a liberating lightness in his great mind. His great mind. He could almost relate to the Great Mind not as an outer reality but an inner essence. Maybe all sentient life was imbued with a sense of the tremendous potential his brain felt right now. Maybe the secret lay within not without. A creation of Primas' Ecclesiastics, distorting, inverting the great secret. Each living being possessed.

He woke. Eyes open. Ah back at the lab. On the couch. Wires coming out of his head. Monitors suspended from the ceiling so he could watch his brain waves. Professor Storaf's laboratory, his assistant the severe looking Etessa, a young hard determined woman. Tubes from his arms feeding some nutrient Storaf had explained. Needing to probe his mental capabilities. Storaf's square face trying to look concerned, not succeeding. More the way he was than he pretended to be. Professional, personally distant. A dual character. He drifted back to the calming balm of sweet sleep. So comfortable, so sensual. Gravity non existent. His mind soared complete into the warm darkness. His thoughts clamouring for attention in the background, irrelevant really. One quick glimpse into the future. Could he achieve this without Nervina's presence. Nothing but darkness. An absence of self, of non being. Momentary panic. His brain like ice. Something not right. Then the recurring balmy fog of repleteness alleviated the sense of total absence. Was he alone without Nervina? No future without her? He was in love no doubt about it. They were meant to be together, predestined, Nervina immaculate. Irradiating him with her presence giving him strength, comfort. With her another dimension opened up deep within him. Love. So strong, so beguiling, so welcome. He missed her a little. A moment of forlornness, a smidgin of sadness making him feel momentarily weak, emotional, devoid of substance, lost.

Energy coursed through him. His eyes opened. The monitors above distracting. Somebody, a young man was calmly detaching the two tubes from his arm. Pfft. Someone behind him removed the wired helmet from his head. He still felt the inner glowing warmth wash through him.

"Horat how do you feel?" the slightly metallic voice of Storaf.

"Fine thanks."

"Good. Join me in the control room please."

The attendants were done. The lights in the observation and scanning laboratory soft, less intense. He was done. Did he pass? He felt a little inadequate for a moment. It was nothing. Relaxed he swung his legs off the recliner and walked slowly through the door the attendant held open.

At a row of consoles and computer terminals Storaf, Etessa looking at him with blank eyes. Storaf showed no emotions. Cold. He worried he would not be accepted. That his turbulent thoughts made him too volatile. Another part of his brain still grappled with the astounding idea that Primaians were even considered for the expedition.

"The good news is you passed." Storaf with a hint of a smile.

Relief. His worries receded. Horat merely nodded. No point asking any questions as to his results. He felt great. The agonizing over. Not that it had been distracting him. Still it was good to know he passed. Yet was he good enough?

"Aren't you going to say anything?" Etessa's shrill voice demanded. What a type. No wonder she got along with Storaf. Two of a kind.

"Thank you Professor Storaf, Etessa. Passing is one thing, being accepted something else."

"I see what you mean young man. Commendable. Yes, you are with the research team. There are two more candidates we have to test. When the team is assembled we will have another little chat amongst ourselves. Now as you are aware our mission is rather unique. We have the grant, the funding to go into the Outlands. In a way Horat it is a bit like your planet's distant past prior the Great Calamity. What we made sure of here today is that your psychological state is solid enough to cope with the difference of their minds to ours. The aboriginal race has a completely different attitude to reality. They have shamans, similar to the DVs. What we need in our team is solid grounded minds that cope with their, ahm, how to say this, occult attitude. They, like DVs will probably probe us. So we must be ready and have the inner strength and ability to handle that without coming under undue influence. We don't know whether we will be accepted openly or resented for probing their culture. As you know that is what it's all about. A complete study of their way of thinking. Previous efforts were of a more anthropological nature. But as all sentients share certain similarities, that data is exhausted. This is not the what we are concerned with. It is the how. Is an occult mind different to our more prosaic, to them, mind? Is our materialistic empiricism radically different to their holistic mind set? Can we learn from each other?" Here Storaf thought of his contact with the Primaians. "Is the cyber world a natural outflow of let's say for the moment the subconscious? And so forth."

Horat understood. "My interest entirely."

"Good, good." Storaf satisfied with that simple answer.

"What about Nervina?"

"Ah yes. A secondary research team, another location. I haven't heard from them as yet. Since you two came to our planet and I assume you two are good friends," he smiled knowingly though made no allusion to his guess they could be lovers continued: "I guess you know she too is made of the right stuff. Very cool, not given to unnecessary emotional interference, the classic intellectual. But as you know yourself, what one projects is not the same as what one is."

Horat nodded. His head liquid. Languid.

"So for now, study up on the material we have prepared for all our successful candidates." And Storaf picked up a thick folder and handed it to Horat. "This is not complete of course. Since it is still several days until we actually leave you will have plenty of time to familiarize yourself with our subject matter. To be precise Horat, this is not an in-depth study. More sociological. Does the shaman mind dominate their culture? Is it a subset? Is the shaman mind the difference to the norm or vice versa? Does the rest of the population accept them in a way your culture accepts your Divines? Are their kind imbued with a natural sense of the psychic? Are they naturals? Have children a given aptitude that they grow out of? Are the shamans considered positively? Are they feared? Revered? Adulated? Resented with their natural gifts of psychic power? Is that power real or imagined? You get the drift. There is also a more mundane element to our exploration." He waited for Horat's reaction. Though his CV, his personal file, his history was exactly what Storaf required, he had to make sure Horat was not there to keep an eye on him. Prima's little ways of observing their acquired resources. There was no reason why an agent could not be an intellectual as well.

"Their folklore?" Storaf continued, "is it still the same as it was centuries ago? You know that we don't interfere in their social and spiritual way of life." For good reason. His masters needed to know the aborigines potentialities. Storaf could guess why. Manipulation. A back door to Regum. Social policy dictated non interference. "If they want to come over to us they can. You have to remember Horat we are not there to impugn our way of life onto them. That is purely up to them. This is not a proselysing mission. We are a study group. Have the tales changed? Is it due to our presence merely by being or is it a natural change within their society? Do cultures change or as in your case, is there a sense of eternal temporalness? In other words are some societies naturally static once they have achieved a certain threshold? Is that threshold kept artificially in check or is it the reflection of their inner being? Remember all that when you study the information you now have."

"It will be exciting. Other cultures. Other realities." Other heads.

"Precisely. You have the right attitude Horat. Congratulations."

"Thank you both. One for being accepted as a candidate and the second coming from Prima." A chance of relieving themselves. He felt better.

"So I can return back to the flat?"

"Yes. And once again, congratulations in making the grade."

A part of him knew instinctively he would. Only when they were finally on their way would he accept that fact. He dearly hoped Nervina would make it.

Estra studied Storaf. Liaising with him directly, ran certain risks. It was her job keeping Lord Gharbel informed. The top DL. She did not question why exactly him. Prima's politics were always convoluted. For a society that prided itself on simplicity they were very complex in the way they went about anything. But she had been ordered to get Storaf and Dr Olsen together. And the best place to meet was at Regum's Central University. Strangers would not be much noticed.

They were in the observation room. Horat had already left. Nervina was cleared so these two were in. This sudden interest in folklore was certainly a new development. A direct order from above.

Daros was in control even if Olsen was the figure head. He was the political officer, the one running Nervina and Horat. Estra was there to make sure they all worked together, iron out any conflicting set of interests. Make sure the Reganian's saw this as purely a cultural exercise. The data they obtained from Nervina and Horat secure. The computer programmes had siphoned out the nature of their resonant states, they psychological aptitude, moulding the information so that both of them were post graduate students. Young minds eager to learn. A one sided exchange programme, an insertion from Prima's end. The Reganians amendable and indifferent that they could not send any of their students to study on Prima. They had their own on the orbital over Prima. That was as close as they would ever get to their people, their planet.

"That went well." Daros said looking at Estra, Olsen and Storaf. The technicians were gone. The only reason they met in the observation room was that it was secure from eavesdropping.

"I'm satisfied." Olsen said looking at Storaf. Storaf aware of the bigger picture even if Olsen was not. He thought it amusing. A Reganian working for Prima knowing more than one of their own. Not that he would let on. This mission contained a military aspect since Prima had officially no military to speak of. Regum's military being the logistics of the expedition. A data sweep of the Outlands and their inhabitants. Every little bit they learnt built up the composite. Physically as in material resources, computational as in how it all worked, mentally in ascertaining the Outlander's mind set. The difference between the Outlanders and the rest of the population observed, studied. Understand their psychic attitude and mystical orientation. Storaf was looking forward to this little exercise. The Primaian contingent under close observation.

"Any questions Prof Storaf." Estra asked. Storaf did not look like an academic. More a high powered executive. Focused, determined, fully locked into his assigned task.

"No not really. The two students passed. That is good enough for me."

"Not even their mind set?"

"Only if there are aberrations I'm not aware of."

Estra looked at Daros. With no sign from him Estra continued: "Their minds are remarkably open. Hemispherically more connected. With no mystical inclinations. So they will be secure from undue mental influences. After all the aboriginals will be curious as to their, your, our presence."

"No signs of enhancement." Olsen spoke up. "No interleaved protein threads, no parallel computational inserts which means no hidden or buried command structures which could self activate if conditions became extreme."

"So you agree, they are what they are." Storaf needed to clear this.

"Stable Volatiles at best." Tara spoke up. Storaf merely looked at her.

"Your deep incursionary techniques confirm this?"

"They do." Daros answered.

"They are cleared to go then. They are unique in a sense." Estra admitted.

"Probably Prima's best."

"Glad to hear it, and, just to make sure, they're clean?"

"Oh yes. Without a doubt." Daros confirmed.

"What about their history?"

"You need to know?" Daros looked at Storaf.

"I'll be with them. Working with them."

"Rest assured, they're the right material." Daros sidestepping. He assumed the professor was what he appeared to be. An academic. "If there is anything else professor?"

"Just to thank you for vetting them."

"The least we could do."

"It is of course understood that the data we gain is our property. I am not cleared to release this. That has to go through higher channels."

"We are aware of that and I know you have to say that."

"You understand."

"What if they want to stay?"

"We'll concern ourselves with that if it arises." Daros unconcerned.

"Will your people," Storaf looked at Estra, Tara then Olsen, "be shadowing us?"

Daros smiled. "No undue influence."

"Well that would settle it then." Storaf was relieved. No complications. "I just hope the DVs stay out if this."

Daros said nothing. Not his department. He was ground control.

"They have to keep out of it."

"Professor Storaf, I'm sure the relevant Domain Lords are aware of the sensitive nature of this excursion. Any DV activity could be detected by the aborigines. That would compromise your teams. Therefore I'm sure the DVs won't be involved." Knowing their military were uplinked to the Orbital.

"I'm glad you're aware."

"This is too important to be manipulated. I understand your concern Professor."

" Well then, I'm off. Thank you again for your help."

"Glad to be of service." Daros replied amiably.

Nervina

Nervina's Brain kicked in as she and Horat entered the campus of Central University. It covered a whole city block. The high rise offices behind them, in front sprawling low rise buildings set amongst small parks giving the area a relaxed feel. Nervina on high alert. Her adrenaline under control, keeping her calm. The sense of anticipation remained. Something was up. Her senses vigilant, acute. She took in everything. The fellow students, support staff, lecturers, she soft scanned them all. Nothing overt. Horat's mind was all excitement. Natural for him. Not enhanced in any way. He was what he was: a Stable Volatile with some natural tendencies. At that very moment her mind switched itself around. Her Primaian self was now contained, functioning as a sub routine. Her other self came out. She was comfortable. Her Brain expanding. Not just that, her thoughts were clearer, there were less of them. The minutiae of the everyday subsided. She felt more herself. It was a good feeling, being in control. The difference remarkable.

Students milled past them as they walked along the broad concourse to the social science block. Nervina remembered where it was. Horat followed hesitatingly a little lost. It was a huge campus. Prima had nothing like it. They both were part of the milieu.

Memory recall. Her Brain revealed a data cache. Prima infiltrating the university. Should she be surprised? After all they were accepted as Primaians. Well Horat was. She not so certain. Query: she a Reganian agent, pretending to be Primaian? If so she had great programming in place. The sensation one of extreme caution. There had to be scanning minds somewhere in this area. Though piqued she held back. No point advertising oneself. The low level noise of the partially externally enhanced Reganian's were not the source. Her Brain had adjusted to that long ago, ever since touch down. Enphased in this world's environment. Whatever was in the background within was out of reach of her curious mind.

They skirted the main administration block heading for the assembly point. Having received the message from professor Storaf to come here for one final lecture prior their departure they dutifully left their run down flat down town. Horat excited, Nervina not. She wanted calm. It flooded through her mind, her head, her Brain. Parts of her not discovered when she was being probed, mindfucked and softscanned. Then her Brain had shrunk itself into a state of non localized being. Diffused itself throughout her mind-body field state. Neat. Undetectable. Simply not there.

Walking along the path, trees around them, a beautiful clear sky, a light breeze, a sunny day. Birds flying about. Change of lectures, more students about, going in all directions. Hurrying tutors. Her legend in place. Research assistant, like Horat. He the potential thinker from some elite family, she the progeny of a Volatile mother and father from a rural backwater.

Horat had gone quiet. He was too excited. Good cover for her. His mind crackling with enlivened motivation. He was looking forward to the adventure. They found the social science building walking into the spacious foyer. Security barely giving them a second glance. A tiny itch in her head. Ah, placid surface scanners in place. Just making sure they were who they were. Still they had to register their arrival. Reganian's could assume any self created persona. No funny business here. You had to be who you were, not who you wanted to be. Intellectual honesty was at stake. It made sense.

A cursory ID tagged check from mildly alert security guards. Three of them. One talking to some student, giving directions, one checking their consoles and one checking them. They verified Horat's true data and just as easily Nervina's false persona. Her Brain was running the show but not directly. Just there in the background, ready to jump into their computers if anything was revealed. She tried not to think if she was Primaian, which she was in her structured shell, or a Reganian pretending to be a Primaian, another shell hovering ready to withdraw..

The processing algorithms were aligning themselves in a certain direction. No clue as to where they, it, herself were heading. But a pathway out of many possibilities opened up. Predetermination in play now. Internal connections bifurcating. She was even more alert now. Horat at ease. After all they were both expected. What could go wrong?

She felt euphoric. As she should. Introspection was self limiting. Give nothing away. Prima's past hovered momentarily, as they were being checked. Taking forever. No it was her Brain working at hyper-speed. The faster one thought the slower time passed. They were cleared, a nod from the officer thanking them for their patience.

They walked towards the stairs as Storaf's office was on the first floor. Horat too rapt up in his thoughts to even talk. Whilst he was excited Nervina's Brain was calculating probabilities at mind warping speed. A programme activated. Having calculated probabilities, her Brain kicked into gear.

As they climbed the stairs Nervina's Brain took over.

"I've got to go to the toilet. The excitement." Was all she said. "You go on ahead. I know where it is."

"Alright."

She would never see him again. Within her mind a metamorphoses was unfolding. Nothing overt, just a subtle shift of attitude. Something decayed within her mind, another programme self deleting. Her perspective broadened out as she turned on the stairs and walked back down.

She was defecting, her Brain leading her out. Horat was in. Her withdrawal she hoped would be put down to nerves. One Primaian who did not make the grade. She just hoped Primaian's were not watching her. She could not ignore that scenario.

Horat was gone. Fact. She was betraying Prima's mission. Fact. Would it reflect on Horat? She hoped not. Horat. Something about him. An infiltrator to be sure. Prima's scout. The folklore. Prima's paranoia that another race had DV capabilities. Not of interest to her programme. Something else but not revealed just yet.

The two security guards were busy with enquiries. The third, the one who had passed them talking to a group of older men. One of the men glanced casually at her, very non challant. Their eyes locked. Stupid of her. She was able to see him without looking directly. Time stopped. His eyes synchronised data collectors. Very enhanced. Implants of the highest order. Boring into her. Being remote scanned. The itch the tell tale sign. The link tenuous for the moment. Her Brain shrivelled, retracted, vanished. A Primaian. Shit. A burst of endomorphic activity. Equilibrium re-established. Cool. Her look insolent. As if she cared.

He seemed prepared. Did he sense her shell like persona? There were several though for the moment she felt herself as Nervina. Reganian dominant. The wrong projection? Was he camouflaged as well? His eyes retracted, going blank. She looked defiantly at him making him out to be some voyeur. Good. She pushed his curiosity back into him. It worked. He did not take her on but there was a hint of defiance there. So was she. Take that. A sneer in his expression, a show of pretentiousness as his gaze retreated. She knew his game, engage her, probe her through her reaction. Careful. Resonant field

scanning capabilities. She held back from calling up an insertion template to cover herself. He would note the change. And arouse his suspicion.

At least his probing had not penetrated very far. Great precognitive reaction. Almost Reganian on her part. She continued down the stairs, past the security desk. The group now back conversing amongst themselves. Not clear yet. Would the security guard lock her in?

She continued walking with an air of disdain.

"Miss." She knew it. One of them was not going to let all this go at that. She kept on walking. He could be talking to anybody. They had her name after all. Near the first set of glass doors. People going in all directions around her. Natural cover.

"Miss." More insistent, bellicose almost. She sensed his presence. Through the first partition. Her Brain defused their lock-on mechanisms. A student gave her a smile. On Prima a crowd would have obeyed and stopped her. Not on this planet. Ah Volatiles, so wonderfully indifferent to order. The student let her pass as did the others.

"Stop." The voice insistent. Through the second glass partition. They all made way for her, parting in front of her. He was getting closer, hurrying.

"Stop right there." Came the command. She meandered through the last partition walking slowly onto the concourse. She heard his footsteps following her.

It was the same man. Indeterminate age, faceless, expressionless yet the eyes said it all. Intent. Focussed which her Brain ignored. His authoritative look meant nothing to her.

"I must ask you to step inside." Obviously no helpers out here. A small crowd gathered, slightly interested, mainly students keeping their distance whilst forming a protective cordon around her. They were relaxed, some amused others watching the man with a hint of defiance. Interesting. One in the crowd observing her. A young woman looking like a student. Then again maybe not.

Nervina turned. "You always like this? Harassing women?" for good measure. Her eyes fuming. The group got the hint. A ripple of laughter, bonded.

"I have reason to believe you are engaged in activities detrimental to the safety of the institution." Slight surprise all around. More became interested, some worried, others defiant. Through the glass partition the three security guards were very busy. The group he belonged to dissipated. Spreading out.

"It's called thinking." Nervina retorted calmly. "And only detrimental to the mentally challenged." Chuckles from the group. The young woman still focused on her.

Her Brain calculated flexing its architectural pathways. One, two hostiles plus the security guards who remained at their post. Two more hostiles fanning out.

Had the security check come up with something? Was Prima recalling her? Uncertainty.

"So indulge me." As her Brain started figuring out an exit strategy.

"There is a glitch we would like to clear up."

"The only glitch is your implants misfiring, again." As if he was misprogrammed.

"As are you friends out here." She guessed correctly. More amusement from the crowd. Some were drifting off, but not the young woman. She might be running this scenario. Nervina observing the minders.

"If you would be so kind." He appealed to her.

"I'm leaving. All I did was escort my friend to his interview with Professor Storaf. Check with him. And tell him I'm not joining him either. As to any detriment I caused, that's in your dysfunctional software." All she could think of was that her Brain might have deleted or reconfigured her persona. Something must have showed up.

Her Brain sparkling. She turned, saw her chameleon pattern go active. And moved with hyper speed. As he was using enhancements, she hacked his system. Now he would not even get a description of her out, visuals would be a mess. She was wearing various clothes which changed rapidly. No one would remember what she actually looked like. Boosted physically she melted through the small group, those around her nearly stationary, she a blur. Down the concourse and out onto the street. Catching a tram or taxi would only confine her. She had to stay in the open. As to what was really going on she had no clue.

Her Brain had taken over. Obviously Storaf's mission was not her concern. Being with him would not further any aims implanted in her. It might even be the opposite. Storaf's mission contaminated, wrong. A dead end, or just a non-end. Useless in itself. Or Storaf working for the Primaian's, or one of his team was. That might blow her cover. Too many probabilities, too many uncertainties, too many opportunities for Storaf to bifurcate at nodal vortices of the space-framed continuum whose quantum states could be easily configured. That meant the actualisation of realities which might complicate Nervina's mission. Whatever that was. She had no idea for suchlike data her Brain held was detained for now. Either way her Brain insisted she leave.

Her camouflage was still in chameleon mode. Long enough to be seen by enhanced implants the locals possessed, visual scanners uploading her several images. She changed again. Enough to sow confusion into whoever took an interest in her. Her

appearance mutating. Covers came and went with lightning speed. Now this gear, now those clothes, shoes, all run by her chameleon programme. Neat. Fast. Effective.

Walking not running. Her Brain uploaded a blank personality, it ran a new set of thoughts. Rampant. Images of another childhood on Regum. A semi desert scene, graceful floating airships, huge bulbous massive constructions, power assisted cruising above the brown landscape. Then isolation.

Her Brain in charge. She was on the main thoroughfare leading from CU back into the CBD. Glittering skyscrapers, wrapped in solar panels that shifted their axis relative to the position of the sun. People about, electric cars hummed by, trams rattled down the street, delivery trucks, noisy petrol engine bikes their helmeted riders looking sleek on designer machines. Spindly lampposts holding the overhead wires for the trams.

No one followed her. No one paid any attention, no pursuit either. If there was security or police around they were not present. Maybe they wanted to see where she went. Was this part of the plan? She sighed. She'd gone over that already. A pawn in a triple oriented set of game plans. Prima, where she was supposed to be from, not quite believing it except for the fact that's where it all began. Regum maybe given the interest of Storaf. Regum's Web could become real, inserting itself into any open sourced head, hers included which might be the actual reality. Their version of mindfucking. Or if Storaf was working for himself, a black op whose aims were closed off to her could be pulling the strings.

Her Brain sent out data tendrils into the Web. She had left some discordant patterns when going into chameleon mode at CU. They expanded like ripples in a pond around most data realms. Barely disturbing the overall equilibrium of the master systems. Not one but many. Clever. Crash proof.

The sense of abandonment remained. She an Isolate. Like most locals. So that's what it felt like. Nervina blending in, or rather blending out with the rest around her. Self absorbed. Her Brain let its tendriled data antennae dissipate, dissolve then vanish, absorbed as surplus energy in the vast realm of their cyberspace. Her individuality reasserted itself. The balance of being there and not there in equilibrium. Like a pixel amongst millions to the remote external sensory devices there not to keep an eye on the populace but to facilitate entry into the Web. The very reverse of Prima's systems.

Keep moving for now. The curious young woman was nowhere around. The traffic cleared and she crossed the wide sunlit boulevard. The skyscrapers were set back, huge pencil shaped structures maximising light to reach the ground, surrounded by spacious plazas dotted with cafés, bars, restaurants, eateries, park benches under broad trees.

The sky clear the sun hidden behind the office blocks which doubled as apartments as well. On the ground bookshops, amazing for this digital society, computer shops, data specialists, fashion and jewellery stores, small supermarkets, bottle shops. Wonderfully disorganised. A mosaic which would confuse any Primaian. Not her. So what was she? Not that again.

Time to find out if she was clear. She headed for one of the open plaza's found some tables spilling out around a café sat down and watched the passers by. A young waiter appeared so quietly she was almost startled.

"The biggest coffee you have, milk, three sugars."

"Fine." And vanished into the café. One or two patrons looked at her momentarily then returned to their own world.

Her Brain crackling. The feeling of abandonment gone. The waiter returned with a huge cup and saucer.

"Pay now?"

"When you're ready."

Time to take stock. No one had sat near her since she came. The jump suit looked like a two piece business outfit. Not too assertive. She had various credit and charge cards so she was not stranded. Horat was though. Or did he make it? Did Storaf care she bailed out? Maybe for twenty seconds. Surely he would have a shortlist from where he could find someone to replace her. Lets hope he would not panic. From Prima's view she had broken ranks. Or was this preordained? Then why wait until entering CU? Prima wanted to know what Regum knew regarding their folklore. After their psychological states. Were they current or vanished in the mists of time. Relevant or irrelevant? She watched everybody go about their business. Individuals creating a wholeness Prima found perplexing. Good. Let them stew on that. No group minds here. Maybe in the Web but certainly not in reality. Preferring fractured multi level scenarios.

Out of chaos order. That was Regum. No social superstructure like on Prima. She sipped her coffee. It was good. Just right. People here were free to move about anywhere, everywhere. No limitations, no constraints, no overt management. If Prima ever mastered AI systems, modelled on their resonant states they would screw down the whole population in perpetuity. Heck they were screwed down already.

Around her a feeling of happiness, of freedom. Being Volatile certainly had its advantages. No absolutes. She saw two priests moving self consciously through the passers by. Handing out leaflets, or rather trying to. No one cared. They knew the

message and were disinterested. How can one save a soul? A ridiculous precept. The soul saved itself. She hoped they would not come her way.

She drained her coffee, rose walked into the dark interior of the café, pulled out at random a credit card and paid. The waiter smiled at her. Not a bad looking young man now her eyes had adjusted. Interested in a detached sort of way. She was tempted to say something but nothing came to her. The card was returned by the waitress behind the counter, wishing her a pleasant day. She nodded at both of them knowing if they were trailing her they would need a whole team.

She kept her Brain in check. No softscanning. Even that would give her away. A part of her inner self unravelling. One of her multiple personas, she was not even aware there were so many, was dissipating, like morning mist with the rising sun. Lighter. The decision to walk out of CU and Horat with the vanished persona the right course of action.

Moving in the general direction of her flat. See if it was under observation, remote or otherwise. Be interesting to find out. Her Brain accepted her decision. Was she going over to the enemy? Depending on who you asked. Well at least with one persona scrubbed so went the data with it. Home. It made her feel warm, she belonged here. Another persona in place. The transition smooth. Out of reach of Prima's agents. That past erased.

People glid past her. What was so threatening about Regum anyway? Their individuality? Their AI capabilities? The Web? The contaminated universe? Everything? Enough to keep them busy. The Reganians did not care. She was at the corner store of the block where the flat was. She turned around but no one of particular interest tried to blend in. No sudden stopping of other passers by.

She walked into the old low rise building. No lifts, just stairs. Familiarity.

A skeleton of a distraught looking middle aged man appeared on the ground floor as she entered. He was staring at her. Her Brain recoiled. His steel grey eyes irradiated his confused state of mind. Web burn out. He held a little black box. A basic scanner.

"Your toy?" Nervina said disarmingly. Surely he was not a Primaian agent. Maybe he was. They were desperate given what little headway they made on this planet.

"You. I know all about you. A reconfigured Volatile. Only Primaians are that."

She hid her surprise, her inner systems dampening her reaction.

"If you say so."

Not what he expected.

"I got your resonance." he looked triumphant. Shit, he was one of them.

"Keeping you busy then, scanning, illegally I may add other people."

"You're an infiltrator. Polluting everybody you come in contact with."

He was crazy, his clothes a little dishevelled, in need of cleaning.

"Found another alien from Prima Nathan?" the landlady appeared talking in a motherly fashion. So he was crazy, or acting it. Her Brain remained mute.

"It's right here. See? Winking red." He said showing them his black box with its set of lights. One winking red.

"Make it yourself or bought it off some dodgy character?" Nervina mocked.

"It's genuine." Pulling the scanner back thinking Nervina was going to take it from him.

"Well you'd better tell the authorities then. I'm sure they are just waiting for you to come to them with this surprise." Nervina countered.

"Do not mock. We are being infiltrated. You are possessed."

She felt better. He was passionate in his assertion.

"So report me. I just hope your data base makes sense to them." The landlady amused by this exchange. She winked at Nervina.

"It's got a few of the enemy. They'll be glad I'm helping them."

"You're red light's having some sort of spasm." The two women looked at the flickering red light, it died. "Run out of steam?" Nervina smiled.

"She did it. see?"

"Nathan," the landlady said patiently, humouring him, "we all value your vigilance but if you harass my tenants, or tamper with their data bases or accuse them of being aliens simply because of your third rate toy then I will do something to have you screened."

He pocketed his mute black box in his baggy coat, sniffed, glared at Nervina and shambled off into the street.

"Nathan. Too much time in the Web. It gets to some. Can't tell which reality is what. Sad really." The pleasantly plump landlady said. The damp smell of cooking in the hallway.

"So one of the tenants."

"Want to make sure he didn't break into your flat?"

"Please."

"Actually it's gone to his head. The previous manager was a Primaian agent. Caught out by Nathan. That was two years ago. You remember?"

She did not but her Brain extracted the data from the Web. Sure enough, another gaunt looking local had been engaged by the Primaians to look out for potential targets.

"That man got a bit cocky, started harassing people until Nathan fooled him with is black box. The man caved in and was swiftly removed. Since then Nathan has been on the hunt for others." She called over her shoulder as they tramped up the stairs.

"I was out of town then. Not in the Web either. On holiday back at the outback."

"That's right, you were saying, I remember it now. Took time off uni. Stress no doubt."

"Don't remind me."

"In your final year now?"

"Well, sort of." Which was somewhat the truth.

Nervina took out her card and unlocked the door. The landlady let her pass then entered behind her, staying near the door. Someone had been in here. The clutter looked different. Everything was almost in its place. The ancient processor moved slightly, for she kept it flush to the edge of the solid wooden table she used. The machine still warm from usage. The dusty curtains wafted in the slight breeze at the open window. She smelt air freshener. She never used it. Even to remove cooking smells. So why use air freshener? Unless to cover up any molecular trails from one's breath. Nathan?

She decided to keep that to herself. She did not want to attract any attention, even by considerate authorities. Too much exposure.

"Tea?"

"Why thank you." Martha said.

"Take a seat."

Martha sat on the saggy lounge. The kitchen was old world. Manual. She lit the gas stove, boiled the water, poured it into the pot, took out milk and sugar and placed it on the low table.

"I don't use air freshener."

"That Nathan. Want it reported?"

Nervina walked around the flat. Nothing taken. She had a quick look at the files on her work table, Horat had his own, all there but all slightly disturbed. Smeared dust trails. Not very efficient, unless they wanted it known they paid a visit.

"Saw no one else?" Nervina asked.

"No love."

Nervina poured, Martha thanked her,

"Tell me about Nathan."

"He's a little, err..."

"Volatile?"

Martha seemed uncomfortable.

"That would be extreme."

"He might be Primaian."

"Wouldn't make sense. He caught the manager out."

"Set up. Cover. Agents are disposable."

"How would you know?" Martha asked out of curiosity.

"Playing in the Web."

"Of course. But is real life like that? Agents and all?"

"I've studied game theory. Theoretically yes."

"Well I'm sure you know what you're talking about." And sipped her tea, smiling sweetly at Nervina. "So," putting the cup down, "you gonna report him?"

"Nah. Waste of time. At least you know. No sensors in the stairwell?"

"There are, but, they're playing up. Must remember to get that fixed."

That was lucky. Nervina realised she could not remain here. Nathan or no Nathan. Someone had a look-see. Then Martha continued: "I'm glad you're not. I'm not stopping you, don't get me wrong. You have every right. He is a terrible busy body, but he keeps the riff raff out."

"You boosted?" Nervina asked. Her mind was tickling.

"For my medical condition love. It's ancient. Should get it updated. Why you feel it?"

Nervina nodded. Everybody was configured in some way on Regum.

"I sometimes get impressions of people, their state of mind. It detects but can't decipher much. More a fuzzy glow. It gets triggered by Nathan's black box. He must have got it working again. A bit annoying I know." Martha placated.

Was she true or was her basic implant a cover?

"Don't worry about Nathan's black box. As useful as his willy." They both laughed. "All he picks up is static frequencies. Maybe a music feed but it's practically neutered."

"Like his brain I hope."

"Nathan I think is some sort of look out. For whom I don't know. Don't want to. He might be black market. Maybe he does work for Prima. Though why they'd pick him being so dumb. Being so suspicious does not exactly make him inconspicuous. Still he pays the rent. Trouble is he's so borderline there is little point in treating him. He's harmless really."

That might be true. Nervina wondered if through Nathan Martha kept her cover. Medical implants were never out of date. And since everything on Regum was state of the art what was she doing with crappy implants? Unless it was a cover for her modifications. She remained wary.

Her Brain checked the processor. Though of an ancient make it contained a finely inner set of multiple light processors electronically configuring on the sub molecular level in a fuzzy quantum field. The information Nervina processed, encrypted in photon fields looked like normal light fields encased capsules activated by her aligned Brain. No one else could get in. Unless they hacked her Brain. The quantum probability fields in her head, accessed through her wristband had a basic access template powered by her body and her movements. The computer was secure but Martha's implant was a cloaking device. She did not explore that any further. Somehow she had to draw Martha out. Find the real persona.

Martha rose, looked for some paper on Nervina's desk and wrote something down, then handed the note to her. It stated that surveillance systems were impossible to detect, invasive passive snoopers possible, then Nathan? On the sheet of paper.

"That might explain the air freshener."

"Your lousy cooking?" Martha laughed.

"His clothes smell. Even that could be a cloak."

"Not could Nervina is. Hm, he's becoming interesting."

"For whom though?"

"And why you?"

Indeed. Why me?

"Politics bore me. I got no opinion on anything." Nervina explained.

"Then Nathan's out on a limb. Pesky little runt isn't he?"

Nervina's Brain tickled. She did not follow it up. She doubted it was Martha's old booster. Someone was remote scanning them. Maybe Nathan was targeting Martha and through Martha her. Nothing was impossible. Only one way to find out. Keep Martha talking. It was as if they were both circling each other. Both women sensed the other was more than she let out. From what little Nervina actually knew, in real time, of Regum was facile. Her Brain kept her up to date as need-to-know arose. Even when paying by credit card at the café her inbuilt chip downloaded as much as possible meaning security codes in case she needed to consolidate her credit history. The legend of her being a student was tenuous at best. Apart from her persona deposited in CU's data system being a mature student, for Horat, Horat her one time lover, as a Primaian post-grad, she

was barely present. Now that she had chickened out Storaf hopefully would loose interest in her. A Primaian freak out not going into the Outlands was not so unusual. That she had not run back for cover at their embassy or mission centres might let her get away with disappearing. She certainly could not stay here. Martha might be the sweet woman she was but something told her she was more than that. Going into her head though was out of the question. So verbal banter was all there was to it for the moment. Disassociations. Part of the unravelling of her previous persona.

"Let's assume Nathan scanned me. Well I am from Prima."

Martha tried to look surprised. Maybe other Primaian's had stayed here. Or in flats similar to this one. It was the student quarter after all. And not that many students. Most Reganian's learnt on-line, acquiring knowledge through the Web. How they made their way after was up to them. They might not be accredited, the only difference in their qualifications.

"Then he was right. Yet you're different love. Less intense, less fixated with order." Martha surveying the messy flat. Files everywhere, books stacked on the floor, papers strewn all over the two desks. Two ancient processors.

"Oh yes, order. So what could he do? I'm on record with the authorities. Even so, we're supposed to be a sort of commonwealth."

"Is that so?"

"Legally yes. Prima has yet to accept Regum as being independent. They want unity. Well I got no idea regarding Nathan and his type. Probably pimping for the authorities."

"I like that." Martha beamed, looking at her empty cup.

"More tea?"

"Yes please."

Nervina poured. As Martha sipped her tea Nervina activated her Brain in broad field oriented secure search mode. Anything relevant would be condensed into compressed data. The room turned midnight blue. No bugs. The walls transparent, just wiring. Kitchen and bathroom clear. At the entrance a thin red line along the bottom of the door. A passive/active trip sequencer, mute transmitter sending any activity to whoever. All the flats had one as she searched the building, front door included. Could be standard fixture. Basic data collection, more like a traffic count. Running off the power grid. She was tempted to scan Martha's flat which might alert her to Nervina's intrusion. So the population was being flagged. The system crude, or pretended to be.

She switched off, the dark blue glow vanished, sunlight flooded through the two windows. Keep intruders tagged Nervina reasoned.

"You had a look didn't you."

"How'd you know."

"Implant. Gotta make sure you Primaian's don't get ahead of yourselves."

"So you knew."

"The concierges in our buildings are alert, after someone discovered an agent operating out another block of flats. He was recruiting, not very good either. Advertising himself. You an agent too?" Martha said without rancour. Reganian's were used to Primaian activity in the field. Using others, not just priests.

"Not exactly." Nervina momentarily had no clue just what her status was. Double agent? One of Storaf's little helpers? Working for whom exactly. She didn't know. Barely understood what that had been all about.

"Well we know Nathan was here. Maybe. Someone was."

"The air freshener. So much for that trick."

"Maybe Nathan let somebody else in. Alerted them."

"It might just be routine Nervina. Given your status."

"I guess you're right." She gave up for now. One thing was certain. She would have to play it safe. Her Brain remained mute. She felt completely blank.

"What does your planet want?"

Good question. Easy answer. Dominance.

"I don't know."

"Surely..."

"You don't know Prima. No one is told anything."

She seemed to accept that. "And?"

"Well, I'm supposed to be with a research team going into the backwoods. Studying your folklore."

"Really?"

"Aha. Accept I changed my mind. Gut feeling. My friend seems OK with that. And that's about it Martha." What she did not say was how estranged they had become once here. Horat was more focussed on their mission and more distant from her. Their love making perfunctionary. She sensed the emotional bond severed as he threw himself into the mission. She realised he was totally in. She was not. She was meant for something else, but what?

"What are you going to do now then?"

"I don't know. I will have to think about it. If I suddenly vanish then they will have taken me into custody. They don't like individual decisions."

"Defecting?"

Nervina was surprised at how astute Martha was.

"Might have to. Can't go back. A loose canon. They'll find out soon enough. Might have already." It occurred to her she should get into Horat's head. But that might complicate things. Better not being there at all. Less is more. "Might get myself unprogrammed, become the real me."

"You would have to turn yourself in. Somehow that disturbs you."

"Not an easy decision."

"I can sympathise with you there. Must be a terrible burden." Martha said sympathetically.

"Well I don't feel I have an affinity with Prima anymore."

"Homeless." Her eyes soft.

"In a way. But free Martha, free."

"If you do leave of your own accord what will you do?"

"What can I do? Neutralise Nathan?"

"Oh him. He would be suspicious. But if he doesn't know where you are, unless he can tag you then you would be free. Depends what's in your head."

"Oh?"

"Meaning Nervina if your people send out a search signal. Track you. I'm sure you've got something embedded. If you'd remove that you could disappear."

"I'll have to think about it."

"If you stay they'll find you. Or our end. What a game all this is."

"Isn't it. Power power power." Power surge. Covered. In the building. How had that got past her Brain. Had Martha kept her talking to get her cornered? She seemed unaffected. No tell tale activity that end.

Cornered. Nathan entered the room, cocksure of himself. Another shape at the door. Non focused. Staying clear of her head. Escape was not impossible. Martha rose. Good cover.

In a flash she pushed Martha towards Nathan. Unexpected she lost her balance. Nathan tried to move sideways and in that one moment she darted past Martha and whacked Nathan in his shoulder. His other hand held a dart gun. The pneumatic hiss of air as the dart missed her. His cover came in, another dart gun ready, pulling the trigger. The needle hit her midriff. It was stopped at the second layer of her protective clothing,

the polymesh coalesced at the singular point of impact, stopping further penetration. Outside a car was waiting with one driver. Thank you Brain. She faked being hit, going wobbly at the knees. Nathan was back on his feet and his goon was reaching out to catch her. At that instant she kicked him in the knees, arching sideways as her leg stretched out. She felt bone shatter, a scream of pain as Nathan shot off another dark at her head. But by then she was bounding down the stairs. Her Brain was working so fast now time slowed. The driver had been alerted at Nervina's momentary escape. Her Brain sent an EM signal of white noise, obliterating any contact between the three of them. The driver was not about to barge through the front door, but was covering it. The next shot Nervina reasoned would be at her head. She crashed into Martha's downstairs flat. On the landing pounding footsteps. She locked Martha's door. Not a moment to loose. She calculated the distance to the window and with a running jump burst through the old glass, feet first, arms extended, rolled over, then jumped sideways at the startled driver. Speed enhanced, adrenaline pumping, muscles taut she pushed the driver forwards, who half turned missed his shot.

She jumped into the car, engine a still running. Her Brain hacked into the system, then engaging drive speeding off down the road. Given Reganian's used mass transit the road was fairly empty of traffic. The car had smart sensors checking out her surroundings. Luckily the car's inbuilt systems was not configured to any specific driver. The scanners, the processors, its data domain basic. So Nathan and his stooges were not Reganian. Thus the cars low profile. Most of the gear had to be black market, second hand, probably surplus. Easily taken over. Somebody was trying to regain control of her. No such luck. Her Brain was blocking their signals to disable the car's somewhat spluttering smart system. So far so good.

Now what? She could go back to the flat. The last place they'd look. It would mean disabling whatever boosted gear Nathan used. Time to keep a low profile. Her Brain shrank back into its secure retreat. Running this vehicle was easy for it. The stuff available to Primaian's was not even cutting edge.

No pursuit noted. Then again they could be using plain vehicles, completely manual. No way tracing that. But its occupants could still be read by her Brain. Their intent would give them away. As to her intent, her nano inserts were calming her down. Just another driver. She kept herself on alert.

The first place they might look for her was right where she was. Yet Nathan never had the capabilities to get a fix on her persona. Unless he was remarkably boosted. Primaian's abhorred artificial reconfigurations. But that was on Prima. Recruited

Reganian's might be far more capable. An alert of some sort ought to have been sent out. She detected nothing.

Of course! They were interested where she would run to. Little did they know that she was unaligned in any way. Her status was low key bottom of the chain. If there was any surveillance it was face to face. She could double back to the uni. Trouble was Storaf. He was most likely a double agent if he was smart. Solely backing Prima overtly would not gain him any friends. Still security at CU had been interested in her. Unless she had broken with some protocol. Prima did not like loose ends. Which meant they were aware of her going solitary. There was only one thing for her. She would give herself up to Reganian security. Get protection. She hoped they would not get wind of her defection.

By now the embassy would know of her rogue state. Unless Nathan worked not for Prima but Regum, or both. But then his tools would not have been that crude. She cruised downtown, turning left here, right there. No tags after her position. This city was huge. Everywhere block after block of skyscrapers. It made Prima's cities look not merely provincial but positively back dated. Easier to get lost, to loose oneself here.

She got her Brain to start searching for Regum's security agency. It accessed the public data base. Unlike on Prima Regum had several. Public security, the police. A whole plethora of private agencies. Data security, private and public property security, military security dispersed among the various arms. Local militia, on ground, naval, terrestrial, public flight, their air force and space. Then there was counter intelligence. No search results. Not that she expected that to be in the public register. Maybe off world diplomatic immunity. What she was really trying to find was whoever watched Primaians. She accessed the wanted lists. There had to be a register somewhere dealing with her kind. Nothing official. The trouble was she did not know what her true status was. Publicly she was a research student.

Around a block. She was using random sequencing to go in no particular direction. Ahead a parking station. Out of its building snaked monorails whisking passengers through the city. Trams on the ground. She drove in, a quick scan then up several levels until she found a place to park. She switched off the engine keeping the inbuilt computers on line. And had an idea. Some sort of surveillance would be in place at the Primaian embassy. That should do the trick. Her Brain using the public information base. Ah yes, diplomatic security. It existed but was not run by an agency as such. Perfect.

Now for the camouflage. She uploaded one of her persona's, as the student into its memory. If they were looking for her she would be 'here'. Pretending to make

contact. Now to choose a second cover. Public security had the most open files. Minor infractions of the law, mainly private data theft, data manipulation and quite a few outright acts of burglary. Mainly computers, external hook ups, the odd military theft of advanced gear. So a criminal sub culture existed on Regum. Then there was personal hacking, downright individual targeted attacks. Ah the games they played in the Web. Well Nathan had tried to attack her. It might be best going for the public police. Then she would ask for protection. But how would they react? The embassy ask for her back? She knew she had to defect. And Reganian's were space travellers. Going off world might work. But there Prima had its SpaceKorps. They would be after her. But first they had to find her. Primaians though were not known for space exploration. She saw a way out.

Her Brain itched. Looking, searching for her. She avoided a trace back. Could be an accidental intrusion by cyber thugs. Random targeting, hijacking personas for dubious ends. Use surrogates for some nefarious deed. She charged up her Brain, used the computer of the car as the nodal point and sent out an EM hit. White noise. Her Brain struck back. The itch stopped. Well that was easier than expected. She didn't bother with the trace.

She got out the car, made her way down stairs, not trusting the lifts and waited on the platform for the next mono rail to come through. She knew where the police station was. Whilst waiting she watched those around her. No one paid any particular attention. But that meant nothing. No tell tale itch. Whoever had tried had a mess on their hands. If they had smart gear they could trace the source of the attack, the car. Her persona there in place.

A train pulled into the station. She got on. Only two stops to the nearest police station. The train pulled out into bright sunlight. People below going about their business. Trams trundled down the broad streets, a few cars, delivery trucks, taxis.

She kept the image of helplessness in focus. Was that her Brain's doing to be extricated? She kept this image in place. Into another high rise building. A multilevel department store and shopping centre. The goods on display in the brightly lit shops looked fascinating. Nothing like it on Prima. Primitive stalls at best. Some shops in the holy city for the elite but nothing like this for the masses. People got on and off. No contact yet. The train moved out, exited the building, back into sunshine, along the side of an office block. People at computers working away at their own business. Some talking, others sitting around tables with their light screens in front of them. Activity everywhere. How could Prima compete with all this?

The next station approached. It stopped in an outside tube like structure. There at the platform was the police station. She hoped the alert officers there would send someone from their protective authorities to fetch her. And by going public it would be harder for Prima to extricate her.

Having recessed her Brain, after all Primaian's were primitive compared to Reganians, Nervina took a deep breath and walked into the police station. She decided to be up front, tell all. Not that there was that much to tell. A student seeking diplomatic asylum, being harassed by Nathan and his goons. That was the crime she would use as a lever to tilt things her way.

The duty officer listened patiently. He got out a hand sized computer, got her to put her thumb on it, registering her DNA, her persona which Nervina decided would be her self. Minus her Brain. He waited a moment. Nothing untoward came up. No criminal record, his first concern. He gave her a momentary smile, as officers went about their work. Clearing the first hurdle he called up a senior officer who took her into the station to an interview room.

"Is this room secure?" was the first question Nervina asked.

"You're in a police station." The middle aged man, dressed in an officer's uniform replied.

"I mean electronically."

"Put it this way, from what you told the officer on duty this Nathan has scanning capabilities. Infringing one's personal freedom outside the Web is illegal. So you have done the right thing in reporting this alleged incident to us."

"My real concern is protection. I don't want to go back. Don't forget the goon squad"

"To where?"

"Prima."

"Yes." He said slowly. "I have informed my superiors regarding your delicate position. You're seeking asylum."

"I am."

"From what we know, your status is Primaian. As such your people have a right to have access to you. Your entry data has you down as a research student at CU with a Professor Storaf. You never kept your appointment." Nothing concerning the way she left.

"Yes, well. More instinct. Nothing I can prove, but I think Storaf is working for the other side. No proof. But my main concern is being abducted."

"They have a right to retrieve you."

"I'd rather not."

"Why, are you in trouble?" the classic policeman's logic. See what one had to hide.

"You know what would happen to me if I returned?"

"I have no idea."

"BrainDraining. It's criminal. They suck out your memories, your whole self. Then they reconfigure you into a zombie."

"I see. And you say this is a certainty?"

"Any deviation officer is suspect. Non conformity is a crime on our planet. Non belief in their religion is enough to have one committed to an asylum."

"Is it?" he looked intrigued.

"It is. The whole planet is one vast prison, unless you belong to the elite."

"Which you are?"

"I was dumped here. My last chance to redeem myself." And she explained how her love affair had constituted a crime. Mingling with a different resonant type. Psychological cross infection. Lowering, corrupting the other.

"Remarkable." He answered diplomatically. "I have notified our security people who are responsible for off world situations. They of course will have more questions for you."

"I'm glad. Tell me are there many like me?"

"As in?"

"Defectors."

"Oh some of you do go missing, rare though. They usually don't last, get in all sorts of trouble. Mainly theft as they have no way of surviving here. Our crime syndicates usually try to recruit them. But they get caught soon enough. We send them back. So in a way you Nervina have done the right thing in coming to us."

"But you're not going to send me back I hope."

"Well the allegations you made warrant investigation. So for now you are of interest to us."

"If it checks out, what then?"

"If your allegations bear out there will be a trial."

"Trial?" Nervina guessed the concept but did not fully understand what he meant. Trials did not exist on Prima. Guilt in breaking any law was automatic, as was the punishment. Explanations were useless.

"That bother you?"

She told him how things worked on Prima. He was aghast.

"So from their point of view you are guilty in having walked out of CU?"

Nervina nodded. "Not only that but this Nathan would get a recommendation. Of course me slipping away, oh yes, there's a car at the parking station to confuse them. You might be interested in that. It's got some make shift gear in it. Could be hot."

He tapped something into his hand held computer and asked her to describe it. She did. But she could not remember the number plate. Then she realised she still had her persona in place. That would reveal some of her capabilities. Yet she dared not use her Brain here. It depended on how the interview went with the next echelon.

She was brought a cup of tea while they waited.

Two suits arrived. They looked pleasant enough. She hoped they were not sent from Prima's embassy.

"We'll take over commander." He gave them his computer. They uplinked it to their arms, then when done asked Nervina to come with them.

"Err, can I have some sort of proof that you are who you say you are? Not that you have."

They seemed a little miffed but took out their smart cards.

"Can you clear that through the commander's computer?"

"No. We don't want to leave a trace Nervina."

"So how will I know? How do I know the embassy has not put out a recall?"

"You are worried."

"Ask the commander what I told him how my kind are treated upon returning."

"We have your statement. If you want you can connect to our office."

"Well even that could be bogus."

"It could at that." One of them replied. "Put it this way, you are a rarity. Primaians usually try to avoid the authorities. Must have something to do with your planet. And since you requested asylum, which has been noted, entered, filed you can request our presence should your people wish to see you. So far no such request has been lodged."

"Not even by Storaf?"

"We're checking CU out. He's not overly concerned. Probably got other candidates on stand by. Plus if you say he might be linked to your embassy the last thing he would want to do is advertise that fact."

"Hm, makes sense. Well, I'm yours then." She brightened. She decided to risk a soft scan. It would be safer here than outside. Her Brain reluctant, having been in

hibernation but performed its duty. It was a flash scan. They checked out in so far as being Reganian.

"Whoa." One of them said as her Brain felt their firewalls replicated a microsecond after her flash scan. "You do that?"

"Do what?"

"Never mind."

Nervina knew that as their reactions had been defensive, and by now the source self deleted they could not trace this back to her. She hoped they would think it might be the Primaian embassy staff searching for her.

"Right young lady. This is how it works. We interview you. If we feel you have a case, then we can offer you protection. Make you an honorary citizen. A makeshift status, a temporal diplomatic solution. Then you have the right to refuse to see any of your people. If however we find any discrepancies, any previous convictions, any serious legal infringements on your planet, depending on the nature of that supposed infringement or any others committed on our planet than that protection is revoked automatically and instantly."

"What about the theft of the car?"

"Given those circumstances I am sure our superiors will take that into consideration."

"Not absolved yet."

"Pending."

"Well it's better than nothing. I am in your protective custody then?"

"You are. When you're ready."

"Ready and willing."

"Right. Commander." And he handed back his computer. "She's ours now. As to Nathan's alleged breaches, we'll sort that out. Depending on this young lady's status you may not be able to charge him directly. Not that we don't want to see justice done, but given the delicacy of the situation it's best there is less than more exposure. You understand."

"I do."

"Fine, that's settled then. Thank you of course for your cooperation. Not that it's on file."

"Glad to be of service. Nervina, you coming to us is appreciated, you have done the right thing." The other said.

"My intentions all along commander."

"Good luck with your application. You're reporting of the alleged crime committed by Nathan will help you." The policeman engaging.

"Every little bit counts."

"It does. Good bye then."

"Thank you for all you have done."

In an unmarked car one of her protectors told her to put on a hood.

"It's for your protection and ours." And handed her a beanie. "It acts as a cloaking device to contain your resonance. Furthermore we don't want them to know where you are. Retro hacking, digging into your memory. Any snippet of information is useful to them." Without elucidating who the 'them' was.

She was tempted to activate her uploaded bag of surprises. Could be easily done. But then she would be even of greater interest to them. She was thankful for what they were doing, looking after her rather than merely dealing with her as they would with any other citizen, due to Nathan's infraction. Taking him in, charge him and await the trial was too public. That's how one of the suits explained her situation.

"I hope your temporary removal is not going to bother you unduly. We know so little about your kind."

The car moved out, smooth motor, powerful in its effortless cruise down the road.

"What happens if the embassy makes enquiries?"

"Neither confirm nor deny is the procedure but in your case, given the interest shown the moment you walked out of CU we will simply deny your existence. Something like, 'we'll make enquires', get as much out of them as possible regarding your status and pretend the police are keeping a look out."

"What if they dig into police files?"

"You sure you're a student?" he asked lightly as they both sat in the rear of the car. Outside normalcy.

"Was."

"True. So you're not going back to either CU, Prima or your studies? We could use you. There is so much we don't know. Now," his voice changed, becoming focussed, "there will be some experts who will want to question you. I hope you will cooperate."

"The price of protection."

"No not really. As I said, we know nothing of your kind or you." Which was not the complete truth. Counter intelligence was aware of Prima's use of students to get knowledge about Reganian psychology, methodology of mental applications, intuitive

cognitive attitudes, state of research, levels of advanced high tech developments, scientific approaches to the cosmos. It always came back to that. The Primaiaans were obsessed with the universe.

The car changed direction several times the driver making sure they weren't being followed. Finally they arrived at their destination. They stopped engine idling, waiting, watching, searching for any undue interest shown in their arrival. When clear they led her, through a gate, up a gravel path and into a suburban house. They removed her headcover. She was in a living room, sparsely furnished. A couple of scenic pictures on the wall, a settee, a couple of armchairs, low table, wooden floor, drawn curtains made of some polymer that would block snoopers trying to gain access. Nervina assumed the house was wired to the hilt.

They showed her around. Kitchen, two bedrooms, one for her, one for the watchers, one room secured with a thick metal door even though the thin wood panelling over it gave the impression of just another room, probably their control centre. The pictures on the living room wall high density surveillance.

For the next few days, a studious looking man, in his sixties gently talked with her. She knew it was an interrogation but he lead his enquiries more like a conversation. Her past, of which she knew little. Born in some distant province, unremarkable parents, an aptitude for analytical thinking and whisked away by the priests into a special seminary at the nearest provincial town. There she realised there was so much more to reality than the placid life of an agrarian village. Workshops, small factories, and for the first time she saw horseless carriages. More tests and after a year off to the Holy City. Having a surprising resonance, extremely tight for a Volatile she and her kind were sent to a college of advanced education. By accepting this learning curve it was made clear to her that her past was over. She belonged to the elite. It all tumbled out of her Brain at the right moments, triggered by the requisite questions, her legend securely in place. To her mind it all was real enough with her feeling no similitude with that embedded cover. Given the students, segregated by their inherent resonant states, they were allowed the freedom of the City. She met Horat. And immediately had a crush on him. One thing led to another until they were caught. Then came the offer neither could refuse. Though the word banishment was not used, being sent to Regum was just that. Once exposed to their psychology they were deemed tainted. Moving through space further complicated the picture due to the infusion of the alien resonance. Now that interested her interrogator. There was not much to tell. It had come from some distance place in the

universe, from an alien culture bent on weakening, manipulating, changing their planetary resonance to that of the invasive resonant field of the aliens. Regum was completely tainted. And not aware they were. The Web was proof of that. Doing the aliens' will.

He asked about the mission Horat and herself were tasked with. Folklore. Was that it? Yes. Comparative studies? Probably, what else was there? she queried. You tell me he asked gently. She could not think of anything.

Thinking. That was what Nervina found out which her inquisitor returned to again and again. Prima's thought processes. It annoyed her a little but her tiny nano bots managed to keep her mind in equilibrium. She answered his probing questions understanding that he, they, were looking for discrepancies in her legend, of their limited knowledge of Primaian psychology. They gained what her Brain released. Of the latter even less.

One of her rotating minders cooked for them, bought the groceries, none were delivered. One was a woman to give the impression a couple lived here, professionals who were often on the move. Software, hardware trouble-shooters. Thus their prolonged absences. Not that the neighbours cared. None of which Nervina was directly aware of, learning how these people operated.

She told of Prima as a prison planet. Regum's knowledge off limits to the entire population except for the few like her and the higher Ecclesiastics. Continually under observation. The questioning was gentle. It made Nervina appreciate the freedom the Reganians enjoyed. No wonder the Primaians were paranoid that any who did come back from here were immediately contained in the Holy City. There was only one space port ferrying their agents to the Orbital. Why the Reganians facilitated them at all, letting them onto their Orbital she could not explain. Dispensing knowledge was the answer. By showing Regum's openness they hoped that attitude would eventually be reciprocated by the Primaians. No such luck. It underlined their different attitude even more so.

Then one day the surprise question. Would she work for them? Not totally unexpected but revealing just the same. What good was she? A mere student? Surely they would be looking for her. Then came the bombshell. Novus. Novus? A third planet. Colonised by Regum. An open planet. Acceptable to Prima. Politically neutral, no conflict, no spying, no agents of influence, pure trade only. Prima agreed for it gained them access to advanced technology which they were free to use for peaceful purposes to which they agreed. There Nervina would be safe.

It sounded tempting. But she asked, if it was a free planet with no politics, no agents of influence, meaning the priests then if she was working for them weren't they breaking their own rules? The minders smiled at that saying nothing. What would she be doing there? Merely observing the Primaians. Nothing specific. There would not be even any need for contact. All she had to do was upload her observations which they would download. Consider yourself a travel writer. That's your cover. Really, that simple? That simple.

She agreed. Her Brain happy with that. Not that it told her directly. More a feeling of moving in the right direction. It was enough for her to be amenable to their offer.

Krimi, in his office at the casino was indulging in some sex. The young woman was sitting on top of him in his executive chair, rotating her wet accommodating vagina teasing him into an even harder erection than he already had. She was a new babe, recommended by one of Nathan's lieutenants. Slowly she rose gently up and down with her exquisite posterior, letting him slobber all over her bared breasts, playing the slut.

Meanwhile an independent security contractor working for planetary security were hacking into his system. They had cornered Nathan soon enough, found the illegal dart guns and gave him an option he could not refuse if he wanted to stay out of jail. Be an informer. The two women from counter intelligence read him the riot act in his flat. For Nathan made the mistake of being just a little too sure of himself. Recompensed generously from the Primaian embassy who made no bones about their presence and their needs, namely finding Nervina. Not his first job either tracing their runaways. Primarily engaged in tracking down turned priests who became too comfortable with Regum's life style. Turning to sex, drugs, music, booze all in the name of blending into society. Not that his masters were fooled.

So when the Primaian embassy was after Nervina Nathan had assembled his men and failed in his mission. Nathan stalling. Counter intelligence on his back had given him some better intrusive gear keeping an eye on Krimi. They suspected him regarding the Primaian's fevered attempts to reign in their rogue agents which counter intelligence wanted for their own purposes. Since they suspected Krimi was one of the lynch pins doing Prima's dirty work it would be nice to know how deep he really was. Or if he was a threat to Reganian planetary security. So Nathan became a triple agent. For Krimi, for Prima, for Regum. He had no problems with that. Survive at any cost. Therefore on a designated day to get into Krimi's system it was arranged for a working girl to distract Krimi whilst Nathan hacked away under indirect observation by counter intel. They of

course from an operational point of view knew Nathan would be a one-case operation. When done they would let him go and let Krimi figure it out. If his system was loaded with black intel they then had enough dirt on him to either use him or shit all over him not forgetting to strip him of his ill gained loot.

As the girl, Kristel, paid in advance by Nathan worked on Krimi the hackers worked away patiently, melting through firewalls, trojan traps, masked counter viral infections aiming at backtracking any intruders which were vaporized, through hostile isolated terrains, simple blotters to mark unwanted search and destroy attacks, past sentinel guard posts, burrowing through crude minefields to finally get at multileveled data bases spread throughout legitimate systems masquerading as innocent analysis stealth scouts until various nodes were accessed that gave intel the whole picture. All this took time, was carried out with false positives pretending to be ram raids keeping the counter security measures busy whilst more innocuous probes penetrated further and further into Krimi's cyberdomain.

Not that Kristel knew. She was told a two hour session was what was required of her. But there was another mission to be completed. The disappearance of Nervina. Knowing that Nathan working for Krimi knew there was a bonus involved in finding her, intel assumed Nathan would in all probability alert Krimi as well as them so that it would be a race against time to get Nervina out. All space ports were on low level alert to facilitate her removal.

Krimi had his first orgasm, felt great, slobbered some more over Kristel's generous boobs and moaned with delight. So straight after satisfying Krimi she suggested a shower together. Krimi was on the verge of checking Nathan's progress. Given his system was now piggy backed to intel his search results were negative. Pending Nathan's enquiries knowing he had lost her. For Nathan procrastinated there not wanting to admit defeat. The sedative his darts contained included nano tracers so he hoped to get a fix on Nervina that way. Accept her smart ware had broken down its molecular structure making it defunct.

So whilst they were having fun in the shower, intel got more and more knowledge of Krimi's dirty little empire. He used surrogate gamblers, advanced credit at an outrageous rate which usually left them in his debt. They then recruited other punters snowballing Krimi's cash flow. Or mining data, drilling for corporate information on possible take over deals which looked legitimate enough on the surface. He was doing well. He also had connections with the Families on Novus who ran its only casino. Oversight on Novus was lax for obvious reasons. Enough rope to entangle them, discover

their MOs which inevitably but not always led back to Regum and not surprisingly Prima. They were inveterate gamblers. Addicted. Easy marks. Deeply in debt. Compromised, just as Regum had planned. Novus was both a gold mine and a wealth of information.

With some coaxing they had another session in the shower. Kristi knew how to turn a man on. Simple really given their logical brain fell apart at the sight of a bare bosom. Then they towelled each other off and to her delight his penis went slightly tumescent. She would play on that and see if they might indulge themselves for a third time. It would take a bit of work on her part but heck the credit was good. So she played the slut for all it was worth. A quarter of an hour later and Krimi, who could not get enough of her, his eyes feasting on her voluptuous body was totally distracted. This time she gave him a hand job then nibbling at his penis treated him to a head job. It took a while but it worked. One very satisfied customer. She rinsed out her mouth in the bathroom, got dressed and blew him a kiss. When he went to give her some credit she did not refuse saying it had all been arranged by a friend who would most likely reveal his or her generosity soon enough. She blew him another kiss and left as he watched her posterior amble out of his office.

What a way to start the day. He sure had some good friends. Wonder what they wanted. The search for Nervina momentarily forgotten. Down to business then.

"Kino." He addressed his wrist com link. His butler, secretary and factotum answered his master's call from adjoining reception. Dressed in an immaculate cut suit, his white hair slicked back over his pale parched old face. Without character lines he kept his age well. His coal black eyes focussed on his master, his thin lips pursed slightly.

With his remote Krimi opened the blinds revealing the city's office blocks sparkling in the sun.

"I assume I missed a few calls." He leered. Kristel had come in through the secret entrance. For the well heeled various discrete corridors led to their abode guaranteeing absolute privacy.

"That you have sir."

"And?"

"It's in your machine sir, but there was one persistent caller by the sound of it. Nathan."

"I hope he didn't call direct."

"No sir he did not."

"Say what he needed to say?"

"No sir. Just that it's urgent."

"He calling back?"

"I don't know sir, I would assume so."

"Did you trace it?"

"Of course. Secure. Third party."

"No ghost signals?"

"None whatsoever."

"Must have some new gear."

"Apparently."

"Well if he's upgraded we better return the gesture and send out an EM flux. If his gear is next generation I don't want my presence noted. Deal with it."

"From your office?"

"No, yours."

"Very good sir." And Kino returned to reception, hooked up the counter blast, recalled the call, traced all it's nodal points and sent white noise back through deleting not just the call but accessing Nathan's system as well. It would crash. If not then they knew Nathan was downloading Krimi's links for his own ends. It would be his end if he kept any sort of log. Kino smiled sinisterly. He did not like Nathan. That man was low life. His tenuous connection to some Primaian's though was too tempting to sever. But since the Primaians were interested in everything the only interest his master had was their gambling needs on Novus.

The crash was successful. Kino perceptive enough to note no flare. Absorbed. That had never happened before. So Nathan did have new gear. Another problem. He returned to his master and informed him of this difference.

"You think he's been nobbled?" Krimi asked.

"Could well be. Unless it's really the high end."

"Well find out if any of the agencies reported any gear missing. Could be a set up to get at me through him."

"Very good sir. Err there might be a problem."

"Oh?"

"Well they may not admit the fact of their gear being stolen. If that is so, then the agencies would be making their own enquires, using a pretext of course."

"Fine. Do what is necessary."

"I shall."

"I know you will. In the meantime I'll have a rummage around my domain. Let my search probes run. They'll know how to vanish if they stumble across something superior."

Kino nodded and went back to his office.

Too many players in this field Krimi mused. Part of the game. If Nathan was getting too smart he would not cut him loose.

He activated a search and destroy sequence, then waited. He set his automatic dialling machine on active to return missed calls saying he would get back.

Counter intelligence had what they wanted. Nathan was connected to Krimi and they were looking for Nervina. Well they would bait him. Move Nervina through the casino. That would trigger, hopefully Krimi's system, if not himself. Enough to get him for abduction. They had Nathan in their pocket regarding his assault on Nervina with his dart gun. Martha had been very helpful indeed. One witness was enough. Then they launched a low level threat at Krimi's system. The underworld was forever engaged in cyber warfare. This one would be no different. Enough to distract him whilst they moved Nervina. But not that compromised that his system was too distracted to follow his orders, if any, if he rose to the bait.

Diagnostics drew a blank. Apart from the usual remote attacks, spy bots, cruising malware, roaming trojans, rogue viruses, nothing it couldn't handle. Accept for the white noise counter surge. Nathan's end. Krimi ran a subroutine via spaghetti junction detours so that Nathan would have trouble unravelling Krimi's probe. A ping alert from outside.

There she was. Nervina. With a man and a woman. Casually dressed. Just a tad too smart though. She had protection! So Nathan had lost her, or never found her. Damn. No chance of rumbling her. He was not going to get burnt with this one. Then an idea occurred to him. His presence at the casino was no secret. This was no accident. The authorities were aware of what went on here. So they wanted her to be seen. A public appearance guaranteed Nervina's safety. She'd be profiled, in the open domain register. The Primaian's would be equally aware. This was in another league. He was not going to do anything but call Nathan.

He got through on a secure line. Maybe not so secure at Nathan's end. Kino would handle the trace, signal variations, spikes, fluxes, sudden drop outs, the usual tell tale signs of being intercepted along the way.

"You seeing this?" he said to Nathan.

"Err, no, what?"

"What do you think?"

"Oh that." Not too smart in the brains department.

"Yes that. Right here."

"Well then she..."

"Nathan you dork."

"Oh, sorry. Our terrain."

"Yes our terrain as you put it so brilliantly."

"You reap the reward then."

'I'll reap you.' Krimi thought darkly. Kino came back into the office. Seeing his master in conversation he waited. Kino looked distracted which was rare for him.

"Hold on." Then turning to Kino asked "What?"

"Though there's no direct evidence sir, but that gear of his is way beyond anything on the market sir."

"Good enough for me Kino. Well at least the system's aware of its signature. Good for future attempts. Delete what you can. We may even have to upgrade ourselves. See what's available. Price no problem."

"Very good sir." And left.

"Nathan, get your sorry ass over here."

"Yes sir." He said meekly.

"Meet me at the bar, the public bar in say an hour." And hung up. From a refrigerator Krimi took out a tiny sugar cube. A poison genetically tailored to attack the liver. Nathan simply drank too much and finally it got to him. The tiny glass phial he pocketed. From his safe he retrieved a casino credit card and told Kino he would be back shortly. He left his office through the front door, made his way to the casino and looked out for those staff who would do the odd job for him. As it was early in the day there were not that many customers which did not concern him. He was looking for his favourite waitress. Sitting at the bar he waited for about a quarter of an hour when Misty appeared. He waved her over.

"When Nathan arrives, make him a charged drink of champagne. You know the one. Champagne with bitters, brandy soaked in sugar cubes. Here's the sugar. Specially refined."

"He does like champagne." She smiled.

"And for that little bit of personal service here's your reward." Handing her the limited credit card.

"Why thank you. Why here he is now." For she was facing him and watching the bar as Nathan looking a little dejected walked in.

Krimi activated his sleeve embedded pc. Accessing the public cams. Well well well. Having switched between cameras, it showed Nathan, then Nervina with her companions. Boutique shopping.

"How did you manage to miss her?"

"Err I don't know."

"Well too late for that."

"Only three of them. I can get a team together."

"They are not the public Nathan."

Misty had the champagne ready for Nathan and a coffee for Krimi.

"Anyway, loosen up. Not gonna chew your head off even if you failed in this one. Shit happens." He added magisterially.

"I'm sorry sir. Some agency must have intercepted her."

"And before that?"

"I don't know." Nathan fumbled.

"She was solo until they picked her up. Not exactly focussed are you?"

"Unless she was being protected all along." Nathan ventured.

"Yeah," Krimi backed off, "you could be right. A bit out of our league. So drink up. Not the end of the world."

"Hm tastes good. Feel better already. Thank you."

"Next round's on you."

"The least I can do."

Krimi watched Nervina go into another boutique on his sleeve's pc. And try something on.

"This legitimate?" two strangers stood behind Krimi and Nathan.

"What?" Krimi half turned.

"Internal revenue. You are Krimi?"

"Shit what do you guys want? I pay taxes."

"Will you escort us to your office?" it was not a question that had many possibilities "You too Nathan."

"Me?" he gulped, then downed the fluted contents of the champagne glass.

'Well that's one problem solved.' Krimi was satisfied. The poison would take a few hours. Sclerosis of the liver. Not good. Krimi glanced at his sleeves little screen. Nervina was still in there.

Then Krimi understood what was going on. Nervina and her friends had exited this particular boutique via a back exit. His interest had been piqued and he had fallen right

into their trap. Snooping was an offence, a minor one. They would claim Krimi was planning something, hacking into public cameras was an offence. And found him just after Nathan arrived. It was too much of a coincidence. Nathan was a rat. Well he deserved what was coming. Asshole.

With a dramatic sigh Krimi rose.

"I'm all yours boys." Maybe he could make a deal. He hoped they were not from revenue. If they were, he was screwed.

Deep Space

Lehra's ship docked at Drassid's Habitat. He had moved since their last meeting away from the gas giant and into the asteroid belt. Since hundreds of other Reganian's made their home here, partly due to the intense mining activities, the industrial extraction and processing plants, the habitats for the miners, the bars, the working girls, adventurers, business types, engineers, thousands of experts hiding amongst this motley crew made any Primaian attempts to even discover that Drassid was in contact with Lady Lehra just that much harder. With hundreds of bulk cargo carriers, now off to Novus one more space ship, unless targeted by DVs made discovery unlikely.

Watching her ship approach Drassid wondered how long until the Primaian's would discover Lehra's duplicity. For the elite on Prima the curfew imposed on their people did not apply. That Lehra had to inform through Lord Pentham of Reganian activity was an acceptable risk. Janon and Reno, counter intelligence were hungry, and stayed hungry. Primaians were not very good with analysis or processing raw data. Seeing conspiracies everywhere ended up with so many impossible convoluted scenarios that their intelligence became a joke. The more Lehra fed them the crazier it got. But one thing was dominant: Regum was always up to something. Whether in the Web or real time. He was looking forward to her visit.

Her ship docked, was secured in the landing bay, rotated for instant exit. Entering his spacious living room. Cocktails ready, hors d'oeuvres on cooled platters. Lights soft. The portals embedded with smart ware sensors so that Drassid could see his surroundings full broad scale spectrum and in real light. Their meeting triple secure from any artificial or biometric probing. They could talk freely.

"The ride out is so boring." Lehra sighed dramatically as Drassid led her to a recliner.

"But not what you have for me."

"Indeed." Graciously lowering herself and taking the proffered martini sipped it, smiled and took in the surroundings. "Busy place."

"Novus is now up and running, basic infrastructure in place, space ports built, well one really with five launch facilities, drops zones for the cargo ships established, splash down in its ocean, the city nearing completion. The nano bots are remarkable. Mind you ascetics are rather basic." And he called up a light screen showing the towering edifices of Novus Prime City right next to the ocean. A huge complex at the edge, the masterpiece the casino, the money spinner that attracted hundreds of gamblers on a continual basis.

"Talking Novus Drassid, I'm thinking of relocating there. Prima is getting to hot. Too much happening that makes me feel uncomfortable."

"You think...?"

"No, yes, well...no. In the future perhaps." She laughed at her conundrum "Pentham seems to enjoy my company. Not that we're lovers. It's a nice change to talk to a man who doesn't want to seduce one. I think our rapport is good. Whether he knows what my jaunts are really about I wouldn't know. He's too discreet to even ask. But there are undercurrents."

"Aren't there always on your planet?" sipping his martini, then pushed a small plate of delectables towards her. She took a cheese and biscuit cracker enjoyed it's natural bite and creamy taste.

"As always you have the best Drassid."

"Well got to pamper my favourite visitor. Your company is always delightful. Actually for a change I have some news for you."

"Oh how exquisite, something for me?" fluttering her eyelids coquettishly. "But before you go on wouldn't you rather hear what I have?"

"Well, if you insist."

"You know I never insist. Something is rattling them."

Drassid understood she was referring to the power brokers, the elites, the Families, the Ecclesiastics, the Domain Lords, maybe even the pontiff.

"Not to do with the incident at the space port?"

"Oh that. Nothing there, case closed."

"They take out their own and simply dismiss it. The callousness is appalling."

"Isn't it just. From the bottom up then. As you know I invite all sorts from that rarefied circle one moves in. I had these two young men, siblings of powerful families. Well one went a little hyper regarding our obsession with the alien field."

"That stumbling block. Handy really, keeps them busy."

"Oh it sure does. Now if some Stable type goes hyper what does that imply? It's rhetorical Drassid."

He nodded.

"It's like he just unravelled, went volatile."

"Glad to hear it."

"Trouble is they're tightening the screws. Containment. Speaking of which there was a suicide at one of the asylums. Pentham told me. Now for your information not everyone in the asylums is mentally troubled. They double up as rehab centres for addicted Web users."

"Amazing. What on earth is so dangerous there? Does it screw their minds?"

"Actually yes. It's the dichotomy, the difference between all these possible cyberworlds. Coming back into reality leaves them depressed at best. Once hooked they live for the Web."

"I get it. Like the odd drug addict, or alcoholic."

"Something like it." she took another tasty morsel then chewed slowly. Outside the flare of a ship powering into space. She watched it for a while as it streaked off into the dark. "So using my ship's black market stuff I had a remote look. So I gotta ask this question first. How real are the space scenarios in the Web's presentation?"

"Real as in real real?"

"Aha."

"Real."

"No artificial constructs?"

"That too."

"That's the trouble with the Web. Us Primaian's can't tell the difference."

"Put it this way Lehra, going in blind would do that."

"So if you knew the reality you could tell the difference."

"Oh yes."

"Well this suicide, a young lady discovered two planets. I assuming, as would our agencies now have a fix on the origin of this alien field."

"Really? You know it aint real. All there is is photons travelling across space. What is revealed is photonic information. To be precise, yes a photon can be a field. But it's strength is so negligible Lehra that to call it a field is magnifying it out of all proportion."

"My thoughts exactly." Sipping some more of her drink. "Tasty." Putting the glass down. "Can you call them up?"

"These planets you mean?"

"Yes."

At his armrest he activated the ship's system. A light screen appeared out of the centre of the table, then turned into a globe.

"Luckily we know where they are." He consulted a directory, then punched in the coordinates. A solar system appeared in the centre. "Ten planets. But only three are in the comfort zone were life to exist." The image expanded to show one white planet, one blue and white and the outer reddish pink with tiny polar ice caps. "I assume it's any of these your referring to."

"Any life on them?"

"Well the central one has heaps of water, clouds, vegetation, so yes life would be there."

"But no resonant field, mental activity?"

"It would be an assumption only." He thought if there was life no one as yet knew about it officially. Technological activity would show signs of EM signatures that had not reached them yet. Could be millions of years into the future. The system was around two hundred light years away.

"Well it's got the Ecclesiastics excited. They're going on about this alien planet and its psychotic state of mind."

"They've revealed this?" Drassid attentive.

"Sure have."

"This from your DVs?"

"Aha."

"You know it could be a psychological reaction on Prima's part. Creating a reality of their own design."

"Bit like your Web?"

"Stretching it a bit Lehra, but yes something like it."

"So we could be fooling ourselves."

Drassid did not wish to agree to Lehra's supposition. But she was right. Prima was as usual deluding itself. Anything to save appearances. Force facts into hypotheticals embellished with religious dogma and add a touch of mania.

"As I said, keeps them busy." he finished his drink. "Another?"

"No, serve yourself first."

"You staying?"

"Am of two minds. Heck sometimes I don't even want to go back. Just stay here, anywhere really, maybe even Novus. Since it's an open planet. Still can't believe that we agreed to that."

"Well technically, and legally it's ours."

"Can't believe we could be so kind."

"So this suicide."

"Oh that was it. This young lady, Carias discovered these two planet. Now the suicide is suspicious but apparently she lost it and shoved a nurse out of her room's window. She snapped. Sad really. They're using her as an example of what can happen to you if you access the Web. Then slashes her wrists but not before going for another patient's jugular."

"Nice."

"You can imagine what they thought of that."

"Sure can do."

"And there was something else. Apparently a bit of a space war. Seems a couple of instructors decided to hike it out of there." She watched him to see if Drassid knew anything of that. "Took a cruiser. To cut a long story short SpaceKorps sent a pursuit ship after them and blew the ship to pieces."

"Rather drastic. Did they steal something?"

"Don't know. Anyway they didn't stick around as a Reganian ship was close by. Rather a coincidence don't you think? Hm?" her eyes bright with excitement.

"My my, you are informed."

"So now you know something."

Drassid collected his thoughts as he ate one of his cheese and biscuits. That incident was not in the Web. It was not in his realm. He wasn't that far in by choice. Merely a free lancer who reported what he learnt. Not target acquisition specific.

"Actually no Lehra. Honest." Explaining his position. She accepted his word. Not everyone was a spy, though given that Prima used everybody who was in space and on Regum and no doubt Novus to get as much as they could it always surprised her how relaxed the Reganian's were. She just hoped they would not one day be rolled over.

"So what have you for me?"

"That Novus is ready. And get this. Your planet has a colony there as well. Segregated of course. More a concentration camp. I think they're dumping your Volatiles they can't realign."

"Exiled."

"Aha."

"And your people don't mind? A prison on Novus?"

"Cheap labour."

"Doing what?"

"Farming, finished products, a steelworks."

"You think that's wise?"

"Free training. Anyway Regum built it."

"So Regum is using Primaian labour? Unbelievable. I would have thought you'd, well not you, they would try and free them, rehabilitate them, assimilate them."

"Your governor general..."

"Our what?"

"Yes that's right. A GG runs the colony. Legally it's an extension of Prima."

"And they accepted that?"

"Sure have. Tell me Lehra," Drassid focused on her for there was one thing that puzzled Reganian scientists. Several things in fact. "how's your cosmology?"

"Basic."

"Any noise about, well, the field changing? Since they've released the information regarding the planets. Or planet."

"Plenty of noise as you said."

"It's just that there is this background radiation, to be precise a secondary presence with a wave front that moved through our part of the universe."

"I wonder if that is what this astronomer discovered. But then why eliminate her?"

"Ah, brilliant. Connecting the dots."

"I'm only guessing Drassid. You can pour me another one now."

He rose and extracted the shaker from a small cooling recess in the table, she held her glass up he refilled Lehra's.

"The thing is. These two planets," as they watched the holo orb "seem to have two histories. Web based only. The pink planet is peopled with a type one civilisation. Yet in real space the planet has an extremely thin and oxygen poor atmosphere. There are signs of dry river valleys, evidence of water erosion. All indicative that once the planet was different to what it is now."

Lehra listened. "As you said Drassid, you have many worlds in your Web."

"We think this background radiation is more than a wave front. We think it's a phase change inside space itself."

"You know I'm on barren ground there."

"It's as if something washed through space."

"Well if it had, it would have affected us. Though I got no idea really even what I'm talking about." Affecting a sheepish smile.

"You see we have secure data domains. Solidly shielded so that no cosmic radiation can affect it. And the same scenario is in there as well."

"So someone uploaded it, maybe to study hypotheticals. See if they develop along our lines of thought or yours. A secret project Drassid." She dramatised.

"Must be. Trouble is no one knows how this radiation got in there. Who programmed it, built it, designed it. Could your remote viewing DVs have done it? For some reason?"

"If they did it would be an amazing breakthrough."

"We know. We're being targeted."

"Yes. I suppose apologising is an empty gesture."

"We're used to it. In fact if they stopped we would worry."

"Ah like that. Understand. Just for the why in itself."

Drassid continued, looking at the contents of his glass. "It looks innocuous. But as I said, we got no idea how it got there and we're wondering, maybe you can find out if someone your end put this there. We know your capabilities, and I'm not being disparaging here Lehra, but as your scientists can't do this we're wondering if this is a hypothetical from your end for reasons just mentioned."

"Like some sort of incubation?" helping herself to another tasty morsel.

"Good way of putting it. The programme's clean, or pretending to be. But it's got us stumped. For there are, ahm, remnants of code within its somewhat tenuous spread."

"And you want me to find out?" He smiled, she laughed. "Oh Drassid, here I thought we were good friends."

"We are, I hope."

"Of course we are. But getting me to snoop? I don't know." Then she had an idea. "How up to date is Novus?"

"Ah tricky that. Officially it's old world technology. That's why it's an open planet. Whether anything cutting edge is in place I doubt it. Why?"

"Well get someone there to access this, whatever it is."

"Yes I see." When Carias had found the two planets a low level alert had gone active. Scientific data along with the dead end Carias found in their system. Even in cyber reality the active algorithms would have continued to create 'space', yet it had not. It stopped. Something that should not have occurred.

Drassid reran the time lines forward and found that WebSpace did run into a void, an absence of data. It defied programming. No data, no energy. Unless they had reached the limit of the universe. For whatever was beyond would have conditions so alien to this universe that even basic mathematical rules did not apply. It was curious. A complete blank. Plus Carias's suicide. Fortuitous? Maybe. Then their astronomer's murder. Prima knew something and Regum's scientists just could not crack it. They were floundering around not getting the bigger picture. Well with the next generation of QCs and their adjunct VQC's where all the rules could be broken without destroying the basis of their enquiries the answers might reveal themselves yet. Then the worrying phenomena at that the edge, the end was moving relatively closer. It was not keeping its distance as time moved on, so that as time progressed the edge did not. It stayed where it was. Their worst fears was that somehow the Primaian's had managed to contain the Web. If they could do that then their whole systems were vulnerable. Yet everything was fully functional in the present. Had the DVs put some block onto the future? That was the big worry.

"So Drassid what now?"

"Indeed. I see you're using my Reganian name..." He smiled worried.

"I meant do we get plastered here or in one of those bars out there?"

"Oh yes. We can do both. Get plastered here and then when we've recovered do it all again."

"Sounds good to me. Not in any hurry?"

"You?"

"Well maybe it's your great martinis, but I feel like defecting."

"Don't." he answered quickly.

"Don't tell me you really really need me that much?"

"Lehra you got no idea how tight your people are. Your planet's off limits to us."

"You got us on the orbital over Prima."

"But your people are all believers thinking us a scourge."

"Bit extreme."

"It's true. Your people want us to be like you. Full on. Nothing less."

"Can't see that happening. It's been too many centuries for that."

"Yes but they're not giving up. We barely have anyone on the ground. Not us, people such as yourself. For all I know you could be the only one."

"That scarce. Well, am I precious or what?" half laughing.

"You are precious. I mean that."

"I'm sure you do. Now make another concoction and play some of that pounding driving music your planet's into."

Nervina

The moment she had finished her breakfast in the safe house, quarantined by her attentive minders her perception changed. Her head. She was about to mention this but changed her mind. It did not seem to matter. Her Brain contracting. Infused molecular stabilisers. Interesting. Her mind adapted. Nothing except the here and now. Extremely lucid, aware of her surroundings indelibly etched acutely perceiving everything around her. Someone was after her and these good people made sure she remained out of their clutches. But as to who or why she had no idea. Yet a moment ago...something she couldn't quite grasp as she stared into the empty tea cup.

"Time for you to move." The woman in the suit said. They had never alluded to their names so that they could not be easily identified. The less she knew the better, she understood that. Not that she knew anything. Maybe it was something she had done. Even that escaped her.

She rose expectantly, then waited. They moved cautiously through the house and out the rear into the waiting car. She was ushered into the back, with her minders. One sat next to her and two at the front. Going for a drive. It felt like she had been inside that house forever. They drove down the alleyway the house forgotten. Everything felt so right it was both a pleasure and a relief from threats that were there and not there. Into the street. A few cars, some passers by, an outing. Fine. Excellent. Fantastic. Good shit this her Brain whispered. Taking the edge out of her head.

They drove for a while, the city vibrant, exciting making her feel good. Her head crystal clear. All her cares wiped away. What cares? Feeling fine. She felt like squealing for joy it was that good, but kept herself in check. Not done getting this excited for her friends were a little tense, watching with purpose.

They turned a corner here, another there. Up front the one not driving looked into the side mirror. So was the woman sitting next to her. No one said anything, but that did not matter. She was positively effervescent. Showing her the sights. Plaza's, shops, cafes, bars, more shops, tall office blocks, high rise apartments gliding past. A tram stopped.

People getting on and off, a monorail moved across overhead and they turned yet again. People on the street all dressed differently, some in gaudy colours, mainly women, men more serene with their apparel. A bright sunny day all around, shining in her head as well.

After a while they entered a large car park, drove up a level and stopped next to a glassed entrance. They all got out, Nervina feeling as if she were treading on air she felt that light. Her head seemed to be bobbing like some balloon. She smiled, the woman returned the gesture.

"Gonna look at some shops now."

Nervina nodded. Into one and out the other. The mall was huge. Tiny lights in the establishments, brighter ceiling lights, a kaleidoscope of colour and people. Open café's, tables with patrons, more shops, into one boutique then another and finally at the third, always looking but never buying they ushered her into a change cubicle which opened at the rear into a cool cement passageway. The wall's clicked shut. A secret destination. How stimulating. They moved quickly down the cool corridor which ended at a lift. They all got in and went up. No numbers inside. A short while later it stopped, her stomach adjusting, the door opened and they were on the roof with a helicopter waiting. What a pleasant surprise. What fun, these people were good.

The two men remained behind watching, looking all around them. Nervina got in the back, one of the men in front and the woman next to her again. And they were off. The tall building shrank as they ascended, the whooshing blades slicing the air heading into the blue yonder. The city became smaller, the people tiny specks of colour. Over extensive parks, then the suburbs with their low rise apartments, broad avenues, so neat, so tiny, so tidy. Not a care in the world.

Then they told her they'd given her a cocktail of molecular stabilisers. That explained her feeling so here, so now, so good. Her Brain uninvolved. She nodded sagely since Brain had whispered.

Up head a space port. The tall gantry towers as huge as skyscrapers. They lost altitude, her ears popped, over a few perimeter fences, the rockets and shuttles aligned. One landing. She was ushered out and into a small trolley, a four seater. Her friends left her. Only the woman sat with her. The driver paid no attention. Another trolley arrived and the two men got onto that and off they were. Past the white gleaming rocket. They parked at a towering gantry with a white shiny shuttle and it's huge orange fuel tanks dwarfing it. Into the elevator, up past criss cross girders until they reached the top. A small gangway the woman still looking around escorting Nervina into the craft. She was given

a helmet which she helped her put on, an air tank attached with nozzles at her front, then an orange clothed technician helped the woman into her space gear clambering a little awkwardly into the upward facing seats. The others empty. Just them. This was getting better by the minute.

"Can you hear me?" the intercom came on.

"Yes."

"It's self activating. Tight. Secure channel just between us."

"Fine."

"We're going up for a little ride."

"Kind of you."

"Any moment now. You may pass out. Nothing to worry about."

"Pass out?"

"Yes."

"Then I'm prepared." Not caring at all if she did or didn't. The orange suited technician shut the cabin door. There were no portholes. Instead overhead three light screens came on showing the outside. The shuttle started to shudder, huge white glowing billowing clouds blowing sideways out. Then incrementally, quivering the slow lift off. This was more than she expected. Off into space. Below all was white blossoming glowing clouds as the white flames of the hydrogen rockets lifted them off Regum. The space port smaller and smaller. Through thin cloud cover, the sky already getting darker. Her stomach was trying to remain in place, her head felt a little heavier, her legs like massive tree trunks, her hands like blocks of metal. Breathing was a little harder but her Brain thought it was all right, which it was. She felt a little nauseous, nothing serious to make her feel sick. She was too enthusiastic with her treat. Then she passed out.

With a supreme effort, bit by bit Nervina's body guard, moved her hand forwards, trying to reach Nervina's gloved hand. Inside her middle digit hollowed out a phial containing a potent sedative. As the shuttle charged away from Regum Nervina might come to any moment as the blood coursed back into her brain. Her minder had nano bots equalizing the g force pushing onto their bodies. The lift off was crude technology. Nervina might be a Primaian with possible psychic capabilities. Until they really knew her capabilities standard procedure was to reveal as little as possible of their technology to her. So max sedation. Not until they knew more about this young woman who had defected. On Novus she would be safer. If the Primaian's tried anything the agencies were ready to make life hard for them there.

Her finger was getting closer. The dead weight increasing as the shuttle's booster rockets continued their acceleration. Finally, the sky outside turning a dark purple on the light screens she activated the tiny syringe in her finger pumping the sedative into Nervina's bloodstream. She would be out for long enough for them to scan her.

The boosters fell back having escaped Regum's gravity well. Space. Stars shining serenely heading for the orbital. Then after scanning Nervina she would either continue on to Novus, or if the results were detrimental, secured in isolation. They had learnt from Prima's containment fields that any mental state could be simulated. The brain could even be almost shut down creating a near death experience. Then the mind unfolded completely, the unconscious opened and the true nature of the subject fully revealed. The observers then knew more about the person than the subject herself. Full on treatment.

Nervina might have passed out but her Brain, self cloaked, having moved into her unconscious accepted the sedative into its outer physical field. Her Brain momentarily not a physical presence, an artificial insert, more an energy state. As such it could mimic any mind set thus hiding itself by pretending to be something it was not. Any scanning activity immediately activated its cloaking capabilities which it would pretend was the mind. Riding her resonance in tandem, a dual field collapsed onto the mind's generated presence, riding the persona's projection.

The shuttle docked at the orbital. A stretcher with two medics ready to wheel her, securely strapped straight into the theatre. Into the deep cavity scanner whilst Nervina's minders sat at the consoles.

"Now to see if she is who she thinks she is." The woman said. The scanner hummed generating insertion fields activating the various resonant levels of the natural mind. Any implants, insertions, boosted artificial intelligence systems, persona reconfigurations, up or downgraded sub routines, stealth programmes embedded in the subconscious would be revealed.

Nervina was clean. Her Brain saw to that. It faithfully duplicated every field state being quantum collapsed into her mind. Her childhood was fuzzy. No early memories at all. Trauma perhaps. Memories could self delete uncomfortable realities permanently leaving no remnant realities to be recalled. Unusual but not outside the norm. Maybe the Primaans subjected the young to their CFs if they thought there were signs of potential deviancy. Nervina's IQ in the upper range but with no particular aptitude. An extremely well balanced dual hemispherical brain with no real inclination either way.

"She's clean." One of the technicians pronounced.

"Almost too good to be true." The woman said frowning. Not that she knew much of Primaian in depth psychology. Nervina was the first subject they ever had who showed such a remarkable stability of mind. A Natural as they said. Her psychic potential was there but currently not active. So not the manipulative kind. The lack of curiosity could be explained if a CF had been applied at a young age when the brain was still growing its inner architecture. Primaians were determined to evolve, if that term was even relevant in an extremely tight band of development. No wonder they lagged behind in the sciences, technology and art. Primaians were not inventive. Or through specific social and thus individual manipulation holding back the natural inquisitiveness of a healthy mind.

She was relieved. No covert signatures.

"Yes." The technician agreed. "What do you want to do with the data?"

"Download it into an external memory, then onto disk. Delete from systems when done." Primaian psychology was top secret. They were able to get into their own minds more easily than unenhanced Reganian's so that the DCS had a minute chance of being discovered. They could not take that risk. Just from a political perspective the hiatus would create unnecessary problems. It would give the Primaian's the opportunity to mind fuck them in return. Call it random DV activity, saying it was accidental, yet practiced. Officially both races agreed to leave each others mind states alone. Officially. For what it was worth.

The technician retrieved the data, deleted the files, deleted the deletion sequence and handed her a small silver marble.

"All there."

"Thank you. I'll arrange for Nervina's transfer." She accessed the secure mainframe and entered Nervina's benign status and that she was off to Novus. Encoded into a tight pulse her data was beamed to headquarters. Since her defection Nervina's progress had been constantly monitored. Even the safe house was embedded with mind probing soft scanning smart ware. Nervina had only been gone over lightly there.

Then came the answer. 'Keep her as is.' Under normal procedure defectors were given a new identity, with memories more or less intact, depending on what they knew, what their commands had been which would be wiped out of their minds. The very fact that her superiors wanted Nervina to remain 'in situ' could only mean they wanted her as bait. Get Prima to reveal their unusual convoluted intents and covert purposes. If they went active over her all the better. It would reveal their operational procedures, their thinking, the logic applied, their rationale exposed. All precious information.

There was another reason for Nervina remaining as is. DCS's were not a hundred per cent perfect. Though it revealed all resonant levels, with Primaian natural psychic abilities dormant in some cases Nervina's potential could escape detection. She might go active due to some preordained trigger. She could be a sleeper. She was in the clear for now. The future had many possibilities each dependent on probable choices. It would be interesting to see how she survived. Credit she had plenty. Enough to start a new life. She hoped for her sake she did just that. Then upon reflection she felt a little disappointed. To get a real sleeper would be a great breakthrough, proof that Prima did have dark designs on them. It was all a waiting game for either side to slip up. The situation currently was very much in Prima's favour. They had their agents on her planet. DVs on their orbital over Prima. But with AI development making quantum breakthroughs it was only a matter of time until they self enhanced beyond even Prima's natural psychic capabilities. When that occurred and mass produced then... they would be the master race.

She felt confident of their future.

Novus

Nervina was asked by customs at Novus's space port to kindly follow them. Not that it bothered her. Her minder had explained it all to her on the orbital prior her departure to Novus. Since she was wanted by the Primaians her political status called for normal asylum procedures to be in place. The authorities would like therefore to talk to her. Not that she would be denied her new life. But given her somewhat tenuous situation it would be best if Novus was aware not just of her presence but more importantly of any Primaian agents who would take an interest in her. It was for own her protection. Nervina understood.

She felt free, lighter, her mind unburdened. Here she could be herself. No tasks to perform, no hidden agenda to focus upon, nothing expected of her. Just watch for approaches, undue interest shown in her. Prima was as far away as was Regum. A new world, a new life beckoned. To her it felt like an adventure. The sky the limit. She had credit so getting settled was no problem. As to what she would do, well she would wait and see what came her way. First to get the feel of the place.

The two customs agents, they looked like a couple, a bit older than her were nice enough. They took her away from the arrival lounge down a corridor and into a bare interview room. Dressed in suits. So not customs. Intelligence. Ah well the last time she hoped. At least she was safe with them. They seated themselves around a bare desk. No file, no data disk, just a terminal, no light screen either. Keeping their presence to a minimum. No file she hoped Prima might try to get at.

"Welcome to Novus." The woman said. Shoulder length black hair, her companion clean cut, neat. Friendly countenance.

"Thank you."

"You've no doubt been familiarised of your situation."

"I have."

"Prima's dogs are here. We know who they are. Most of them anyway. They may or may not take an interest in you. See which way you jump. From what we know you're here to begin a new life."

"Correct."

"Your profile is interesting."

Her Brain became alert.

"So I could be a target." Nervina staying calm.

"A person of interest as they say. Did you know you could be an insert?"

"Not that I'm aware."

"Your controllers have done their work. Nothing to indicate that. We got the report from your time at the safe house." Not mentioning the DCS on the orbital.

"And?"

"Well. As I mentioned. Of interest."

"Because of my defection?"

"Your race does not take kindly to that sort of behaviour."

"You think they'll try and get me back?"

"By rights on Regum that might have been a real possibility. You did the right thing going to the police. Here on Novus it would be a crime to attempt to kidnap you."

"That is good news."

"You're an opportunity for us Nervina."

"Really? A mere student."

"One with her own mind."

"Anything I should do? Apart from the obvious."

"No, just be yourself."

"Are the laws different here?"

"No not really. In fact there is more freedom here. Politics as such don't exist. An executive council manages the planet. Basically you can do what you want. Just don't murder, assault or invade any one's privacy."

"I won't."

"Good. You're free to go. Hope you'll stay."

"I intend to. A new life." She said dreamily. "Tell me, what is Novus all about?"

"A new planet Nervina. In a way a social experiment. That both our races can co-exist. As to the economy. Our big draw card is the casino. You might get a waitressing job there, if only to get started. It's got a huge shopping complex. You might start your own business. Or work in one. We are short of labour. The use of robots and similar

technology is at a minimum. Except for heavy industry. Oh yes, Prima has a colony at the edge of the desert. That is off limits. Understood?"

"What's going on there?"

"A rehab centre for your Volatiles. So stay clear."

"Oh definitely. I don't trust my kind. Or rather I got no affinity with them."

"That's good. Any other questions?"

"If I need to get help, if as you say I'm being say under their observation."

"Your minders uplinked you on your sleeve. A pc, it's also a com link. Hit enter and hold for five to ten seconds. Then help is on its way."

She already knew she had a processor embedded in both her sleeves. Her Brain aware. Its capabilities far more than any add-ons.

"Am I being tracked?"

"Only when necessary." She said blandly.

"That's good to know."

"It doesn't bother you?"

"On Prima we are always under observation. One gets used to it."

"Well Nervina, rest assured we're nothing like them."

"That is appreciated."

"And don't hesitate to call. Even if it's nothing. You never know. So if it's a false alarm don't worry."

"I am indebted."

"No not really. We understand your situation. They might not even care you're here."

"Hope not."

"Anything else?"

"I still can't believe I'm here. And free at that. It's delightful."

"Glad you feel that way."

"Is Novus's city, the planet uploaded?"

"Not as such. All external."

"Right."

"We'll escort you out. So that if anybody is watching you they'll know we know."

"Neat."

Nervina headed for the Casino. Not that she needed a job. But there was something about the place which attracted her. Enticing. She understood the concept

of gambling and the odds involved. Aware her Brain could calculate those odds and play the games accordingly. It would be a smart way to earn some credits.

So she rented a room in the triple towered complex at the edge of the city. She had never worked before, except in the village helping on their tiny farm and was not impressed. Life was not meant to be that hard. Regum proved it.

She started to gamble. Her Brain informed her if she won too much, at roulette, cards, poker machines, she tried them all management would become suspect. Smart ware was illegal to use when gambling. Chance had to be chance. Of course the odds were stacked against the gambler, that's how they made their money. She made sure she would come out even at worst. That was not hard to do.

A few days later she was approached by a pleasant young man. When anybody wanted something they were always on their best behaviour. Or nearly so if devious. This one was suave, as if reality blended to his will. Or those he worked for. Sure enough he made a commercial proposition.

Nervina had observed those around her. A charged microcosm of Novus. Deals made between gamblers, credits exchanged, credits taken, sometimes by the look of the looser to their detriment. Loan sharks. Day time tourists in for the thrill, gambling the natural high.

So she let him talk as she played a game called two hundred. A fast version of solitaire. One round only. Usually ending in a deficit. One could play a single deal, or multiples. Just tell the machine dealing how many games you wanted. She went for blocks of a hundred. Over a hundred deals that averaged out to either one or two but mostly four thousand in credit. Not too often. But one could loose the lot if the score reached a hundred. That usually deleted both the deficit and the credit. So she continued to loose by design whilst listening to his proposition.

It was simple really. Work for his boss's syndicate. He watched as she finished her run, having barely lost. No real damage.

They had coffee in one of the many restaurants. She would be advanced credit at two per cent interest. Her domicile upstairs would be free, as long as she handed over twenty percent of her winnings.

Her intuition went into high frequency boosted by her Brain. What he was proposing was not illegal. A sub culture in place. Individual gamblers were plenty, targeted by an existing underworld. Credit cards at times were lost, stolen. Unfortunate he said. Unless one could protect oneself. She could but that would attract attention.

She was trying to be invisible. She had also calculated the rates of pay as a worker and figured gambling paid better. The tout, and there would be quite a few must have marked her some while back. Take the first offer? Why not. She did not want to spread herself around advertising her professional abilities. This way she would have protection which he guaranteed outright.

"You would be under contract. An open one. If you want out you simply return the advance."

"I got a better idea..."

"Renar."

"I'm Nervina."

"Your idea?"

"I buy into your operation."

"Oh a shareholder?"

"Something less obvious. A silent asset. I deposit an amount to be negotiated and we'll talk percentages."

He was impressed.

"Excuse me for a moment." He spoke into his com link extended as a tiny patch from his collar. "Boss, got a potential here." Then waited. Nervina's Brain downloaded Renar's data base in his suit. No point going right in. The tiny patch retracted.

"He's willing to see you."

"Good. Let's go."

She felt a tickle in her head. A soft scan. They were geared up here. Good to know. It meant she could do likewise.

They walked through the brightly lit mall, past the boutiques, jewellery stores, more cafes and bars, restaurants, computer stores all lit up, shoppers and tourists strolling about. Then to a bank of lifts. They entered and went up just one floor. It stopped on the mezzanine level, another bar behind a glass partition with more gaming machines.

"That's for the high flyers. Down there is the low life, the punters who keep this place going." With her Brain on low level alert it reasoned that the odds on the floor below, for the small time gamblers were configured differently than up here. Down there she found out there were plenty of minor pay outs, enough to satisfy but not for a decent win. With small bets it might take longer to loose one's input but up here whilst losses might be greater so were the winnings.

"Seen enough? Depending on your credit you might operate out of here."

Using the data gleaned from Renar's link to his boss she accessed the mainframe's more open ended offices workstations. Families, Cooperations and Syndicates were the top end, in that order. The boss, simply known as E whom she was to meet was a syndicate in his own right.

They entered what looked like another lift but ended up being a secure entrance. Renar swiped an entry card, the door opened and they walked down a carpeted pastel painted corridor. Two security guards with 'Globus Corp' lettering acknowledged Renar as they passed them. Her Brain itched profusely, deeper scans as hers went neuter. Too smart to be caught out. Good try fellows. And armed. Stun guns. Easily negated. She forgot to ask her receiving officers what the deal was with private protection. Not that she needed it but appearances were everything. She'd get that information later. Probably some sort of licensing in place.

Another fake wooden secure door. A camera above. The door opened automatically. Reception. A young woman greeted Renar and spoke into her intercom on the desk, a manual set up. Then through the last door. A conference room and office. Two couches, several armchairs, low table, a glittering bar along one wall, the smell of fresh coffee, a shelf full of paper files, very secure, several screens showing various parts of the casino both inside and out. A view over the ocean, sunlight sparkling off the water. From a side door a thick set man, in his sixties, bald entered.

"Good of you to come." Dressed in a well tailored business suit, charcoal grey, white shirt, black tie, silver cufflinks that were comlinks. A hint of after shave. As it was morning he might have just risen. "And a pleasure to meet you young lady. Please take a seat. Any refreshment?"

"I'm fine thank you."

"You don't mind..."

"Something tells me you'd have one anyway." She laughed just a little. Treating him on socially equal terms. Yet not taken lightly. He had Renar pour his coffee as he sat, waited, observe ring her, studying her, sizing her up.

"You have met my assistant Linoch."

The first subterfuge. She did not bother looking at 'Renar'. So they wanted to be known by a public name whilst operating behind the scenes with another one. His eyes reflected the tiny ceiling halogen lights. Nervina sitting comfortably in an armchair watched his wry smile when introducing his assistant by his real name. She accepted the situation as is. Then receiving his coffee took a sip, seemed satisfied whilst Linoch stood back a little.

"I'm Nervina by the way."

"And a pleasure it is to meet you. You are doing well on the floor. Not actually loosing. Almost exceptional. So Nervina I'm impressed."

"A matter of not getting greedy."

"Wise. Showing remarkable control. So." He took another sip, "what do you say about the offer?"

"I have a counter proposition. Became a stakeholder."

"My, very upfront."

"I value my freedom, and time." Laying it out.

"You're new here."

"You can say that."

"Just arrived?" her Brain was tickling. Either the room was loaded or he was. Probably both. She let her Brain release some vague memories. It would help establish her legend. Each probe consolidating her past.

"Yes."

"Settled in?"

"Aha."

"Staying?"

"Sure am."

"Gamble before?"

"No. Prima has no casinos."

"Not Reganian?"

"Spent some time there and, ahm, had to leave in a hurry."

A slight smile. Letting him think she might be in trouble might make him think she was in, or was, in a bit of a fix. He didn't ask what exactly made her leave.

"Not unusual." He said placidly. "So a stakeholder." He repeated, thinking. Calculating. "I myself am recent. Most of us are. Come here for all sorts of reason, Primaians included. Though they tend to keep to themselves. But then so do Reganians. In our nature. We haven't the group mind of Primaians. You may even be approached by other syndicates or families. They basically run Novus like it was their domain."

"Sounds familiar." Thinking of Prima.

"I try to stay away from partners Nervina. Nothing personal. I work better on my own."

"So do I."

Another tickle. Trying to find out if she who she claimed she was.

Nervina soft scanned her surroundings. The casino had probes everywhere. Making sure no smart ware was being applied.

"I would have to make some background checks if I were to consider your offer."

"Won't find much. But feel free. I am me and that is that."

"Ha! Cool. I like that. Not enhanced by any chance?"

"If I were would I be here? I mean the casino, Novus. I know they're working on it on Regum. But what would be the point here? The casino doesn't allow even low grade programmes to be used. Sort of self defeating."

"Yes. But the others, well, let's say there is a jostling for position. Really playing power politics. Using any means available. Who knows? You could be an insert."

"I could."

"So you are what you claim to be. An isolate."

"Like the rest."

"You're not like the rest." An easy enough assumption.

"How is that?" be interesting to know.

"You don't socialize."

"I've just arrived. Know no one."

"Perhaps." Marrus was his name her Brain told her. Harmless enough but Nervina remained cautious. People like him had power. Somehow that seemed important to her Brain. Creating a back up. Drawing out any Primaian's after her. She was a defector after all. Nothing was certain. Having protection could come in handy. The price was just credit. Not exactly selling her soul here.

"Tell me have you considered why they let you go?"

"Why would you be interested in that?"

"I have to make sure whom I am dealing with."

"I understand. I used my situation to my advantage and got out."

"With some help no doubt. Unless you're enhanced. So which is it?"

She did not like the line he was taking. But then Marrus did not wish to be entangled with any authorities either.

"I am what Prima calls a Natural. Events sometimes fall into place. A matter of pattern recognition. I used circumstance to my advantage. And yes I did have help. They were only too glad to exit me. As to who they are they didn't say. Some freedom group I assume." She dissembled. "Just to get at Prima. Nothing more."

"They do exist. Run by their government. So they spotted you and got you out. You were lucky. Using the moment, making the right decision. For now I am satisfied." Replacing his cup on the low table.

"Another one?" Linnoch asked still standing.

Marrus nodded and Linnoch repoured handing the cup back.

"Need my daily fix to get the brain going." Assuming Marrus had a minimum of add-ons, configured. "Now Nervina I have a proposal. As you might be aware we sometimes gamble against challengers. The idea is to send someone broke and pocket their losses. These challengers are not revealed except by a code. The reason for that is obvious. How would you like to play against my challenger?"

"Sounds exciting."

"It gives the game another edge. This is relevant to the two hundred game only. The casino still gets its cut either way. It's legit. The plus side is winning's are of course their loss. I underwrite your losses you get twenty percent on the winnings."

"Why would I do that when I can get the lot for myself?"

"Accidents happen." He said without emotion.

"You said the identity is not revealed."

"And you are correct there. But it doesn't take a genius to get into public cameras. Easy to deduce who is playing what machine which is linked to the challenger."

"That open? Looks like security is a bit lax."

"It is. The casino says it's for the individuals protection. By being in the open were something to occur security would know who was playing whom."

"Which is being manipulated."

"That's where protection comes in."

"I see. And free rent?"

"Correct." Marrus like the others owned a few units in the complex. Throwing that in cost nothing. Especially for one such as her who never really lost. Marrus was interested because she might have either the intuition to know when to go for it or hold back. Coming via Regum could also mean she was uploaded with some new form of stealth processing. His scan did not reveal this but one never knew what that planet came up with. They might be testing her as a prototype and she would not even be aware of it. He wanted to find out.

"So what's the deal then?" might as well.

"Glad you're interested." another sip. "The easiest way is what Linnoch was told to offer you. You become a surrogate. I advance you say ten thousand credits. That should keep you going and hopefully break my challenger. I think I know who it is. A family. Too powerful to chase. It is now a matter of honour to finish this one way or another."

"And I'm it? Your ticket out?"

"If you continue to play as you are, why yes."

"What's in it for me?"

"If you win outright. Two thousand." She knew considering the stakes this was not much.

"And the contract then is done. No hidden catches."

"None whatsoever."

"All right."

"Nervina, welcome aboard. Now Linnoch if you will?"

He walked into the outer office and returned with a portable pc and handed it to Marrus who handed it to her.

"Read it first, it's plain enough."

She scrolled down the screen, was satisfied. It was just as he said. No mention of the underlying subcurrents concerning challengers, their power plays. Plus a clause regarding her personal protection and not just in the Casino but anywhere on the planet.

"Just imprint your thumb. Your identity will be uploaded and coded by the way."

She put her thumb onto the screen. A tiny laser scanned her iris and she was done. Her Brain alert withdrawing when the laser probed her. The tell tale tickle. Another data base with her open persona. Her base line more secure. How effective he really was remained to be seen.

Marrus attached a fibre optic strand and downloaded the contract and her `self' into his system. Beautiful. Now if she could get into that if only as a passive intruder. She thanked her Brain for that information. Then Linnoch retrieved the hand held computer and went back to reception.

"Your credit's been transferred into a casino card, not your personal account. There's a lot one can do with that amount. So the credit's only good on these premises, by that I mean the gaming floors. Of course the lower end remains open for you to use yourself, but the high flyer lounge will be your area now. The credit card also has a machine reserved for you through which the challenger plays. The card is only active with that particular machine. Tell me do you drink?"

"Not really."

"Good. In the high flyer lounge they are gratis. The idea is to get you to become reckless, loose inhibitions. You understand."

"I certainly do E."

"Now a word of warning. The casino have their own dogs. They've caught the odd high definition individuals trying to use their embedded enhancements to crack the odds. They were not only expelled, their credit stripped but also deported."

"Thorough." Whilst she considered how to get as much from him as possible. "The Web isn't in place here is it?"

"No and never will be. In a way even the Reganians want it like this. They just cannot resist, some of them, heck millions on Regum to live without it, literally. Here no such temptation. It makes for easier surveillance as well. Everybody is in the open on this planet. Why do you miss it?"

"I was never in it."

"Never?"

"No. Not interested. I mean it's just fake reality, a diversion. I prefer reality."

"Excellent. Now you might still be of interest to other factions Nervina. So don't be smart with them. If you do decide to defect you have to repay at a variable interest rate. Not cheap. Twenty percent. I would prefer you to honour your contract of course. But I think you will find my offer as generous as they come."

"I should thank you for the offer to be a part of your team."

"Accepted, duly noted." He replaced his cup.

"Well, looking forward to this." For she had the sagacity to comprehend her ability to grasp random sequencing which was how the cards were dealt. Then calculate, given it's a closed system, the odds within that system of specific winning combinations and bet on that as the game unfolded. That's where the real money was, the end run only significant to the challenger

"I have the utmost confidence in you." Which sounded more like a declamation than an observation. "Now I don't expect you to start straight away. Would say three days suffice to relax, unwind, recharge."

"Thank you." Now that she was in she decided she might need a bolt hole. She had checked out the city and found at the edge of the CBD near the light industrial suburbs several older flats. She would set up a second home there, for real privacy. The buildings were basic, no smartware, mainly external links only. There she could hibernate,

retreat, or disappear if things did not work out here or if anybody took an interest in her in any way.

Something distracted Marros. His eyes retreated just a fraction. Ah. Configured, even if using externals. Then he relaxed.

"Someone just accessed your track record here."

"Is that legal?"

"Yes. Gamblers can. Means the casino has nothing to hide. But it is perplexing given we have just sealed our contract. Could be a coincidence. Could be my challenger. You've just been witness to the way things work here. They're most likely trying to read your game plan. Every gambler has one or several, depending. Interesting." Marrus looked at her wondering if she had released the data herself. Maybe the casino knew someone was interested in her. Nervina knew her Brain was dormant. She would have to watch herself regardless of Marrus's claim of protecting her. At least he had notified her. Her confidence rose a little.

"Top range stuff." Alluding to the search. She was tempted but considered it a dry run, a scouting expedition. See if there was a reaction. None from her. She hoped Marros was astute enough not to follow it up. Or counter the move in some way. Let them flounder.

"So stay alert. You have a smart brain. Don't let them in. I know you're either a Natural and or a Volatile. They'll try and destabilize you so watch out for that as well. It's not exactly legal neither is it illegal."

"I am with you there."

"See you at the lounge, not here in three days Nervina. Anytime before midnight. Time of the high flyers. So how updated are you?" straight in, just like that.

"Not."

"Don't kid me." His deep eyes turning frosty.

"Well E if they did they didn't tell me."

"Prima? They mind fuck you there. Regum."

A little of the truth would not hurt the lie.

"Used CU as a cover."

"CU?"

"Central University."

"Ah." Mollified

"What's in it for them?"

"Pissing Prima off."

Marros laughed. "An extension of their security agencies. You know I'm gonna check this."

"Don't compromise them. Nice people."

He just looked at her expressionless. "See you in three days."

"Linnoch."

"Coming sir."

He entered Marros's office.

"Is she?"

"No artificial inserts. Just her pc, standard. Nothing for us to worry about."

"So she is a natural?"

"Stable at that."

"Well keep an eye on her. She claims she got out through some underground conduit, out of their uni. Knowing Regum I'm not surprised. Well I am a little. Still one picks up things. Gonna be interesting how she handles herself."

"I understand. You wanna do this remote or have someone on the ground?"

"Remote Linnoch. She might sense the watcher. Anyway the casino's got its look outs."

"We got her profile. I'll enter it. Only when she's on the premises?"

"Heck no. Constant at first. I wanna make sure she's the isolate she claims she is. Nothing heavy."

"Very good sir."

Nervina's Brain itched again. Oh boy, there were some nosey parties on Novus. Her boss? Well she was making sure she was a dud. She passed the two guards, into the lift and out on the floor of the vast entrance. No loaded searchers revealing themselves. Could be a broad scan sweep. The others, the Dormants just interested in having some fun. If loosing could be considered fun.

She had played to not just beat the machine but slowly access the processors. The casino's systems would be state of the art. In a way this place was perfect to siphon data from whoever was here. Especially the high flyers. Their credit ratings, their credit flows, the furtive caches and whatever else they wanted to secrete. From there to the syndicates, the corporations and most importantly the families. Shades of Prima. All by degrees, tiny steps testing first the cyber security in place. She could not swallow Marros saying Novus was low tech. From a Primaian perspective this was high tech. From what

little she gained on Regum this was a predeceased generation of computers and slow ware operating here. The space ports for one were using chemical rockets. Virtually ancient, cumbersome. Novus was not revealing it's secrets. The planet purely commercial.

First to get a flat at the outskirts. She caught the monorail back to the city. Find a real estate agent. There were several. The first one would do. The lady at the desk was most helpful. Then her enthusiasm dampened when Nervina indicated she wanted the low end of town explaining that until she was really settled no point blowing her credit on some upmarket joint. The lady wanted her credit rating. Nervina used her top level account. She seemed satisfied. There were several flats available as she turned the computer screen towards her. The one she picked, furnished, was a corner building, low rise, suitably run down. Good view of the intersection with a small row of shops. Ideal. The tram ran past it. She took it paid the deposit and signed a three month lease the legal minimum. It did not set her back that much paying straight up. That changed the woman's attitude again as she handed her the keys. Now that was low tech.

Free. Took some getting used to. No one watching her in an overt sense. Her Brain merely hovering in the background. Back to low alert. She waited at the tram stop and after a while it came. Transport was free. No driver. Last in pressed a button and it moved off smoothly. Not quite full. She sat down and watched as shops and shoppers passed by. Few ground vehicles, the odd loud motor cycle moving swiftly, small trucks delivering goods and services.

Her Brain woke up. Awareness. Alert but not alarmed. Recognising something akin to itself. That was a new sensation. Then it passed. A woman running along the footpath. The tram stopped and a few people got off and on including the runner. She looked casually around and ambled over to sit next to her.

"We're long lost acquaintances." Was all she said. This time her Brain felt comfortable. The woman, her age or thereabouts, short cropped black hair, pale, lean, lively blue eyes twinkling, a half smile on her face. Embedded pc on each sleeve. Geared up.

"We're secure."

"So we know each other?" Some sort of follow up. She thought she was free. Well they had done her a favour of getting her out so now came pay back time. She waited.

"Ratze."

"Nervina."

"Good to see you." The commuters kept to themselves. Nothing there.

"Could be."

The tram turned right down the street taking her to her flat.

"It is. Honest. Just arrived?"

"Aha."

"Me too." Why did Ratze feel like she knew her?

"Who sent you?"

"Sent? Now Ratze was thinking. Her rescuers had thought it wise to move her to Novus. Explained the concept of an open planet. Safety amongst the public. Straight out straight in.

"Some friends dropped me off. I had to get away."

"Same here."

"Really? Prima?"

"Yes."

"Same here. I defected."

"So did I."

"Shit. Most wanted to get away themselves. Bit like me."

The tram stopped. Some exited. The tram did not move. Ratze pressed a button. It moved off.

"So, the two of us running away from Prima." Nerivna looked at the screen's display. Several stops to go. "You think they'll try and hijack you or me?"

"They'd better not." Ratze sounded determined. Her Brain was eager to scan her. Just a little soft scan. Instead Nervina let her Brain go.

Ratze laughed. "I could do the same to you."

"You loaded as well?"

"Now that your Brain's skirted mine, yes."

"Couldn't resist. After all you, a stranger."

"Not that strange. Well actually yes but not in the normal sense. Not quite sure exactly how strange I really am." Ratze's eyes searching hers.

"Know the feeling."

"Kindred souls perhaps?" questioning.

"Could well be."

A comfortable silence. Nervina kept an eye on the overhead screens. Nearly there. Even though Ratze was like her she did not wish to have her find her flat. Not yet. In the distance to their left, having passed out of the CBD, with low rise flats the white flaring

flames and white billowing condensing glowing clouds of a rocket slowly ascending into space.

"Were you up before?" Nervina asked curious.

Crunch time Ratze thought. Hesitant. Those on the orbital were a race apart from those planet side. DVs might be held in high esteem but were not trusted by those left behind on the ground.

"You have." Nervina guessed.

"As you."

Should she reveal her aborted mission on Regum? Not yet.

"Looks like we're in the same boat."

"And we both aren't what we seem to be." Ratze's eyes locking onto hers.

Another stop. More people got off. The last passenger leaving pressed the button. The tram moved. Her Brain tried to reach into Ratze's. She let her in a little. A fascinating multiple layered protective set of shells.

"That's just the cover Nervina."

"I keep mine under wraps." Meaning her Brain did so. The less she knew the safer she was given any hostile probing. Nothing in her memory to give her cover or covers away.

"So surprise me."

"My stop is next."

"I'll stay on board. We'll meet again. I'm thinking we could be useful to each other."

"I prefer to be alone Ratze."

"So do I. But we seem to share a similar past."

"Which means a common future?"

"Futures Nervina." Her Brain went active for a moment. The image of bifurcating realities instant, throwing their probably tendrils like a tree into her mental space.

Ratze's was...what? Destined? Pre-programmed? Her Brain only told her what was there not how it got there. Fortuitous? Most unlikely.

"We do need to catch up." The tram was nearly empty. Nervina rose.

"I agree. Meet for drinks tonight?"

"You are in a hurry."

"If I'm right about you I've got heaps to tell you." That tasty morsel could not be denied. Her Brain was eager for information.

"Since our Brain's seem so similar I guess we can keep in touch."

"Sure can. Tonight? Know the `Ocean View?'"

"I'll find it. See ya then."

The tram stopped, Nervina gave her a backward glance then got off. The block of flats, three stories of bricks, reminding her of Prima's provincial cities was just like the screen showed at the agent's. The tram moved off Ratze looking but not waving.

They met early afternoon the next day at the bar in the city. It was full of office workers having a great time. That meant anybody wanting to observe them would stand out. Nervina saw Ratze sit near the entrance at a small table, a tall grey looking drink in front of her. Nervina was actually glad to see her. Not that she craved company but Ratze felt comfortable. Still she was cautious. She could be working for some agency here on Novus. Or like her seeking refuge. Maybe political. `Ah well' she decided to bear it. The price of freedom.

"What you having? I'll get it." Ratze smiled. "Just got here." Looking around, searching for watchers.

"Oh, ahm whatever you're having." Nervina replied easily.

"Gin sling."

Nervina nodded and sat down. Some younger men watched her then looked away talking to their friends. Ratze came back with two tall slim glasses and with a flourish set them down.

"Cheers."

"Those men at the nearest table seem interested." Nervina observed.

"Oh that, you'll have to get used to it. They're single."

"Well they won't get used to me." And sipped the slightly bitter, tangy drink. Refreshing. She felt it melt into her stomach, warming her slightly.

"You being tagged?" Nervina asked.

"Nope. Unless it's on the ground by either extremely uploaded ops or just plodders more or less braindead."

Nervina suppressed a laugh. The latter so true.

"Survival." Ratze said.

"Without a past." They clinked glasses.

"As long as it does not unravel. They will try, eventually. First they want to see what we do." Ratze focussed with a gleam in her eye.

"They won't get much from me then. No matter what's buried, and buried it is." Meaning her Brain but leaving that open. "Even if they did there isn't much of interest.

Whether Prima or Regum or here." Nervina was confident. "Bits and pieces all over the place at best. Nothing even a genius could make sense of. My past is fairly straightforward. Anyway I got a job. And you would never guess what that is."

"No I wouldn't."

"A surrogate gambler. With some character called Marros. Heard of him?"

"No."

"That's something then. So how come we're connected?"

"Beats me. My Brain told me." Ratze confident about Nervina. Her Brain's alignment for starters. "Not on this world that's for sure. I'd better come clean. I used to work for the DVs." then waited. Nervina did not react.

"The alien field." Nervina prompted taking another sip. Outside the blue waters sparkled in the afternoon sun.

"That."

"So you don't think there's anything to it?"

"No. Regum is doing it right. They're the future. Prima is...static." Diving right in. Get the feel of Nervina's Brain. If she had one. Ratze thought so.

"My sentiments exactly. And I don't feel any bond there either. I'm not a DV myself you understand. Even though they thought I was a potential."

"Means you're a natural."

"Oh yes. Right on the button, I think. You?"

"Me?" she took another sip. "Shit for brains."

"I should be paranoid having run away. I was sent to Regum on some research mission studying folklore there. Then at the final interview stage I walked, left my partner and got out."

"Congratulations." Ratze finishing off her first glass. "Love gin. When a suitable time comes I'd like us to do a reverse dump."

"Hm." Nervina not to sure. This was too fast.

"What?"

"I'm surprised. I thought you said you were solo."

"That will remain so. But if we pool what our Brains know..."

"Might confuse our personas." Nervina replied cautiously. "You could dump yourself into me, do whatever and I'm holding the can. I could even be the can Ratze."

"I'm running a bigger risk here. You alluded to not having probed your Brain. It's me that's going into the unknown here."

"You got a point there. I could be psychotic."

Ratze was amused by that admission.

"Maybe that is why they let me go, to cause havoc." Nervina ran with that delightful thought. A time bomb ticking away. "My synaptic pathways infused, suppressed dendrites, preconfigured algorithms in place ready to go." She paused. "Actually that makes some sense." And explained her probing the Casino's systems.

"That come to you out of the blue?"

"In a way."

"It's a lead in."

"It sure is."

"And dangerous."

Nervina's Brain tightened.

Ratze continued: "They have to be ultra security conscious. There is always some smart arse trying to get one over them."

Nervina relaxed. A different danger. For that one moment the hazard she perceived was on a much broader scale. Huge. So huge her Brain almost expanded into it and discovered that that domain was nearly if not directly infinite. Something was brewing somewhere. Any calculation, any set of equations resulting in infinity were flawed. So either the flaw lay in them, or, another slight surprise, a real flaw present and inherent in not just the casino's system but all systems. If the flaw was universal then it would be a constant and thus not recognisable. Yet her Brain had stumbled upon it and quickly retreated. More importantly that inkling was remembered in an inner safe containment domain of a mentally recessed haven.

"Something happen?" Ratze's Brain felt the surge receding as quickly as it surfaced. Nervina had an amazing repository.

"Something intangible. A flaw somewhere."

"Flaw?"

"Infinity."

"I'm a bit lost."

Nervina explained her guess.

"I see. No I don't. I can understand what it is you're saying. A flaw of great proportions. Either embedded or simply a glitch in the casino's system." Ratze started on her second drink. "Unless, there's a more prosaic answer. Flawed by design. Stack the odds in their favour. Either way you have stumbled across something."

"I have, haven't I?"

"Be careful."

"I'll be cautious. My Brain I'm certain will suitably configure itself if it gets close to this again. But if it is real, from what you say, that information would be worth a lot."

"Like your life."

"At least I've got some protection. You think I should alert my boss?"

"If the flaw's in the random generator that construes the way the cards come out, or all their other games then that would really send shockwaves through all those connected to the casino. Which in this case is the planet."

"A brilliant con."

"Exactly."

"You gotta be anywhere soon?"

"No why?"

"Let's get shitfaced."

Prima

"The Deep Visionary's survey of certain past events," without elucidating, "have yielded something that given its veracity has in a way answered our prayers." Lord Qatus looked at Lord Gharbel who had made the journey up to the Orbital the moment Qatus informed him of the breakthrough. Qatus sat in the observation room, along with two technical assistants fine tuning the captured visionary revelation from Elentra in charge of the DVs. Qatus could barely contain himself with this coup that might settle the problem of both the alien field and the homicidal race of psychopaths behind their monstrous projection.

It was pure chance. As Web Guardian Qatus had come up to investigate the incident regarding the escape and destruction of the two rogue guides, Ratze and Ung. Elentra replayed the sequence of their escape. Studying visual confirmation from a group of DVs scouring their specific time lines. Another group the alien world. That had been Elentra's idea. Go back to the beginning, see where and when their psychopathological path manifested itself. The escape of the two instructors almost irrelevant. They had the data-source.

After seeing what the DV's discovered Qatus realised its importance. The destruction of the spaceship, the possible defection of the instructors was a minor loss compared to the information they gained. The field remained, this time indicating exactly where. Another race responsible. Another Qatus thought. Where was the first one? No response. Nothing on file.

The designated specific target group of DVs chosen by Elentra had managed to lock into a sequence of time, millions of years ago that could be an answer to all their fears. Perhaps obviating the assault of their space by this misbegotten race of volatile delinquents. Qatus told the technicians to route the data into ultra secure memory storage. It would be up to Lord Gharbel to decide what to do with it.

"The Divine Mind guided them to a point in time that revealed itself to the DVs through its infinite wisdom answering our prayers." Elentra intoned with reverent

solemnity. Qatus nodded his appreciation whilst Gharbel was focussed on this magnificent, according to Gharbel and Elentra, breakthrough.

"What you will see Lord Gharbel is the power of divine wrath, the price paid by any who would dare meddle with the supreme serenity of His Being and by default the cosmos. Not only that but thanks to the revelation we now have the source of this malignancy. Blessed indeed." Qatus rambled on.

"What you are about to witness, what we will witness is truly magnificent." Elentra added. "At first what the DVs picked up was not that significant. Another huge asteroid dislocated at the outer accretion disk..."

"The what?" Gharbel preferred plain words.

"The rubble left over when their solar system was formed."

"Ah."

"Which through other stray micro planets sends pieces towards their sun. Then months later," Elentra continued, "something truly divine occurred. The asteroid collided with another sending it off onto another course entirely. Now it is heading for the planet we had been searching for ever since the alien field invaded our serene space."

"So we know the source. We have a target, a focus to work on." Gharbel said with some satisfaction.

"The Divine Mind has done that for us. Laying the groundwork. Computer simulations predict a catastrophe. It will lay them low, perhaps even destroy them. Our prayers duly answered after all this time." Qatus following accepted wisdom. "Our patience rewarded." he added gravely.

"Rewarding our fervent belief in its cosmic supremacy." Elentra repressing her excitement.

"And now we will witness the magnificent deed itself." Qatus allowed himself a gratifying smile. He nodded at the assistants who activated the screens. Space, a swathe of stars in the background. There it was. The massive asteroid tumbling serenely towards the distant planet. Hurtling through space moving inexorably towards its target.

"According the computers it's a million to one chance." Elentra informed Gharbel.

"Is it now?"

"It will end this struggle of ours." Qatus added. "And Regum will be left on its own. We know, according to the DVs that in another future that insane world would attach itself to Regum thus creating an intolerable situation for us. Now that link will be severed, the future rewritten in our favour."

"So we will be dominant?" Gharbel breathing relieved.

"The timing could not be more perfect."

The massive asteroid was closing in on the blue green cloud streaked planet. It started glowing a brilliant white leaving a flaming trail in its wake. Announcing its impending wrath. A second screen calculated its point of impact hitting the southern ice cap. Its presence a terrifying beauty. The massive chunk of rock glowed like a miniature star, tiny flecks flaring out as bits disintegrated in the atmosphere announcing its terrible intent.

Then it hammered into the white continent at a forty five degree angle. A white wave of dislodged ice rose slowly outward from the powerful impact. Smaller ripples and shockwaves expanded outwards into the ocean surrounding it. Plumes of white steam boiled upwards with cosmic fury as the asteroid burrowed deeply into its pristine surface. More undulating shock waves spread out as it slowly came to rest deep beneath the surface.

They all watched in holy admiration as the divine deed was done. The white icy waves became smaller.

A group of DVs were focussed on the minds, the resonant state of the hopefully doomed race. For the moment a few were awed, some though horrified as the broiling white clouds billowed angrily into their blue sky. Then came the frightening realisation of the massive impact as the earth trembled beneath their feet. The tectonic shock exploded volcanoes, their orange and red magma spewing out in brilliant splendour dirty grey black plumes of smoke. More volcanos flared their liquid fire skywards across the globe. The first white crested tidal waves hit the nearest landmasses around the southern icecap. Sticking land the tsunamis spread across the stricken coastlines. The shock wave rippled underneath the ground resulting in earthquakes, dust plumes rising from the surface. The DVs could see right through the fuzzy dirty fog. Mountains crumbled, rubble bouncing down from their snow capped heights. Cities tottered and disintegrated, trapping their inhabitants. Fires erupted within the calamitous destruction. Ships were flung ashore and smashed onto the mountains of debris. The southern ice cap was now smudged into dark glowing grey as its volcanoes came into life. Dirty steam hissed out of fractured crevices whilst the meteor glowed sinisterly below its collapsed surface.

The ice melted into hundreds of newly formed rivers, the ice cap shrinking. The sea level rose rapidly. The agitated oceans, their first tidal waves receding followed by less intense surges of water invaded the low coasts drowning more cities. Those inland

were collapsing with repeated quakes, the ground yawning caverns as the earth was rent apart repeatedly. The volcanoes continued to pour their swelling dark clouds into the sky obliterating the sun. Darkness enshrouded the planet. With no sun their crops would fail, wither and die as would their livestock. Those who did survive would die of starvation and disease. They had been smashed back into the stone age according to the computers whose projected calculations were even more lurid than the clouded planet.

Stunned, all were silent. Elentra then activated her back up DVs to insert their message to those who did survive. Imbue them with their vision of divine wrath for having strayed from the spiritual path which was their only true destiny. Show them the terrible glory of the Divine Consciousness. The DVs projected, en masse the holy retribution that became their fate for the heresies harboured in their misaligned souls. Now was the time for redemption and sanctified reflection.

They had them where they wanted them. On their knees. The Divine Will irrefutable. The computer analysis showed a tiny percentage would survive. Once the oceans had settled those who did endure could live on its bounty. Begin life anew but focussed not on technology and its material gains but devoted solely in aligning their souls to the Divine Supremacy of the cosmos. The DVs would make sure of that. Ram the message home. Stray from the divine path and risk punishment. Accept the supreme vision and eternal salvation was the reward. Those still intent on their pathological way of thinking would suffer the torments of a fractured soul. The DVs were in control now.

In their excitement, being witness to this historic event they forgot that the alien field was still in place.

"Elentra," Gharbel waiting until she had finished instructing the DVs, "it worked like a magnificent dream. It will reinforce our faith and those on that world."

"I believe the universe has been reclaimed." Qatus sighed contentedly.

They nodded sagely.

"We have work to do." Gharbel restless. "The Divine Consciousness has acted and we are duly humbled in its blessedness towards us as the divine race. Our resonance will be strengthened. Our foes vanquished. Now it is up to us to make sure they remain as they are. The DVs will hold them in check. That is their primary duty now. As for the Reganians they can draw their own conclusions."

"Should we release this?" Qatus asked.

"To them? No. They might decide the DVs were behind this. Moving the asteroid so that it struck that planet." Which on the screen was surrounded by black clouds

vomited forth from hundreds of volcanoes. "That might cause unpredictable reactions with possible hostile intent towards us."

"What about our people?" Qatus probed.

"Not necessary. We don't want it to be known that there are other races out there. Remember we have Volatile Naturals. If they link up independently anything could happen. So, not yet anyway. First we have to make sure the Earther's follow the correct path. Then we shall see." Gharbel warned.

"Lord Pentham would have to be informed. Be on the alert to what you just have alluded to. As you said, Volatiles are unpredictable." Qatus replied.

"And I presume I will also have to watch the DVs, make sure they stay aligned." Elentra added.

"That is so. Good thinking." Gharbel was pleased.

Elentra knew that it took only one individual on that planet who could create enough of an aberration to change the present in thinking along their old lines and thus recreate the past they had lost. It made her work easier now knowing they had the target in place. Vigilance was of the essence, both there and here. She would run some future projections, computer simulations to see what choices if any were possible on Earth.

"Now Lord Gharbel, Qatus. Shall we see how effective divine intervention manifests itself?" Elentra asked. They were still astounded at the massive hit. The white plume of snow and ice fell slowly over the southern icecap streaked with grey smoke from its gushing volcanoes. Tiny orange flaring molten streams of lava ejaculating obscuring the visual imprint of the observatories having found the location of Earth.

At a separate set of monitors the planet's resonant state enveloped the read outs, then channelled through the DVs, into control. System analysis showed their states of mind being in utter chaos. The high end of discordant volatility. The sea level was still rising dramatically as the excess heat continued to melt the ice cap. Huge chunks broke off slowly dispersed around the white continent now covered by dirt, snow, rain, volcanic ash all muddying the picture.

Tiny resonant bubbles glowed ubiquitously amongst the utter chaos of stricken fear riven prostrate minds. There were some whose resonant state was flaring into heightened consciousness.

'Apotheosis.' Elentra thought. The cosmic catastrophe was actually enhancing perspicacious intellects. She did not voice her concern. The idea of a moment ago that it took only one deviant to reconfigure mass resonant states might eventuate actually did.

After all that is how Prima's equivalent resonance was kept within the boundaries of their global state. Through the Immortals, one per continent. She looked at Gharbel. Qatus satisfied as he digested the horrific calamity like a sumptuous feast. Whilst the stricken, dying inhabitants were burning out with fear, horror, dumbstruck, their essence collapsing into utter chaos certain individuals on Earth searched for an answer to their doomed fate by imbibing the catastrophe in a way that mentally struck out in a completely different way of thought. Awareness of the vastness of their situation as a planet in the enormous ocean of space. Prior the asteroid hit they had imagined space and its millions of stars as a flat bowl, the gods behind that black curtain, the lights their souls. Now these astute thinkers saw space three dimensionally. They had become aware of space as space. The jump in their mental state that the reality of space was completely different to their previous assumptions. The ancient knowledge of their beliefs shattered. The conviction of their faith in the gods destroyed.

These few did not accept the DVs insertion of divine retribution as a plausible cause. They negated this aspersion of an overriding cosmic deity. They rejected it's presence, frustrating destiny. Filled with their own wrath for having so severely suffered their harsh fate. 'Never again' thought with a resolute determination to understand how the cosmos worked. The very thing the Divine Mind and the DVs had tried to obviate had been boosted.

All this came via the DVs observation, fed through the computers and Elentra's naturally enhanced resonance. She was the head of the DVs at the operational end. But for the moment she did not reveal this for her exalted visitors.

"You may have noted the flaring minds." Gharbel looked concerned.

"Yes. The very opposite of what was expected." Qatus came to understand.

"I've noticed that too gentlemen." Elentra agreed. She entered some commands into future possibilities. Moments later the answer she had already guessed came back. A new civilisation would arise from the ashes. One less superstitious, more analytical, less prone to mystical reasoning. Deleting the necessity of divine intervention. The calamity a freak accident.

"So this stupendous acclamation of the Cosmic Conscious is denied. The catastrophe actually enhancing their mental processes." Gharbel grasped the kernel of this newfound way of thinking.

"You think this might have been an error, a miscalculation?" Elentra aware she was close to thinking heretical thoughts. Given the seriousness of the situation all angles

needed to be considered. Asking difficult question was necessary for the moves they were to make in containing and subjugating the mental processes of the Earthers.

"No Elentra. Revealing the enemy." Qatus said serenely.

"Now we know of their existence the DVs can still work on them." Gharbel spoke with sure conviction.

"A revelation then."

"Correct Elentra. Flushed out." Who though? Not the Reganians.

Elentra, focussing on the practical end of running the DVs thought fields with self-boosted determination. Closer to Reganian logic than Primaian. She was after results not ideological correctness. Necessity dictated the need to counter Earth's misguided orientation. Specific minds had deepened, expanded. As the realisation of the immensity of space imprinted itself upon them so their minds reaction had deepened and expanded as well. Moved forward by a mammoth leap in evolutionary terms. Jumped millennia ahead by this decisive act to blast them back into the stone age.

"What of Regum?" Gharbel asked.

"No change." Elentra watching their monitors.

"Good. That shows they have not cracked the DVs. Now this event did occur millions of years ago. But there is something else we can do. Given what we now know, I'm referring to the revealed enemy, I am considering something more audacious. Since you Elentra are the supreme commander regarding the DVs there is no reason to hide this from you. I expect you concur Lord Qatus."

He merely nodded. Gharbel was above him. Elentra cautious. When Domain Lords had ideas things got messy and complex if not complicated.

"After a suitable stretch of time, as the Earthers rebuild their world it might be useful for us to actually have a presence there. Show them that we care for their well being spiritually. All it takes is one mind."

"Go in direct, reveal ourselves?" Qatus surprised. "You think that wise? It means they will be aware of us. I thought the divine command was for us to remain beyond them. Be the effect without showing the cause."

"Consider Qatus. If they try to link with us, we'll think of a surprise for them. It will convince them of our spiritual superiority."

"Ah I see." He beamed.

"Won't they then also become aware of Regum? Through us?"

"Even better. Then we'll know what the Reganians are up to as well."

"This gets better by the moment."

"We will be the dominant race." Gharbel intoned.

"I assume at some suitable time we shall reveal this major historic event."

"In good time. To draw the appropriate lesson."

"So you are intending for Earth to recuperate, see which way their minds flow. If they show signs of deviation we I assume show our interest in an appropriate way." For Qatus guessed what Gharbel was thinking. "Using whatever means the Reganians applied to convince them of our, err, disinterested interest. It will strengthen us. The Reganians can brag about their achievements whilst we infuse our own resonant state. Some diplomatic effort will have to be made to convince them that Earth is of interest to both our races."

"You think Tellafus will agree? By that I mean us working with the Reganians."

"I cannot see any difficulties there. In fact it is beyond his domain. The pontiff's primary concern is for the condition of our souls. We as Domain Lords have a far larger brief. There is no need to concern him. Not yet anyway."

"I understand Lord Gharbel. Who would you suggest?"

"If I may?" Elentra asked.

"Please." Gharbel was feeling munificent. So many opportunities were penning up.

"We have an extensive data base here of our people. We search for a suitable Volatile. With Earth recovering, and this could be centuries away from the current point in time, which as you say the Reganians can focus upon at will we find the right time to insert ourselves there. We need the Reganians to come on board this diplomatic mission to Earth. Let the Reganians think they are in control with us tagging along and sowing the right resonant state through an extremely potent but stable volatile."

"That would be Lord Nihen's domain." Qatus answered.

"We could find a relevant volatile who has not been groomed. Unconfigured." Elentra suggested.

"Someone untested?"

"More like unaffected by initial training."

"Purer."

"Yes."

"Worth considering."

"And able to withstand Reganian influence." Qatus warned.

"But of course. He or she will have the requisite resonance. Elentra you may start searching your data base. As you have clearance and access your search should have no trouble in that regard. However the reason remains with us." Gharbel warned.

"Understood."

"So who will run this?"

"Why Lord Qatus, the Reganians." He allowed himself a wicked smile.

Telafus's since the revelation at the Immortal's sarcophagus, devoted to not just their noble and holy ancestry but more importantly keeping the planet's resonance pure for all eternity wondered exactly what that entity contained. The being, the lordly presence holding that eternity in its sights if not grasp, or so it seemed was a heavy burden upon him. Though he had a confessor, revealing this would cause consternation. Worse if word got out the resultant anxiety that It would cause, not just with the Domain Lords and their realms but if It percolated down to the people their resonance would be imperilled. The people distraught. Unity fractured. The collapse of everything, he, all they stood for.

He was in the hidden control centre of the inner observatory at the pontifical palace. Functioning from the days when Regum had still been an obedient dominion prior the Calamity. The monitors linked to the Trine, the System Guardians, shadow presences of combined souls mimicking individual entities as Immortals were seemingly not effected by this strange alien being. The flawed intelligence was still outside, if It was as real as Telafus presumed. Had it been in his head? Was this Regum's doing? There was no linkage there. Whatever inherent discrepancy had manifested itself was somewhere out there in space and possibly in distant time itself. He hoped so. The monitors showed no undue influence. Everything was as it should be. Was this perhaps the alien field? Indicators showed that to have come from the opposite direction. Were there two fields then? The lack of knowledge was disconcerting. Intelligence from Regum specified they were not, as far as anybody knew, aware of It either. With no effect noted Tellafus wondered if he indeed was the only one cognisant of this malignant presence. An entity which poured images into his mind. Mimicking computer generated visions. The best he could come up with was some sort of subdomain of Regum's Web. A sick joke from a demented brain. An overweening ego playing master of the universe.

Lingering, festered in his memory, haunting him, mocking him. Subtly interwoven into his resonance, an outward projection, something `other' infusing and irradiating It's realm of space with Its deleterious essence. An overweening bombastic exultation of Its

insistent mind that nothing could stop It, nothing could touch It. As if It was some ancient god resurrecting Itself from the depths of their lost mythological past. Yet no DV, no Naturals, no Volatiles had noted Its presence. Was he the only one to note Its execrable presence? Was he going insane? Or merely targeted being the supreme pontiff tasked to unite the people in holy communion. So by focussing on him alone It was striking at the very focal point of their planet's divine essence. Bypassing the Cosmic Consciousness. Completely indifferent. An outrage, a heresy, apostasy.

The planet's resonance was still as it should be. He would alert the Domain Lords to watch out for new heresies. Cults devoted to this malign intelligence. Remove dissonant minds, contain the contagion wherever and however it manifested itself. Double their efforts to keep the Web out. He took solace from the monitors and DV links. Apart from the alien field, a constant, there was simply nothing there to give credence to his vision. Was this something merely a chimera? Or was he Chosen as an avatar? Worse, he chided himself for almost thinking it, could the Divine Mind have manifested itself in this most unusual of revelations? Becoming a personification of its holy projection into a tangible presence? He felt a surge of exultance at the thought of being Chosen.

There was another way of finding out. Premature Ascension. Enter the Trine where all was pure spirit. Unburdened by earthly thoughts. Pure divinity reaching into the whole universe as the penultimate end state of one's very existence. It had never been tried and he had no wish to end his days just yet. It would be his last recourse.

Nor was he so blind as to be ignorant of his own flaws. Part of life. Taking that flaw into the Trine would bring a certain contamination with it. He would then be rejected which would be the end of him as pontiff. To gain Ascension before one's preordained time would indicate hubris. The rejection would mean spiritual degradation. No pontiff had ever dared to assume Ascension due to the feeling of inner completeness. He was not that divinely attuned yet. He simply was not ready.

He would need to concentrate on imbibing the holy ether of the cosmos. Thus fortified he might be able to fathom this strange being that seemed to possess worlds, time and space. Would it be enough? Was his resonance strong in that regard? He had come away untarnished, except for the memory of the revelation. Nor had It challenged him directly. Not that It needed to. It seemed so sure of Itself. Disturbing at the indifference It showed regarding the very belief they knew was divinely ordained. So he came back to the rationalisation that this was a god not defeated. Merely driven back, then turned reclusive, gestating, self spawning to make a come back. If that were

indeed so than he considered himself a worthy challenger to fling this pretentious god into oblivion.

What if this god belonged to the alien planet? What if through their devotions it drew its strength to challenge not just him but the Supreme Being itself? Was a cosmically divine battle ordained? The Guardians, the Trine, the System Surveyors were not aware of it. He was going around in circles.

Maybe it was best to ignore it. A voice inside of him rejected that course. It would be what It wanted. So how to prove its reality? Open the Infinity Chip? That might be what It desired: access. Yet doing nothing was not going to remove it either. He would have to go back and study this presence, no matter what the consequences. He was willing to sacrifice himself for the greater good and take on this pretentious essence that dared to think Itself capable of usurping the Divine Being. Challenging it by its very being. The Immortals had wrestled the daemonic gods of old. Which gave him a pleasant idea. If he usurped this thing he too might be lifted up into the realm of an Immortal.

His mind was made up.

He secured the portal to the underground bunker and via secret passageways underneath the pontifical palace made his way to the official observation room. Devoted technicians and designated priests were relaxing, watching the screens covering the planet. A huge operation but a necessary one to keep an eye out for any deviant outburst as they arose. Then the containment fields would be adjusted to subsume the individuals who strayed from the divine path thereby saving their souls from the perdition they sailed into. Keeping the spiritual peace. The deviancy contained.

The foreman acknowledged his holiness. He told them to continue their sacred duties. Asked if there had been any unusual activity and was notified that minor fluctuations were manifest but nothing outside safe delimitations.

That at least was something.

He returned to his private chambers, took his evening meal then asked Semor to attend him.

"I'm going to pray at the Immortal shrine. What I want you to do is create a secure link into the Web Guardians."

Semor nodded. It was not his duty to ask but to obey.

"I felt a heightened resonance the last time. Now is it me, the Immortal or a manifestation of the Divine Mind? I don't want to think that I am in any way above my own station."

"Is it an outer or inner noticeable phenomena?"

"Exactly Semor." Telafus replied without answering.

"Very good. In the control room or your private link?"

"The control room. If the Great Divinity is self exalting that would indeed be a blessing for our planet."

"It would indeed."

"Blessed be the Great Mind. How long I shall be will depend on many factors. My resonance . It could be quick or take some time. I want you to remain in the control room. Of course if it takes longer get Ichnen to take over. But do not release it into the public domain. Thus the secure link. For if it is just me, well, I am not the type to wish to trumpet this heightened resonance. That would only create expectations I might not be able to fulfil."

"I understand. Very humble of you pontiff if I may say so."

"I don't know about humble, I'm thinking of the Domain Lords. I don't want them pestering me. They will read all sorts of things into it."

Semor suppressed a smile. As one of Telafus's private advisers he too was aware of the politicking the Domain Lords indulged in. He also knew how Telafus abhorred the gamesmanship they indulged in both with and against each other.

A heightened resonance. If only.

"Take a short break. I need to gather my thoughts, prepare myself. The Immortals deserve due reverence."

"Of course pontiff." Semor rose from the ornate armchair opposite Telafus's gold embossed recliner and left.

'How to deal with this?' Telafus considered. What exactly the entity intended remained obscure. It had shown him multiple worlds, multiple realities. From what he was told regarding the Web it could be assumed this was just another subdomain. He had only been shown its convoluted realms from the outside. He had no idea what it felt like being inside. Maybe after this venture he might try, compare its effect on the mind to that of the entity. Which had offered to share its dominion.

His mind tracked back to the Domain Lords. They had their spheres of influence deeper than surface reality and as vast as space linked to the planetary resonance. Within that envelope were the combined soul states of all of Prima's inhabitants. The Immortals had infinity, eternal life just short of that of the Divine Mind. And what had he? His office? The terrestrial end of Prima. A vicar to the people. Enclosed and isolated. Not that he craved power. It only disturbed the serenity his mind, the tranquillity of the soul.

Divineness his driving force. If only Regum was not so blind to the celestial magnificence. Shut out by the Web like a heavy curtain richly embroidered with manifold diversions. Well he had stumbled across a diversion, one deep in space, maybe of space and from what he remembered, gestating, growing and expanding. Surely It did not have the strength to usurp the Cosmic Consciousness. It could be a test. To see if they were vigilant, fastened to the Holy Ether. Stray from the path and loose your soul. Still a tiny voice niggled him: accept this gift and be strengthened. He could be the ultimate Lord of all domains. Tempting. But what to do with this power? His mind went blank. No answer. Just the silence round him.

What to do with this power? What did the entity intend? It had said it held worlds in its grasp. To what? Infuse itself! The image of Prima vanishing in its hold so real. Or a play of images. Well he could counter that with his own. Now when he thought of the Divine Being nothing came to mind. Nor could it. The Supreme Being was beyond mortal conception. There and not there. As the Reganians expanded into space they had not come across any essence at all. Just space. Space. Enigmatic. The ultimate puzzle. When he had finished his immersion he would check up on the science of space. If such a subject existed. There were scholars cleared to access Regum's knowledge base. If only to understand their thought processes. As non believers they saw the magically infused universe as an empty extension filled with stars, the galaxy and now millions surrounding their universe. Was this the real vision or their internal projection of what they wished it to be? If it were not for the alien field then this hallucination of theirs would be less tenuous.

So many baffling events. It had to be a sign, a challenge to strengthen their resoluteness in their belief. He would thus be strengthened by the challenge of the entity. Accept it for it was. Not as vast as the True Being. Reject it and let it fester in its own convoluted disfigured mind. Or, or could it be that this bizarreness was his mind's creation? His inner wishes, his own soul seeking not just the answer to all answers but wanting to be an answer in itself?

Well the revelation was upon him. He would rise to the challenge, invigorated by that thought.

He changed out of his pontifical robes into that of a humble priest. The black cowl and gown comfortable. The outer office empty, Semor taking his short rest. He had thought of going to the control room to make sure everything was set up to route whatever came his way out of the public domain for now. There were many secrets his predecessors kept hidden. Not even the Immortals aware. That was held in the Trine, the heart and soul of their divine essence, guiding the Ascending pontiff by revealing the

short falls of wrong reasoning to aid in the transformation from the body's end to the purely spiritual eternity upon passing on.

He felt his age. Or was he weary of his office? So much was happening yet nothing seemed to change. Mere surface disturbances upon a choppy lake its depths unruffled. It was an apt image he would use if things became tricky.

The night was clear, the stars bright, no breeze. He passed the ceremonial guards who saw only a priest. He showed them his signet ring and told them he was not to be disturbed as he prayed in the Immortal's shrine. They saluted.

His heart was beating faster, his mind crystal clear. He felt he was at the beginning of a stupendous adventure. Past the flickering flames of the wall's torches into the mausoleum, pressed the pressure plate the inner recess opened to where the Immortal resided.

The tiny lights came on. The sarcophagus resonating he thought in the knowledge that eternal life was possible, attainable. He arranged the cushions then squatted on his haunches and readied his inner self, soul, mind, body.

All would be revealed. Foreknowledge guiding him, making him aware of what was in store. Discover if It was an ancient entity, a mad dream, an alien insertion or an inner longing he denied himself.

Time to meditate. On It? No, let It come to him. He concentrated, eyes closed on the supreme divineness of the universe.

Space. Stars. So close. A planet. He refocussed on the Supreme Mind but the glittering blue waters, the ice cap, the snowy mountains, forests, deserts remained in sight. And the presence of the entity somehow involved at that distant world. No glorious galaxy in view. Telafus had left Prima's space. The source of the alien field! The presence was down there. Had it found a people who had accepted It? As an incarnation, as a god unto itself? Had he missed his chance to gain further understanding of its multifarious realms?

The essence of Its nature felt thick, clammy inside him, unwholesome like some poisonous exhalation. Dominant, a sinister putrid excrescence drawn down towards the planet. It's circumference expanded and slowly flattened out. A vast baleful citadel perched imperiously on top of serrated vicious jagged mountains. A bright light above it. The damned edifice crumbling and decaying with unnatural speed, shaken to its foundation. A cosmic war on an occult plane. The entity was being challenged! It had come to this place and was being rejected by another potent force, perhaps the bright orb pulsating above the crumbling citadel. On closer inspection it was not pure white but

rather embedded with tiny specks of coloured fragments. An artifice sent to destroy it. A construct of the Trine? The Web Guardians? What or whoever had created this was winning the cosmic battle.

The walls of the citadel collapsed to its unwholesome foundations. The essence which had dominated here in its foul reign escaping its foreordained doom poisoning the very air around it. A shadow passed through him and he shivered. A bubbling darkness, an evil mind, a cesspool of perdition dissipated both into him and up and away from this tiny sun's presence. A huge retaining wall bulged outwards and collapsed in thunderous decay. The radiance of the tiny sun relentless trying to burn out the dreadful monstrosity that both fought it and used it to draw upon thus aiding its escape. The invisible apparition instead of being blasted to oblivion worked on the deception in pretending to be destroyed.

The affinity from his previous encounter even stronger now. It was one and the same. The deception worked. The inveterate intelligence was outsmarting its aggressor with exquisite timing. Its fall, its demise a contemptible pretence. On the ground for he was hovering just above it a putrescent deliquescent corpse bubbled into nothingness. For a moment in its final assumed moments strange glowing three dimensional geometries, not unlike what he had initially come across. It went deep and far, inwards and outwards enmeshing the horrid entity in a protective cocoon, using the bright orb itself stretched across space and time to facilitate its escape. The pulsating patterns, a square and a circle, glowing gossamer lines, vibrant, full of resplendent alien energies fascinated Telafus. The artful ruse worked. Sentient anger and determination to rid their world of this pestilence. This unwholesome aberration infused with a venom barely contained in its foul mind expanded within the flaming patterns a malformed coterie of baleful impregnated homicidal madness. The dead were strewn all over the mountains where a desperate battle raged. The massacre of those under its wrathful embrace mangled, chopped, butchered in wanton carnage to obviate its evil servants.

All peripheral. The lambent quivering cocoon, glowing brightly now that the tiny sun had vanished, severing its link drew him away along with the strange brightly lit enclosure. The carnage below, the ruins of the citadel now a dark shadow if its former self, where there still clung remnant malevolent dormant vibrancies receding with a mind jolting rapidity as he followed the flickering blazing cocoon in which the essence had surrounded itself, following the trajectory of the tiny orb back into space.

His soul was being stretched through the distance, the speed of escape incredibly fast. He felt attached to this strange manifestation as it blazed brighter, the

tenuous spectral glowing lines becoming more solid, more intense. It was reassembling itself far away from the planet it had just managed to escape.

Awestruck Telafus realised too late the geometries were now all around him surrounding him in its unnatural embrace. The cloying viscous essence percolated thickly around him seeping into his pores. Insanely warped twisted patterns came and went, a tortured moulding reincarnation reflecting its deformed mind, a visage of demented exultation having escaped its preordained doom.

It had found a more potent source of power. An unseen vortex and with lightning rapidity, taking no note of Telafus, barely a blemish in its reconfiguration weaving its potent web. Pulsing obscenely in its living deformation all around him.

Telafus realised his entrapment due to his fascination with its outré power. He tried desperately to call out to the Divine Mind. Instead a sonorous intonation, a hiatus replaced instantly by a soul wrenching ululation mocking his pathetic cry for divine intervention. He tried to extricate himself by focussing with determined spiritual longing to be released. To no avail.

His mind agitated, unable to focus. The essence pleased with this as his thoughts were tossed about driven by an invisible fetid wind. Any focus on any particular deliberation torn apart by the raging storm in his head. The moment any idea tried to form itself it was twisted out of shape becoming unrecognisable deformities then sucked out of his soul making it impossible to get his bearings.

The strange glowing strands taut bonds. The domain in which he found himself, instilling a mind pounding dread weighed heavily upon him. All normalcy was negated, ignored. The entity completely indifferent to the havoc it caused not just in Telafus's stricken soul but equally in its own demented fashioning of its own spatial realm.

The silence that became the answer to his frantic impregnations was a deafening void within him. He felt eviscerated, ensnared in a catafalque of immanent destruction maybe even death. He did not want to pass on in this convoluted domain. He felt utterly corrupted. The entity all around him, within him not as a being, more a semblance of life eternally deformed. And a sensation of triumphant madness with a surety of its self, resolved in its own cosmic domination. A potency of almost unlimited power. A presence not easily denied.

'You have just witnessed my resurrection.' It was back, gleefully invigorated by its miraculous escape.

'Escape? You are a hallucination.' Hoping to break the spell.

'And?' not even challenging Telafus's assumption.

`You cannot be real.'

`I was real enough down there.'

`They destroyed you.'

`They butchered my believers. But not I. Thanks to a miscalculation on behalf of my enemies I used their pathetic attempt to interfere in my designs to escape, reform, redesign and resurrect myself in even greater splendour. Last time I showed you my possibilities. Do you deny them even now?' It snickered.

Telafus desperately searched for a way out. It's breath was cold, wet, a festering decay seeped into him. He searched for the being.

`You will know me soon enough.' It said derisively. `All worlds will.'

Telafus felt disembodied. He thought of the Web Guardians and It took note of that. A tremendous vibration shook his soul. Reverberating through him It threatened to shake the very flesh from his bones. His bowels turned to water. He felt himself putrefying as this monster sucked the very life essence and all of his soul from his being. It feasted in glorious sumptuousness on his unravelling mind, extricating his memories. All he knew, of Prima, of Regum, all the knowledge he possessed was absorbed by this being.

`You had your chance. Now it is my turn.' It scoffed.

Memories were strung out into the solidifying orb. As he had seen before. Each tiny image a world, a reality, a living reality, animated. Telafus stretched between where he was and the subtle infinities within this sphere. Dissipated in all directions becoming one with the insane patterns of his enclosed prison glowing eerily as his life gave substance to this quivering cosmic entombment.

`I have learnt much. And will put the knowledge gained, to be gained to further my aims. Those who I will reveal myself to will see what they wish to see, what I wish them to see. *I will be the redeemer of all the worlds in the universe.* Those that are, those that will be and if I feel like it those that have been. Your pitiable divinity is but a childish fantasy, as weak as that of your kind.'

Telafus was shocked, then frightened for there was no denying this entity. He had to get back and warn...when his mind snapped. For a moment he saw other races in torment, homicidal beings glorying in wanton destruction and filled with divine grandeur as they brought death to their enemies. Cities in flames, catastrophes overwhelming the recalcitrant, civilisations turned to dust as its demented followers resurrected new worlds to its unholy design.

The demonic visions exploded in self replicating patterns through the many domains it already possessed. It was too much. He became a husk, hanging on to dear

life. Tormenting fires within consumed his soul. His memory completely gone, his mind lost its anchor and unravelled. The apparent demise of this being untangled itself from an attempted entrapment. His soul turned to dust, it's essence absorbed by the entity. It had a thousand faces, countless personalities including that of being the Supreme Divinity for all time.

Several days later Semor looked for the pontiff. The monitors had shown extreme signs of fervent mental and spiritual activity. The pontiff in some state of apotheosis. Then the readings went crazy. The programmes could make no sense of it. Perhaps Telafus was in communion with the Supreme Mind. Then just as quickly as the heightened resonant state appeared it collapsed in intensity. The remnant discordant resonance remained steady. With a disturbing analysis. Insanity. Surely not.

He made his way with two priests, as witnesses fearing the worst and found Telafus a drooling, soiled, jabbering idiot. Rambling fearfully, haunted by maddening visions as his distorted mind rambled on about fallen worlds, a cosmos in decay, a usurping god, the peril of millions of souls at risk by some unknown being. Semor was glad Telafus had ordered him to route whatever came his way into a secure data domain. No pontiff had ever gone insane before.

He closed off the mausoleum and made his way to the asylum to admit Telafus. Officially he had passed on. A mock ceremony of Ascension would have to be performed and a new pontiff installed. A mad pontiff. What in all that is holy had driven his mind over the edge? He had no wish to go down that road.

Regum

The two all terrain ground vehicles were halted overlooking on a knoll the last Reganian settlement straddling the border to the Outlands. The settlement of Amaik nestled next to a vast lagoon. The ocean a dull grey reflecting the cloud laden sky. The tide was out. The remains of seaweed, stranded jellyfish and the rest of the muck from the lagoon's murky waters gave rise even at this distance to its awful stink.

The assembled team took in the panoramic view. Amaik was a fishing village of several thousand inhabitants. Some of the Outlanders mingled amongst the Reganian's, who craved a simpler life than the high tech glitz of Regum Central. Even from this vantage point they could see the people milling in the village. Huddled low rise brick buildings around the town square.

Off to one side slightly up the hill the hotel where they would be staying before venturing forth into the backwoods. Situated further up a gloomy edifice, massive walls, squat. A ponderous place of worship for believers in some new god the priests of Kratham preached as the redeemer of the universe.

Professor Storaf reminded his team and his military escort for the Outlands yet again that they were entering a land of ancient paganism. Steeped in magic and mystery. The reason of their journey.

The soldiers were stretching their legs. Mitaj's grunts Dag, Turd and his second in command, captain Headache. Storaf ambled up behind Mitaj knowing the Outlanders were indifferent to the high tech Reganian's, who, by political decree left them to their own devices. Nothing was certain as to their reception.

Headache, solid, brute strength was every inch the soldier. Turd brawny, a little slow at times, watching the town below warily, seeing potential hostiles everywhere whilst Dag, easy going was more compliant. Treating everything as some kind of pathetic joke. Mitaj allowed to choose his team. He knew the men. The rough end of the slippery pole. Perfect for this mission.

Their all terrain vehicles inbuilt systems detected no signs of hostility. Outlanders had a predilection for incessant conflict. Most were armed with crude mechanical guns, engaging in incessant blood feuds regarding some breach of honour in their archaic administration of justice. Every one of them a law unto themselves. Murder not uncommon. Strangers regarded with barely suppressed suspicion. They were entering a hornets nest. Their ruler Kratham who by virtue of his supremacy so named his city, really a hovel with his citadel and palace had been informed of their interest in the culture of his people. Impressed of the interest taken by these intruders he had laconically accepted their ingress with indifferent hauteur. He would not guarantee their safety. They would be on their own. Thus the military escort. It would keep the natives at bay. Brigands infested the mountains where even Kratham's writ was regarded with total indifference. Kratham's soldiers had to patrol in small expeditionary forces to make sure they returned with their lives intact.

Yep, thought Mitaj this field trip might not be so boring after all. Not that he was itching for a fire fight. Merely being here, representatives of Regum was a show of strength in itself. The powers that be knew pacifying this vast province would be a waste of strength, manpower and time. If they wanted to live like this then so be it. Even though there were gold and silver mines, ores and precious lapidary fields Regum had no real need for this province's wealth. By letting them keep their commercial enterprise they also kept Kratham on side.

Mitaj's men didn't give a shit which is how Mitaj liked it. Outlanders had no respect for subtle diplomacy, verboseness, pretentious kindness. Outsiders were imbued with a cool indifference. Just like his team. They had warned Kratham that any hostile intent would be dealt with using whatever means necessary. No doubt word had gone out to leave this team alone.

Horat considered himself merely a tourist. Etesa, a cold fish. Cena the aspiring idealist, enraptured at being a member of this expedition. She had a rosy view of archaic ancient life as some ideal. She saw a simple beauty in their rude ways, their closeness to nature, something Reganians thought at best as quaint. Easy to get along with. A bit like Dag, accepting everyone's view whilst showing no inclination to impose their own on anybody else's. Then there was Naj, a serious young man, rational, an explanation for everything and surprisingly quiet. Smarter than he pretended to be. It made Horat think. He seemed out of place here. Still by keeping low he was able to observe and learn. What was wanted. Information regarding not just Reganian psychology but equally if not more important that of the Outlanders, especially their mythological and occult lore.

Were they enhanced natural volatiles was the big question. What were their psychic capabilities? That point had been driven home in no uncertain terms. Horat wondered why the priests, who were accepted at Kratham's court had not fathomed the people they lived amongst. Not that Horat was deeply religious. He believed in the Supreme Being and that was that. He had given up praying years ago, feeling silly talking to a Being that remained silent.

For Mitaj this lengthy jaunt was almost like R & R, though he did not fool himself of the possibility of danger. As for the possibility of psychic hostility their onboard systems would alert them to any aberrant mental activity. No big deal. All military personnel were enhanced to some degree as well. Nothing they could not counter if the need arose.

So here they all stood viewing the little town below. Picture perfect were it not for the stench of the lagoon. The tiny harbour nearly empty, the fishing fleet out on the ocean.

Etesa looked like some matriarch reviewing her servants. Her tiny glasses kept on slipping down her nose. She let them sit there pretending that is how she wanted it. Not willing to admit they were the wrong size. Why she did not have her eyes surgically adjusted was her way of showing her individuality. That her eyes were not that imperfect. Mitaj wondered what Storaf saw in her. Etesa seemed complicated, difficult as she squinted into the distance.

Turd used his embedded system to check with their military satellite above surveying the terrain for them and nodded to Mitaj that everything was AOK.

Mitaj nodded back. His orders, apart from running protection were just as specific as Storaf's. Not just to keep an eye on the group but also find out what the Outlanders were. What they were on about. Counter surveillance. The need to know of the Outlander's state of mind eagerly sought by his superiors. And survey the terrain. Though the telemetry from above could replicate any part of the planet, including ground penetrating laser probes, capturing by imagery the ground itself would broaden the data in case they ever had to go in for whatever reason.

Then there was the military view that academics were eggheads, soft on the inside, not cool under pressure, crack easily, get compromised or get into trouble due to their naivety and run into messy endings. Mitaj there to make sure none of this would occur. Anticipation was the thing. That meant a knowledge of behavioural patterns expecting the obvious and the devious. As long as they kept a lid on things, they would remain solid as a force. Still this motley crew might become vulnerable to mental instabilities, freaking out if things got nasty. The professor appeared stable enough, Etesa

thoroughly hardboiled which probably was a front. As for the students, well youth always thought itself indestructible. He hoped. For the moment all was sweet harmony.

"Open a link to our quarters Headache. Use the vehicle's." Headache walked over and got in touch with the manager of the hotel. Everything was arranged for their stay.

"Alright people, let's move." Mitaj ordered and they climbed back into their vehicles. The mounted guns front and rear were weather protected. Once out in the wilderness they would be action ready. Mitaj preferred to fry the brains of any opponent. Using supercharged resonant states through EM spike hits. It would send any volatile over the top. Aware of the enemy's intent the moment they thought it.

Horat followed the others wondering if he was being monitored. He knew he was not enhanced. Not quite a Natural or a Volatile his resonance was a murky area of neither and both. What his true potential was he had no idea. When he had been with Nervina, Nervina where are you? What have you done? He had felt brilliant. Without her he was a mere shell of his former self. At least she had shown him his inner potential. For that he was grateful. Barely missed her. Strange how love, or was it lust, dissipated so quickly.

They rolled into town. People let them pass along narrow rutted dirt roads. Small smelly petrol driven vehicles bounced along with them. The five story hotel was at the edge of town, down the hill a little. Behind them the strange gloomy edifice of the priest's house of worship. Set behind tall walls it looked more of a deserted bastion. With simple antennae Mitaj noted. Linked to a base and from thence to where he wondered? Why would priests need that? He did a quick scan and found no signal. An opening in the roof showed an optical telescope. That might explain the antennae.

They pulled into the forecourt. Shrubs along the side fence, flower beds in bloom even though it was late autumn. The car park at the rear down a small lane surrounded on one side by hedges running along the side of the building. They drove down the little lane and under huge trees parked their vehicles facing frontwards. Only a few cars parked. The summer season over.

A liveried attendant was at the spacious rear entrance. Mitaj noticed security cameras. As they got out Headache walked away from them checking out the front and other side of the hotel. The professor, Etessa, Horat, Cena, Naj, had their personal belongings out. Turd, Dag and Mitaj their kits, to be met by an effusive round middle aged podgy faced smiling hotel manager in a discreet suit.

"Ah, welcome to our establishment." He beamed and bowed a little.

"Not many guests." Mitaj observed.

"Alas not this time of year. Picks up in winter. Ski season."

"Good. Then put us in a new set of rooms please."

"I beg your pardon?" he frowned.

"A new set of rooms if you will."

"If that is what your wish...it might take some moments."

"Thank you. First floor. We'll wait."

"What are you doing?" Storaf asked surprised.

"Security professor, security. Bugs."

"Bugs?"

"Surveillance."

Storaf was a little lost but nodded acquiescent. Why would anyone bug them?

The military mind at work.

"Who would be interested in us?" Etessa asked displeased at the delay.

"Who indeed?" Mitaj answered non committally.

The effuse manager returned and announced with a flourish that their rooms were ready. A group of attendants awaiting them in the grand foyer. A chandelier, huge vases with an explosion of blooming flowers, some armchairs and small tables, a bar with separate coffee lounge and restaurant, all deserted, greeted them. The grunts carried their own gear.

Headache returned.

"No enemy in sight?" Turd smirked.

Headache gave him a dead pan look.

"Got it all recorded?" Mitaj asked.

"And swept. Nothing out of the ordinary. In house security cams, visuals only. A sat link of course, mainstream public."

"Thank you Headache."

The hotel had seen better days now that they were adjusting to their surroundings. The wooden panelling showed some water stains, the carpet a little threadbare, the armchairs well worn a few lights missing in the overhead chandelier, the lift retro ancient, a brass cage with thick black buttons. It wheezed down and an elderly couple emerged a little surprised at seeing the military here but then showed no further interest. The attendants with Storaf leading the way. His troupe following entered the lift to the first floor where they had been relocated by Mitaj's instructions.

He took his men up the stairs. Checking out the layout of the hotel. Dag and Turd shared a room as did Mitaj and Headache. Etessa, Storaf and Cena had a room each, Horat sharing with Naj.

Horat and Naj exchanged nervous smiles. The room was basic. Two beds, a small table with two chairs, fresh flowers in a tiny vase, the inbuilt cupboard, two armchairs and a tiny patio with closed french doors. The attendants deposited their bags, showed them the ensuite, bowed and left.

The room overlooked the town's mixed gables and rooves, some with chimneys light grey smoke wafting up. The broad lagoon further out, the ocean beyond, the horizon blending in with the overcast sky. Wall lights illuminated the wood panelled room. No view screen, no computer terminals. Next to their beds an ancient intercom. With a touchkey set of numbers. A little note explaining that punching in a room number would connect them. Within moments Storaf called saying they would have their meeting in an hour. They could freshen up, relax, go over their notes and their tasks.

They were all gathered in the professor's room. The lights along the walls more ornate, a small chandelier, the furniture glowing well oiled the wood shiny. The french doors larger, the balcony with potted flowers, a huge single bed. Plus room for a conference around an oak table, ten chairs around which they sat. Palatial. Coffee and tea making facilities. Even with the french doors shut the whiff of the lagoon was still seeping into the room.

Headache and Dag were on patrol. Everyone else present for the final briefing. Cena demure, Naj attentive, notes ready in front of him, small notations here and there, Etessa prim and proper surveying them as if they were her charges, Storaf looking all business, Mitaj observant, Turd relaxed, amused.

Storaf said they could make their own coffees. No one moved.

"I'll do it." Naj offered, asked them how they liked theirs, and busied himself brewing a big pot of instant coffee. When they all had their cups in front of them, amongst their folders and paper note pads, for nothing would be entered into an electronic data base for security reasons Storaf started to proceed.

"Our roles are clear. Mitaj and his men are our escort. When out in the field, if an incident arises we are to obey his and his men's orders."

They nodded, Etessa reluctantly to Horat. Why she singled him out was a mystery.

"Once we leave here we are passing out of Regum's legal jurisdiction. So to make it clear, Mitaj has complete authority regarding enforcement of his orders,

pacification where necessary and subsequent follow up procedures." Looking at Mitaj. "To which we are grateful." A wan smile from Mitaj's square set face. The eyes softening slightly at the acknowledgement. Turd was looking around the room, observant.

"Now the Outlands are a law unto themselves. No fraternisation with the opposite sex."

Where did that come from Horat wondered.

"We are here to gather their folklore. I can be more specific now. We are surveying what they posses. If time permits delve into it. But it primarily is a surveying mission only. Who are the wise men and women. Particularly the shamans. Is their folklore rote or memory based? Then there are their centres of worship. Again the same questions apply. Where are their monasteries if any? Do they have monasteries. From what we know there is no central belief systems. Do they acknowledge a supreme being? Or as we know, many gods? For essentially they are pagan. Now this is most important. We are not here to judge their belief systems. We are social scientists not priests." Storaf let that sink in.

Horat felt better. He was aware the role he was playing for his mentors. Uncover the shaman psyche. Did it pose a threat to Prima's DVs. His mind alert to the fact that Storaf's mission was his cover. Not that he would reveal his true intent. Plus he was fascinated having studied what the Reganian's knew. Yet no one in the group made mention of his origins. Either they did not know, care or were too polite to mention it. If Storaf knew he was not saying. It boosted Horat's confidence as he sipped his coffee. He felt perked up. More than a research assistant, a post grad student. He was surveillance itself. What a buzz. Refreshing. A good sensation. Stay in the background, observe, note, commit nothing to writing that might give you away. Take copious notes regarding the field trip so that his focus was out of focus. Was Storaf even aware that the interview had been a game or had he passed on his own laurels? Was his presence arranged through his embassy?

Storaf went on about methodological purity, objective analysis and a phenomenological approach to whatever they came across.

"And no pretence please. Try and be humble. We don't want to be so overt as to make them withdraw into themselves. Use your brains in trying to acknowledge their point of view. This is not about us, it is all about them." Looking at each in turn. Everyone nodded dutifully.

"Now for some basics." And from his briefcase Storaf unrolled some maps. A stamp at the bottom had CU's seal. A slight muddying of the insignia Horat noticed, one overstamp. Military? Probably.

"As we have no view screens here, these maps will have to suffice." Lot's of green, forests, rivers, red dots indicating settlements, getting thinner further north, grey for mountains, closer to the shore farms, not many roads. A distinct red line indicating their journey heading mostly north. Well into the Outlands. Then the line became dotted further out.

"I'll pass it around." Storaf said. Whilst they were taking their turns he continued: "Of course our escort have our projected travels uploaded in their on board systems. But in case of fall-out it's good to have secure print media back up." Looking at Mitaj

"Now where the line of progress is dotted means basically unknown territory. Here even Kratham is barely acknowledged. The best way to describe the area is independent hill tribes. A law unto their own. There we, as we will at all times, be on our best behaviour."

"Bandit country." Mitaj added.

"Precisely. We could be robbed. Though I doubt it. Even out there they know that Regum has power it could use against them. That should be enough for us to be left alone. But this is to make you aware that time has not changed anything since Regum's arrival. They are the original inhabitants. We respect their decision."

They understood. Right into the heart Horat thought. At a nod Mitaj asked for their attention.

"Out there this is logistically a military not a civilian operation." Holding them in his roving gaze. Etesa displeased but said nothing, her glasses still a little down her nose.

"Any questions?"

Cena quiet, Naj suppressed a smile, Storaf inscrutable, Horat curious.

"What's that mean exactly?" Naj asked at last.

"It means young man you listen to us, follow our instructions, no matter what. We are in charge."

"Including fahrting?" he jested.

"Even that. We tell you where you can shit or can't." Mitaj said with a straight face.

"No free will?" Etesa asked.

"Not unless I say so." Mitaj turned to her.

"Unless I'm mistaken commander", she took a deep breath, "but this civilian research us under Reganian federal jurisdiction which includes but not precludes the use of enforcement, meaning its legal application in both spirit and letter of the law. For the moment you may speak of course, have the floor within the prescribed guidelines and subsequent attendant acts, amendments and empowered authority vested in the entity of which we are its designated agents as granted under the seal of the constitution granted by federal decree meaning the body of the university. And in further pursuance of its legal activities as outlined within its empowered jurisdiction, to whitt any area in the case pertaining to the expedition. As such we can exercise free will. The university is a separate legal corporation, a body, entity constituted through various legal appliances and extensions decreed by the executive council and by that same extension exercising those rights in space as in time. So wherever we are present as such agents we are a free constituted representative body made up of individual entities who are thus the expedition itself. You are present," she smiled, "with due respect, at our invitation."

"Not here, not now. The university signed a legal waiver placing all of you under military jurisdiction." Unoffended by Etesa's little speech. "So, any relevant questions then?"

"Etesa has a point." Naj offered.

"She can have as many points as she likes. It makes no difference. You take orders from us. It's us laying our asses on the line."

"I think the commander has made his point. He is C & C on the ground." Storaf tried to lay it to rest.

"You say you have powers of suppression of hostiles, lethal or otherwise." Naj piped up. "We have no weapons. If I am attacked or have to kill someone in self defence..." he paused.

The very thought shocked Cena. There had not been a homicide in Regum for years. The idea was poison to their world. It was like resurrecting the barbarism of mythological times.

"... would I be liable?"

"It won't come to that." Mitaj replied without hesitation.

"Even if accidental. I may wound the assailant and he or she dies of an infection. It is primitive out there."

"No charges would be laid."

"Would there be a record against me?"

"A record yes but not against you. As you are not the aggressor."

"I would remain innocent."

"Yes."

"What about a pre-emptive strike?"

"We'll take care of that."

"What if I discover some sort of lethal ambush, say whilst a diversion is in place to distract your men and the only way to save the situation is to strike first. What then?"

Mitaj looked a little exasperated.

"They are far fetched hypotheticals that simply will not occur. We have surveillance gear that does in depth sweeps and scans. There will be no surprises. And though I shouldn't say this but we are in touch with the orbital." Without saying what they could do up there.

"Anyway... "

"Who owns the notes we take?" Cena asked.

"The university. Remember everything is under military jurisdiction." Storaf spoke for Mitaj.

"So they have access to our notes?" Horat listened to that.

"If it contains pertinent data relating to the operational end of the mission then yes, we have access to that."

"But don't own it."

"We can secure it for obvious reasons." Mitaj said blandly.

"You mean steal it." Naj said.

"Steal, secure, whatever."

"Would we get it back?"

"Depends what's in it."

"What if the group has been infiltrated by a rogue agent?" Horat had to ask.

"What? Rogue agent? Get real." Mitaj said a little huffed. "My men are clean as a whistle in that regard."

"Spies can be sneaky."

"Well, Horat is it? If you think there is such a rogue agent then you'd better come to me quick smart.."

"What if it were the commander?" Etesa jumped in, smarting no doubt from her own demolition.

"Young lady let me tell you, and the rest, categorically. In the military orders are obeyed not broken. Anything vaguely resembling as being regarded suspicious, or any action deemed subversive is rectified long before that deviation will actually occur. It's

called checks and balances, plus C & C. If there is any possibility of infiltration it's on your end, not ours." Mitaj explained smoothly. "Anything else?" he waited. "No?" Silence. "All clear?" it was hard to tell if Mitaj was facetious. "Good. Glad that is cleared up."

"We leave tomorrow." Storaf announced. "Early. Get ready. By dawn."

"What about the bar?" Naj asked.

"What about it?"

"A celebratory drink."

"Ah, good point." Storaf relaxed. "I don't know about our escort," glancing at Mitaj who slowly shook his head, "for this is a grey area. Murky even. Whilst you are all under contract whilst performing your duties you are to remain sober. This includes drugs as well." He paused. "However, as the Outlanders indulge in both, one socialisation, the other religious a situation could occur if pertinent knowledge could be gained that one must do as the locals. Take the shamanistic experience. We know so far that there are certain individuals who have natural gifts. Their shamans recognised at childhood. They are then trained further in the mystical arts. Dream divination is, as your notes tell you extremely important. Some do use drugs."

Horat's mind was electrified. Drugs he thought. He knew on Prima the villagers smoked some mind enhancing weed or drank their home made brews. Yet the 'chosen', meaning the select few, the Families of which he was one, the higher Ecclesiastics, Divines, the elite both at the executive level and their representative political arm, in fact those who were living in their vast enclaves away from the rest of the planet kept their minds pure. Drugs and alcohol were for the masses. Yet reading his notes about the Outlanders, their attitude was not dissimilar to that of Prima. See which minds were attuned to the greater resonance, aligned. Everybody knew that as such drugs were used selectively to further their religiosity.

"Is that a yes?" Naj wanted to know.

"Professor." Mitaj interrupted. Storaf nodded.

"I think a clear head is wanted. As you know, the Outlanders have psychic capabilities. Not unlike Prima's DVs." Mitaj looked at all of them. Horat's face felt momentarily hot. It passed. "So being aware, focussed would be preferred. We all know what hangovers are like. Makes the mind sluggish. If a situation arose that called for quick thinking, fast responses being half pissed might endanger all of us."

"I concur." Storaf added.

"I guess that means no." Naj replied.

"It does that." Storaf replied.

"Good try." Cena looked slyly at Naj.

"So people, go over your notes. I cannot emphasise enough that we have to relate to the Outlanders. See things from their perspective. But, as I just said if we are invited to partake of either, and I mean invited, then we should be compliant."

"Well let's hope for the best then." Naj answered.

"You may return to your rooms."

"Can we see the town?" Cena asked. "It is still in Regum. Might meet some Outlanders."

"If Amaik was part of our research yes. But we want to leave early tomorrow. We have a lot of terrain to cover."

"Why didn't we fly in?"

"Yes indeed. Partly to get a feel of the land. Dropping in from above was considered a bit overwhelming. We don't want to awe them."

"But they know we can fly. They might think it strange we're doing this the slow way. They might think us as spies." Naj considered.

"Surveying the land." Mitaj informed him.

"The sats do that."

"As I said," Storaf said patiently, "to get a feel of the land, the people."

Naj accepted that.

"Any last questions?"

There were none. They were allowed to leave.

After the research assistants left Mitaj wanted a few words with Storaf. He dismissed his two men. They rose, saluted. "You two can relieve the others now. Four hours on four hours off. Extend the perimeter. Patrol round the hotel. I doubt anyone is particularly anxious regarding our presence. Vehicles remain primary. They are our survival gear. Boring I know men." They understood, saluted once more and left.

"Your team members. How secure are they mentally?" Mitaj asked.

"They've been vetted."

"As you know we have psychotronic gear we are testing."

"You mean the military?" A wan smile. Storaf wondered if they were as liberal in its uses as his masters. "I suspected it." wondering if there would be complications.

"Not surprised then." Mitaj dismissed that assumption.

"The military and their toys. I suppose you want to test your weapons as well?"

"If need be, yes." Mitaj stated. "That is why I asked. A firefight is the last thing I want. Reports to be filed for starters. Rest assured we are not here as a show of strength. Protection professor, protection."

"This equipment. You have scanned us."

Mitaj said nothing. He knew what this group's true capabilities were. He was embedded with a psyche-hot node linked to his embedded pc in his sleeve and threaded via his semi bio insert to his enhanced brain. Naturally this was top secret. It read everyone around him for a radius of fifty clicks. Partially AI this gear they were testing could create resonant standing waves of any frequency and amplitude to synchronise with any individual who might target them psychically. It would neutralise any overt insertion, from any source, hard or softcore, AI or bio, if they were deemed hostile in intent.

"Had to. During the trip out. Now we both know that the inhabitants, some anyway have boosted capabilities. The stuff we have neutralises their mental waves, their projected field. It reads their minds, enhances our resonance then forms a cacoon around us. A shield. That should make you happy."

"But it can be turned against them."

Mitaj was reluctant to release that information. Not only could it be turned against anybody who tried, but ramped up and hit with a resonant field that burnt their brains, fried their minds.

"Neutralize is the term professor."

"Psychotronic mindware. Dangerous stuff."

"All under control" up at the orbital Mitaj thought. Silent running. Constantly soft scanning their area of operation. "Anything hostile shows up and we overwhelm them with feelings of goodness. Sort of tickle their endomorphins."

"Well I'm glad to hear it. We don't want to get into mind games here."

"All depends on the locals, who I am told are not exactly open to strangers."

"Something we shall find out Mitaj."

"Then there is Prima to consider professor."

"Them?" he was not about to reveal Horat's status or his deal with his controllers.

"We know their DVs target Regum which includes the Outlands. Part of my job is to find out what they are discovering by remote viewing. Regum needs to know if they are in direct contact. Whether forced or through their own volition. You get the drift?"

"A dual purpose mission."

"That's right."

"I should not be surprised."

"Why I'm telling you this. And why I changed the rooms. In case of bugs."

"None here then?"

"Clean."

There was another aspect to the psychotronic resonant field generators with which Mitaj was linked. Testing the integrity of its architecture. Find out limitations of the molecular frequency associated with internal mental structures mimicking uploaded neural pathways of targets of interest and that of the gear itself. The core a shell, a ghost, an ephemeral duplicate residing within it, a cyber mind in itself. Cutting edge stuff.

"Tell me, what were the results?"

"Of your assistants? Fine." Settling in his chair, relaxed. "Naj is focused, tight resonance. A veritable citadel. Smart. Logical. Analytical. Hard to surprise. Cena is the opposite. Soft, pliant. A reed bending with the breeze. Fascinating in itself. Solid at the core. Her outer self might freak out but she has as I said her core in place. She might seem ruffled at times but it's mere rippling waves on an otherwise deep lake. Horat is something else. Strange really. His outer resonance is tight. Rare in fact. Trouble is what's beneath. It's like he's projected everything into outer defences. That could be problematic if that were breached. Without deeper scanning I can't say how solid he is."

"You think he might crack?" Storaf explored Mitaj's concerns.

"Rock solid on the outside. Under normal circumstances, perfect. Problem is if that were breached his inner self could collapse. The plus is it would take a very potent psychic field to get through, but once it did he could crumple like a house of cards. Still the vetting process cleared him."

"He could be a liability?"

"Only in the most extreme of circumstances."

"Well we don't expect any excessive mental assaults."

"Correct. Actually professor it's not that bad. I'm viewing all this from a worse case scenario. All your assistants are remarkable in themselves. Naj's mind is fast. He has the capability to anticipate, a huge advantage. He can see things from another perspective. Abstract, highly intellectual. So no surprises for him. Cena would at first be flattened. Yet her resilience will bounce back. Then she would self align and like Naj adapt to the changed circumstance. Appear compliant without giving way. Only Horat is the dark one. This outer show of strength could be hiding an inherent weakness. But first his shell has to be cracked as I said. And it ain't uniform either. It's like, as if multiple algorithms are working in conjunction. Constantly shifting their parameters within whilst

creating a series of buffers without. Like an active AI. Multiple locking logic gates in place. Be interesting to see how he copes under stress. Etassa is a brick. Solid reasoning inside and out. She could fracture but like Horat it would need a massive surge."

"Let's hope not."

"Agreed there. We're not here to kick ass."

"I'm glad to hear it commander." He paused. "You know I was interviewed by some military types. I didn't even know we had a military. I mean I know we have a branch, a pool of extra trained security forces. But I thought of them more like police with extra, ahm resources. But had no idea of your outfit."

Mitaj looked pleased.

"They seem to have people in place everywhere. Not that the two who came to see me said so. But their views were so broad ranging that even I was surprised. And they knew their psychology, even Prima's. Trying on the Orbital to learn Primaian states of mind..."

"The DVs."

"...most definitely. 'Foreign agents' they alluded to. Then us of course and the Outlanders. Gave me hope. Not force oriented at all. Back door approach. And here I thought the military were a battering ram." Storaf smiled.

"If need be."

"Sort of non enhancing that image."

"That's the idea."

"And interested in knowledge systems. You're other mission Mitaj?." Coaxing. "You got some secret project?" his eyes flaring a little.

"Let's say taking an interest." Meaning those above him.

"Well I'll be."

"And here I thought I'm minding a bunch of eggheads. Your team know this?."

"Of course not."

"Good. Keep it that way." Mitaj rose to make himself another cup.

"I get the feeling something is up commander."

"Tell me." He sat with his fresh cup of coffee.

"A hunch. Why now? Prima is planning a subterfuge." Testing Mitaj.

"Professor they are always up to something. Except it's the same hymn sheet over and over."

"That could be camouflage."

"Oh yeah?"

"I get this feeling they want more." Storaf feeling his way.

"Well we all know what they want."

"True. I feel as if they are shifting their approach."

"Really."

"You're hedging."

"Professor." He admonished him with a tight smile.

"I won't push it but I'm glad you know the layout."

Mitaj aware Prima's psychic infiltration techniques were threatening to breach their basic AI capabilities. Anomalities were appearing in the data gained. A low grade back ground non coherent, non localized anomaly present in their overall data. It did not interfere directly with any com systems, data spheres, or other sensitive info realms. But it's consistency did mimic their planet's resonant state as if it had spread itself into the universe. One of Mitaj's tasks was to locate this source. It could be that the psychic abilities of the Outlanders might be amplified through resonant insertion by the DVs, then boosted through them out into real space.

With Primaian psychic warfare anything was possible. The Outlanders being used, since the priests were at Kratham's court. Maybe singular shaman types could do a double take on the DVs and screw with their heads. All options were open. This mission was meant to find out what was going on. Then there was the edifice on the hill. An observatory? A link to Prima's orbital. Less conspicuous here for they only had a small military outpost in place. Probably testing their capabilities. Yet no red flags had gone up. Mitaj was relaxed.

"I'll leave you to it professor. See you in the morning. Bright and early."

"You too commander. I'm glad we had this little chat."

"Clear the decks."

"For a collision?" Storaf smiled darkly.

"No. No collisions. Not from our end. Until tomorrow." And left his room. The only other thing Mitaj thought was that Horat was unusual or Primaian. It might have been arranged through the embassy. He could thus be an agent. Maybe not of influence. An experiment, a test case. Connect with the local shamans. Make them think Horat was one of their kind. An outsider yes, one on their level.

Then there was the edifice on the hill. Low grade tech capabilities. The first step to a listening post.

Outside the hotel, dusk smeared the grey sky into sombreness. Having called his men Mitaj asked Headache to come with him. Turd and Dag would continue patrolling. He was going to check out the dark edifice squatting on the hill behind them, then pay a courtesy call to their tiny military outpost. Mitaj needed information. The background radiation one thing. Was it some ethersphere the Primaians were using. Use their backchannel to see what could be dug up. His men listened, then he left them to patrol the hotel grounds both inside and out. All floors. The kitchen, laundry, even the manager's office if possible. They saluted and he set off with HA.

Some guests were returning to the hotel. Others stepping out for the night. Below the town's lights gave the place the look of a dull fishing village.

The cry of seagulls, the smell of the lagoon and ocean, salty air, the distant roar of the surf, the air cool, the sky overcast.

"You know we might have a Primaian amongst us." Mitaj said to HA as they started to make their way up the hill past small cottages. Soft lights within humble houses. Dinner time. The smell of cooking. Fish

"Interesting. The gear come up with anything?"

"Nothing covert."

"Ah. You want me to keep an eye out. Who?"

"Horat."

HA nodded.

Further up the hill some mansions were set back from the narrow deserted street. No pedestrians about. All snug at home. The trees looming shapes spreading their shadowy foliage into the darkening sky. Only the odd streetlight here and there. Small pools of pale light in the encroaching gloom. The pile of stone on the hill a black radiance cloaking itself with the coming night. A petrol driven car made its way up the hill, it's headlights as dim as the streetlights. It was like stepping back centuries. The silence pervasive. A heavy moroseness saturated their surroundings.

They looked at the squat dark building. No one about. At least the locals were not taken by Prima's proselysing. Believers fervent in their insistence of having found all their answers in one go. One idea. One revelation. Sad really.

Mitaj accessed his HID function and saw in front of him the streets they were in. The road ahead branched in either direction around the citadel. No access except by a tiny gate which was shut. The structure as mute as the stones it was built of. No plan of its insides. No data on its observatory or the lone crude antennae. He updated it by looking

at it. Then his link pixellated. The signal was breaking up. Interference capabilities in there. Duly noted.

"You getting any glitches HA?"

"I'm passive. Feeling of resistance as if something is there yet isn't."

"Could be them. Primaians for certain."

"Gotcha."

"Good."

"Ah we have company. Go active?"

"No."

"Calm, focussed on us."

"What a surprise."

"Linked?"

"No boss."

"Go braindead."

"Sure thing."

Mitaj felt their approach. He was still passive-active. A vague thickness around them, slightly foggy, viscous. The building neutral within. Then they saw the two cowed figures approach.

"Peace and harmony to you." One of the men said. Middle aged by the sound of his voice. Their cowls hiding their faces, gloomy shadows.

"Likewise." Mitaj answered. Oozing darkness. Others alert inside now. Aware. Recessed within their resonance. A cordon around the squat structure.

"You are invited to the rite of Ascension. In three days time."

"Thank you." Whatever that meant. He kept his system as low as possible. Calling up data not considered.

"Our blessing."

"Fine. Good night."

"Travel well."

HA looked at Mitaj who merely nodded then started to turn and walk back down the hill. The lights of the town a little brighter as darkness fell.

"How did they know we're here at all, travelling?"

"HA. We're not locals. An easy assumption."

"Gotcha."

The two priests watched them walk back down the hill, not moving. A quick passive scan. The entities within the precincts still alert.

"What's this rite?"

"Some religious whatever. I'm not accessing my data base HA. And now we pay the local commander a visit."

"Colonel, now that we're out here, are we really baby sitting them?"

"We are captain." Back past the hotel. Night had fallen. The few lights did little to dispel the gloom around them. The dark an essence, like a black fog. The lights of the town barely shedding light. The crystal brightness of Regum City another world away.

At the front of the hotel a soldier was waiting.

"Ah Colonel, captain, our commander is waiting for you." The man, a corporal stood to attention having received Mitaj's message the previous day of their coming this way. The base more a political presence than a military one. A basic compound set behind the local university college. It boasted a few light armoured vehicles, a com station and a handful of staff. Essentially a listening post, the closest they could legally get to the Outlands. A backwater concerned with intelligence pertaining to the restiveness of its distant inhabitants. During the day the technicians made sure the computers and ancillary gear functioned.

Prior their mission he had been briefed as to the true nature of their own presence. His superiors, via the orbital were aware that the locals were passively hostile to Prima's priests. It was the latter that concerned them. They were trying to white ant the ancient culture. If push came to shove they were here to help the aboriginal inhabitants. Kratham knew he had back up. Even if under the priest's spell. DV activity? Something. So the military decided to keep an extremely low profile. A minor outpost pretending to be an afterthought.

Then there were the people of Amaik themselves. Indifferent to Regum's glittering high tech life. Rejecting civilisation, harking for an existence long left behind. Closer in attitude to Prima than Regum. Again the question at the highest echelons was posed if they too were under the influence of Prima's DVs. It just made no sense that having freed themselves from the mentally mind numbing need to physically work, wasting one's precious life on necessities that could easy be attained automatically that they wanted to live life the hard way. The locals even paid lip service to the priests message of spiritual salvation. A no brainer if ever there was one. How could a spirit be saved? Since life is life it was what it was. Self replicating. It saved itself by being alive. Anything else was supposition with no concrete evidence to prove that some other dimensionality of thought was required to fulfil life. Like the attraction of a drug. If it spread across the

planet their whole social structure could be contaminated. Exactly what the priests wanted.

That there was an agenda at work was obvious. To flush out the protagonists essential. Not the priests as such but their puppet masters. Or the DVs. The only other cause might be the shamans themselves. If not by design than by default. The life of the noble primitive had its own illogical attraction. Was the strange background radiation an effusion of these ancient minds? Mitaj told to find out what really was going on. So when CU's little outing was put together military intelligence had a legitimate way in. So far they only had questions, not answers. Mitaj was there to see what was under the rocks. Prod a little and see what gave itself away. Thus the high tech gear in his vehicles. And a little enhancement for himself and his troops.

They went to their little base. All was quiet. Two guards at the entrance. At the outer office a soldier engaged them in chit chat. On the wall a poster of the priest's propaganda enjoining all to share the cosmic peace they brought. Go with the flow.

The duty officer came out of the commander's office and announced they could go through. They entered a primitive office. Behind the metal desk a middle aged woman, a colonel just like Mitaj, accept he was for the moment designated 'special group leader' which made him a smidgen above her. She rose from her desk in her neat uniform and saluted them. A few filing cabinets with their tiny status lights electronically sealed. Deep black eyes, a no nonsense expression, slightly hard facial lines, generous eyes. Short black hair. Mitaj immediately knew she too was enhanced. They exchanged knowing smiles without connecting.

"Thank you for seeing us at such short notice. My superiors suggested a courtesy call so we can acquaint you of our presence."

"Appreciated commander Mitaj. Please you and your captain, take a seat."

They sat on two metal fold out chairs. On the wall paper maps showing Amaik and its surroundings, another of the area and a third map opposite showing the whole province. Most of it was green, forests and mountains with less and less settlements further west and north.

"Refreshments?"

"Coffee would be welcome."

"Nothing stronger?"

"On duty."

"Off course." She answered a little disappointed. Bored probably. "Welcome to our, ahm, base." She suppressed a smile.

"A pleasure to be here."

"Not if your term of duty is as long as mine colonel Mitaj."

"That busy?"

She pressed an old fashioned intercom and asked for three coffees.

"So what can I do for you gentlemen?"

"First to log us in."

"Already done at the front desk."

"Local knowledge."

"Briefing a bit vague?"

"General."

"Understood." Not one to waste words.

A knock and her subaltern entered with a tray of three cups of coffee. He placed them on her desk saluted and left.

"We want our presence as low keyed as possible." Mitaj said after tasting the instant coffee. He wanted to pull a face at its odd taste. Nothing like the real thing. He noted her epaulets. Signals. Intelligence.

"Naturally. I have been made aware to offer such assistance as I can. We have a few all terrain vehicles but I know you have your own."

"There is one minor request. That this conversation is off the record."

"That I cannot allow. However, whilst the meeting is duly noted the contents are not. Or rather they will be appropriately vague. Generalities such as your request for local knowledge. After all we're both in the same outfit." Meaning military intelligence.

"We're here to find out what the situation is regarding psychic activity. I know the military have a long winded definition: enhanced intelligent operational directed target acquisition capabilities or some such. Psychic intrusion. And those behind it. The group I am with," without giving her their name, "are the perfect cover for me to do a little active probing."

"Glad to hear it. My brief is to be passive. So finally some movement in our field of operations. I assume some sanitized version will eventually find its way back here."

"I cannot even vouchsafe that colonel."

HA finished his cup and put it at the edge of her desk. She had not touched hers.

"There seems to be a third force in place." Mitaj offered.

"Now let me see." She said playfully. "We have the DVs, the priests, the shamans. Taking the first two as one leaves what? Prima. Correct?"

"Go on."

"Alright." She finally took a sip. "They've reconfigured their resonant envelope."

"Almost."

"Regum's Web has gone intelligent."

"That is a possibility I actually have not considered. Put it this way colonel, something is being detected, something new."

"Ah, an EM field then."

"Warm. Have you noticed certain aberrations?"

She laughed. "We get nothing but."

Mitaj looked surprised.

"The nature of the shaman mind. Naturally enhanced. No two are alike. Broadscale yes, but each mental signature is individual."

"I see." Mitaj continued. "There is a field of background radiation in place out there. With, at present no discernable effect on our capabilities, meaning both enhanced and associated systems. Now I noticed up on the hill a gloomy edifice. With a telescope and rudimentary electronics. What's the story there?"

"Ah the priests. Studying the starry hemisphere."

"Looking away from the galaxy."

"Indeed."

"Nothing much to see, unless they are searching for something."

"That is my view as well. So far our scans have come up with nothing. We can blend into their com links. It's really an optical telescope. So far nothing of interest."

"Not even this field?"

"If so they're ignoring it."

"Deliberate?"

"Could well be. Make us think they know less than they do."

"That's the trouble with intelligence. Always so many hidden agendas."

"Well at least with the Primaian's and their obsession things usually fall into their predetermined pattern of thinking. However we are on top of their little outfit here."

"Well that's cleared that up. So this EM field is being ignored or missed, even though as you said they have radio frequency analysers."

She was considering something.

"I may be able to throw light onto this mysterious field."

"That would be appreciated."

"You are sworn to secrecy."

"Naturally."

She pressed the intercom. Her subaltern entered.

"Get my second to take over. I'm going out. A few hours at most."

"Yes colonel." Saluted and left.

"We're going to pay someone a visit."

Mitaj nodded.

She lifted a hand held mouthpiece from the console, punched in a few numbers, waited, connected via an encryption link, then said she was bringing some friends then hung up.

"This little gadget makes calls untraceable. Rerouted."

"Only the best."

"These people don't exist regarding us. They work at the college behind us. Not even on our files. Recompensed through a special fund at my discretion."

"Intel."

"Indeed. Keep our profile low."

"Excellent."

They walked back out into the salt laden night air. Using a civilian car they drove off. No designated driver, no official record.

Mitaj was up front with her, HA in the back.

"We should have changed into civvies, but at this time of night most of the inhabitants are getting ready to call it a night. You may have noted," as she manoeuvred the car down deserted streets, "that no one is about. So if anybody does see us, we're dark shapes. Oh captain. At your feet are some bottles of wine. Please bring them when we get there."

HA groped at his feet. "Found them."

She drove all over the place. Right here, left there, another right and left. Making sure no one was following. Then stopped along a row of cottages. Nearly all were dark. The colonel was right. People went to bed early. She must be bored out here Mitaj mused. HA was all awareness. She killed the engine, got out and let Mitaj carry the bottles.

"Oh by the way I'm Baia to them. Not my real name of course. I'll just call you colonel and captain."

She knocked. Moments later a hall light came on. A thud of feet and a man appeared, silhouetted against the dim ceiling light. They entered walked down the corridor and into a tiny living room. On the couch a woman rose, long chestnut hair, tanned, lively brown eyes, mid thirties in a long dress and brown blouse. The man too had long hair, paler, blue staring eyes, brown pants, pale blue shirt.

"Hello." Baia smiled, walked over to the woman and gave a quick hug. "Duvik, Risa, two associates. They've got something for you to check out. Brought some wine for the occasion. Can't drink myself, but you two go ahead."

Pleasantries were exchanged.

"This way." Duvik said. Risa went into the kitchen to open the bottle as Duvik led them into the house. In the hallway he removed a carpet and lifted up a section of the boarding. A ladder led below. He switched on a light, they clambered down. Their op centre. Four tatty lounge chairs, a small stained coffee table, the surface slightly warped. Risa followed shutting the cover, using a lever to move the carpet back over the entrance. Threadbare carpet on the floor. What the room contained impressed Mitaj.

Along the walls industrial shelving with computer screens, consoles, external hard drives, software attachments, racks of data files, manual controls, three different com links, stand alone data banks, encrypters, scanners, tiny status lights glowing on their equipment. Overhead climate control hissing quietly and the soft putter of a mobile fuel driven generator, it's exhaust vent going into the wall.

"Scrubbed by a set of filters which is fed into the wall's cavity. Keeps the house warm as well." Duvik explained as he showed them to their seats. Risa poured into two cups the white wine Baia brought.

"You sure?" Risa asked indicating the bottle.

"Fine thank you." And looked at Mitaj and HA. Not tempted.

They sat, Duvik and Risa drank their wine. Baia exchanged small talk, how their tutoring was going at the college, who said what to whom, which academics played the incessant game of internal politics.

"So," Duvik said after a while, "you want something. Or your friends do."

"Two things."

"Only two? Must be a slow one." He smiled.

"The hill."

"Them. Well what do you want to know?"

"What is going on up there?" Mitaj asked.

"Yes, good question. What's the second one?"

"Any unusual fluctuations? As in an EM field. Might be related, might not."

"Well they got a telescope up there. Not very powerful. Looking out. We know Prima thinks this so called alien field has its origins that way. Not that there is anything remotely close. Apart from the other universe. Which is probably what they think this alien field is. Just data. Photons really."

"This is something else."

"Glad you said that. We have detected some background radiation. In fact Baia two fields. One is broad-spectrum a few degrees above absolute zero, very constant, so low level it is of no direct consequence. But," he drank some wine, "there is another resonance in place. Sort of fades in and out. And close. As if it's this universe's background radiation. Like an interference pattern. Sort of. More like a quantum superimposition. Looks static though."

"What do you make of it?"

"It's there, sometimes. Has wave properties. A field that sort of pulses and is expanding, but at a very slow rate. This side of the universe, definitely."

"So it's confirmed." Baia said. Mitaj was satisfied.

"Like a fog with holes in it."

"But nothing to do with the hill?"

"No."

"What about the Outlands. Could it come from there. Sort of communal field projection?"

"Like the shamans focussing their psychic abilities into space?"

"Something like that. If I may. Did this field manifest with the coming of the priests up there?" Mitaj queried.

"No. They are recent. No whatever that field is, well it's thousands of light years away. So it started millennia ago."

"Is it focussed in any way? Any specific frequencies?" Baia asked.

"My sensors tell me it's broad-spectrum. Remember my stuff has limitations. The orbital should have a better picture. What are they saying?"

"Nothing Duvik."

"Well that could mean one of two things." He drained his glass, reached for the bottle and refilled Risa's and his glass. "They know and want to keep it secret, or they know and it doesn't matter. Or just another cosmic phenomena. Which Baia it could be."

"Anything from Prima's end?"

"Well it's not effecting their envelope."

"Is it affecting Regum? Are the shamans resonance changing. Any patterns?"

"Ah, they are always transmuting. Always active. But no overall pattern of what you mean."

"Thank you." Mitaj replied. "We're trying to track this to its source."

"What if it amplifies?" Baia asked.

"Glad you asked. Here it gets weird. It would expand of course. Assuming, and this is a big assumption, it's data rich then it could effect Prima's resonance. Realign it. Not that they'd notice it if its incremental enough. But if it is data rich, and the universe is nothing but a changing set of data fields, it could, and remember this is all speculation, could inform our universe if its contents. Self revealing."

"I've had a thought. Knowing Prima's orientation they might see this as some sort of divine revelation."

"Not bad Baia." Duvik was pleased.

"Is that possible?" Mitaj asked.

"Anything is possible." Duvik turned to Mitaj. "Everything is undefined, probable. It's what's actual that counts."

"So it's probable."

"Maybe. But that has to be studied from your end. My facilities are limited."

"Understood." Mitaj was satisfied. At least he had corroboration. "So just to make sure I got this right. It's got no effect on us."

"Too weak, too far."

"When would it get this far?"

"Beyond our lifetimes. Thousands of years at its current pace. If it ever gets this far. It could be excessive radiation from the galaxy. It might have been there forever, growing slowly. Given there is only x amount of energy it might only expand to an equivalent amount. It may never get here at all."

"So out there no unusual activity?" Mitaj wanted to make sure they were under no psychic threats.

"No."

"Well I'm satisfied. Baia?"

"Nothing else?"

Matij had enough data pertaining to the Outlands and their psychic states. The extraneous source self limited. Still the area was a hot spot of activity. Not as strong as the DVs but intense through their naturally enhanced population. Especially up north where they were heading. If they could download direct their states of mind, then reconfigure

that into their EAI's they then had the jump on the DVs. Not that Storaf would ever know. He was just their ticket in.

After some more chit chat they decided to leave. Duvik showed them to the front door having made sure with his basic surveillance gear that the area was clear.

In the car she said: "You know we could do with a some upgrades up here." Pointing to her temple. "Counter the priests. Why they even let them here is beyond me. It stinks."

"Open door policy."

"I disagree."

"We have them under control Mitaj."

"We?"

"Well the powers that be. I sometimes think," concentrating on driving the car down the deserted road, headlights barely illuminating the street in front of them, the houses shrouded in darkness under a black overcast night, "we are becoming too individual."

"Too individual. Individual is individual. How can that be too?"

"Socially fragmenting. No core values."

"We are our own core value."

"What I mean is Prima is united. We are not. Each doing their own thing."

"Don't forget. Once the E component of the AI's is mass produced we'll be on top. Weld that to whatever we got and the DVs wont know what hit them."

"Is that policy?"

"It would be if I had my way."

"So they're playing with the idea."

"Haven't told me colonel."

"I just hope it doesn't backfire."

"You mean turn us into Primaians. Or Outlanders. That'd be funny." Mitaj laughed.

"Your friends were useful."

"They are."

"I hope their equipment is securely routed elsewhere."

"It is."

"That's good. So they can't get nailed down."

"As long as you don't mention them."

"I won't. Neither will you captain."

"Sir."

"Drop you off somewhere?"

"The hotel will be fine."

"Sure thing." They headed through the sleeping town towards the hotel.

"Front door?"

"Please."

She drove into the courtyard. Dag and Turd were somewhere, out of sight. He would relieve them and do the rounds with HA.

"Thank you colonel. Unfortunately all I can say in my progress report that you were very supportive and helped our orientation."

"Fine by me. Won't stand on ceremony and salute you out. You're not keeping contact with me?"

"No colonel."

"Good. The less said the better."

"Totally agree. Good night then."

"Night."

"Thank you colonel." HA said. "A drink another time?"

"Sure thing soldier."

She left them and headed back to her quarters.

Dag and Turd appeared having heard the car. They saluted.

"Anything?"

"All quiet."

"Good. Take your rest. We'll take over from here. Relieve us at oh four hundred."

"Yes sir." Turd replied. They headed back into the hotel.

Later that night Mitaj's bio-enhanced inserts alerted to an incoming call. He headed for the lead vehicle, plugged in his fibre optical patch from his sleeve and listened. A flyer was being sent. The team was to be split up. The professor and part of his team to head directly to a monastery at the foothills of the northern mountains. The rest continue as planned then rendezvous there. He cut the link.

He got out the vehicle and told HA the change of plans.

"To chose who goes ahead." Mitaj considered.

"Why you sir."

"No we got our mission. If I come flying in it would send a message. We want to keep this low profile. Turd definitely. Two soldiers of lower rank will look less intrusive. How about you as well?"

"Yeah, I'll go."

"Good man."

"You and Dag. Just observe. Don't get into any shitfights."

"Not us sir."

Turd was smart. One reason for his nickname. They were all trained as one man armies. So Mitaj expected no problems there. They could look after themselves. They had their basic AI capabilities. Turd and HA would be the advance party then. When they came out Mitaj informed them of the change of plans. It made sense splitting up the team. Not that Mitaj was told as to why the plan was changed, unless it had been intended as such and not revealed until the last moment.

Turd was excited to fly ahead. HA more laconic. He was now the second in command and accepted his role quietly.

"Now unless something in the extreme occurs, we run silent."

They nodded.

"Conversely if the shit hits the fan and you are being overtly threatened you have permission to use reasonable force. I leave you to decide that."

"Understood." HA replied.

"Engage the professor if you can. Learn. Ask questions. Appear interested in his work."

"Is Etessa going?"

"I'm considering keeping her with me."

"That's good."

"Do I detect a little, ahm, discretionary relief?"

"She's hard as nails."

"That's why I'm keeping her under observation. Horat seems so not there, less emotional he will be a good buffer. Naj is smart. Cena is just Cena. She might be the easiest to get any info out of. If away from the others. Sweet talk her."

"Yes sir."

"Another thing. This monetary. An abbess Mudhan runs it. It's got a library. If you can get access, find out all you can about their head space. The term I believe is 'magic'. Psychic applications. That's important."

"With you."

"You have your writing gear. Take notes."

"Sir."

"Well we were all briefed so I need not say any more. If we get our shit together on this one we may even get a recommendation at the least men."

"Nice to be noted."

"You were chosen for this mission. That says something in itself."

"Guess so." Dag said.

"So you two get some rest."

They saluted and left.

Mitaj relaxed. They would get the jump on the DVs yet. If this worked out their EAI's would be no match for them. Motioning to HA they started their rounds.

Novus

During her remaining two days off Nervina travelled on the mass transit systems. Get the feel of the place. Trams in the city and suburbs supplemented by mini buses. A maglev train connected the casino at the southern end of the CBD. The place had no name, just 'The City'. It was the only one around. The scintillating high rise buildings glittered in the constant sunshine on Novus. A dry desert planet, water came from a desalination plant at the northern promontory.

Then there was the vast ocean which received bulk deliveries from space. Splash downs. Huge crude iron encased containers, mainly bulk goods, processed ores from the distant asteroid belt were dumped here. Huge plumes of white rose with a slow serenity to the rushing sound of water. Settling on the ocean floor their crude external engines on pop out wheels self drove to the wharves to be transported by goods trains to the steelworks west. A pall of red dust, from open hearth and blast furnaces, black dirt from the coke ovens hung smudged over the vast industrial spread. Worked my Primaians. The Outback off limits.

Her suburban flat mostly populated by workers employed at the small factories nearby. Mainly specialist engineering outfits, custom made producers, computer factories, mechanical workshops gave her a view of the industrial estate spreading out in a large area of prefab factories. The rest of the planet was terra incognita. No one really left the City. There was no where to go. Above the Orbital stayed in its geostationary orbit, linking the five space launching facilities just behind where she lived. A little north a headland jutted out, where the more wealthy and connected, their mansions stretched out along a road resided. No public transport there. They had their own vehicles.

Once whilst strolling along the waterfront, dotted with a few bars, restaurants and cafes Nervina spotted Ratze again. Nervina remained incognito. She toyed with the idea of following her, subsuming her Brain to remain invisible but changed her mind. She really did not want to know, or her Brain decided against it. If Ratze was working for some outfit it might be better if she were left to herself.

Ratze. A Natural. But with whom? Alone? Perhaps. Her escapade from Prima could, like Nervina's removal from that planet be a cover. Which meant Ratze was on a mission. Not her she hoped. Maybe like her she worked for some outfit or Family who engaged in their dubious activities freely here whilst having to operate more clandestinely on Regum. There were maybe Primaian Families and these she wanted to stay away from. She might be out of the loop, secure, as long as she kept to herself. Nor did she want any attention focussed on her. Thus being seen with Ratze too often not recommendable just yet. Her Brain knew very little about Marrus, who as an independent unit could be a front for entities she had no wish to come into contact with. Hacking his data base would have to wait.

She caught a tram back to her flat.

Of greater interest were the space ports. Privately run by both corporations and families. The engineers, scientists and specialists kept mostly to themselves living in a small village built right next to it. Soft scanning open data bases revealed exotic material research facilities, bio-researches dabbling in molecular permutations probably concerned with new AI interfacing processors. Along with metallurgists, chemists, computer buffs, astronomers all drawn from Regums academics. If they ventured out they maintained a low profile. Their facilities in a secure compound. Secrets. At least Novus was more than just a commercial enterprise..

Her neighbours were a mixed lot. All workers, no specialists. They accepted each other at face value. Nothing like on Prima where everybody was in each other's heads, constantly. Making sure one's resonance stayed attuned to one's being. Prima, a vast prison in comparison to Regum and Novus. She felt free here, lighter. Without the oppressive mental atmosphere which had been the norm. Not until one left was the difference apparent. No wonder so few were allowed back after having been away. She nearly missed her stop.

She was sitting at her window watching those walking with their groceries, their shopping, coming and going. Ratze. Something about her. A feeling of familiarity. But the question was, was there a motive? Restless she went back into the City. With no particular place in mind. She ended up at the casino to see it as a visitor. No one paid her the least attention. The security guards only looking cursory past her. Her Brain recessed. Something was bothering her. Undefined yet present. Maybe a left over from Prima's constant surveillance of every thought, every action, every nuance being analysed. Freedom, what a precious commodity. She ambled through the endless malls, passed so many shops that no amount of credit could exhaust what was on offer. Such

riches were reserved for the elite and chosen on Prima. Bored she decided to head for her little bolt hole. She was comfortable there. The furniture a little worse for wear, basic, cosy.

She made her way to the terminus. The maglev train appeared, all perspex in a silver aluminium frame glid smoothly to a halt. The doors slid opened, the travellers exited, some excited tourists or like her workers on their day off. They got on. After a cursory wait, it was fully automated the doors slid shut and off it went. Those around her were chatting, out for the day. She was sitting on the left admiring the desert's pastel pink brown colours. An azure sky above, in the distance the white flare of a rocket slowly ascending into space. She was starting to feel at home here. Even if she only knew Ratze. It was enough. Company she did not crave. Even the casual conversations she had with her relaxed neighbours occurred on such a light level that there was no feeling of personal intrusion. Everybody had a comfortable ambience about them.

The City's large edifices moved slowly towards her. She saw a helicopter rise from one of the taller buildings, sunlight flashing momentarily off its cockpit..

"Such an easy way to get around." An older lady remarked sitting down next to her. Daydreaming she had not realised a fellow passenger sitting next to her. She would have to try and not drift off too far. Then again her Brain might be adjusting her to be like the rest.

"I think it's great they way they've organised it all." Nervina replied happy at the diversion.

"Very satisfactory." The older lady said. Dressed simply. Elegant. A wealthy retiree. A whiff of perfume, delicate, a rich essence. Taste.

The high rise buildings were getting closer. Some low rise buildings whizzed past

"From Regum?" her companion asked.

"Last port of call." Nervina volunteered. See how she would react.

"A traveller. I used to travel in my time. But now I've decided to make Novus my home. It's so relaxing here. I used to teach, tutor I should say at CU."

"I nearly studied there. Then changed my mind. Had a few interviews with some academics. But the overspecialisation of my subjects turned me of."

"That is a pity. Learning is good for the brain."

"I agree. But since all the data's in the Web..."

"True, but it's singularly focussed. A specific area of interest is always more than it's shell contents. The Web may give you answers, but true learning is the art of asking the right questions. A discipline in itself." She said kindly. "Any family here?"

Tricky. Stop being so hypersensitive she told herself. "No."

"Neither I," she beamed. "Well at my age they're all dead. The others I found too self enclosed. I want real freedom."

"So you're from Regum as well." `Dead' not `passed on.' Regum for sure.

"Where else?" she chuckled.

"Oh I don't know, a habitat perhaps?"

"Been there. Dangerous for the mind."

"Really? How?"

"Well you loose contact with others. Become your own world. There are plenty who have mentally lost it. Completely warped." She said with some distaste.

"I would have thought their AI's would keep them on track." Interested in what she had just said. Different mental bifurcations.

"Well they can be ignored can't they? Switched off even, except for the basics. One needs an amazingly strong mind to stay focused."

"Never thought of that."

"Neither have they. I shudder to think in what sort of a mental cul de sac they can imprison themselves with."

"Sounds like Prima." Nervina laughed.

"Oh that place. Ugh." The lady shuddered.

"Yes they are strange."

"Deluded."

"So I gather." Nervina said cautiously. Nothing covert about this seemingly nice woman.

"Always conspiring."

"You met them?" see where that would lead.

"One hears things." She answered.

"I suppose."

"Surely you've run into priests."

"Avoided them. If I saw them in the street I would do anything not to pass them. Hide in an entrance, pretend I'm not there. Total aversion." Nervina add libbed.

"Not a bad idea." She smiled. "I'm Kisa by the way."

"Nervina, pleased to meet you."

"Did you know dear, there are some criminally insane in the Outback?" she said conspiratorially.

"You mean..."

"Where they have their colony."

"Is this good or bad news?"

"Bad of course. They are up to something out there. I can feel it. Sometimes," she continued, "I think I must have distant ancestors from there. I get these flashes, remnant psychic left overs probably. Not enough to tip me over the edge, but I do get the strangest of dreams."

Knowing what the Primaian's thought of that Nervina admitted: "Same here. Sometimes. Strange worlds, similar beings but endowed with awesome powers."

"You too? You might have Primaian blood yourself. Ever checked your family history?"

"No. I don't want any surprises."

"I can understand that. A new beginning and all that."

"Yes Kisa. A new beginning."

"I just hope they don't do anything nasty."

"Who?"

"That governor general out there. I don't trust them. But why would the Council even allow them here? Novus belongs to Regum. I tell you Nervina something is going on out there."

"Some sort of deal."

"Some sort of deal. You said it. What's in it for them I ask myself."

"Cheap labour I hear."

"That's just the surface. It's a conspiracy." Kisa was determined.

The train started to slow down.

"I talk too much." Kisa apologised.

"No not at all. Interesting what you said."

"Well most people don't want to know or don't care. But there are some of us who do care for this planet. Maybe we can have a coffee sometime..."

"Hm. Kisa you come to the casino often?"

"For a flutter now and again."

"Because I work there. If I see you then yes, why not?" Nervina replied without even thinking.

The train pulled up at the concourse along the water front. The doors slid open.

"Here is my card Nervina. Don't be shy." Kisa winked at her. "When you have time of course." She rose. Nervina likewise.

She watched Kisa blend in with the other commuters, crossed the plaza and onto a fleet of waiting mini buses taking her to wherever she lived. It was nice to have someone talk to you for the pure pleasure of it. Exchange ideas without ulterior motives or get an angle that usually concerned them not herself. Or be manipulated into revealing snippets of data or compromised by being drawn out in endless games which counter intel played.

A man's voice asked solicitously if she were lost. She was standing rather vacantly with her own thoughts. She turned and saw a casually dressed elegant young man, wired at the back of his neck, the tiny strands off line. No activity.

"Just bored. Thinking. Thanks." He nodded and moved away bidding her a good day. No internal alerts. Coincidence? A watcher? She could not allow her guard to be down. She was essentially a refugee and a possible target. She had disobeyed orders and done a runner. People here were indifferent. Even when gambling pleasantries were exchanged with a minimum of curiosity.

Time to do some homework. Externally. Her flat was the bare minimum with no computer terminal. Not that she needed one. Find out if Ratze and by default herself were in the public register. Everyone was scanned coming in. Would it be locked down for the security agencies here? With that positive idea she felt invigorated. Her rescue might be noted. Or hidden. See how exposed she was.

She walked over to a large map of the city next to the waiting area. Use what data was available rather than do a back entrance run internally. On Prima any information accessed was tagged. There the DLs knew exactly who wanted to know what. It made her cautious. See what happens this end with her curiosity. See how Novus's systems worked. Any trip mechanisms that alerted hounds, passive watchers like the man wondering if she were lost.

The maze of the city showed where the malls were, the most important businesses, service centres, doctors, specialists, and everything else one could want. So not everybody was on-line, wired, inserted, hooked up, sub-tuned, module specific. The information external. This planet had a logic of its own regarding data. Harking back to the old days. It would be interesting what was not there.

She looked at the lay out. Ah a library. Prima had them, off limits to the public only a few blocks away. She would walk, see if anybody was following her. No containment fields either. An open planet. No overt controls in place. Nervina strolled into the CBD. Office blocks towered above her. So much activity for such a small population. No programmes to guide you. Here you had to think for yourself. After

walking down a few blocks, past shoppers, people on business she found the library in a non descript edifice. Unlike Regum City the buildings here were straight up, functional, simple solar panelled outer walls between hundreds windows. Above a few helicopters connecting commuters from roof to roof top.

The foyer was busy with whatever brought the populace here. A directory. The library was over three floors. So many offices. It would certainly overwhelm any true Primaian's. True Primaian's. If she was not one of them then was she a Reganian agent sent to Prima after being reconfigured. Maybe here were some answers. She walked up the stairs. Most used lifts. On the third floor the main entrance to the library. A foyer, a long desk with several staff busy with books. Books. Hidden on Prima, back up data storage on Regum, since the Calamity had affected their systems. Books were incorruptible. Safe. Secure.

Her Brain tickled a little. Natural curiosity by the staff. Or a security check. She was in passive mode. Not much to retrieve from her. A uniformed attendant studying her. Not intense just cursory. She walked towards the front desk with its consoles, view screens and com links. A male attendant in a business suit looked up his expression ready for her inquiry.

"Browsing."

"Well that's a beginning. Anything in particular?"

"Several. science, astronomy, history. Recently arrived so I'm curious about Novus."

He nodded. "Next level up. This floor is fiction."

"Mythology, folk tales."

"Third floor. Under ancient history, sociology, psychology. Second floor is science and technology."

"Thank you."

The tickle in her Brain remained. Not quite an itch. Low intensity. Then they left her alone. A spiral staircase next to an internal lift. A guard busy focussing on someone else who arrived. She climbed the metal stair case and saw shelves covering the whole floor. Amazing from a Primaian perspective. A few people sitting at reading desk lining the windows for the light. She was after information regarding the corporations, if they were here. Which she did not want to make known. She saw various terminals to narrow down the search.

Another help desk. The young woman looked up.

"I'm checking out prospective employers. Where would organisations, business's be?"

"Well you're on the right floor. Are you taking any books out?"

"No."

She seemed relieved. "Then you won't have to register. But you can do that anytime."

"What about downloading?"

"Scanners are available. A small fee. Point one of a credit per page. Just swipe your credit card." She smiled. "Most business's have their data pre-packaged so you don't have to go through their information page by page. The screen advises you how much they contain and an abstract of course."

"Can I uplink the scanner?"

"Yes. No problem. Saves paper. Point five of a credit per page."

"Thank you for your time."

"Glad to be of service."

"What section is the business directory?"

"Oh of course. Yes. Nine hundred. It's all marked along the isles."

"Thanks."

She was relieved that her status was of no concern to the staff. Maybe security had already cleared her.

She discovered that the books were really computer slabs. The scanner for flexi data rich download. She walked along the rows until she discovered the Casino. There were several slabs. Subsidiaries and subcontractors. Might as well download the lot and let her Brain sort it out. She activated her sleeve's computer and walked over to a table next to the window. It looked over to the next office block. She pulled out her fibre link, inserted it into the spine and let her link do the downloading. Her Brain hid behind her personal pc. Companies, contractors, official owners, family concerns, principle stakeholders and shareholders, affiliates. Having done that she put it back and took down the space corporations. None connected to Prima. Now for Novus's government. A quick search at the terminal and she found the section it was at. Executive Council, Representational Council, departments.

Now for the history of the planet. Up the spiral staircase. She asked the attendant, another young woman where that was. Three hundred plus. She found what she wanted and this time took her time downloading it slowly.

First came the probes. Automated observation station. Tree planting on a huge scale to enrich the atmosphere, bacteria in the air to soak up excess CO2, fungi, viruses to make the air breathable. Several decades passed. Massive injections of bio-forming molecular designated scrubbers creating an atmospheric equilibrium. Vast fresh water underground coming mostly from the ice caps. Mineral rich. Then came the colonists, all Reganians. Labour was needed. Regum used low tech applications since this was an open planet. Prima was happy to supply the necessary workers. The city rose, micro factories to get the infrastructure in place, engineering works, construction companies, transport organised. No evidence of prior inhabitants. No evidence of any remnant extra-terrestrial visitors.

She searched for the 'Calamity'. Refer to 'Regum'. Her Brain, rerouting itself into her sleeve's pc reminded her that on Prima that was privileged information. She found 'Regum' and accessed the 'Calamity'. Speculative only. Massive EM flux [?] from within the galaxy. Possible source. Centre of galaxy. Possible cause: speculative. Drawing in 'space' due to its gravity well, possible repulsion wave. Singular occurrence [?]. Cyclic [?]. Due to pre-technological civilisation any previous [if any] EM wave would have passed through without discernable effects noted. Refer to 'mythology', 'folklore'. Also refer to 'Prima' [ditto]

She got up replaced that history and found Prima. Under 'mythology' distant struggles with ancient gods who won usurping 'demons'. Under 'folklore' many individual stories of resistance by 'occultists' and 'shamans'. Subsumed to priesthood and the coming of the singular god. Obviously the source here was Reganian. History stopped. Millennia later technology. Near civil war. Exodus of scientists [et.al.] to Regum, twin planet. 'Calamity'. Supposed wrath of singular god. Regum proclaimed 'heretic'. Alleged psychic enhancement of Prima's 'volatile naturals'. Coming of Domain Lords. Upon their death transmuted. Declared as 'Immortals'. Pontiff proclaimed as 'unitary immortal'. Orbitals and habitats built by Regum. Space exploration. Building of WebWorld, later WebSpace. Supposed 'alien field' appears in near space. Universe bigger than previously thought. Surrounded by hundreds [?] of micro galaxies. Supposedly inhabited by alien sentients responsible for assumed alien field. Data does not confirm such a field.

She took a mental break. If the Primaian's knew this...She continued. Cooperation on Orbital. Priests sent to Regum. That was that. No it wasn't. Novus discovered. Refer to 'Novus'.

Nervina ran through 'government' both Regum and Novus. No religious departments. Just as she thought. A strange manifestation of Prima's.

She returned the slab. Then she had an idea. Ratze. Find out if possible her agenda. If she could. There was something about her. An affinity. Chance? Luck? Pre-determined? Time to find out.

As she reminded herself with no Web hence no curiosity regarding herself or Ratze. Like stepping out of the picture. Even the Orbital was not doing any sweeps on the ground. Just pure research. Maybe. Nothing her Brain recognised. Yet the Orbital was not mentioned.

Back to Ratze. Maybe from space. The habitats had definitely unique individuals who rejected socialising as a way of life. Manifesting pure individuality. Ratze perhaps one of them. Someone who had infiltrated Prima's orbital. An interesting person.

But first, she had nearly forgotten, a search of herself. Back to the 'Novus' file. Sure enough a personal directory. With contact numbers, simplified personal computer addresses. She found herself, arriving several days ago. Student from Regum. Nothing relating to Prima. Her Brain must have deleted her other past. Ratze, Reganian. Visitor. Habitat unknown. Corrupt files. Pending. So she had nothing to do with Prima, officially. An agent of sorts, weren't all agents that? Just her being here. Corrupted files. Someone muddying the waters.

Nervina sent her a txt message on the open link. 'Drinks?'

Moments later an answer. 'Fine, around three at the 'Terminus'?'

'Sure thing.'

Nervina was on her second cup of coffee at the 'Terminus' watching from a bar stool at the window the passers by. The view of the plaza, the maglev train moving out as people strolled by. In front the ocean, the waves lapping the broad sweep of the shoreline. Splashed down selfdriving containers, huge white impact plumes of white water rising up majestically as they came in from space, lumbering out of the water, auto docking at the wharves ready to be lifted by overhead cranes onto waiting flat rail wagons.

Everybody busy, going about their business. Uniforms. Not military, just security police somewhat laconic. Corporation insignia on their smart clothes, walking signage.

Ratze appeared amongst the commuters pouring out of a tram, dispersing, going their various ways. She walked slowly letting others pass her by. Nervina watched her and anybody who might be trailing her. No one loitering near her.

The bar when Nervina entered almost empty. The lunch time crowd gone leaving tourists, others off duty to enjoy the afternoon over a few drinks. Some solitary drinkers. Her Brain sensed nothing. One or two men had glanced at her arrival. One older business type even asked her to join him. She declined politely and wished him a pleasant afternoon. She took her coffee to her place at the window. He left shortly after even giving her a wave. Nothing to indicate he was more than wanting someone to pass the time with.

Ratze was still cautious as she made her way towards the bar. No one around her was relaying any signs, changing a briefcase from one hand to another, fiddling with a lapel, tugging an earlobe, all prolix forms of communication to back ups who might take an interest in her. Nervina kept her Brain on standby. Ratze half turned keeping an eye on the others see if there was a subtle change in body language, a cursory stare, a feigned glance or suddenly leaving to be replaced by another watcher. So far nothing. Inside a few workers were drinking at the bar, who could easily see behind them given there was a full length mirror, shelving stacked with colourful bottles of liqueurs and various spirits.

Ratze was still taking precautions, fiddling with her shoes. She pretended to half loose her balance and did a quick sweep to see if anybody was watching her. Nothing. Then she walked in.

They greeted each other. Ratze though focussed was in an amiable mood. She asked Nervina what she wanted. She was fine. Ratze strolled to the bar, nodded at the workers, exchanged some pleasantries, took her beer and rejoined Nervina.

They hugged, watching those around them. No one gave them a second look. They sat.

"Glad you could make it. So how was your day?" Ratze asked taking a generous swig leaving a white line on her upper lip.

"Checked records. Public domain. You're there. Ex habitat."

"Really? You?"

"Student."

They exchanged a knowing smile. Neither were what the official data base assumed. Their cover was holding.

"I got a job." Meaning Ratze was establishing her legend.

"Yeah? What?"

"Fire safety officer." amused.

"Same here. A surrogate for some character, professional gambler."

"You a pro?"

"Easy as pie."

"Careful. If you got smart ware..."

"I understand Ratze. And a unit to go with that."

"Is it clean?"

"No bugs. But I didn't dig too deep."

"Good."

Nervina realised they were both inserts on the loose. Neither had to acknowledge that.

"Checked the history of all three planets." Nervina divulged. "One overriding factor. The calamity. Interesting, some sort of cosmic pulse. Totally stuffed all systems. One has to assume it's all more secure now."

Ratze nodded and drank some more beer. "Hm, not bad."

"No overt explanations. Just theorising."

"Nothing religious?"

"Nope."

"So you're, were a student on Regum."

"Sure was."

"What was wrong with it?"

Nervina knew that eventually somebody would ask that question. She was glad Ratze did.

"Get away from my ex. He walked in and I walked out. Some research into folklore on Regum's aborigines. He was going strange ever since..." Nearly saying their arrival. "Anyway, I thought of making a clean break. Leave the memories behind."

"Good move. So Novus it was."

"Aha."

Ratze finished her beer, saying "To Novus."

"To Novus." Nervina agreed.

"Want something?"

"A liqueur and another coffee. Use my card."

"I'll get it."

"Generous."

"Not always." And Ratze made her way to the bar.

As she ordered her drinks, a middle aged business suit deleted his portable viewscreen, pocketed it and asked if she was from Regum. Given that there were so many arrivals here it was merely an opening line.

"I heard you toasting Novus. I'm on sabbatical." His eyes twinkling, a few character lines and a rich resonant voice. He would make a good speaker. No tell tale itch. "I'm sorry to intrude. Just arrived myself."

"Know the feeling. Company. Not many academics here." As the barmaid delivered her drinks. Ratze paid with her credit card.

"There are, but not my field. Group dynamics. My assistant is gone missing." He lied. "Don't know where he's gotten to. He'll turn up. Got a few days to get my stuff together. So here I am at this bar." He smiled charmingly. "So how are things on Regum?"

Strange question if he just left.

Then added. "When my assignment is done I may stay here."

"Same here." Ratze concurred.

"Name is Talex. I might as well come out with it. I'm bored."

"You wanna join us." It was an observation.

"If you don't mind."

"Depends on my friend." Ratze watching Nervina in the mirror. "So follow me." making their way over to the stools at the window.

"Talex. From CU at Regum. May I join you?" as Ratze handed Nervina a small green glass, her coffee, then returned to the bar to retrieve her beer. Talex was drinking some cocktail, cheeks slightly flushed. No microbots on him Nervina noticed. Or off to enjoy the effects of the alcohol. No itch.

"You may." Nervina replied graciously.

"Social scientist specialising in group dynamics." He explained.

"CU?"

"Yes. And you?" focussing on Nervina. Then sat a little away so that Nervina and Ratze could stay together. Not intrusive.

"Ex student. The curriculum was not what it said it was. Too much blah blah. Not enough substance. Motivational studies, psychology." Nervina made up. Not that that faculty did not exist. She was being cautious.

Talex laughed pleasantly. "Yes, I think I know what you mean. Wasn't always like that. But ever since the advent of the priests there's been a change in orientation in the Arts and human sciences. Enter ideology. Right up my alley. Defending their stance.

Always assumed but now part of the course. Don't agree with it myself..." As he sipped his clear cocktail.

"My reason for bombing out."

"Sad really. Waste of a good brain."

"Well if they would stick to the data..."

"My point exactly. Leave the philosophising to the philosophers." He readily agreed.

"So what's your interest here?"

"New world. New social experiment. Free form. No established social norms, no guiding laws, freedom to be whatever one wants. Almost like the habitats. What are you in?"

"Gambling."

"Oh."

"You sound disappointed."

"Good brains are needed here. Actually," he paused, took a sip, the classic move to collect one's thoughts, or dissemble, "I'm working for the council. They want future projections, probabilities in social and individual behaviour. I could do with another research assistant. As you know, there's no web here. So everything has to be done manually, collation of data. Time consuming but necessary just the same."

Nervina and Ratze looked at each other. Could be true could be false. Without a deep scan Talex was an unknown quantity.

"Don't look at me." Ratze smiled.

"I got a well paying habit." Nervina answered.

"They are even considering integrating the Volatiles."

Both women held back. Either he was an academic or he was sending out a signal to them. Coincidence?

"Labour market's tight. I tried several agencies but everyone's taken. Everybody is outsourced. Even secretaries are hard to get." He hinted. Languid brown eyes. No intensity. Could be the drink they both thought.

"Talex, if your contractor has set you up here, surely they have the means of procuring the qualified personnel. Even if they have to do that on Regum." Nervina said spot on.

"That's what I was doing at the bar when your friend came along. If you want to have a look, check it out. Remember not everyone on Regum wants to come here.

Compared to the City this place is a suburb. Limited life style. And no web. I'm a little desperate ladies."

They laughed at that.

"You don't look it." Ratze observed.

"Can't you use or design a data cruncher?" Nervina asked then took a sip of her liqueur. "Nice." Followed by coffee.

"So where do you actually do your work?" Ratze queried.

"Everywhere. In the field as they say. But I do have an office. Actually I work from my unit."

"You got access to the Outback?" see what happens Nervina thought.

"Limited. No one wants to go out there." Talex despondent. Either a good actor or genuine. Both women were holding back scanning him. So they had to pump him the slow way, by conversation.

"People," he continued, "misunderstand Vs. They're not dangerous. They don't infect your minds and they're not violent. Just their emotions are a little unstable."

Nervina wanted to stay away from the Outback simply because it was under Primaian jurisdiction.

"I want nothing to do with Prima." She replied.

"Your legal status is guaranteed."

"I don't like them."

"Neither do I." Ratze added for good measure. "Good luck in finding someone Talex."

"I guess that's that."

"Sure is." Ratze confirmed.

"So, for your time, get you the next round?" he pulled back.

They placed their order.

"My pleasure." Talex slid off the stool heading for the bar.

"A bit obvious." Ratze said to Nervina.

"Telling me." As she watched Talex at the bar. See if he gave any signs to any of the drinkers there. As Talex left one of the men pulled over a coaster.

Gotcha.

"He just passed a message to that bloke drinking on his own, to the right of Talex Ratze."

Ratze gave her a knowing look. Low level approach.

"There you are then." As he lowered the tray of drinks and coffee.

"To our respective futures."

They cheered each other. His embedded pc at his sleeve was inactive.

"Hope you get what or who you want." Nervina said softly.

"Sorry for wasting your time." And downed his cocktail. "Ah, just what the brain ordered." Smiling effusively.

He rose, nodded once more to them and ambled out of the bar. They did not discuss Talex's attempt at their recruitment or entrapment. Whether Ratze knew of Nervina's somewhat precarious situation could be left for another suitable time. So they talked about Novus in general, their respective 'jobs' and the bright, hopefully, great unknown future.

The sun was setting the sky ablaze in deep crimson as it slowly sank behind the office blocks casting purple shadows over the foreshore and plaza. Lights twinkled along the jetties, buses alight, streetlamps coming on. Shadows moving across their field of vision. Workers were coming in for their first drinks.

Ratze watched on the reflection of the window pane the tag at the bar. Using optical enhancements she could see him clearly in her head. He was just sitting there nursing a beer. She reverse zoomed onto the mirror. He was not watching them. Very professional.

They finished their drinks, the night ahead of them. Outside a solitary taxi cruised by. Both brains tingled. Whether from that one cab or the agent at the bar neither of them bothered to check out the attempted scan.

"Fuck fuck fuck." Nervina spat. Ratze looked a little surprised at her.

"Know the feeling."

"They're onto me."

"Something happen on Regum? I know you said you left CU."

"I had to get out."

It was cool outside. The sky over the ocean turning black. The stars shone bright.

'Take the taxi.'

"You get that?" Nervina asked. Ratze nodded. She did a quick search only to end up at a defunct outbox.

"Someone's taking an interest. Not Talex. I got his resonance." Ratze's Brain was assuring her.

The 'not for hire' cab cruised closer. Nervina waved, it pulled over. They got in. Ratze remained on low alert. Whoever was tagging them did not resist. But all she got was a remnant presence. Isolated drop boxes. Someone was as configured as

themselves. Tempting to follow it up Ratze thought but not yet. She knew `he' was interested in Nervina. Yet `he' did not mind Ratze's presence.

Inside the cab they were sealed from the driver. The door shut, they moved off.

"Just drive driver."

He looked over a little and merely nodded.

Ratze made it understood that she would trace the interested party. She sent out a tight squirt bomb which slowly blossomed into several packed fragmented search engines. The engines dissolved. Countermeasures. A persona appeared. An operative linked to a family. An interested party that wanted to keep Nervina secure. Ratze accepted it for the moment. If `he' could dissolve search engines then `he' was connected to a very potent data realm.

The two women looked at each other.

`Nervina. Talex is one of Prima's active sleepers.'

"I shadowed with you just in case," Ratze said, "there's an echo."

The taxi turned here, then there, then into the centre of town.

"You got that as well?"

Ratze nodded.

"Tempted?"

"Do some drifting? No. Way ahead of me." Better be cautious than too assured. `He', for the voice, de-encrypted sounded male, was using some very advanced gear. Neither of them wanted to reveal even a smidgen of their own capabilities. The itch was gone. So Talex was a look out, a recruiter, a stooge. His work most likely genuine.

First contact Nervina thought. Cover blown. Not that she had one accept as an ex-student. The partition in the cab was opaque. Just a fuzzy shadow of the driver. Ratze was tempted to use her optics to see clearer but even that would reveal something of her enhanced state.

The partition came down. With short black hair, a round face, tiny strands at the nape of his neck feeding into his collar the driver remarked: "They will be relentless."

He turned right then right again. Next left. Checking for tails. Not that it was necessary. "Prima prides itself on physical intimidation as well. Playing external mind games." The driver said looking straight ahead.

"No point asking who is with us." Nervina said at last as the cabbie concentrated on driving. Ahead a tram stopped letting off some passengers. He drove around.

The driver did not respond.

"Why the interest?" might as well ask Nervina reasoned.

"Prima's activities. Whoever they are interested in is noted." Not even saying who `he' was. For all she knew this could be a ruse as well. Reveal a portion of your capabilities, then come to the `rescue'. But Prima was not that sophisticated. They were more up front and relentless no matter what the cost or intermediate outcome.

"So driver, saviour," Nervina added for good measure, "it's the situation I'm in rather than me per se."

"A bit of both."

No surprise there.

"Your accepting Talex's offer is under consideration Nervina." Nervina ran a voice recognition analysis to see if `he' was the origin. Not that she expected confirmation. Programmes in place to counter her probing. No match. If the driver was aware of her curiosity he did not remark on it.

"Well you can tell your boss I'm not going."

Down into another street. They were driving aimlessly.

"They'll mind fuck me."

"Nervina if they wished that as a priority you would have been snatched." He answered.

"What about the authorities, the council?"

"Ah, you don't know the set up here. The council is really a business. Huge latitude regarding Prima's activities. They meaning the council want Prima in the open."

"Including abduction?"

"If there is a security risk to Novus, then yes. Officially agents are not considered desirable. So removing an agent from the streets no matter who is acceptable to the council is one less problem as far as they are concerned."

"So much for an open planet."

"Council sees this differently. They don't want any conflict of interest."

Ratze laughed at the ludicrousness of the council's stance. Every corporation, every family had their personnel engaged in some form of data gathering. Contracts, agreements, positions regarding commercial ventures, future hedging, everything was of interest. Manifests, type of cargoes, movement of personnel, it all was of importance since the market was a free for all on Novus. What the council did not want were political agents. She looked at Nervina in a new light. Nervina could be designated political. Her move to freedom an affront to Prima's loss of control. And Primaian's were control freaks. So Nervina was of interest to them. Ratze wondered what this Talex really knew that made them want her back.

"So you're removing me from the situation." Nervina observed.

"No we want you in."

"I told you..."

"I know. For the moment it's in your interest to go along."

"Some choice. I have an employer you know."

"It's being taken care of."

The street lights glowed, casting pools of light, momentarily lighting up the interior of the taxi.

"Did your people get me out?"

"Prima is after the Kabal. They're using Vs, DVs to try and find them. We want to make sure they don't."

"This relates to me? What's the Kabal anyway?"

"A group dedicated to containing Prima."

"They are contained. Self contained."

"Not in space."

"There's the Web."

"It's open. You found out yourself."

"Ran into it's end."

"Yes. Interesting that. By rights it should loop back into itself. Which it did not."

"End of the sequence." Then turning to Ratze asked: "Kabal. You know anything?" She shook her head.

"Tell me, you a believer?"

"No."

"What about the alien field?"

"That? The Primaian bogey."

"Will you see Talex at least? At his residence?" changing tack.

"Could be a trap."

"It won't be. I'll drop both of you off..."

"I told you."

"...and consider it at least. Ask some questions." Ignoring her protest. Well she did owe somebody something for getting her out. Now they wanted her back in. There was an upside. Now that Talex was outed, she might learn more of what Prima was up to on Novus.

"You want to come along?"

"Oh definitely." Ratze said with relish.

"Don't commit yourself Ratze." He said.

"Oh I wont."

"Neither will I." Nervina emphasised.

"What we know of the Vs out there is they're itching to get out." He hinted that the environment in the Outback was not as hostile as it appeared. "Oh yes," he added as an afterthought, "there's a party tomorrow night. One of our leading socialites, Nerfahsi. Talex is invited. No gate crashers. So if you play your cards right...a few Primaians ingratiating themselves."

"You want us to keep our ears open."

"Exactly. That's why seeing him tonight is essential."

"No one else available?"

"Nervina, Novus is a small community."

"And we're new faces."

"You got it." he handed an envelope to Ratze. "Your invite."

"Embedded?"

"No, clean."

Ratze pulled a pair of gloves out and took the envelope. She did not want an imprint left on the envelope. No DNA trace. Then pocketed the invitation.

"Oh yes, I'll be there as well. But you won't know me, at first. You can of course ignore me. I'm there to make sure there are no surprises."

He also handed over, steering with one hand, a small portable pc. It was a tiny matte black flat slab.

"Press that anywhere, hard if you're in real trouble. In case Talex tries anything. It's self configuring Nervina. No one else can trigger it. Sends a one time squirt then self eradicates."

"Thank you driver."

He pulled over in front of a non descript high rise building.

"No charge. Talex's residence. See you two tomorrow."

They clambered out and the taxi drove off with the 'not for hire' sign on.

"Looks like you got friends Nervina."

"Yes. But are they fair weather friends."

"I'll stick by ya."

Talex lived where he worked. A large one bedroom flat. The living room with a view onto another building across the street was cluttered with basic computers lacking

AI capabilities. Regum was not letting Primaian's get a glimpse of their latest devices. He had some bottles of a white clear rum, mixers, nibblies set out on a tray. A little surprised that Ratze was with her he accepted with good grace. The assistant was not around.

After some inconsequential chitchat Talex broached the need for a research assistant. Nervina avoided the offer by saying until her political status was clarified since she was applying for citizenship she would then let him know her final decision. Her job paid well, free accommodation. He would have to have better remuneration. It worked. Talex needed to clear that.

He filled them in regarding Novus's society. Credit ruled. Brains were highly regarded in the technical field implying social scientists were at the bottom rung of the ladder. A little frission there. However, he brightened, in the Outback it was the reverse. Brains held in high regard. And mentioning high regard he beamed, there was a party tomorrow. Would Nervina grace him with her presence. It would be an honour he added.

Nervina played the reluctant, indifferent individual. Parties bored her. This one would not. The hostess, Nerfahsi was a patroness of the arts. Novus's best. She would meet him there after work. A few more desultory drinks, Ratze remaining suitably subdued, played the tired visitor giving Nervina constant looks that she wanted to be out of here.

Talex tried his best to be a good host. To no effect on the two women. He asked yet again of the offer and Nervina said once her situation was cleared up and a better offer of her salary negotiated she would seriously consider it. Then they left, hailed a taxi and rode out to her hideaway at the edge of the city next to the light industrial parks servicing Novus.

Ratze was delighted with Nervina's second home. Unpretentious, basic yet comfortable, the living room couch folding out into a spare bed.

The next day, Ratze left early leaving a note saying she would be in touch regarding the party. When Nervina appeared to play the surrogate at the casino, one of her boss's minders told her that some powerful individual had deposited an unspecified amount of credit to cover Nervina's take for the next three days. A little surprised, she was glad to have the time off. The basic comlink in her flat upstairs Nervina had not bothered to activate. She knew she could link with Ratze direct which was enough. Talex would have to get to her the hard way, preset node to node. With nothing to do Nervina

decided to walk around the neighbourhood and get a feel once more of the place and the layout. With Talex in the equation everything changed.

Back at her block she watched pedestrians, some of whom nodded without infringing her privacy. No tell tale itch of being scanned. People actually minded their own business. After walking for several hours she had a late light lunch at a gloomy café, welcoming the immunity she felt amongst the few patrons eating their meals. Then returned to her flat and decided to have a nap until Ratze returned.

When Ratze did in the early evening she ceremoniously and with much aplomb pulled out what she called some 'rotgut'. It was a half flat bottle of white rum and placed it like some sacred icon on the small rickety coffee table.

"Do we have to bring something?" Nervina asked, a little worried thinking of Novus's social norms. It dawned on her how isolated she really was. Horat had sometimes drunk with her which usually threw her mind in turmoil. No warming effect of spirits, nor the merry mayhem going off in all directions at once. She wanted to remain focussed.

"No, this is for us. Get into the swing of things. The locals drink Nervina, most days. Well the bars are never empty are they? You do drink don't ya?" she was rummaging in the tiny kitchen for some glasses and found only two old cups. It would do. She unscrewed the cap and poured two generous swigs. Nervina was instantly apprehensive. Ratze was definitely in a party mood. Parties. Prima was another world in more ways than one. She could not remember going to any on Regum with Horat, 'Horat I wonder where you are.' He belonged to the past. Trying to get her drunk. She reluctant. Horat desperate to get away from something the way he drank with a vengeance trying to be another person.

"Not really Ratze."

"Shit hey? Well never mind." Raising the cup and taking a gulp. "Ah that hit the spot. This stuff is rare you know. Made from sugar cane. Worth millions here."

"Millions?"

"Precious."

"Ah." Uncomprehending.

"Well more for me then." Ratze smiled inanely.

For the next hour, with Ratze doing more of the talking, as the level in the bottle went down her effervescence went up. They talked about everything and nothing. This was a different Ratze. Getting blasted. Occasionally she would have a glass of water to dilute the effects. Ratze rambled on about her time with the DVs, their obsession regarding Prima's paranoia which interested Nervina. Another perspective. Nervina did

not feel she was a Primaian. More as an outsider, Ratze explaining their religious psychology, so alien she barely connected. On Regum she had felt some affinity with the place. There everybody was not so much introverted as singular, pursuing their own dreams. Then at CU she felt disconnected which surfaced when inserted into a group environment. Cooperating with others cramped her mind. Just having to pay attention to others an effort, draining her. Ratze understood saying the best way to deal with that was to ignore it. Easier said than done.

When darkness at last descended Ratze suggested they should make their way to the party. More interaction. Nervina wondered how long she would last there. Others just did not interest her. They were in their own lives which dominated their thoughts. Life was life, going on about it tedious to her. She had nothing in common with character types that subsumed their individuality, focused more on their offspring, or their work which ended up to be their whole universe. Universe. The ultimate mystery. Of little interest to the majority she stumbled across.

Outside it was cool with the advent of night. The bright stars shining in profusion overhead. A tram passed. Traffic was light. Dinner time. A few passers by with their groceries. Ratze saw a taxi and hailed it.

The driver had no idea where Nerfahsi lived. He explained that he needed an address. Ratze told him to head for the northern headland. Nervina looked up Nerfahsi on her sleeve's pc and was surprised she was not listed.

"What about the invite?" Nervina asked.

"No address." They drove past the low rise flats, lights on everywhere, including the many shops. Then into the darker streets of the light industrial estates that spread out around them.

"Looks like one of us has to get in touch with Talex."

"I'll do it." Ratze offered. She used her comlink, apologised for interrupting him and got the location which she passed on to the driver. They followed the empty ring road, the city aglow, the lit up high rise buildings slowly receding behind them. Past more darkened workshops, processing plants, small factories.

"You trust Talex much? I mean now, as he is, or thinks he is."

"Nervina I don't trust anybody. You heard the man yesterday."

"Yes I know. I don't know if I should accept the offer. Did you know somebody paid my boss for me not to show up for the next few days?"

"Really? Interesting. No fix on who?"

"None. Must have been quite a few credits. Someone is interested in me."

"And that is worrying you."

"Well, not that in itself. I don't know. All I know is I feel things are happening around me and I'm the last to know."

Ratze wanted to allay her fears by saying if she was an `insert', which piqued her Brain, then that was to be expected. Surprises were part of the game. She had a sneaking suspicion she was meant for something stupendous herself. The meeting with the general, the secluded house, checking her out then letting her run. Where to? With what intent?

A huge truck roared past them.

"It's as if I was being led somewhere." Nervina suggested.

"Same here. Still better being here than where I was."

"I wonder why we would be invited to this party."

"I agree there. We're at the bottom of the social feeding chain."

"Bottom. I don't even feel part of that Ratze."

"Stay that way."

The driver sped up after they left the industrial estate and turned off towards the headland. The odd car came the other way. Darkness around them under the night sky. Ahead they could see a few lights of the houses strung along the road to the promontory.

"What if it's a set up?"

"I checked Nervina. Nurfahsi is a real socialite. So why Talex? Well I did some digging there as well. He's in with the governor general of the Outback. So he could be a person of interest if not influence. And since the Outback is sealed off, well who knows what Nurfahsi is angling for. There might be more to her than the social butterfly."

"Maybe she's got the hots for him."

Ratze thought that was funny. To their left the white roaring flame of a rocket taking off, the launch pads hidden behind a series of low rising hills.

"I wonder if there are any answers here." Nervina said wistfully.

"Same here. Trouble is no one's given us any direction. It's intriguing." Ratze knew the alcohol was making her loquacious if only because she let it be so. Her little nanobots could easily convert it into extra energy without it's boozy effects. But this time she wanted to play the part of being `herself'. The insight made her aware she was more than the sum of her parts. But tonight she would be like everybody else. That would hopefully let `their' guard down. She sensed that the evening might not be entirely wasted getting wasted.

"You know I feel at home here."

"You do?"

"And you?"

"I got this feeling this is only the beginning."

"I get the opposite. I guess it's being whisked away from Regum. Sort of like an end run."

"It may not last." Ratze said thoughtfully.

They started the slow climb up the headland. The houses were set back from the road, some with lights on, others swathed in darkness. There were gaps between them. Antennae and micro dishes indicated they were built into the ground still with magnificent views of the coast.

The taxi slowed into a driveway. Ahead security with glowing night sticks waved them to stop at an open gate. Nerfahsi's house was ablaze with lights. Several cars parked on the spacious forecourt. The entrance festooned with colourful globes, groups and individuals milling about. They both felt the tiny touch of a custom scan. The taxi stopped. Ratze lowered her window and showed the guard her invitation.

"Who's the extra?" he asked.

"She's with Talex. I think he's on his way."

The guard looked at his glowing screen, asked if she were Nervina, to which she assented and he waved them through. The taxi drove down the path, dark hedges on each side for privacy and stopped outside the grand entrance. Ratze paid the driver, ready to party. Nervina tense. There were two small helicopters, two VAVs, limousines, motorbikes and a few smaller cars.

"If you want me to pick you up later, here's my card." The driver said.

"Thanks, we'll keep you in mind. Have a pleasant evening."

"You too ladies." And he drove away.

They could hear conversation and laughter spilling out into the night air.

The reception area, a plush magenta carpet, huge vases with dried flowers, oil paintings depicting mountains, oceans, valleys and liveried servants with trays of champagne, beer, spirits, hors d'oeuvres were busy everywhere under a small chandelier. The conversations good natured banter, tinkling of ice cubes in drinks, background party music of some intricate rhythms flowing merrily along.

They entered the huge lounge. Holographic pictures glowed on the walls. The overhead chandelier turned down, wall lights adding a soft glow amongst the multitude of guests. The holograms changed, abstract patterns growing into an almost

recognisable pattern then dispersing in soft explosions, lashing jets of ink in water dispersing into fractal tongues, others mild sunsets on alien planets, moonscapes with darting meteors impacting in riotous blasts sending up glowing grey clouds of swirling twinkling dust.

There were easily a hundred people here. All shapes and sizes, fashion statements by most women, others discreetly dressed, some men ostentatious in their appearance, a few with glowing jewels, women with patterned facial make up. Orange hair, blue hair, lime green, masquerades with exotic face masks. A generous buffet stretched along one side of the wall glittering on crystal glass platters the food as colourful as the guests. At the other side of the huge room the wet bar where black suited attendants served an array of drinks. Beer, wine, champagne, spirits, cocktails, the bottles glowing shades, fruit juices, mixers, a glistening ice tray reflecting the wall lights. Corks popped, guests laughed.

Ratze went for the food first saying it would soak up the alcohol. In an adjoining room, full of even more guests they took their plates and devoured with relish the exotic offerings of shell fish, mussels, oysters, tiny bite sized deep fried fish, cold meats, potato salad, fresh garden salads, strips of marinated beef, chicken wings, octopus. Having devoured their entrees Ratze then steered Nervina in tow to the bar.

She ordered a double green liqueur and knocked it back then asked for a glass of champagne. Nervina went for apple juice, Ratze giving her a look of shocked mock horror.

No one seemed to take the least interest in them. Perhaps because they were in their jump suits, a statement from the lower end of the social spectrum. Ratze did not mind. With no distractions she could observe the others. Nervina remaining in her shell. Demure.

A short woman, dressed smartly in an elegant jacket, no jewellery, a face of indeterminate age and dark black eyes extracted herself from a group and made her way towards them. They both felt their Brain's being tickled thinking she could be security. They were both wrong.

"Allow me to introduce myself. I am Nerfhasi, your hostess. You must be Nervina," who bowed a little, "and you are Ratze."

"Thank you for the invite." Ratze replied.

"A pleasure to see new faces. You cannot imagine how tight our community is. We share an acquaintance." She said.

"Not on this planet Nerfahsi. Unless you are alluding to my employer."

"Oh nothing as trite as that Ratze." She beamed. "Lady Lehra."

"Really, how is she?"

"Fine by all accounts. Apparently you met some..." paused as a garishly dressed young man, loud clothes, a riotous mismatch greeted her, then momentarily dwelling, looked at Ratze and Nervina and decided to move on. "...bores."

"Oh those two. Can't even remember their names." Ratze said lightly. What a small world, worlds.

"Oh that's alright. Merely boys riding on daddy's coattails." Nerfahsi laughed.

"I left early. Lord P was there and I thought, suspect they are lovers."

"How astute of you. But the answer is no. Let's go to the patio." And with smooth graceful motion glid through the crowd, accepting a nod here, a smile there. Outside the patio overlooked the great dark ocean, the stars barely visible as festooned lights twined their way around the overhead trellis.

"You're a naughty woman." Ratze said at last as they stood and looked out into the space ahead of them.

"I should hope so."

"I mean you scanned us."

"But of course." She replied cheekily. "I had to make sure."

"I understand. You know Talex I assume."

"Yes." She replied cautiously.

Nervina had a Brainwave. Talex. Right through his dormant memory to the Outback. The impression of the Vs one huge resonant wave. Contaminated. Nervina's Brain recoiled. So that was it. Some sort of psychic experiments was going on out there. She wondered if Ratze had received the same surge. Then it passed.

"It's just that my friend Nervina here has been offered a job as his assistant working in the Outback. Something to do with intelligent resources."

"Yes Talex. Came to my attention a while back." And took a sip of champagne.

"Can't find anything remiss about him. Now that makes me suspicious." She winked.

"That why you invited him?"

"Oh yes. Everybody here on Novus has a past. Something they left behind wherever they came from. So when somebody is squeaky clean..."

"Indeed." Ratze concurred.

A group came out, boisterous, acknowledged Nerfahsi and walked a little away to sit at the outdoor tables.

"So he's in with the GG." Ratze offered after a momentary silence.

"There's some weird stuff going on out there." Nervina ventured.

"Do go on." Nerfhasi was all attention.

"Only that he's ex CU or still with them. Thing is why he's so interested in me?"

"You were a student there?"

"Was yes." Without elucidating. She was tempted to do a scan on her hostess but thought better of it. Not yet.

"Well there you have your answer."

"Trouble is I don't want to go near Primaians."

"Now that I can understand. Though we should not be too hard on the Vs. Not their fault they were born that way."

"It's not that. It's the GG."

"Oh I see. My you are mysterious." Then seeing Nervina's muted reaction Nerfahsi quickly added: "Not that I'm prying. As I said, we all leave our past behind when we come here. No one asks about political or religious affiliation. Each to their own." She placated Nervina.

"Well I said I wouldn't but Talex seems intent on me. That makes me suspicious."

"I'm sure you have your reasons Nervina. Personally I would accept. Everybody's dying to find out what really goes on out there." She said softly.

"Really? I thought it was to adjust them."

"Well yes. But you know Primaians. Never what they seem."

"What about the council?" Ratze asked to deflect attention away from Nervina.

"Ha! In cahoots if you ask me."

"For what aim though?" Ratze continued the line of conversation.

"Well that's it isn't it?"

The party was getting louder inside, the ambient music rising with the level of conversation driving their exuberance along.

"Anyway," she touched Nervina's arm, "you're perfectly safe here. Every one is scanned as you may have noticed. Any overt designs are just not welcome."

"What if someone's enhanced?"

Good question Nervina Ratze thought.

"You are in deep." Nerfahsi observed, her eyes shrewd.

"Trying to stay out."

"There is a lot at stake at the moment. Ratze's friend, Lady Lehra is a person of interest to us. You could say we are connected. Why am I telling you all this. Because," she lowered her voice again, "I suspect you two are, how shall I put it, 'on leave'."

Both their Brains went into alert mode. But nothing was coming their way. Not from the guests, or Nerfahsi. Ratze wondered how much of this was a set up by Talex or by other interested parties.

"Oh don't look so glum. Let us say that our mutual friend is with a group who have an interest here, meaning the planet. For the good of Novus. Keep it independent. Now I've said enough." She resumed her normal voice. "And I must get back to my guests. Too long with you two and people's tongues will start wagging. Let's say I'm a facilitator. And believe me the GG is our highest priority. What you decide to do Nervina is up to you of course. But if you need help do contact me. I mean it. Now I must be off. I'm sure we'll run into each other before the night is through. And thank you for coming."

"The pleasure is ours."

Nerfahsi smiled and drifted back into the living room where another group were ready to embrace her.

Ratze was alert. When Nerfahsi mentioned being a 'facilitator' her Brain clicked. So did Nervina's. Neither of them placing the previous momentary link they felt in their Brains. One thing Ratze was certain of, they were both linked. Sharing their configuration. From a similar source. Intriguing the way they had come together here on Novus. Nervina from Regum and she getting out from the DVs. Then there was Ung. No point searching for answers. It was not going to be as easy as that.

Other party guests were coming out to the patio, drifting in small groups, carousing, voluble in the cool. Even with climate control the house was getting warmer. The women felt slight tingles. Ratze got her Brain to molecularly break down the alcohol before it had any further effects.

"I'm being scanned." Ratze said quietly

"Same here. Not returning though. I'm passive receiving. Get the source."

"Sources Nervina."

She did a quick take. Multiple points of origin. Not all in-house. Without doing a trace neither could be sure who the outsiders were. Without a reliable third source to verify the soft scan neither could be sure whether Nerfahsi's crowd was under observation or doing the scanning.

"It could be a general sweep." Nervina suggested.

"I know. Annoying isn't it?"

"Not being able to counter it. Still someone's revealed themselves. You know Ratze that one of the safest environments is the casino."

"You're right there. So are they after Nerfahsi's little group?"

"Could well be. Trouble is they are aware of us. I'm staying low. If there are watchers here, they're good. Unless Nerfahsi is a front."

"Like Talex? Where is your intriguing recruiter?"

"If he doesn't show up soon I'm out of here. The place is too hot."

"Yeah, well I wanna find out who this interested party is."

"Wait, let your Brain do it's stuff." It was the first time Nervina alluded directly to Ratze's capabilities.

"So you know."

"It's a guess. Don't worry I'm, ahm, configured myself." Nervina was about to say 'enhanced' but thought better of it. It was not that she did not trust Ratze, she got out herself. But until the need arose she would just let her know that she was not without her own resources.

A short man, dressed in grey, two piece tailored suit, some crumbs on his lapel, round face, glistening dark eyes, tipsy, holding a champagne glass almost blundered into them. Then as if focussing properly said: "Ladies. Pardon me. I'm Yosu. You're new here."

"Well Yosu," Ratze kept her Brain open, nothing there, "I don't do many parties."

"No? Two lovely young ladies? What about you?" looking at Nervina, almost focussing, then gave up and wobbled slightly on his feet.

"I get bored easily Yosu." Nervina said matter of fact.

"Maybe you haven't met the right people. Nerfahsi knows just about everybody who is anybody in this backwater. I can point out the artist who created the holograms, the odd writer, which is odd." He chuckled and took a generous swig of his champagne.

"Writing what?" Nervina asked.

"Oh this and that. When I was last on Regum I found a library. Wow, should have seen what there was."

"Rambled on about whatever excited them no doubt." Ratze answered disinterested. The tell tale itch came and went. Something was going on. She did not like it. Someone was searching for something.

"Yeah, but not all." He said trying to sound mysterious. "I'm doing some research into this library. It's only available to a very select few."

"And you're one of them?"

"Just don't tell anyone."

"Well you told us." Came Ratze's bland reply.

"Ah," he grinned, "that's because you two are special."

"Doubt it."

"Oh no. I mean oh yes." And he tapped the side of his head.

"So Yosu what do you do?"

"Me? Nothing, nothing at all."

"So tell us about this library. I mean is it some information graveyard?"

"Ho ho ho. If only. There is even an index of who is connected to who. You would be surprised."

Ratze wondered why Yosu was telling them this. She did not like the way he had tapped the side of his temple indicating they were enhanced.

"Not just who is in who's pocket but what they get up to."

"And what might that be?" time to dig a little Ratze thought.

"Murder."

"My that is something. Where here?"

"No ladies. Prima."

Ratze was alert. Nervina looked coolly at Yosu trying to appraise him.

Some walked past, Yosu waiting until they were gone.

"Well. I know nothing about Prima." Ratze trying to draw him out.

"I'm actually an investigator. My brief is to track down the culprits."

"Aren't you on the wrong planet? No web for starters."

"I've got a lead here. Into the Outback. Prima is using that as a cover to hide certain individuals."

"Why are you telling us this?"

"To make Novanian's if they can be called that aware they are being used."

"Used?"

"Not directly, well yes directly." And he slurped some more champagne. "It's time to blow their cover."

"Are you trying to recruit us?"

"Perish the thought. It's just that your persona's are in that library."

"?"

"Along with Lady Lehra, a suicide of some rich kid in an asylum, can't remember her name, happens when I drink. No matter, even this murder of some astronomer." Looking bleakly at them.

"What's that supposed to mean? I mean, it's so unrelated. I think your synapses are misfiring." Ratze said dead pan.

"Prima is looking for you. They don't like escape artists."

"They don't like a lot of things Yosu. So I got out. I'm sure I'm not the only one."

"Then there is the missing agent." He looked at Nervina. She froze. From Yosu's point of view her appearance was cool. But her Brain was warm, alert. Given that Yosu knew so much, that the Web had a secreted data base where somebody was feeding it uncomfortable information, either set up by Prima's intelligence agencies, or Regum's and by default even Novus made her realise this was no accidental meeting. She decided to softscan Yosu. Slightly configured. Standard AI stuff. His intoxication real. Straight into his memory. What he said was true, according to what he knew. With his intrepid brain one thing stood out. He had been sent to warn them. As to who that remained ambiguous. Foggy persona. A very smart system, chaos based algorithms. External construct. Very sophisticated. She withdrew.

This party was more than just a good excuse to celebrate. Nerfahsi's little group, Yosu's access to the web's data base and their being in it. At a guess it had to be Primaian counter intel which Ratze dumped into Nervina's Brain..

"I'm a refugee Yosu. So I would prefer it if you kept that to yourself, whoever you're working for..." Nervina warned him.

"I'm freelance." Yosu looking a little offended. "And to show you that I mean you no harm, both of you, here's my card." Then fumbled inside his suit and extracted a card announcing that he was a lawyer.

"You see," he continued, draining his glass, "I've been hired by a client to find out what happened to this astronomer. Vanished, missing, presumed dead according to what I've been told."

"But it's got nothing to do with us."

"No it hasn't. Not directly."

"Are you saying what I think you're saying Yosu?" Ratze all attention.

"Prima does not like defectors."

"So you are saying in your oblique way what I think you're saying. Tell me ever heard of Talex?" Nervina asked.

"No can't say I do. What's he do?"

"Works as a researcher for the Outback. Trying to recruit me." Nervina explained. "Might give you a lead. You ought to check him out."

"I might. Look I might as well come out with it." looking forlornly at his empty glass. "I'm no friend of Prima, unlike some. When I found you two in there it made me think that your 'escape' was arranged. The time line fitted with the vanishing of my client's

daughter. So when I saw you two I had to make sure. Trust me I don't think you, or you," looking at them each in turn, "are the culprits."

"Better believe it." Ratze warned him. Not that he noticed.

Nervina called up Talex in her Brain. With Yosu sozzled he would not notice. Obviating his AI was no problem. The tell tale itch of the surface scans were gone. Whoever had done the search was hopefully finished. No remote probes either, no triggers in place.

Talex `appeared' in her Brain. His head a fog. Configured. To penetrate the fog was risky but it did reveal he had something to hide.

"But you two are on their search list." He said finally. "I must get a refill. Get you anything?"

"I'm right." Ratze said.

"Same here." Nervina thinking. If she and Ratze were being wanted then either they needed protection, which Nervina thought she had, or they had to vanish.

"Oh before I go. There's a rocket leaving in a couple of hours. Launch pad five." He fumbled in his pocket. Here's the key to my bike." And bowing as gracefully as possible straightened up a little unsteadily and walked back into the living room.

Ratze and Nervina exchanged glances.

"I guess it's decision time. You think he's for real?"

"I checked him out. What he said came straight out of his memory."

"Yeah, well, doesn't mean much. Could be a set up. I mean where is this rocket heading? Prima, orbital, Regum, habitat?"

"I know Ratze. But being in that data base, Prima's no doubt means we're both on some wanted list. I didn't even think Prima would use the web."

"Plus the hint of the missing astronomer. It's a warning for both of us."

"Ah there you are." Talex carrying three glasses of champagne.

They took the offering. Ratze blocking her alcoholic effects. Nervina like wise.

"I don't drink." Nervina said.

"It's a party." He said expansively. "What d'ya think?"

Ratze's Brain on active subtly probed him. The fog still in place. If he tried to get smart she'd head-ram him. He'd pass out

"About what?" Nervina not wanting to discuss his offer. She had made up her mind. It was too dangerous even if Nurfahsi claimed to have contacts on her side.

"The party of course. Great isn't it?"

"Where'd you meet Nurfahsi?"

"Oh she met me. At a bar, where else?" he chuckled.

"It's a little cool out here. I'm heading back in. And go to the restroom. Coming Ratze?"

She nodded.

"If you'll excuse us Talex."

"Of course."

Moving through the vocal crowd Ratze spotted Yosu.

"Which is your bike?"

He turned, smiled, then said: "Just press the key. The bike will have a status light flash on. Also activates it. You can ride one? Manual gears on the left, one down, neutral the rest up. Throttle's on the right, brakes on the left. It's powerful so don't gun it. She packs a punch. I'll pick her up tomorrow. You got just under two hours. Good luck." And disengaged.

The two women made their way into the foyer where the guests restrooms were located. Placing their glasses on a small table, the liveried attendants nodding courteously. Yosu ambled out as Ratze and Nervina went to the restroom. Some woman was doing her make up, smiled and left.

"You reckon this is safe?" Nervina asked.

"Nothing is safe. But if we're wanted, heck a little ride somewhere might be fun. It's obvious that one of us has back up. At a guess Nervina that is you. You had 'friends' get you out. Someone is looking out for you. And me." She was thinking of the general.

"So let's do it."

Another woman came in, looking a little hazy, smiled a deep grin as Nervina and Ratze left. Yosu was standing at the entrance.

"Let's go then." Smiling at an attendant who smiled back.

"Just as I thought." Yosu said as they walked into the fore courtyard. Two dark shapes were 'admiring' his bike. They came to a VAV, the doors gulled open and they all got in. The engine purred quietly, systems on go as the dashboard lit up. With the doors shut Yosu said: "See that? Somebody was watching the bike. Not mine." He chuckled. "Somebody heard what I said."

"Not good." Ratze agreed.

Nervina was all nerves, adrenaline rushing. Ratze counted herself lucky that she had not been active back there. They whoever they were must be using pretty advanced AI gear to have picked that up. Then again there had been revellers around them on the patio.

"The bike was a ruse." He smiled cheekily.

Yosu could not take off in the crowded space of the other vehicles. The dirt blown out and the jet's blast would blister the other modes of transport. So they drove out slowly, past some people drinking. Both women felt a tickle.

"That's just me checking those two at the bike." Yuso informed them.

Through the iron grated gates and slowly onto the empty road leading down into darkness. Yosu hit the accelerator pushing them back into their seats. A clunk as the omnidirectional thrusters engaged and they were airborne, two long hydrogen flames pluming brilliant white behind them.

Nervina sitting in the back shut her Brain down. Ratze decided to get a fix on Talex. Nothing yet.

"I've sent a pulse out to your rocket. No acknowledgement of course but the lock on's just happened. Ignition sequence has started. We'll be there in a few ticks."

"Not the two hours then?" Ratze smiled.

"No. Can't really reveal real time scenario's. Anyway it's a routine transport. You're persona's been a little modified. Now for the surprise. Nervina, you're the one they're interested in. Ratze might be in the data base but she is officially missing presumed dead. Some incident in space. Destruction of a ship. So Nervina you are an insurance agent, freelancer of course. Doing a routine run to make sure the company's following safety procedures. Nothing unusual in that." From the dashboard he retrieved a data disk with the insurance companies insignia, a simple 'GSI' imprint. Nervina uploaded it onto her pc then pocket it.

Ahead the lit up towers of the launch pads, lights in the night rising from below. Gantries aglow, condensing vapours coming from feed lines radiant white at the waiting rocket.

"Officially cargoes go missing. Always a black market. Prima no less. The crew don't like anybody around but they accept the need for vigilance."

"Gotcha Yosu." Nervina replied.

"It's all standard procedure."

"Talex is getting restless." Ratze interrupted.

"Anxious?" Yosu concerned.

"Trying not to."

"Nearly there."

The space port was rushing up filling their view.

"I can hover at the entry gate. Straight in. I see you two are always ready with your jump suits."

"Oh yes, never leave home without one." Nervina laughed. "I'll miss you Ratze."

"I hope we meet again."

"A techie will have your helmet and reserve pack ready."

"You must have friends in high paces." Ratze jested. "Won't this, ahm unusual delivery attract attention?"

"Short notice is how insurance companies work."

"Where am I heading?" Nervina asked.

"Sorry. Even though no one's looking for us yet, you understand."

Nervina nodded.

The VAV decelerated as Yosu swung her around to the top gantry platform. An extension of the platform slid out. The door gulled open and Nervina walked straight out.

"Thanks for everything Yosu." Nervina called out over the roar of the engine.

"Love ya Ratze. You too Yosu."

"Go. Talex is doing a low scan." He called out.

Nervina disengaged her Brain completely

"Thank you again."

"Go." He called out then his door shut and he slowly hovered away from the platform and flew back into the deep night sky.

Two techies, one putting her helmet over her head, the neck extension sealing itself to her jump suit's collar. He fiddled with the fibres linking her AI to her body's computers. Her Brain off. The first thing that happened was the HID superimposed on her vision running through com-check, systems check of her integrity, fitting her survival back pack, pack status, water, air, her ID for the crew, uploading and accepted. A pat on the shoulder and she was AOK. The short brightly lit walk into the waiting open hatch, guide lights on the pathway going vertically down past the pilot and co-pilot as she took hold of a handrail and dexterously manoeuvred herself into the rear seat behind the flight crew. Another passenger was already strapped into the webbing, all suited up. The cockpit door shut, ground control doing one last assessment. Ignition sequence on hold now ran the final countdown. Ignition. Small viewscreens gave a comprehensive view. The engines below roaring its mighty flames, clouds of condensation billowing out in a brilliant lit white yellow glow. The telemetry fed into her. The rocket shuddered as the thrust began, feed lines disengaged, the vibration increased the gantry tower tilted

back. Audio came through as background noise to give the pilots the necessary tactile sense of how smoothly the engines were functioning.

The shields on the windows were up during lift off. Full thrust, the space port an island of lights as the exhaust forced the expanding clouds out and upward. Nothing was said to her even though the comlink was open. The HUD she deleted from her head. The first stage disengaged, a tiny clunk then the second thruster kicked in. A slight wobble more speed, the g forces pushing her back into her seat. Extra oxygen for the brain automatically fed stopping her from blacking out.

The vibrations decreased as they soared into the stratosphere. The space port now a glowing spread, their white plume trailing back. Then the lights of the city, the casino, the steelworks in the outback and darkness beyond. Stars appeared in the background beyond the curvature of Novus. The second stage disengaged and the final blast into space itself began. A short time later the g forces receded escaping the planet's gravity well.

"Welcome aboard. You may remove your helmets. If you need help say so." The co-pilot said. Her co-passenger removed Nervina's saying she had no idea how the seals worked. Her fellow traveller was a squat bulky squarish headed middle aged man. Silver hair reflecting the tiny lights in their cabin once the co-pilot had swivelled around and helped him take his helmet off.

"So lady, an agent of the insurance company. Extra company is always appreciated." He was youngish, thirty something, bright blond hair now that his helmet was off as well. The captain removed his own, a shock of black hair.

"My name is Shalor and our captain here, his first, just promoted is Terrad. Not to worry he passed his exam with flying colours and that does not include the contents of his stomach." He laughed. Terrad grimaced with a tight smile. "Well," Shalor continued, "I won't ask who you are. Travel much?"

"Occasionally." She put her Brain on standby, open but not scanning. Just reading her companion's. No alerts. She came to a decision in case Prima would take an interest in her. "I'm Nervina, investigator and sometime refugee prior that."

"Isn't everybody?" Shalor smiled.

"Been up often?"

"Third trip"

"Yes! Three times lucky." He hollered punching Terrad on the arm. "Us old hands have our little superstitions. So a triple welcome to you Nervina."

"I'm Khavit." The older man's voice gravely.

"Pleased to meet you." His smile on his lined face more a grimace. She thought of Talex, keen to scan him to see how deep he was with the GG. Then there was Ratze to consider. She would wait for her to make contact if the need arose. Ditto Khavit.

"Hm, what is that aroma I detect?" Kahvit asked.

"Apple juice. So Kahvit what brings you into space?" Nervina asked. They would be together for a while.

He studied her, eyes a little narrower but no scan detected. The look was intimidating not that it worried Nervina.

Instead he asked: "How long you been on Novus?"

"Hopefully not long enough to leave a history."

"A pro hey?" his expression softening.

"I don't know about that."

"GSI send a rookie?"

"Just past trainee level. Freelancer actually."

"My. They are serious. The manifest had someone else down."

"Really. That's head office for you." She smiled easily.

"Hm." Not convinced.

"You don't think they'd advertise exactly who is gonna be present?"

He was fishing. Maybe he thought her brief extended beyond cargo. Or felt himself compromised, on a mission. A trouble-shooter, or a king pin. Extracting himself just like her. It could even be that he was trying to find out whatever GSI were after. Not that she had the faintest. All she knew somebody was looking after her. He could even be her minder. Instead she thought of Talex. An attempt at remote viewing.

"I don't like snoops. Think of them as low life Nervina."

"Just here for the ride. Make sure everything is safe and sound."

"What's this about being a reffo?"

"That was then, this is now."

"I think there's more to you than that."

"Well Kahvit, everybody's got a past on Novus. Past tense past. Including you."

He looked at her eye to eye. She didn't blink. What company!

"I even have discretionary powers."

"I must remember that." Then laughed. Now that he relaxed she focussed on Talex. If Kahvit was configured the presence of her Brain might get him to back off. Nervina relied on her memory more than her Brain directly to link back. Well well well. He was with Nerfahsi. So was she a 'marker' on his behalf? The job offer was most likely an

attempt to snare her in. Before her imagery ran into interference on board she voided her link. She would wait until Kahvit would be asleep and rummage around his head. He was no ordinary passenger.

"I won't apologize for my brusqueness Nervina. I don't like amateurs." Had he sensed her point of focus? or her method of application? Her Brain was certain he had not. Using instinct. A Natural. Ex Prima perhaps? "Or wanna be adventurers, usually Reganians who've been too long in the Web and think the real world's not much different. Or the insurance company sending some superficial shit just to fulfil their contract on the cheap." He said sanguinely, his rough voice sounding like a congested motor chocking along. Theatrical. His initial intensity receded. "So Nervina what are you on about?"

It was a standard question trying to gather dirt. Or trying to make her feel cornered. He was no amateur. The shields were down now, the bright stars everywhere.

"Indeed Kahvit. Let's say the people behind me are not standard fare."

"Is that so?"

"Believe it."

He looked at her studiously wondering, vainly no doubt whether he was her target. Nervina pondered her destination. She was not about to hack into the ship's systems until she knew just how smart it was. One thing was sure, whoever was with her, took an interest in her was connected at the highest level. That thought lent itself most likely to Kahvit as well. Short notice arrival. Not the norm.

Mission Control: Andromeda Station Three.

`Commander.'

Her mind alert. Sleeping wakefulness. In her quarters. Lying comfortably in her cocoon. It's bio-molecular configured external AI sentient field, her public persona keeping watch. Whilst she rested receiving the incoming sentience from the Komantura. The audio link directed in phase to her projected field resonance. Fully awake she collapsed it back into her mind. Sentinel power points rose to configure a secure chameleon projection. Any probing, sentient or invasive assault systems would only `see' a low level intelligence asleep. The security in place she said: **`Yes.'**

`Watch this.' Her superior communicated. Mind to mind,

She had expected a compressed extract of the data their QCs down loaded from the section of space where the three operatives were. Instead she saw a space ship materialize over Mars. A stage one world. Solid foundation of an urban civilization. Then both space ship and everything on the planet was gone.

`Potent PWs' correct in the first assumption. Confirmed.

Prima appeared surrounded by its motley brown pulsing reconfiguring resonant envelope.

`The source.'

`Sentient interphase. Hijacking the collapsing PW and substituting their own.'

DVs in space.

`Sentient driven. Heavy stuff.'

`That whole section. Through a void wave.'

Earth. Less affected. Scene one: space faring capabilities. Limited advances. Mechanical computers, external devices. Vanished just like Mars's sentients. Earth survived the inserted void PWs. Deep scanning revealed a heightened psychic sense. An inkling of *their* presence. Earth perspective: supreme beings mentally constructed as gods. The answer amongst the stars. Their technology deemed magical. Remembering a golden past, a collapse, a cosmic calamity of wrathful gods. The sentients of Prima. Fear, loathing mingled with exultation and a will to reconnect. Earther's remembered. With their present vanished so was the perception of that reality. Yet that switch was due to their bifurcating brains not completely deleting the now gone past. The knowledge base was there, just not the means of application. They would recover the knowledge lost. It

would be their main driving force. But it would be difficult. Psychic frontal assault waves tried to suppress their fervent desire to recapture their once glorious past.

`Dangerous.' She communicated.

`A third force.' Her superior remarked. **`Destabilisation.'**

`Universal?'

`In a moment.'

Ung at a huge space station near a mid range star. A huge array of energy dishes driving QCs.

`The source?'

`No. Ung will rectify.' Another correct assumption. Then: **`The anomaly contains two worlds. One race. Genetic drift. Divergent minds. Regum on track, Prima self isolated. Entropic decay held in check with their resonant field. Total suppression.'**

`Weird.'

`Self generating psychic abilities. You're on high alert. They can get in.'

`We'll cover ourselves.'

`Essential. Strange background radiation in the anomaly. Micro universe predating ours.'

`Verified.' But it did not come as a relief. What they knew of this monumental gravity well was now substantiated. Intelligent life did reside within that section of space.

`The anomaly. Increasing gravity waves. It's pulling our two galaxies into it.'

`By design?' knowing they had millions of years to figure out what was going on in there.

`Perhaps. Could be due to it's internal mass. A freak occurrence on a cosmic scale. It's the extraneous background radiation that is of interest. In and out of phase. Collapsing momentarily then gone. Something is developing in there. Different to the background radiation of our universe. Similar but not the same.'

`Alert our agents?'

`No. Preconclusive deduction will only pre-empt. Independent verification is essential.'

She accessed the base's data.

`A third planet. Novus. They're both there.' Slightly surprised that instead of being dispersed they were conglomerate. No QCs in place. She understood. If their Brains unravelled the mystery no overt smart systems could lock onto their Brains on Novus. The DVs were no problem for their agents. Yet the Primaians revealed their ability to pull reality out and insert their own. It could make a difference to Ratze and Nervina..

`It might.' He replied. **`Initial computational simulations suggest Regum is in danger. It could be anywhere between now and the distant future. Their Web a series of terminating end points. Absolute zero in several hundred years. But the time line is shrinking. The countdown is on.'**

`Do we act?'

`No. Our presence must not be revealed. The calamity is not final in itself. Something similar to what occurred on Mars. At least we are aware of the pattern. All your spare capacity has been reconfigured to monitor the most likely PWs. Which will be the one that actually collapses in reality will become apparent the moment the transition point approaches. Then we will know what to do.'

`Any specific orders for me?'

`Cosmic surveillance. Ung, Ratze and Nervina are still secure. Now this non-phased field may be nothing, or it could be related. The fluctuations indicate that it is a future state leaking into time.'

`Why not...'

`Because it could be a trap. If it is sentient it will know that other sentient minds are curious. Then if linked it could dominate, insert it's programme. Contamination on a cosmic scale. It might even use us to further its aims. All speculation. Or just be a spatial phenomena. Until we know more we observe.'

`Understood.'

`All the requisite data is in place at your end.'

`Thank you.'

`End contact.'

Things were happening. Potent DVs manipulating not just time but it's contents. The assault over Mars a worrying development. A possible intelligence embedded in their background radiation. Even they never explored that possibility.

A new frontier, a totally alien application of the inherent universal laws of physics. Gestating in that micro universe. Or merely excess energy from its huge black hole at the centre of their galaxy. Drawing in the ancient background radiation from its bursting into existence trillenia ago. Unless a future mind was moulding it to its design. That would change everything in that universe. Luckily due to its titanic gravity well it could not expand very far. Not now. Even less in the future. She tried not to think of all the possible permutations. Their computers could do that. He said she had all the data required. Ratze and Nervina were on to it even if they did not know it themselves. It made sense. If the DVs found out and Prima was behind this it could unmask them. It made sense for

them to uncover whatever was going on by stealth and by degrees. Nothing overt. Less to lock on to.

She relaxed and went back to sleep.

Prima

Gharbel at his sprawling estate was wary. His serenity always slightly agitated when he contemplated the future. Regum's mere presence galled him. However that was balanced with the success of removing through the DVs their mission to Mars. Thanks to Elenra who had managed through Ung to sub route the last remnant files prior their dissipation into nothingness. It was a success beyond even his most fervent desires. The loss of the civilisation though puzzled him. The power of the DVs, under Elenra's guidance, watching ever assiduously was a feat of cosmic proportions. Discussing the implications which were even beyond his comprehension necessitated the need to fathom the resonant ground state they had achieved. Whilst at the orbital Qatus had urged him to return at his earliest convenience. Even the request, couched in a vague reference to certain developments irked him. He was the supreme domain lord. Qatus had better have a good reason to expect him to be responsive to this request. He took orders only from the pontiff. He replied gruffly that he would accept.

Using the shuttle he returned leaving Elenra to come up with some plausible answer to their stupendous achievement in removing Regum from the scene. At the expense of vanishing a civilisation. The obvious answer was of course that the Great Mind had taken a direct role in their removal. One less target for recruitment in the cosmic game to dominate space. What surprised him was Regum's silence on the matter. Not even the slightest hint that something had gone awry. If that was the case then the expedition must have been run at the deepest of levels. Not willing to admit defeat.

Interestingly enough, as Qatus returned back to the planet, there was no hint on Prima itself of their success. Nothing from Pentham whose primary duties lay with the security agency. Nor had the priests on Regum fed them any information regarding their stupendous feat. Everybody had gone to ground.

At the space port a VAV was waiting for him. He flew over the desert towards the distant forests heading straight to Gharbel's private estate. The meeting secret. His pilot communicated ahead, merely announcing they were on their way and would be there shortly. He had slept a little on the way down and decided to doze a little more.

Landing at the estate he was greeted by Gharbel himself. No servants present.

Well this had better be good. It wasn't. Totally unexpected.

"Insane?" Gharbel was mystified. "Impossible. With the backing of the Trine, with an Immortal?"

"His resonance is a mess. Volatile barely describes his state. The pontiff is safe in his asylum. I think the alien resonance has gotten to him."

"This is critical." As he came to grips with the situation. By all rights he would be vice-pope until another candidate was selected. "Does the palace know?"

"No he was instantly removed. The guards who saw him have been reassigned. They are isolated. No one knows. His secretaries have been sent on leave. No staff for the moment that know of the calamity. To think Telafus was vulnerable."

Gharbel barely took in the study they were sitting in. Ancient tomes, out of public view lined the shelves. He looked at them as if an answer lay there.

"This is a bad omen."

Coming right after their success in removing Regum's mission it occurred to Gharbel that maybe they, the Kabal were behind this. Using nefarious means to wreak havoc and extract revenge upon them for their success over that planet. If news got out it could lead to social chaos. The panic unleashed horrendous. The question that was on his mind was whether the Trine, the Infinity Chip, the Immortals were infected as well. So far the planet's resonance was secure.

"Anything from Regum?"

"Nothing Lord Gharbel."

"We have suitable candidates ready. I've accessed the Guardians who have chosen Skias. A bishop who is amendable. Quite happy where he is in the field. Since time is of the essence I have asked him to present himself to us. He's clean. Solid resonance. No intricate dealings with the Families, rather a loner. Stays clear of the Ecclesiastics, some connections with the Divines, as expected. No links to Lord Pentham. His slate is clean."

"So Skias? Run past the Immortals?"

"His resonance has been fed to them by me and they are flexible. Or rather silent. Which means acceptance. No disturbance there."

"How is Telafus?"

"A mess. Isolated from the other patients."

"Good."

"To think after all the news we had. Earth nearly demolished, an opportunity for us to align their surviving remnants and now this. Maybe Telafus disintegrated due to the alien field."

"Officially perhaps. He is under intense observation."

"I should hope so."

"You err, will forgive me for having called you?" Qatus wishing to clear the air.

"You are forgiven." Gharbel was magnanimous. "The other Domain Lords are aware of this, ahm, most unusual occurrence?"

"No. I threw a cordon around the event."

"Excellent. Any disturbance in their resonance?"

"None whatsoever. A completely isolated incident."

"We will have to assemble new retainers, new secretaries. Experts who can ascertain Skias's mental state. I am aware the Cosmic Consciousness may have found Telafus wanting, a sign that maybe Telafus harboured heretical tendencies."

Qatus looked at Gharbel uneasily, shifting in the ornate arm chairs they were sitting in.

"We should create a diversion. Keep the new and temporary," Gharbel underlined, "pontiff busy."

"Oh?"

"Earth is demolished. This is our opportunity to make sure they become aligned. Until then no one aligns with this heretical race."

The shift of perspective expected. Qatus more concerned with terrestrial matters. The logic sound.

"More than just a diversion. If the Reganians..." Then held himself in check. Not yet. Instead he backtracked. "The DVs have as you know amazing capabilities. We have not even begun to use their full potential. But there is one thing missing. Technical capabilities. In fact certain capabilities only Regum has." For a plan was dawning upon him. Since the Reganian's could insert a mission then why not use them to insert one of their own on Earth. It went against the status quo. Telafus could have been targeted by Earth. The disaster that visited their planet was perhaps preordained. If they could convince these beings that Regum was behind this and that they were there to save them in this, their precarious moment, then great things were possible in having the Earther's accept them as saviours.

"Put it this way, I think we can get Earth on side." Gharbel determined.

"A worthy cause."

"But we need Reganian help. Find a charismatic to fulfil that role. A magnet to their spiritual needs."

"Something worth exploring."

"You know of course that we have a technical department."

"Yes."

"I think it's time we paid them a visit."

"What have you in mind?"

"Ah Lord Qatus. To dominate Earth of course."

"Commendable."

"It's more than that. Consider. I have just come from the Orbital. Suffice it to say something occurred that must remain cloaked. However Regum in their arrogance managed a brilliant break through. Something along the lines of the DVs but in a material sense. If we can use that know-how, feign peaceful scientific collaboration, in other words get them to accept what I have in mind then we can have a real presence on Earth."

"Space travel."

Gharbel smiled.

"Get them to have one of our own there?" Qatus's eyes expanded in astonishment.

"Convert the natives."

"By all that is holy..."

Gharbel's VAV made a perfect landing in the desert complex near the space port. Out here, away from the rest of the planet Prima's technical experts acquiring their information through the remote viewing capabilities of the DVs did their best, along with informants on the Orbital to gain as much knowledge of Regum's scientific achievements as possible. The complex with its own perimeter fences was some distance off from where they landed. Only approached through special transit officers who dispatched the cleared visitors. Restricted to Domain Lords and their designated agents. The public did not even know of its existence, nor that of the space port. If the masses knew the official attitude regarding the study of material science the consequences would be calamitous. It flew in the face of everything the priests preached. The need to get the upper hand on Regum required unorthodox methods. It was for the greater good of the planet.

They exited the VAV and were met by two security guards expecting their arrival. Gharbel was his serene self whilst Qatus blinked in the bright desert sun. An unmarked van, doors open was waiting for them to take them to the research centre. Behind the driver's compartment were four swivel chairs for their comfort. They climbed in. The VAV they arrived in was being towed out of sight into one of the hangars. Both Domain Lords sensed the heightened mental activities of their escort. Stable Volatiles. Dedicated to

cracking the DVs raw data, devoting their entire lives in this isolated colony to the great cause.

They drove down a dusty evenly graded road towards the distant mini city out in the middle of nowhere. No one spoke. Qatus excited, his first visit. Gharbel completely at ease. The slight jolts, they were travelling at speed enhanced the sense of excitement for Qatus. Not all Domain Lords knew of the extensive facilities out here, the only other one being Lord Pentham. After some time they came to a perimeter fence and guard post. The van stopped, a cursory look then they were waved through. A second security fence, another quick inspection and they were in the large town. Apartment blocks and research facilities, a scientific college for specially gifted individuals who had an aptitude for mathematics, science, analysis, the requisite know how to keep up with Regum's advances.

The van stopped in front of a low two storey building. Nothing to indicate what facility they were at. Security extremely tight. As expected. Their escort showed the way. Inside the corridor two white frocked women, senior staff welcomed them to their establishment. Their escort withdrew.

They were shown into a computer laboratory. Huge external cabinets gleamed under white overhead lights, tiny green, yellow and red status lights winking. View screens along work benches, cables snaking across the floor. In the centre more upright screens some scrolling down data.

The two middle aged women did not identify themselves nor did they address their two visitors by name. Secrecy was of the utmost importance. One of the women, they might have been sisters the elder took out a hand held device from her laboratory coat's pocket and pressed a button. A hologram appeared at the centre of the table. Qatus was impressed, Gharbel merely waiting for the glowing ball to reveal its contents.

"From what I've been told," one of the women began, whilst the other was using a console to punch in some commands, "you have a need to be made familiar with certain specific information. So to familiarize you with the general situation we shall begin this little tutorial with certain paradigms relating to Regum."

She pressed another button. Regum as seen from space. The planet was swathed in an aura of colours, its resonant image. Brighter than Prima's which was in the background on a second screen, it's usual motley of browns, greens and blues.

"This is a computer simulation of course. A future state." she paused for emphasis on that particular scenario. "We are studying divergence here in regards to our

anticipated future. As you can see Prima has decayed a little. Not much but degradation is slightly apparent."

"So they're getting stronger." Gharbel said shifting on the stool.

"Indeed that is correct. If present trends continue that is."

The second woman sat a little back from them.

"Regum has gone past critical point. What that means is that they have gone beyond their natural RS. Cyber enhanced. Not computer enhanced, cyber. Artificial intelligence is dominant."

"The Web." Gharbel expostulated.

"That is so. A quantum shift actually. A higher energy state simply put, drawing on the energy of space."

She waited. When neither spoke she continued.

"So an apparent resonant shift. Regum has self-isolated causing a rupture. Impenetrable to our DVs. In a way their isolation is our isolation as well. Now it gets interesting."

Regum and Prima receded amongst a star field which fell away so that they saw their spiral galaxy. Towards the outer rim of the hologram two smaller galaxies. A tenuous fog narrowing between the two galaxies, ballooning out around both planets.

"What this represents is the alien field. As you can see its source is Earth. Not encouraging I know, but this is millennia in the future." Actually it was less but she did not want to spook her visitors. The view zoomed in on Earth. Their resonance was a riot of colours. None dominant as around Prima or Regum.

"It is a fairly young planet. Relatively speaking their formative intelligence is very malleable thus no dominance of any specific mind set."

"Malleable, I like that." Gharbel said.

"Indeed. But potent. A heady brew."

"Surrounded." Qatus barely whispering.

"Remember this is only a future projection my lords."

"Is the asteroid hit factored in?"

"It is."

"So it had no effect."

"It had an effect alright. It sped up their mental capabilities."

"But how..." Qatus was astonished that the catastrophe could have hastened their cerebral development.

"Well that would be speculation on our part. We are concerned with facts here, probable factual actualities."

"This effects our resonance?" Gharbel content to let Qatus do the talking.

"It does. Thus our somewhat weaker field along with Regum's enhanced state. Assuming total passivity on our part. If the alien planet is left to its own volition, advancing along its evolutionary path they will not only self enhance both spiritually and materially..."

"You mean a combination of the two?" Qatus asked surprised. "Would that not destabilize their minds, their souls and thus create an unstable resonance?"

"Ah you pre-empted what we are studying here. So to jump ahead, yes. Our RF would be contaminated. That would filter through to our Volatile population. We would be hard pressed even with the CFs to keep a lid on it. They, along with Regum would usurp or negate us. Either scenario would be abhorrent."

"Where will this lead?"

"Glad you asked. Please observe."

Earth and Regum appeared next to each other. On both planets new patches of various intermingled light tonalities became apparent. Multiple layered like Prima's but denser as a new set of membranes were weaving themselves around both planets. Less homogenous than Prima, more discordant.

"From the initial base state to diversity to fragmented wholeness. A totally new sentience. Considered impossible but there it is. Layer upon layer of meta-formulated resonances, growing over each other until so sealed that they cannot be influenced by our RS. There you have it gentlemen." Then continued hastily:

"Not only that, WebSpace is enhanced as well. Physical domination of both universes. If we are included it is at a very low level." She said dispassionately.

"So if we do nothing this is the future?" Qatus was worried.

"It is."

"Who else knows of this?"

"Nobody except us and now you two."

"The pontiff?" Gharbel asked.

"No. This is only a possibility not an actuality. No point disturbing his serenity, or that of the Immortals."

"How did Regum manage this future state?"

"Ah here it gets tricky. Phase state of space. It is as if they are drawing upon the energy of space itself."

"Using the Great Mind?" Qatus was aghast.

She ignored the suggestion. "We cannot even pinpoint how or where they are doing it. It appears the source is everywhere and nowhere specific. All we detect is the effect, not the cause. What we think is, is that somehow their WebSpace has become a force unto itself. No doubt their computers are behind this, but they are using thousands on their planet and in space. In a way the machines have taken over, both on a future Earth and Regum. Self duplicating. Our resonance could collapse."

"This cannot happen." Qatus exclaimed. Gharbel barely acknowledging the seriousness of the situation. A compromised future.

"We will be at their mercy, if one can call it that." She looked at them so objectively it unnerved Qatus. How could they handle this knowledge so dispassionately? Her fellow scientist stood there just observing them. No emotion in their eyes either. No wonder these workers were so far removed from the mainstream. They were almost Reganian.

"No doubt my lords have a plan." She said as if it were an accomplished fact. Gharbel definitely had more than one.

He said: "Most certainly. Turn the tide against Regum. Through their orbitals. Use the DVs. We do have access to their minds. The machines will be ours. We configure them to our resonance. And I have Earth in mind as well."

"It is good that there is hope." She said.

"We have our containment fields. Tell me is there a way of getting into their computers?"

"If one has the access codes, why yes." She answered.

"Right, we get the DVs onto that. Machines are limited by their very nature. Every artifice is less than perfect. We exploit that. Apart from a power failure what else can cause a massive malfunction?" Gharbel focussed.

"Electronic fields."

"Their systems are shielded, as are ours."

"So they are protected." Qatus guessed correctly.

"Radiation can effect computers."

"Thank you. Most helpful. Well if there is anything else?" Gharbel asked.

"I think from your query that covers your interest."

"It does. At least we know what we are dealing with. We thank you for your time ladies."

"It has been our pleasure."

"Tell me," Qatus asked, "how do you cope with this dark knowledge?"

"Faith."

"Commendable."

They were shown out of the computer laboratory. The hologram collapsed into nothingness. Gharbel was going to make sure so would Regum.

Outside two new security men were waiting to take them back to the space port.

In the van Gharbel remained silent. He was formulating his counter measures with sweet revenge in mind. So Regum wants to dominate utterly? Once back at the space port their VAV was ready for them. Their assigned pilot came out of the hangar as the small tractor pulled the flyer up in front of them. During the flight back Gharbel stayed within his own thoughts.

How to irradiate Regum's computers. A lot of research would need to be done. Secretly. Then there was the matter of aligning Earth. The task was not so daunting as to be impossible.

"You know Qatus, the Great Mind has certainly revealed through our intrepid researchers a way out."

"A way out? It's horrific."

"Don't you see? By knowing the future we are prepared."

"It's demoralizing."

"I learnt something very useful about the capabilities of the DVs up there. Rest assured there is a way out. Several actually."

"I'm glad. At least it was only a projection, millennia away."

"Remember, that whole sequence began when T equals zero."

"Whatever that means."

"Qatus it means that a certain set of events unfold in a given situation when all other things are equal, stable."

"But we are all equal in the Great Mind's realm."

"It is a mathematical tool."

"The sacred numbers. Manipulating them is..."

"Bordering on heresy? Playing with the sacred forces of the universe?"

"Exactly."

"How do you think those scientists work?"

"By divine inspiration."

"The paths to that are as many as the mind can conceive Qatus."

"Who said that?"

"I did. The end does justify the means."

"I agree there. Our future is at stake."

They were leaving the desert behind them. Savannah below, in the distance the haze of the forests, further ahead the pale mountains and beyond that their estates. Comfort and familiarity. Qatus was rather shaken by the revelation he had just witnesses. Even if it was only one possible future. Containing Regum would be nothing but short of a miracle.

"We have to start thinking like Reganian's Qatus. How else to contain them but by their means."

"As long as we keep ourselves in check."

"Qatus, this is a priority. Not even the pontiff is to be informed."

"I am with you there. I'm just worried that by thinking like them we don't fall into the trap and become like them." Qatus felt the discordance of a Volatile. It disturbed his equilibrium. Plus Telafus going mad. What had brought that on? He almost shuddered not wishing to know the answer to that. Events were coming apart all around him. As the woman said, if they did nothing then they were doomed, irrevocably so.

"Where do you wish to be dropped off?" Gharbel asked.

"When do you intend to see Telafus?"

"Later. First we must invest Skias."

"Will you need my presence?"

"Not really why?"

"I think I need some time to contemplate."

"Seeking inspiration I hope."

"Hope. What we need is a doomsday weapon."

"My thoughts exactly." Gharbel concurred.

Skias, in white unadorned robes knelt in ardent prayer at the foot of the catafalque housing the sacred Immortal in the palatial grounds. This act his first step of investiture as a supplicant, offering his soul to be as one with the ancient sages. The initial step on becoming pontiff part of the esoteric initiation: acceptance, by uniting his selfless seeking soul with the sacrosanctity of the Immortal, and by default the other Immortals shrouded in the ultimate outer realm contained in the Trine, the Guardians. Aligned with previous if lesser exalted pontiffs who acted as shields, keepers of the penultimate mystery encased in the Infinity Chip, the unity of all: the sacred souls of the Immortals. The

active vigilance of the Guardians sacrificing their undying essence to keep the Infinity Chip's holy domain and thereby Prima's resonance pure.

If Skias's resonance was deeply flawed, misaligned or contaminated by devious heresies he would be rejected. As he considered the honour bestowed upon him by the conclave of the Ecclesiastics and Divines drawn from the broad multitude of priests and bishops Skias was not without the nervousness that he as the holy petitioner sought ingress to the penultimate of his soul's holy reverberation. What the holy orders heads did not know was that Skias harboured a secret life. Now would come the test as to whether it was indeed heretical.

Skias had made it his mission to use any means to achieve Primaian supremacy. Keeping that firmly in mind, to create the necessary cover he had sought out the forbidden knowledge denied to the masses. The true inherent wisdom of their ancient occult lore. He would delve deeper into the precursor to that other strand of applied wisdom: scientia. It was a combination of the two: occult revelations to be applied through the scientific method to objective enquiry. All information, all thoughts a unitary whole. Did not the Supreme Consciousness reject Regum's WebSpace? Her technological prowess? If that was deemed as a profane sacrilege than surely Prima's concern for the truth of their faith the correct path. Not that he would, if accepted by this Immortal linked through the Trine change the orientation of the divine orders. His ideas would remain closed to any probing by any of the exalted domain lords.

The status quo would remain, on the surface. He would make it his duty to align his resonance with the universe itself. The Great Mind was a part of it. But since Regum acquired knowledge as if plucking it out of the ether, that strange effluvium that seemed to contain all the answers, so he too would seek its hoary knowledge. Then and only then could he put his plan into action. To suffuse the Trine, align it with that of the ethereal cosmos. Prima would have the best of both worlds. To be in command of both the exo and esoteric. They would then be truly supreme.

As things stood now they were being relegated to be an appendage in the great scheme of things. If the holy orders continued along this path they would become a mere curiosity. The insistence of saving one's soul without enquiring to understand and not comprehend the very universe which had given them their conscious lives truncated their own intelligence. Skias was going to use knowledge to expand the consciousness of their race. With himself of the first order.

Having spent all his life harbouring these deviant thoughts, having as bishop access to the forbidden lore including glimpses of the magic of sacred numbers. He was

well adapted to keep even these intellectual longings subsumed from spreading into his conscious thoughts when called to sacred enclaves where the political application of their divine mission was constantly reaffirmed. No one knew of his clandestine objectives. Now his stance would be put to the ultimate test. If he failed it would be of no major importance. There had been others who had been rejected. He would not be the first nor the last.

The change of perspective occurred so subtly that he was only aware of the difference in that his surroundings were resonating on a different wavelength. His mind becoming unitary. His head was open. The enchantment wholesome just like back in his study in the small town where he administered the sacred needs of the people. The familiarity reassuring. But what followed next was not. A potent presence. The cosmic essence somehow different. Powerful, determined, unformed. Something potentate. He put the feeling of this dormant cognizance due to the projection of his own self.

Meta-symbiosis. There were Volatiles who claimed through their dreams knowledge of a previous life. Returning until they reached their own apotheosis. The past or the future? In this undeterminating field it was hard to tell. The feeling of immanent power supreme receding yet reasserting itself. A momentary vision of some stupendous struggle. The memory of his own effort to forge a link with the ultimate.

A damned realm. Horrific nightmares of overweening minds thriving on discord. The alien planet! In utter decay. Chaos reigning supreme. A commanding presence. His? An ancient war. Prima? Was primordial Prima the alien planet? The past they negated? A secondary incidental potential source applying its prevalence over the receding consciousness both within and without space. Trying to entrap him by artful deceit. A potent supremacy tempting him to access this distant conflict deep in space. War. The progenitor of the conflict amongst a multitude of malformed minds. Skias subtly withdrawing to escape the trap. Circumventing the ambush laid out for It or for him. A barely flickering intelligence, a glowing three dimensional geometric web, drawing upon the power of space. Maybe united with the Great Mind. Or the base design of Regum's Web.

Fascinating. Skias the observer in this confusion swirling around him. Secrets the Immortals ignored. No records alluded to this strange violence of both brute force and unadulterated will trying to force itself into space, into reality, into the holy ether.

Transformation. Movement through and within space. Connected. Escaping mortality. Moving through the Supreme Consciousness, a mere spectral presence. During a split second It picked up power, enhancing Itself to fulfil Its designated destiny.

Escaping the clutches of Its almost fated doom. The remnant decay left behind, the fascinating geometric configuration dissolved back on that distant world whence the essence found a secure place in the universe. The bright glow of the galactic centre shone brilliantly. A massive black orb, huge drawing in the churning stars, in blinding white streams of foggy light. Right next to It. Skias in the realm of this mighty presumption of an enhanced consciousness.

'So you wish to know me.' The voice reverberated in his head.

Was this what Telafus had experienced?

'One of my minions.'

Disguised in a web of insanity. It was enough. Skias willed himself out of this presumptive presence. He knew enough. The images stayed deeply embedded in his own being. With determined desperation he thought of where he should be. The strength of the Immortal reasserted itself. The dark star, the glowing enticing geometrically growing matrix receded into a tiny lilac ball. For a moment the blackness of space all around him. Focussing upon the sarcophagus reality resumed its natural embrace. One amongst many.

One amongst many? Did its realm contain other futures? Willed by Its own supraconscious mind? Was this the Cosmic Architect? Or...the convoluted images threatened to resurrect within him. Focus. Refocus. You are the pontiff.

Still entangled.

'I can offer you supremacy.' The voice chilled him. He was not about to reply.

Blinking he opened his eyes. He was in the sacred fane of the Immortal. It was over. He had not been rejected. Yet what he had learnt! If he was to comprehend this occurrence one thing was certain. Telafus had been trapped, his mind blown away by its own determination to survive whatever threatened Its existence. Another powerful force had negated Its presence on that distant alien planet. One thing was certain. It would return. Skias was ready. It might even be useful in the coming struggle.

That 'thing' endowed with intelligence would be trouble. They could ignore it at their peril, or accept its reality. A terrible choice. He hoped he did not have to make that decision. He felt strengthened by the fact of knowing the possible disaster that lay in store. Hopefully after his final Ascension.

He would use proxies to try and comprehend what was going on. It might even require Reganian help. Their own knowledge of science, of the universe was as nothing compared to what this distant cosmic consciousness harboured.

The public ceremony of Skias's investiture was acclaimed by the multitude in the public arena at the pontifical palace. The prelates, the Divines, the Ecclesiastics, the bishops and select priest all bowing before him as he took his seat under a canopy erected for the holy occasion. Three days of festivity were unctuously proclaimed to a mighty cheer from the gathered masses. The ceremony over after giving a speech to keep Prima secure from malign enemies, both within the realm of life, not forgetting the universe, whilst trying not to think of his experience for fear of recreating the ardency of this dark intelligence.

In the palace, a large reception to celebrate his holy ascension was given. Skias chatted away. Whilst all was revelry and happy commotion he knew that his office might be a troubled one. It was as if he were at the edge of a precipice whence the whole planet was heading. Oblivious to the danger. Or rather as he reminded himself, seeing danger where there was none, which meant mainly Regum, thus missing the bigger picture. He vowed to take an interest in the secret machinations of the highest Domain Lords. Gharbel who looked after the Immortal's realm, the Guardians and the Trine, the contents of the Infinity Chip, unknown to the population at large. Qatus, logistics of keeping this configured realm secure and Pentham the Sentinel making sure all were at peace.

He was not about to expose himself to the dread that lurked at the centre of the galaxy. Then again it could all have been his mental projection, his fervency in uniting his soul with the invisible essence, the ether of the universe. Time would tell. He hoped it was time enough. At least he now had access to all the hidden lore of their planet's long millennial history. He would scour the ancient tomes for strange hints, furtive suggestions, oblique references to anything unusual in the quest for divine knowledge and cosmic wisdom. Find if when and where this entity had been spawned.

"You may sit Domain Lords." The reedy voice of Skias intoned serenely at the first secret enclave. Gharbel, serious, lean, mean and determined to be supreme of all the lesser Domain Realms. Qatus, good natured on the outside, and just as jealous of his realm rose awkwardly due to his girth and Pentham, fluid certain of the knowledge he possessed pertaining to the true condition of the planet. Supreme Lord of security which included the ferreting out of dangerous deviancies and unholy heresies. Exactly what Skias was after. No intention of making them familiar with his revelation. Take an interest in Telafus's well being. What his madness contained could be what he had not dared to ascertain. He might have withstood the onslaught that brought Telafus down but

knowing what did happen to the previous pontiff, presumed Ascended to the rest of the planet, he was not about to tempt fate. There were other ways of going about fathoming his revelation.

The Domain Lords seated themselves on the ornate chairs in front of a small dais where Skias held court. A small table, hand carved coffee ready for them to enjoy. Skias had dismissed the palace servants and as yet not decided who his secretaries would be. For the moment temporary assignees filled those positions.

The throne like chair upon which he sat, silver wrought legs, golden back set in black onyx speckled with dots of silver representing the universe upon which he now reclined as Divine representative of their world. At the back of the chair rays alluding to the sun etched into the golden surface radiating out of an embossed disk.

From court gossip at the reception of his investiture Skias learnt that he was considered a creation of the Ecclesiastics. Neutral, indifferent with no opinion whatsoever. It was assumed his mind was as bland as his rarely voiced declamations. That had worked in his favour. They wanted a non entity on the throne. He was happy to oblige. He had kept his personal quest to himself. Accepted orthodoxy without hesitation.

"A new era my lords." Skias said graciously, like the sun itself surrounded by his satellites taking, at least in his presence, his mind as supreme in all matters. Telafus he had discovered had let the DLs roam free. He had been a vacillator, relying on them to formulate policy, using their decisions instead of his own. Skias was going to be cautious at first. The Ecclesiastical staff had filled him in on all the domain lords lives, their orientation, the strengths and weaknesses couched in diplomatic niceties. He would take an interest in the state of the universe. That meant knowledge of the astronomers and the DVs.

"We are indeed blessed by one such as exalted as yourself pontiff." Gharbel said unctuously, a matter of form over substance.

"Thank you Lord Gharbel, and thank you Qatus and Pentham for coming at such short notice."

"Our pleasure." Qatus beamed drinking his coffee.

"I have of course been studying the files of Telafus. I seek fervently that he may be rehabilitated."

"Very decent of you." Qatus added.

"Yes. Well there are reasons apart from common decency. Knowledge my lords." And waited to see their reaction. The concept loaded. There was holy and mundane

knowledge, Prima's and Regum's. Skias was not about to differentiate. Keep them guessing.

"Hubris of the soul." Gharbel said at last.

"Only if perused for selfish aims. Regum is surrounding us through their Web with knowledge. From that perspective we are in a way contained."

"A solid rock of faith in a sea of heresy." Pentham replied.

They were all being terribly correct. Well it was to be expected at this first private audience.

"I fear the strength of their knowledge contains a certain danger."

Nodding of heads.

"From a material perspective we could be easily negated." Skias though was thinking of something else. This had to be approached cautiously.

"Surely not. There is nothing in holy writ to suggest such a negative stance pontiff." Qatus replied, sipping his coffee.

"The planet's resonance is displaying certain minor fluctuations which reflect the conflict going on in the universe."

"The alien field." Pentham replied asserting the status quo entailed in the pontiff's allusion.

"The intelligence behind it." Skias ventured a little further.

"The Great Mind has delivered us from this evil pontiff." Gharbel answered and relayed the asteroid that had laid Earth low. Destroyed their misguided civilization. "It will take millennia for them to recover. In the meantime our DVs will make sure their minds are attuned to that of the Divine Will."

"So my lords, why is Regum still so powerful?"

A pause.

"Their minds are deviant." Skias intoned solemnly. "They are audacious in the extreme in laying down this Web onto the universe and thus the Cosmic Consciousness. If unchecked it might distort reality as we perceive it. Therefore I consider it my first duty to obviate the danger in the cosmic realm."

"I wise decision." Pentham concurred.

Gharbel thought the obsequious complement unnecessary. This was a private gathering. Such puffery smacked of small mindedness.

"I will familiarise myself with the sacred astronomy. There seems to be a flaw laid onto the universe. You say Earth has its misguided orientation wiped off their planet. Still

the alien field remains. That my lords would suggest would it not that perhaps this excrescence might have its origins elsewhere?"

A sharp intake of breath from Gharbel. The trouble was Skias could be right in that assumption. A worry.

"It might well be Regums doing." Skias suggested.

"Nothing to indicate that is so pontiff." Pentham answered.

"Perhaps it was sent from the future?"

Stunned silence.

"That is impossible. With due respect pontiff." Pentham replied. Gharbel and Qatus remained silent. In interesting concept if a little illogical.

"I agree it is only a cautious exploration."

"Your holiness is most humble." Qatus said. "There is some disturbing data," Gharbel tried to caution him regarding the knowledge they possessed, "that the Earthers will at some future date recuperate. The DVs have discovered that the shock of the calamity has spurred certain of their kind into heightened mental activity. At the moment they cannot do much, their planet in ruins. But once they have recovered from the calamity I consider it pertinent that we make sure they are aligned to our way of thinking."

"Of course Lord Qatus. What disturbs me is that the DVs have not been able to curtail this sudden mental development of Earth's."

"It could well be," Pentham jumped in, "that it may have been much worse without them."

"You have a point. However I have a suggestion. Use heresy to fight heresy."

They were all attention. A pontiff with dangerous ideas. That was something new. It might even be exciting to watch him succeed or fail gloriously.

"Regum's technology. I am aware of certain developments regarding their achievements. I am familiar, now, as pontiff of what they are capable of."

Qatus looked at Gharbel. Did he know what they knew? Or was Skias truly psychic?

"Instigate a peaceful approach regarding Regum my Lords. It cannot hurt. There is officially no change anticipated in the status quo. However I think we should combine our intellectual resources and insert one of our own on that planet. By understanding them directly we can tailor our needs more finely."

Gharbel could not believe it. Exactly his and Qatus's thoughts. If the pontiff was on side, why that would be delightful. Fantastic. Exactly what he wanted.

"Any views?"

"Pontiff," Gharbel began. "We have been exploring this very scenario which your perspicacious mind just revealed. By the Holy Mind itself this is a most fortuitous conjunction."

"You have?" Skias was delighted. He drained his cup of coffee. "Please pour yourselves."

"Indeed yes. It is true that the Earthers," Gharbel continued, "some, seem to have an enhanced intelligence. To have the ability to combine both Reganian and our way of thinking. Something that could work to our advantage. It causes mental instabilities. Thus the reason I believe for the persistence of the alien field. However if we act now, we can guide them onto the holy path of spiritual redemption."

"Lord Qatus, Lord Pentham?"

"It would certainly give us more knowledge of their capabilities and their intentions. Of course regarding Regum a formal approach or behind the scenes regarding diplomacy has to be envisioned. Let them think we are actually interested in their way of thinking, a sort of thaw in our attitude." Pentham recommended.

"I think Regum would be amendable pontiff," Gharbel concurred. "Find a suitable candidate from amongst the Stable Volatiles or Naturals. Maybe even a heretic."

"A heretic. How apt." Skias was amused. The others relaxed. "Now Lord Pentham. You are of course familiar with your duties. Meaning the heretics. I'm sure you have a list of deviants. We need an individual who has a certain charisma, a stable mind in the sense that this mission will not overwhelm him or her, in that it does not go to their head. Someone knowledgeable and solid enough to be with us spiritually."

"I will see to it pontiff."

"Now my lords. We put out feelers to the Reganians concerning our interest in wishing to learn of these distant beings. Help them recover from their unfortunate disaster. Give them succour. Though we will not admit our spiritual endeavours. More as a gentle presence. We shall put it about that a Kabal exists amongst us who are not in agreement with the overall tenor of Prima's attitude. To facilitate that impression, let some heretics free. Make it appear as if there are covert agents letting this occur. Maybe even let them escape to Regum. That will make them think the Kabal is effective in its limited way. An odd scientist or astronomer could smooth the way."

Pentham could not believe what he was hearing. The plan was brilliant in its simplicity. He said: "It would also take some of the pressure of containing these deviants."

The people in general are behind us. I don't know how they would take to have heretics on the loose."

"A good point Lord Pentham. No this individual will come from within our inner domains."

"I agree." Pentham nodded draining his cup. "Lord Gharbel, Qatus?"

"I see no problems there pontiff." Gharbel answered.

"I concur." Qatus was happy.

"Now I must impress upon you that this is classified. There are to be no records. Anybody who comes into possession of even the slightest hint of what we are about will get BrainDrained."

They knew it was drastic but necessary.

"Err what if the DVs stumble upon our thoughts pontiff?"

"The same."

"But once the Kabal is in place, what then?" Pentham a little worried.

"We will go through the motion of pretending to BrainDrain whoever is too fervent with the Kabal's aims. Relocation to the provinces for a certain period of time should suffice. So my lords are there any other questions?"

"I assume a shortlist is to be drawn up?"

"No Lord Pentham, no records. Use your head. Your capabilities should keep the DVs out should they accidentally stray. You are Domain Lords after all. Just stay vigilant. Now I know this will take time. Also we cannot meet too regularly. That creates a pattern which the palace staff might remember. I will send word now and again regarding our progress. Remember we are all sworn to secrecy. I would consider it an insult to actually make you swear an oath. For it includes me as well. Rest assured this is no trap. I am not here on some witch hunt. We need to get at the bottom of the existence of the alien field."

They agreed to that.

"You may go. Lord Pentham I have to indulge your presence."

"Of course pontiff."

Gharbel was a little miffed that Pentham was asked to remain behind. Qatus happy to get away. They could now continue their work knowing that they had the pontiff's blessing.

"Lord Pentham." Skias studied the Domain Lord. The pontiff he was glad, so far, was not in resonance trying to embrace his domain memory as was Telafus's wants when

faced with difficult decisions. All Pentham was aware after drinking a few cups of coffee was his empty stomach. No matter how exalted one was the biological necessities continued to remind him of corporeal existence. The pontiff was trying to ascertain something. His steel grey eyes focussed, determined. This new spiritual head was unlike his now insane predecessor. He waited feeling himself examined. All he got was a shrewd intelligence behind the bland look.

At last Pentham said: "Supreme Lord?" As spiritual leader of all inhabitants he was above the Domain Lords, not of them. By venturing the appellation he in fact was letting Skias know of their power hinting at their unity even though Skias was above their realms. The holy office was that of the corporeal representative of the Cosmic Mind. Skias was the sun and he the subservient vassal. Skias was not about to disabuse him.

"I am aware of your sacred duties regarding the overall security of our planet's resonance, that of the masses, the vigilance required to ferret out deviance and heresies wherever it may occur."

Was Skias hinting that aberrations were manifesting at their own level?

Pentham merely nodded.

"Your position is somewhat unique amongst all of the Domain Lords. The proverbial fly in the ointment, an irritant which by its very presence, its very nature reveals what may well be camouflaged."

As pontiff he could if he desired appoint new Domain Lords, dismiss those found wanting, reshuffle the orders.

"What we cannot afford now is for this," he allowed himself a smile, "ahm, study group to be used for ends other than its intention. As you are the supreme officer regarding security, counter intelligence I task you to report anyone who thinks they can further their own aims through this group. It must remain unsullied. I cannot allow it to be sidetracked for whatever reason."

"I understand."

"I hope you do." Skias was hinting the he was not to use it to entrap those who might find it useful to further their aims through this secret body.

"If I comprehend this correctly do I have full executive power?"

"Ah I was informed of your directness. I welcome your attitude. Exactly what is required. You may as well know, I probably think you suspect it anyway that your office is tolerated. That the need of an overseeing security apparatus in these, err, interesting times is becoming more important. There are many developments on several fronts which have to be juggled. I have familiarized myself with all the domains." Letting

Pentham know that Skias was not one to let the Domain Lords dictate policy as Telafus had done.

"If I could I would make you supreme Domain Lord. Not dependent on Lord Gharbel's whim or Qatus's favours. For there has been a monumental stuff up."

Ah. Who stuffed up he wondered.

"We are in recession regarding the whole planet. I don't know what the DVs are doing but it seems that they and by default us are reacting to events rather than formulating events to further consolidate what should be our primary position."

So far so good. The DVs, though overseen by the Ecclesiastics and Divines who though they were merely a higher order of the priesthood kept vigilance over the DVs. A united body backing them up, the reserve force behind them. The actual functioning of their efforts guided by Elentra.

"Regum is on the ascendant. That is one reason why we have to work with them. So one of your duties is to make sure that no one involved is contaminated with their thought processes. That will be difficult for we have to make it appear we concur with their methodology. It does not mean we are in agreement. So you will have to watch out for that."

"As my duties require pontiff."

"I am satisfied on that score. Make it plain to Janon that it is imperative we work to gain the upper hand. For there is something I came across that is of interest which I discovered amongst Telafus's files. This mission on Regum."

"There are several pontiff." Trying to get clarification.

"The priests may continue as they are. Telafus cleared one specific mission which is of significance. The search for the ancient knowledge amongst the aboriginal culture on Regum. And not too soon either. If it turns out there are similarities in regards to our distant mythological lore then we will be able to obviate their shamanistic powers. The Reganians were extremely smart in leaving them to their devices. They are of our race. We think the genetic drift over the centuries has curtailed their mental capabilities. It is one of the reasons I suspect why the priests are not making much of an impression. It is also one of the reasons why Regum never bothered to impress upon the aborigines their view of the world, of reality. In short they are leaving them alone so that they may find a use regarding their psychic abilities to counter our DV activity. Let me show you."

Skias was well and truly on top of his field. Telafus barely bothered to make himself acquainted with what occurred on Regum. He had been Prima focussed. As such they had let Regum slip out of their net. The correlation was there. Pentham could not fault

the supreme pontiff. The office was sacrosanct, guided directly by the Great Mind. That Telafus was found wanting would be anathema. Skias was by the sound of his preamble taking the struggle back to Regum.

Skias activated the viewscreen on the wall where a picture of a bucolic scene of Prima's mountains changed to an image of Regum. Skias had a small console which he took out from his desk.

The image of Regum was that of their resonant state. It glowed brightly, yellow based unlike Prima's motley browns, greens and blues. Focussing on the northern Outlands. There the swirling darker coloured resonance revealed the mental state of the aboriginals. Skias zoomed in and amongst the darker similar patterning an almost tiny white orb shone.

"I am aware Lord Pentham of the incident regarding Varus and Shach."

Lord Pentham had almost forgotten about that and the debacle.

"It seems to me there is now a third force involved. That white orb is due to a singular entity. It is not Reganian, or if it is, it is a new psychic development. Even though it is almost discordant amongst the sea of the aboriginals resonance it is not in conflict. A most unusual phenomenon would you not agree?"

"The mission on Regum under Professor Storaf will eventually arrive there."

"Yes I have read the notes. Make it appear that, yes, it is there but more as a finishing touch than a prime objective. Excellent planning."

"Believe it or not pontiff that mission originated with SpaceKorps."

"Even better. No linkage to your domain then?"

"None whatsoever."

"Nor Janon?"

"Not unless it has some significance to our status."

"Who is in charge? The reason I ask this is that the reports are what I believe your people called 'sanitized'."

Skias was extremely well informed. One positive aspect, Pentham considered was that if Skias was outward directed, he would be less involved with the terrestrial domains. He might even have more freedom to fulfil his duties here.

"I can find out. SpaceKorps is really the security arm on the Orbital. Making sure that whatever intelligence is gathered by the DVs remains secure. The raw data is safe up there. As you correctly stated the cleaned up reports come to this office."

"Good. So why was there no mention of this? Observe."

Skias punched in some commands into the console. It was a time-line. The resonant field over the Outlands was paler. Then a dark spot appeared, tiny at first. It went fuzzy, seemingly irradiating the area which slowly turned brighter, more dense, psychically stronger. Staying within its boundaries. Then the tiny sun appeared as if out of nowhere.

"What do you make of that?"

"Two vortices."

"Yes Lord Pentham, I can see that."

"Forgive me, I was not aware of these two phenomena."

"No mention in the reports."

"Maybe according to the DVs they are local. No threat to us."

"But are they not unusual?"

"Unusual?" Pentham felt stupid repeating Skias.

"There is nothing like it in the records."

"Ultra individuals." Pentham was amazed. A totally new development in the psychic scheme of things. Watching the time-line run they were a different set of behavioural patterns. The darker dot diffused itself into the general resonance, the white dot remaining isolated.

"Observe this then."

The location on the zoomed in scale moved south east. The local resonance there paler, tiny speckled browns within.

"These are our priests which their leader, Khratham has actually accepted. A breakthrough for us. Whereas on Regum's huge city and it's surroundings it almost washes out their presence. Progress in the Outlands."

"Yes pontiff. It looks like the inhabitants are aligning to our resonance."

"Except out there. What intrigues me, and should have alerted SpaceKorps and your domain is how these two phenomena can be so independent of the overall background resonance."

"That is the aim of the mission." Penthan explained. "If we can get into their folklore, uncover their inherent wisdom then we shall know definitely as to the how and why's pontiff."

"Why could not the DVs?" Skias persisted.

"The DVs primary objective is Earth, the alien planet and the alien field. They are battling that, neutralizing it as much as possible. All efforts are directed to that field. The scouts are trying to align the inhabitants of Earth. Now that the calamity has struck,

blessed be the Divine Mind, the focus continues. The other DVs are of course targeting Regum's population. The Outlands, because they are in alignment to a certain degree with ours are kept under cursory observation only pontiff. Then there is the burn out rate. We are loosing more than we can recruit. Our asylums are almost full. We shall need more."

"As I thought. Now as pontiff I do not like to interfere in the day to day running of our operations. It only creates difficulties."

"Very wise."

"Common sense Lord Pentham. Common sense. So there is no spare capacity available?"

"Regarding the DVs. Well there is always room for some manoeuvring."

"I follow you. How long until we know what is actually going on in the Outlands?"

"As we discussed, the location of the white resonance is one endpoint, the other vortice, a mystery."

Skias looked at the imagery. "Well at least it's holding. If there is a sudden change than I shall order the team to go there directly."

"Understood pontiff."

"There is something else to consider."

"I am listening."

"The Web."

"Yes?"

"How is the infiltration going there?"

"Not good."

"I appreciate your candour. Explain."

"Whoever we send, after they have been vetted, don't last long. Burnt. They can't handle the multiple realities. Freaks them out. They become targets. They get destroyed. The Reganians spot them almost immediately."

"Well send in more. Keep them busy whilst we formulate our plans to negate their Web."

"Negate the Web?" Skias had done it again.

"Yes. The other function of our little Kabal. Scour the planet for specific individuals who have an aptitude to think like Reganians. Use the heretics. Surely they would be the best to cause havoc."

"I had never thought of that. No, that is not quite correct. We considered it but came to the conclusion that they would go over to the other side. Not only that but once over they would, in our parlance have been turned."

"Yes I see the logic there. We have to find the source of the Web."

"Pontiff. There is no source. It is a combination of all their computers."

"Well then let us shift our perspective. We need to consider a global assault."

"Yes you alluded to that."

"Keep that in mind."

"As you wish."

"One last matter. We have to find out what sent Telafus over the edge."

"Yes. Most unfortunate."

"There has never been a case like this for centuries. The best I could come up with was in our ancient history, pre-Calamity. I suspect that that had been more political. Word cannot, must not get out that Telafus is insane."

"Your holiness communed with the Immortal. Dare I ask...?"

"Indeed. Though technically sworn to secrecy, there was nothing to indicate Telafus's demise had anything to do with the Immortals."

"I am pleased and relieved to hear it." for that domain was off limits to Pentham. It belonged to the domains of Qatus and Gharbel. The less they were involved the more freedom he had.

"As you are concerned with security Lord Penthan, perhaps you can draw up a list of potential secretaries for my office. The bureaucracy here is a nightmare. And this is off the record, the DLs want their own amendable candidates. If only to find out what I am about. Given our specific agenda I will need rock solid personnel."

"I shall see to it pontiff."

"Now any questions?"

"We need secure channels of communication."

"Yes I have considered this as well. I think it is time to use embedded comlinks. Shielded. Just you, Lord Gharbel and Qatus and myself of course."

"It will simplify our work."

"I know SpaceKorp use them up there. I am also aware that it is forbidden to use Reganian technology on Prima." Skias smiled with simple delight. "But given we use their technology anyway I don't see why we should be curtailed in our holy mission. The ends do justify the means."

"I wholeheartedly concur there pontiff."

"Wholeheartedly?" Skias's face changed suddenly.

"Why yes. With direct communication, secure, it will reduce the risk of messengers from knowing what it is we do know."

"Of course. I just wanted to make sure you did not embrace this step merely for the chance to engage in technology for its own sake."

"It is a tool pontiff."

"Well. You have my trust Lord Pentham. Just one last thing. If either Lord Qatus or Gharbel prove to be difficult, let me know."

"I am indeed indebted pontiff."

"That you are."

Elentra disengaged out of the filtered data realm of the DVs gathered information. She checked regularly, then tailored the information for Kroena. Whilst trawling through sub-domains, curious how the scouts targeting Regum were performing to sets of incoming data domains found a sudden match. One group of DVs concerned with Earth was so near to what was coming from those specifically focussed on Regum that the similarity was uncanny. Not that one group of DVs knew what the others were harvesting. A matter of stopping cross feeds into each other's heads. She double checked. Both streams came through different channels. It verified the information she was accessing. Remarkable. Backtracking the Reganian feed it appeared the DVs were reading a Reganian mind. Or more to the point accessing its resonance.

Her first reaction was that it was a trap. Disinformation. The Reganians suspected their intent so when the data matched she was more than curious. Not alarmed, excited. This could be a first. A Reganian actually allowing access to his mind. She had informed that group to not increase their activity, not to engage in remote viewing. Stay on passive alert. This was too good to be true.

She checked and double checked having called Kroena in. They went over the evidence repeatedly. The results were always the same. Skias's interest in Earth was welcome. Domain Lords were too smart for their own good she thought. Necessary if difficult. Always jealous of their domains. This was too big for any one of them. Ever since the asteroid hit she had been assigned to make that planet their primary target. It would be up to others to decide what to do with both sets of information. The breakthrough on Regum and Earth. The planet was stricken after all. Kroena agreed that a courier was too risky. She was also as interested about Earth and Regum as her superior Elentra was.

Elentra arranged for a shuttle to take her down. At the spaceport a VAV would take her directly to the palace. The only location on Prima that allowed direct flights. The desert lay to one side. The inhabitants never knew, living on the other side of the planet just how they used Reganian technology.

She touched down on the palatial grounds, ceremonial guards in their gaudy tessellated uniforms ready to take her to the pontiff. She was escorted into the rear of the sprawling buildings, through corridors, an inner courtyard and finally into the main building. At one nondescript door her escort halted and knocked. How quaint.

Elentra entered and saw the dark grey robed gaunt face of the pontiff's private secretary. Without any emotion or expression of interest he showed her through a double set of doors leading from reception into a study.

She was announced. Skias, in a plain robe, with only a small insignia indicating his position, in slippers for it was nearly midnight was sitting in a deep armchair in front of a low table. Reports were scattered upon it, a decanter of some liqueur and coffee in front of him. Skias dismissed his secretary who shut the doors behind him.

Skias asked if she wanted a coffee or something stronger.

"Your holiness..."

"Please Elentra, Skias will do."

She relaxed. "Coffee, milk, three sugars will do fine thank you." Amazed at his unpretentiousness. He did the honours then bade her to take a seat. She sat in the armchair ready for her. She savoured the coffee.

"I have news your...Skias." He looked alert at her.

"So I gather." He replied easily. "Important enough to come yourself. We have heard much about your difficult work Elentra."

She remained appropriately silent.

"There have been developments." Taking a deep breath she continued: "In a way we have been fooled." Getting the bad news out first.

"Why does that not surprise me?" he replied unruffled. She had no idea how pontiffs behaved but his unpretentiousness threw her a little. She expected a person of immense gravitas, a resonating presence. In a way he was. Maybe he kept himself in check. The ease of his persona so different to the impression Domain Lords had on her.

"Because you are the supreme head? Supreme in all domains?"

"A worthy burden." A smile playing on his lip. Would it remain after she revealed what she knew?

"As it is I am sure pontiff."

"Elentra. Your worthy position does not necessitate formalities."

"Of course, ahm, Skias. The DVs have had some surprising success."

"Even though the Reganians remain true to form?" he made it easy for her.

"Perplexing once I've explained myself. Tricky almost. One of the reasons why this information could not be sent by courier Skias. The data has been checked and double checked, independently evaluated by my trusted second in command Kroena."

"Which is?" he asked gently.

The coffee had perked her up by now. Skias sipped his liqueur, he the essence of infinite patience.

"It's like this. Two data streams. Identical. One from Regum, the other from Earth. Both confirming the veracity of its contents." She had gone over her presentation so often she hoped it would sound professional now that Skias had shown himself to be so accommodating.

"Go on."

"The meteor strike on Earth was real. It did occur. In the distant past."

"I see. I am familiar with the divine act."

"Time Skias."

"Let me guess. The event we witnessed is in the past."

"Millennia Skias."

"That much." He accepted the fact.

"As you know our DVs can access any event irrespective of time."

"So I gather." He put his tiny crystal glass down.

"Earth has arisen from the ashes." There, she said it.

"Ah." No surprise, no shock. Cool comprehension.

"They are technologically capable once again. Not space faring yet. But they have machines that move them across their world. It is only a matter of time until they end up in space again."

"Really. How remarkable. What an enterprising race. Being hit by a massive meteor sent by divine providence which becomes to them a minor setback. That should please the Reganians. Did they have a hand in this?"

"Which brings me to my second point Skias. We seem to have independent verification from Regum. The DVs have a source."

"Now that is interesting. We are aware of the difficulties in accessing their minds, any mind really. The priests try of course. Without much success." He seemed unperturbed. "So a source? From the Web or live?"

"He appears live Skias. Almost compliant. I smell a trap. The information harvested from his resonance is the same regarding Earth."

"So Regum is feeding us information. Verifiable information."

"They are. Well somebody is."

"Do we have an identity?"

"There it gets tricky Skias. As I said, it feels alive. But it could be an opening in the Web. Either way the data matches."

"It was good of you to bring this to our attention directly." He paused and poured himself another small glass from his decanter, holding it aloft for her.

"No thank you, tempting as it is."

He replaced the decanter.

"Well then. We must assume, in the greater scheme of things that the powers of the DVs in curtailing Earth's resurrection regarding their capabilities that shall we say, they have been less than successful."

"Annoying." She admitted. "The strange thing is, that unlike on Regum, many of the Earthers are amendable to our orientation. The DVs are effecting their mind set. They do believe in a unitary god. But that has no effect on more independent minds who align with Regum. One could almost conclude Skias that maybe the Web extends as far as their planet. It certainly exists in their space. Both our worlds are an influence. Concomitant. Even stranger is that they have their wars. Not for and against the spiritual and the technological but even weirder they use their technology against each other. They are still homicidal."

"Which would explain the alien field."

"Indeed Skias. A bizarre race of beings."

"That is an understatement." Not upset at this development. Serene, unperturbed. Telafus had been focussed on the alien field. Now he was no more. She must have missed the Ascension. She wondered if the Cosmic Mind was realigning this new pontiff. He certainly was not so obsessed with Regum as his predecessor.

"What would you have me do?" Elentra needing confirmation.

"Good question. The Reganians are influencing Earth. Well well well. So be it. They seem to be, for the moment, on the ascendant."

"An uncomfortable truth." Because it was so.

"Then we must adapt as needs be."

"That is the pattern."

"Meaning we should take the lead?"

"Naturally."

"What would you do?"

"Err, as in from your or my position?"

"Any position Elentra."

"Well, we have contingencies in place. Either we step up DV activity or curtail Regum's, or preferably both. Ideally if we could get on to Earth then maybe use our influence there to reveal to them the glory of our civilisation. Not forgetting the spiritual wasteland that is Regum. Present the truth in such a way that they come towards our view. Of the possibility of uniting one's soul upon Ascension with the immaculate, the divine, infinity itself."

"Eternity."

"Yes. It would dwarf their fascinating technology as one mere bauble. A form of entrapment."

"We must be practical. You say you are in communication, or this entity with you on Regum or via the Web. Either way the link is there, correct?"

"That is so."

"As I have indicated, do not press the advantage. This can be of immense benefit to us." Skias was already thinking of the plans for his Kabal. "We will not hide the fact that Earth has arisen. We shall let it be known just how dangerous, how pathological these Earthers are. To both planet's futures. You say they are still engaged in homicidal warfare. Then let Regum know that if they continue to influence them the war might come to them as well." His mind was enlivened for there might be a way to curtail Regum's expansion. By divine inspiration. Maybe Earth was the answer to putting Regum in place. "That may make them stop and think. Depending on how they react to that. Then we shall know what contingencies we have available for our divine mission."

"So do I target Earth? Regum?"

"Continue as you were. No change as yet."

"Understood."

"I am pleased. Now I assume," for Skias had another stirring thought. "that you have studied the psychopathology of the Earthers."

"Only at a distance. It burns the DVs out. I study the effects. I must admit I'm too frightened for my sanity to go down that path."

"Is this effect the alien field or their kind?"

"The DVs Skias come across potent psychics. There the real struggle truly is decided. Though they are not targeting us directly it cannot be ruled out."

"You are sure?"

"Not dead certain."

"Their society, if one could call it that though has potent psychics? Shamans?"

"Definitely."

"So their threat to us is minimal?"

"So far. The interesting thing is that Regum's WebWorld and WebSpace, the two are interlinked yet self contained is doing us a favour pontiff."

"I find that hard to credit Elentra."

"So did I at first. As did Kroena."

"Go on."

"Well as I said. Their shamans are drawn not just to the Web, they actually journey into it."

"Really?"

"In a way they are being drawn away from us. Any interaction with Prima is in cyberspace. Since Prima is a simplification and to a degree a make believe pretence, overblown, their knowledge of us is both restricted as to our true selves whilst magnified in relation to our esoteric state of being."

"How long has this been going on?"

"Right from the start."

"Yet our inserts are impotent." Skias assumed correctly.

"Our inserts fail. Anyway their primary concern is Regum."

"True." Skias looked at the glowing contents of the decanter but thought better of it. The liqueur was an excellent drop. Combined with the strong coffee it was the perfect combination of the two to both ease the mind and invigorate it at the same time.

"I assume of course that you are familiar with psychic states of mind?"

"Well yes. The DVs are of principal concern."

"I want you to remain for a little longer. Are you tired?"

"No Skias. I slept on the way down."

"Good. Your knowledge then of the Volatile mind, those of a Natural inclination your field of study."

"Not just me pontiff. There is Kroena and two others I should mention. Risea and Khral. Extremely capable."

"I am sure they are that Elentra. There is something that I need ascertained."

"As you wish pontiff, I mean Skias."

Skias must have asked his secretary to come in.

"Bring us Telafus."

"?"

"Remember Elentra this is beyond top secret."

"Understood."

"I need a second opinion. You see this has never occurred in our long and noble history. Unless we go back way beyond the Calamity. You are familiar with the role the Immortals play?"

"I know they are the eternal repository of ancient wisdom. A conduit to the Great Cosmic Mind. The Ascendant supplicant is guided by their psychic awareness and of course both spiritual guide and celestial repository of all the previous pontiffs as well."

"So by rights they are benevolent."

"Of course..." Elentra surprised of what Skias was laying before her.

"You see, this is most difficult not just for me, but my office and in a way the serenity of the masses." His expression cool, detached. "You see Telafus must have experienced something whilst in holy communion with the Immortal whose eternal soul graces the sacrosanct temple. He is possessed. Not by the Immortal for I too have sought his guiding spiritual force. Now you are familiar with burnt out cases. I believe Telafus too has burnt out. Or to be more precise is burning out."

"That is terrible." Thinking of the poor man's suffering. For a pontiff, the Supreme Lord of all Domains to be so vulnerable was disturbing. She understood why she was sworn to secrecy. Not only might it destabilize the social cohesion of their race but the roll on effect which Regum could use would collapse the very foundations of not just their belief and faith but also their political base as well. Never mind the ramifications. The pontiff led to madness. Regum would have a field day. The consequences unthinkable. Which is exactly what had occurred. She was ready to face the madman. BrainDraining though an option deemed sacrilegious. It must be a dilemma for Skias.

"Are you shocked?"

"I cannot even begin to explain how I feel Skias."

"I see why you are indeed head of your section. Your attitude has been noted with gratification."

She felt a warm inner glow. To have the pontiff on her side, sharing the greatest secret on Prima was in a way an honour which was priceless. She had reached the pinnacle in her duties. Her station was above all others. The Ecclesiastics and Divines relatively below her. She had the most powerful office holder solidly behind her.

Nahkt appeared from a well hidden door. The bookcase parted and Telafus was wheeled in by his secretary. Drips from attached bottles were fed intravenously into his arm. Sedatives most likely calming a disturbed mind, a riven soul, a mentally tortured being. Nahkt withdrew.

"To think he had once been the supreme spiritual guide, the culmination of all that is sacred on Prima. Reduced to this shell of a being." Skias sighed.

Telafus looked gaunt, emaciated. Barely aware, completely indifferent to his surroundings. Not even bothered by the straps that fastened him to his wheelchair. Dribbling from thin wet lips. The skin sallow, transparent. She had seen cases like this before. The haunted look still disturbing. The madness willing itself to remain with him.

Telafus muttered, incoherent, babbling. There was no way he could be Ascended.

"Officially, from a medical point of view the prognosis is that the alien field has subsumed him." Then turning to the patient called his name.

A momentary flicker of recognition, then his eyes withdrew as Telafus thought about who he actually was.

"Telafus? Yes he is known to me." His dry voice crackled.

Skias gave Elentra a look of sorrow. She was fascinated by Telafus's inner convolutions. A battle was raging in his mind. She could almost taste the fear he was suffering.

"It is you." Skias said gently

"You do not know me yet. But you will soon enough." He cackled, his dark eyes blazing. His visage changed. The character lines deepened, sweat appearing on his brow, the lips pursed, thin, mean, indomitable.

"I am going to put a sensor band on your head Telafus." Skias extracting the headband Gamers used to get into the Web. This pontiff was not afraid to use Reganian technology for his hallowed duty. Elentra was glad. The use of technology did not compromise the soul. Skias rose and gently wrapped the matte black headband on Telafus's shaven head.

A hologram appeared on Skias's work desk. The glowing sphere permeated by a purple haze. Tiny lights indicating the planets. At the periphery the glow of their galaxy.

"This is a representation of our universe. I thought the purple haze was the alien field. You..." and Skias used his remote control to change the imagery within, "...will see that the alien field is a pale yellow. It was initially assumed that we might have finally detected the Cosmic Consciousness. Since the Holy Mind is Eternal and Infinite it can

never be determined as a physical form. Then it was assumed that it could be an extension of our resonance commingled with that of Regum. We are not certain. Nothing is. So Elentra, what do you make of this?"

Before she could answer Telafus blurted out: "My essence. You are seeing my essence. Nothing you can do about it. I am cosmic." Looking with childish delight at the hologram.

"His psychic residue. His projection? Is Telafus..."

"Telafus Telafus Telafus. What is he compared to me?"

"...projecting via the Immortals this field?"

"No."

"I possess the secret of time, all the worlds are at my beck and call. I am the creator of what will be, what will come to pass. No one can deny me."

"He thinks he is someone else."

"Possession."

"Yes but who's?"

"Could the Reganians be behind this?"

"In what way Elentra?"

"Well they have personas in the Web. Maybe Telafus absorbed some mythological being. The way the Earthers, their shamans imbibe the fantasies in there. This could be the Web you know."

"An interesting supposition."

"The Web. A platform."

Telafus eyes flaring. "Useful to...but you will know soon enough." His eyes fixed on Elentra. The dark orbs receding in perpetual continuity. She held the gaze willing herself into his open eyes. They contained space itself. A vast nothingness as something. Filled with an ether or that of his expanded soul. It went on forever, without end. Elentra was not scared. Burn outs were not that rare. She had seen the look before. The soul inflated, embracing everything which overloaded the mind to comprehend and cope with the vast realm they expanded into. She explained this to Skias.

"Yes but if you look closely, the purple haze does not extend as far as Prima or Regum. Only the pale yellow field." Focused on the hologram.

"Maybe he inserted himself into that."

"Can your device quantify the phenomena?"

"Certainly." Skias punched in some commands and a flat light screen appeared next to the hologram. Whole data strings rolled across it.

"Slow it down please." All she needed was a quick view. The technicians were the experts there. But she could recognise the algebraic configurations, the inherent algorithms driving the data. The equations ran into infinity again and again. Trying to quantify without success. Either the structure of the mathematical methodology was flawed or the field was.

"Something is definitely wrong here."

"You're telling me." Skias jested. She returned his smile.

"Nothing is wrong or everything is wrong." Telafus laughed. It sent a chill down her spine.

"Is it his mind we are seeing?"

"Or something else?" Elentra speculated.

Telafus was grinning triumphantly.

"Your numbers will never get at me. I have them all." Telafus's certainly disconcerting.

"Is he always like this?"

"Mostly. Sometimes he is another person. But he won't reveal whoever is in possession."

"And nothing from the Web?"

"Not yet. You think it's Web based? Even though the purple field is nowhere near us? Tell me Elentra, how is your astronomy?"

"Basic."

"What do you know of the galaxy?"

"That it's there. Sorry to be so trite."

"No that is alright."

At the mention of the galaxy Telafus's eyes withdrew, watching them suspiciously.

"Who are you?" Elentra directed her gaze at Telafus.

"I am many, I am all, I am one. I can be whoever I want and you will never know me. I will only reveal what I wish to reveal. And you will be none the wiser. No one will. I am indeterminate to your puny minds. Mere sand beneath my feet. I shall..." then Telafus withdrew into himself.

"I wonder if this madness is not faked."

"How?" Skias asked.

"A veil."

"Camouflage?"
